[NOTE.—This is the famous French Archbishop of Peking who defended the Pei-tang Cathedral so courageously during the Boxer trouble.—ED. J.M.]

NEWS FROM PARIS.

Saigon, August 28.

M. Mesurier has been appointed *Directeur l'Assistance publique*, in succession to M. Mourer.

There have been 11,000 cases of cholera and 800 deaths during the past week in Egypt.

(SPECIAL TO "JAPAN MAIL.")

CHOLERA ON THE "SAIKIO MARU."

Kobe, August 28.

Mr. F. Wilson, an American passenger from Shanghai to Yokohama by the N.Y.K. steamer *Saikio Maru*, died on board, of cholera, at six o'clock this morning, despite the utmost attention given to him by Capt. Young, by the ship's doctor, and by Dr. Fowler, who was summoned from shore.

The steamer left the Pier about five o'clock for Quarantine. Two Japanese boys are down with choleraic symptoms.

(RECEIVED AT THE NAVAL DEPARTMENT.)

PRINCE KOMATSU.

His Imperial Highness Prince Komatsu embarked on the *Yakumo* and, accompanied by the *Tokiwa*, left Port Arthur at 7 p.m. on the 22nd instant and is expected to reach Kobe at 4 p.m. on the 26th.

THE CORONATION SQUADRON.

The *Asama* and the *Takasago* reached Queenstown on the 20th instant.

PRINCE KOMATSU.

The *Yakumo* and the *Tokiwa* arrived today (26th) at Kobe.

(RECEIVED BY THE FOREIGN OFFICE.)

FOREIGN NEWS.

The Consul at Fusan telegraphs under date of the 23rd instant, that there were 15 cases of cholera, 9 ending fatally, at Fusan from the commencement of the outbreak (13th August).

The Consul at Masampo telegraphs that all vessels arriving from Japan *via* Fusan, or coming from any port in the neighbourhood of Fusan, as well as fishing boats from all ports, are to be medically inspected.

No official confirmation has been received of the report that the Chinese Government has ordered its commissioners to sign the tariff convention.

(RECEIVED IN TOKYO.)

NEW CHINESE TARIFF.

The Chinese Commissioners have received instructions to sign the Tariff Convention but are delaying to do so. Japan proposes that the signature should take place on the 1st of November, but the Chinese are disposed to postpone it until Chinese New Year's day. The point is now under discussion.

(FROM THE "JIJI SHIMPO.")

THE SHAH.

London, August 20.

The Shah gave a banquet yesterday to the members of the Diplomatic Corps in London. The Persian Sovereign visited King Edward at Cowes to-day.

CENTRAL AMERICA.

The rebel army has won another victory in Venezuela.

KING EDWARD'S CRUISE.

London, August 22.

The King is now cruising round the the coasts of the British Isles.

THE SHAH.

A military review was held at Woolwich in honour of the Shah.

DISTURBANCES IN SIAM.

The rebel army has been successful on the borders of Siam and Burma. Many Government officials and their families have been massacred. The foreign residents are all safe and under protection.

THE SULTAN OF MOROCCO.

The Sultan of Morocco has been severely injured in an automobile accident.

JAPANESE CORONATION SQUADRON.

London, August 23.

Admiral Ijuin gave a banquet yesterday on board the *Asama*, inviting thereto the Mayor and principal citizens of Queenstown. The Japanese Coronation Squadron is now stationed off Queenstown.

JAPANESE BONDS.

Four per cent. Japanese bonds are quoted at £86¼ on the London market.

COTTON MARKET.

Quotations for cotton thread are showing an upward tendency.

ACCIDENT TO A NORWEGIAN STEAMER.

Nagasaki, Aug. 24.

A Norwegian steamer has been wrecked on the Korean coast. The Mitsubishi salvage steamer *Oura Maru* has been sent to render assistance.

RUSSIA AND AFGHANISTAN.

London, August 25.

The *Novoe Vremya*, in an article regarding the relations between Russia and Afghanistan, says that the time has come to wipe out the unpleasant feeling existing between the two countries. The Russian paper further states that the Amir of Afghanistan entertains an anti-British feeling.

ENGLAND AND JAPAN.

Viscount Hayashi, Japanese Minister to England, has expressed his warmest thanks to the citizens of Portsmouth for the reception given by the citizens in honour of the Japanese Minister and his countrymen.

(FROM THE "JAPAN HERALD.")

CHINESE EASTERN RAILWAY.

London, August 22.

The official organ of the Russian Navy Department estimates that the loss experienced by the steamers connecting with the Chinese Eastern Railway has been two and a half million roubles since the starting of the scheme, two years ago.

EXILED RUSSIAN STUDENTS.

The Tsar has issued a Decree for the recall of nearly all the Moscow students who were exiled during the riots in February.

RUSSIA AND MANCHURIA.

London, August 23.

The Odessa correspondent of the *Standard* says that Russia's fulfilment to evacuate Manchuria depends upon the settlement of the question as to the retention or retrocession of the right bank of the Amur. If it is retroceded it is considered that Russia's position might prove perilous.

The correspondent adds that it is believed in St. Petersburg official circles that Russia will formally annex the whole right bank of the river to the Chingan Mountains.

A FRENCH NAVAL BASE.

London, August 25.

The French authorities are considering the project of establishing a naval base at Kwangchau Bay, between Nivet and Fortbayard, involving a cost of one and a quarter million pounds.

THE MONROE DOCTRINE.

London, August 27.

President Roosevelt, in a speech delivered at Augusta (Maine), has affirmed his belief in the Monroe doctrine, which he defines as a statement of a very firm belief that the nations now existing on the American Continent must be left to work out their own destinies.

"The American Continent," added President Roosevelt, "can be no longer regarded as a colonizing ground for any European Power."

(FROM THE "Kobe HERALD.")

CORONATION NAVAL MANOEUVRES.

London, August 18.

At the supplementary naval review held at Portsmouth to-day seventy-six warships manoeuvred off the eastern headland of the Isle of Wight in torrents of rain and a gale from the south-west. The grid-iron movement was successfully executed and spread over an area of twelve nautical miles.

The fleet saluted subsequently in token of farewell and dispersed to their respective stations.

King Edward returned to Cowes and acknowledged the cheers from the warships as his yacht passed by.

BRITISH AND JAPANESE SEAMEN FRATERNIZE.

A concert was held yesterday on the *Asama Kan*, the conspicuous feature of which was the fraternizing of the British and Japanese seamen.

(FROM THE "DEUTSCHE JAPANPOST.")

KING VICTOR AT BERLIN.

Berlin, Aug. 28.

The *Norddeutsche Allgemeine Zeitung* and the *Reichsanzeiger* welcome King Vittorio Emanuele of Italy to Berlin in the most sincere manner. The *Norddeutsche Allgemeine Zeitung* praises him as a highly gifted ruler and as a resolute and successful ally of Germany, wishing that Italy may develop her welfare and strengthen the position in the world she has obtained, as by her own force she has won her national unity. The *Reichsanzeiger* dwells upon the fact that the existence of the Triple Alliance has resulted from the urgent necessity that the territorial state of Central Europe should be maintained, and welcomes Prime Minister Prinetti, accompanying his King, as having worked successfully at the renewal of the well-approved possessions.

The Italian King's visit at Berlin is to be regarded as a demonstration of the Triple Alliance against the last revenge speech delivered in Paris by General André. Commercial questions have not yet been discussed during the visit. The papers of the opposition parties also express friendly opinions as to Italy and her King.

THE NETHERLANDS.

The telegram of the Laffan Bureau reporting that the Netherlands intend to join the Triple Alliance is unfounded; also the report that the Dutch Government intends to sell Riouw Island to Germany.

FRANCE AND SIAM.

The Siamese question will cause no difficulties if France continues to respect the rights of other Powers concerning their trade relations with Siam.

BARON SHIBUSAWA IN BERLIN.

Baron Shibusawa during his stay at Berlin had several interviews with notabilities and men of mark.

(FROM THE "N.-C. DAILY NEWS.")

THE BOER GENERALS AT COWES.

London via Bombay, August 18.

The Boer Generals Botha, Delarey, and Dewet, accompanied by Advocate Ferreira, left London to visit King Edward on board his yacht at Cowes. The illuminations of the fleet at Spithead were spoilt by a thunder-storm. The Generals returned to London in the evening much pleased with their reception by the King.

Later.

Lords Roberts and Kitchener met the Boer Generals at Southampton, and accompanied them on board the special service vessel *Wildfire* to the royal yacht. Lord Kitchener presented them to the King. Their reception was most cordial; the conversation was informal and politics were eschewed. His Majesty referred to the persevering gallantry of the Boers, and their consideration and kindness to the British prisoners and wounded. The interview lasted a quarter of an hour. The Generals lunched with Lord Kitchener on board the *Wildfire* and then made a tour of the fleet.

POLITICS AT THE CAPE.

London via Bombay, August 22.

Twenty two Progressive members of the Cape Parliament, including two of those opposed to the suspension of the constitution, have adopted unanimously a vote of want of confidence in the Premier, Sir Gordon Sprigg, K.C.M.G. They have elected Dr. Smartt as their leader. There are nine Progressives absent from Capetown, and there are only four others, excluding the Ministers.

FRANCE.

London via Bombay, August 19.

Thousands resisted the closing of the convent schools in three towns in the department of Finistère (of which Brest is one). The troops were compelled to break the doors and expel the garrisons of peasants, who sang hymns and threw filth at the besiegers.

Another officer has been imprisoned in a fortress for refusing to participate in the expulsion of the nuns from Douarnenez.

ABANDONMENT OF THE NAVAL EVOLUTIONS.

London via Bombay, August 19.

A gale with mist and torrents of rain compelled the abandonment of the evolutions of the fleet, which steamed out to sea.

HOMEWARD-BOUND.

London via Bombay, August 19.

The Japanese and other warships which attended the naval review have sailed for their respective homes.

GREAT FIRE IN BORNEO.

Hongkong, August 19.

The Chinese quarter in Pontianak in Dutch Borneo, has been burnt down. The damage is estimated at one million dollars.

* Pontianak is a large town on the west coast of Borneo, exactly on the equator.—Ed. "N.-C. D. N."

THE BOER TRIUMVIRATE.

London, August 19.

It is explained that the Boer Generals could not accept the invitations given them on Saturday last owing to their attire being unsuitable for a ceremonious visit.

They expressed themselves extremely pleased with their visit to the King on Sunday.

The Generals arrived in Holland to-day, the authorities giving them a warm welcome.

London via Bombay, August 20.

The Boer Generals were received with an ovation at Rotterdam and the Hague.

Later.

Though the welcome given to the Boer Generals at Rotterdam and the Hague was cordial enough, the crowds were unexpectedly small and showed little enthusiasm.

THE FIRST FAVOURITE FOR THE ST. LEGER.

London via Bombay, August 20.

The trainer of Ard Patrick says that he will not run for the St. Leger owing to lameness. To-day's accounts say that the colt is improving, and that there is a possibility of his running.

A NEW ACADEMY.

London via Bombay, August 22.

The King has granted a charter of incorporation to the British Academy for the Promotion of Historical, Philosophical, and Philological Studies.

THE EXCLUSION OF UNDESIRABLE ASIATICS FROM CAPE COLONY.

London via Bombay, August 21.

The Governor of Cape Colony, in a speech to the Cape Parliament, said that a Bill would be introduced prohibiting the introduction of Asiatics, other than British subjects.

CAPE COLONY'S LOYALTY.

The Governor of Cape Colony in his speech to the Cape Parliament announced a Bill fixing the annual contribution of the Colony to the Royal Navy at £50,000.

The House adopted without discussion an address of congratulation to Their Majesties on their accession.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM EAST ASIA.

Hongkong, August 15.

The Hongkong merchants are disposed to agree with those at Shanghai who criticise the Mackay treaty, feeling despondent regarding the terms as to the real fulfilment of the promise to abolish likin.

Serious floods are reported from the Province of Kuangsi, thousands of people being drowned.

August 17.

At to-day's meeting of the shareholders of the Hongkong and Shanghai Banking Corporation, one hundred thousand Dollars were voted to the former Chief Manager of the Bank, Sir Thomas Jackson, and it was resolved to erect his statue in Hongkong.

White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

There has been a large business, buyers entering the market freely for all descriptions, and the week closes strong at quotations. The full rates of exchange demanded by bankers for private paper cause the silk to lay down at high prices in consuming markets, but this does not apparently deter buyers from operating on a large scale. Arrivals continue good and the stock is kept within reasonable bounds.

QUOTATIONS.

Filatures—Extra Best, Coarse	Y. 1,050 to 1,060
Filatures—Extra, Fine	1,030 to 1,040
Filatures—Extra, Coarse	1,000 to 1,010

Kakedas—No. 2	875 to 880
Kakedas—No. 2½	840 to 845

WASTE SILK.

Buyers have commenced operations in earnest, and a large business has been done at gradually advancing rates. We seem at present to be somewhat above the prices ruling in consuming markets, but dealers here have every confidence that consumers must come up to our level.

QUOTATIONS.

BOVRIL AT THE FRONT.

Bovril has played such a conspicuous part in South Africa that it forms no inconsiderable feature of the story. The *Lancet* has had frequent references to Bovril in the reports of the officers of the Royal Army Medical Corps. Nearly every newspaper correspondent has had to refer to Bovril to make his story complete. Rudyard Kipling and Baden-Powell have written their Bovril stories. Over 500 British hospitals and similar public institutions use and prescribe Bovril, not beef tea, but Bovril.

The reason is not far to seek. Bovril is a nourisher as well as a stimulant. It contains the albumen and fibrine, the sustaining properties of the beef. It is this fact, together with its absolute purity, that commends Bovril to physicians and scientists, and proves in practice what it demonstrates in analysis.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 6TH, 1902.

BIRTHS.

At No. 5-B, Tsukiji, Tokyo, on 31st August, the wife of Rev. A. W. COOKE, of Wakamatsu, Iwashiro, of a Daughter.

At Amsterdam, on the 31st July, 1902, the wife of MARTIN DAMES-VISSER, of a Daughter.

Of a son, the wife of F. SCHROEDER, the editor of the *Eastern World*, Yokohama, Bluff No. 14, on the evening of the 4th inst. The boy has been named GEORGE EDWARD SIDNEY.

SUMMARY OF NEWS.

THERE are now in Tokyo 1,499 foreign residents with 351 families, including 1,194 men and 305 women.

DENGUE fever is rife in Hongkong at present, especially among the Chinese. Plague and cholera are both dying out, however.

ON the night of August 27th fire broke out in a storehouse at the Ikuno Silver Mine and the whole building was destroyed. The loss is estimated at yen 6,000.

IT is reported that an American lady staying at a Nagasaki hotel had stolen from her between the 3rd and 12th inst. a quantity of jewellery. A foreigner is believed to have been the thief.

THE Rt. Rev. Bishop Partridge, of Kyoto, preached an eloquent sermon in Christ Church,

Yokohama, on Sunday after Morning Prayer upon the text, "And there remaineth a rest for the people of God."

A DISPATCH from Taipeh dated August 31st says that a gale of wind and rain swept over that city and the neighbourhood on the night of the 30th, causing inundations. Extensive damages resulted.

MR. RITTER, the Swiss Consul-General at Yokohama, in a report recently made to his Government on silk culture in Japan, registers an opinion that the export of silk from Japan will notably increase in the near future.

H. E. GRAF VON ARCO-VALLEY, German Minister to Japan, went down to Kobe on August 31st to visit the Commander-in-Chief of the German fleet. The Minister left Kobe for Miyajima on the flag-ship on the evening of September 1st.

AUGUST 31st being the birthday of the Queen of Holland, the Dutch residents of Yokohama had a fête in honour of the event. Mr. Sufu, Governor of Kanagawa Prefecture, visited the Netherlands Consulate the same morning to offer congratulations.

THE Japanese Standing Squadron, consisting of the flagship *Hatsuse*, *Asahi*, *Mikasa* and other vessels is now cruising round the coast of Korea. The fleet touched at Fusan on August 27th. Vice-Admiral Hidaka is Commander-in-Chief of the Squadron.

ON September 3rd an accident occurred in the Kanda Coal-mine, Fukuoka Prefecture, and resulted in the death of one coolie and injury to six others. The accident was due to the breaking of a rope fastened to a coal-hutch which was in course of being raised to the surface.

PROFESSOR S. TOMIL, of the Law Collège in the Imperial Tokyo University, has tendered his resignation to the Minister of Education. He was very popular among the faculty and the students of the institution and steps are being taken to persuade him to withdraw his resignation.

SUNDAY, August 31st, being the birthday of the Crown Prince the occasion was duly celebrated at the palace in Shiohara, where His Highness is now staying. The representatives of Ministers of State, Privy Councillors, and other personages in official circles proceeded to Shiohara the previous day to offer congratulations.

HORI MASAJI, of Ishikawa, and Iwamura Seijiro, of Ogi-inachi, Yokohama, were arrested on Aug. 29th by the Isezakicho Police on a charge of theft and sent to the Yokohama Chiho Saibansho for trial. It appears that on July 12th these men stole some silk from a store-house in the compound of the Yokohama Railway Station.

THE Bureau in charge of the forthcoming Fifth Domestic Exhibition is reported to have decided to publish a pamphlet, in English, describing the exhibits which will be distributed to foreign visitors. With this in view, the Authorities have asked experts in various lines of art, industries, etc., to render assistance.

NEWS comes from Korea that a sailing-ship manned by Mr. Nakajima and a few other Japanese residents of Mokpo recently encountered a party of pirates near that port and had all the articles on board plundered. Upon receiving this news, the Japanese warship *Tsukushi* left Fusan for Mokpo on August 31st in search of the thieves.

ABOUT 1 a.m. on September 1st a landslip occurred near the premises of the Yokohama Gas

Bureau in Gochome, Hanazakicho, Yokohama, but nothing serious resulted. About an hour later the precipice again broke away to the extent of about 80 feet, with the result that the house occupied by Mr. Hiraku Seitaro was partially damaged.

THE Earthquake Disaster Prevention Investigation Association, of Tokyo, in its report lately published, announced that with the exception of the recent catastrophe at Tori-shima more than 40,000 people perished and 200,000 houses have either been destroyed or damaged from the effects of volcanic eruptions since the great eruption of Bandai-san, in the north, in 1889. The loss amounted to about one million yen.

A CERTAIN Japanese firm in Kobe is reported to have received intelligence from Seattle on Sept. 1st to the effect that a keen demand has arisen for about 2,000 labourers in that place in connection with the construction of railway and other works. It is believed that the demand arises through the building of a big station at Seattle, which will, it is said, become the principal depot of the various railway companies now running into that place.

IT is reported that Mr. Watanabe Ryusei, Principal of the Tokyo School of Music, Uyenoh Park, will be appointed adviser to Viceroy Yuan, and the post thus vacated will be filled by Mr. Oshima, instructor in the institution. A Tokyo paper further reports that Mr. Tono, school inspector in Nagano Prefecture, has been invited by Viceroy Chang Chi-tung to act as his adviser in the matter of education. These gentlemen will leave shortly for their new posts.

A COMPROMISE has been entered into between the Mitsui family and Mr. Hara Tomitaro, a silk merchant of Yokohama, whereby the latter has agreed to purchase four large filatures at Tomioka, Otsu, Nagoya and Miye, which had hitherto been conducted by the Mitsui family. The property was legally transferred on September 1st. With regard to this, the *Jiji* says that with the money accruing from the transaction the Mitsui family intends to expand certain business now under its care while Mr. Hara's business will be much enlarged.

MR. KANEKO NUIZO, keeper of the Bansei-ro, a house of ill-fame in the Yokohama Yoshiwara, was shot dead on August 27th at the Kusatsu hot springs, Joshu, by a resident of Yokohama named Hatakeyama Togoro. The cause of the tragedy is not known, but it is believed that revenge is at the bottom of the affair. The facts seem to be that for several years the murderer had been employed by Mr. Kaneko but for some reason or other the latter dismissed him. Early this month, Mr. Kaneko, with a Mr. Yamanaka, went to Kusatsu and they were taking a walk in the streets when the former was shot with a pistol by his ex-employee who had gone thither for that purpose.

A KOBE report says that the Nippon Yusen Kaisha steamer *Kamakura Maru*, which arrived in Kobe on Sept. 3rd from London, via Suez and Hongkong, was almost caught in a water-spout about 6 a.m. on the 1st, when off Formosa. Happily the heavy stream of water passed clear of the vessel, but the Captain was obliged to stop the ship's course for a while until the danger passed away. The weather was rough, with a storm of wind and rain, and at one time the vessel was only able to steam a little over eight knots an hour. Among the passengers on board the *Kamakura Maru* was Mr. K. Matsui, First Secretary of the Japanese Legation in London.

THE TORISHIMA DISASTER.

Tuesday, Sept. 2.

The *Hyogo Maru* has returned from her expedition to Torishima. She left Yokohama on the 22nd of August and reached the island on the 24th; remained there until the evening of the 25th, making the round of the various islands in the neighbourhood on her return voyage. The sum of her observations is that not a sign of any living thing is to be found on the island. With the exception of about one-tenth of its area the whole island is devastated—covered with rocks, ashes and lava—and the volcano is still in a state of active eruption. The small section remaining intact is on the western coast, the northern, southern and eastern shores being completely covered with ejectamenta. It was at the little oasis on the west that the party landed. So far as we can gather from their account, what happened resembled the Bandai-san eruption on a larger scale. The whole of the upper part of the mountain—Komachi yama—was torn off by the violence of the disruptive force and hurled down upon the low-lands. It was as if immense flakes had been suddenly stripped from the outer faces of the crater and precipitated through the air, burying everything under a mass of rocks, earth and lava. The expedition was accompanied by Professors Tanakatate and Omori. These gentlemen, accompanied by some students, announced their intention of making the ascent first, and erecting a flag at the top of the mountain should it seem safe for the rest to come up. The mountain they undertook to ascend was not the principal volcano, Komochi-yama, but a secondary peak, called Tsukiyo-yama, from whence a clear view of Komochi-yama would, it was thought, be obtainable. The flag having been duly displayed, the rest of the party undertook the ascent, dividing into two bands. Much difficulty was experienced in effecting a landing, Meiji-ura, the only available approach, being quite unfitted for the purpose. Provision of a canoe had, however, been made at Hachiojima, and by means of this the landing was made. The height to be climbed was not more than 120 or 130 feet, but as it was necessary to creep up almost perpendicular blocks of lava the task proved very arduous, especially as the lava was still hot and the sun beat down with great force. The only traces or suggestions of life were a grass-cutter's sickle and a solitary kite circling overhead. Sounds of thunder were constantly proceeding from the mountain and the crater belched forth vast volumes of smoke. The party then made their way with much difficulty along the shore in a northerly direction. At Hyoriuji they passed a place where a pasture-land had existed. There the carcasses of two oxen were observed. They were torn almost to fragments, the tails alone remaining intact. There too it was found that a new bay had been formed extending about 200 yards into the island and measuring 100 yards across. From the sea at this place a sulphurous spring was bubbling up. It was here that the people of the *Hyogo Maru*, when on her last visit, had thought there might be some possibility of human beings having taken refuge, but one look at the bay with its precipitous lava-strewn sides and the sea boiling fiercely, dispelled all hope. On the 25th the party succeeded in making their way round the whole island. Arriving at the place where formerly had stood the hamlet of Tamaoki, with its hundred and

twenty inhabitants, its school and its hospital, not the smallest trace of all these things was to be seen. Whether the village and its foundations had been hurled bodily into the sea, or whether the whole had been buried deep under an avalanche of rocks, mud and lava, it was impossible to discover. The party which included thirteen relatives of the unfortunate inhabitants of Tamaoki, had come provided with implements for making excavations. But Mr. Ariyoshi, Councillor of the Home Department, the principal official present, pointed out that under the circumstances it seemed hopeless to attempt anything. If, however, the relatives desired that an effort should be made, digging would be undertaken at any desired point. A representative of the relatives, whose horror is described in moving terms by the correspondents that accompanied the expedition, replied that they were grateful for the solicitude shown by the Emperor and the Government. They had hoped to carry back some relic of the lost ones, if only a garment or a lock of hair, but they saw plainly that nothing of the kind was possible. It is now stated that symptoms of the coming disaster were observed as early as last March; such as greatly increased temperature of the hot springs, withering of the leaves on cherry trees and other unusual phenomena. The recounter of these things is a man who claims to have urged the inhabitants to adopt some precautions long before the catastrophe occurred.

Wednesday, Sept. 3.

From pictures taken by the *Jiji Shimpō's* correspondent at the scene of the Torishima disaster, it appears that the upper part of the island's principal mountain, Komachi-yama, was completely destroyed, blown into fragments, by the force of the volcanic explosion. Previously to the disturbance this mountain had appeared as a high peak emerging from a cup-like cavity and forming the central object of a number of smaller eminences. Now the cup-like cavity alone remains, with huge rents in its sides: the central peak seems to have been shattered and scattered over the surrounding district and into the sea.

The scientists who accompanied the expedition have explained the views held by them—or rather by one of them, Professor Omori, for Professor Tanakatate had taken instruments which it was too late to use, and Mr. Inoma's remarks may be summed up in the statement that Komachi-yama is to be regarded as an active volcano in the sense that this is not its first eruption. Professor Omori, however, expressed a definite theory, namely, that the catastrophe had been caused by an explosion of steam in the bowels of the earth. This he deduced from the fact that no lava had been ejected—a piece of unexpected intelligence which indicates how careless were the newspaper correspondents that spoke of climbing over blocks of lava. The matter discharged by the crater had been earth, rocks and gravel only, after the manner of Bandai-san and Azuma-yama. But the Professor pronounces the Torishima catastrophe to be the smallest of the three. It is evident that there was not much to be learned. Indeed the *Jiji Shimpō's* correspondent observes that the attempt to derive any clear conclusions from the professional pronouncements was like trying to catch a cat-fish with the convex surface of a gourd; a conclusion reached by most persons that have studied seismic literature.

CHINESE NEWS.

Saturday, Aug. 30.

The telegraph reports that two more missionaries have been killed. This time the victims are Americans and the place is Hong-chou, a town on the Los River in Hunan, to the south of Chang-sha and Lake Tung-ling. Hunan having been the scene of the last catastrophe, when two British missionaries lost their lives, it may perhaps be inferred that this second assassination is due to the same cause as the first, namely, a panic and false alarms connected with the cholera epidemic. As these reports reach us, we can not but recall the words which Selby puts into the mouth of Wong Chiu-yeung, speaking in 1901:—"In the troubles of the last few months in China, you have slain multitudes who had no probable relation to the instigators of riot and massacre; in not a few cases you have slain those well-disposed to your interests, and willing to defend your lives. Soldiers who do not understand Chinese speech or Chinese ways, have inferred that every man who wears a queue must be a demon, and have dealt with him upon that theory. Never for many years have shooting and decapitation by guess-work been carried out upon such a frightful scale. You call us barbarians because we extort evidence by torture, but you convict by caprice and execute by conjecture. The saying comes to my mind, 'enmity raised in one day can not be dispelled in a thousand.' Our people are rude and look upon all foreigners as of the same stock. It is to be feared that the sons of slaughtered sires, the brothers of sisters dishonoured and then stabbed, and even the generation after that, will repay upon many an innocent and defenceless missionary the wrong done within their families. Files and phalanxes of hospitals and free schools, and munificent famine relief, oft repeated, will be necessary to efface the memories left by this deluge of blood, and this profanation of Chinese houses. Those who have been busy writing anti-Christian pamphlets and placards, and inflaming the spirit of riot and persecution, will be able to allow themselves a little breathing space. Through two or three provinces at least, the unhappy history of the past year will make all Treaty provisions for the toleration of the Christian religion unavailing for some time to come."

Messrs. Wu and Sun, the two students recently deported from Japan, reached Shanghai by the *Ryōjun Maru*. They were met at the bund by a secretary of the Consulate with a file of gendarmes, and were escorted safely to their destination. They are now engaged, it is said, in a translation office kept by a Chinese. The report adds that they are compiling and publishing brochures setting forth the facts of the students' embroglio and attacking the Chinese Representative, Mr. Tsai.

Meanwhile this incident does not appear to be checking the advent of students from China. Twenty-four new students, including two women, arrived on the 29th instant in Tokyo. They are from the provinces of Hunan, Chekiang and Kiangsu.

Monday, Sept. 1.

A telegram to the *Asahi Shimbun* alleges that the Chinese Minister and the Secretary of Legation having sent in their resignations these have been accepted by their Government, and further that Prince Tsai, who arrives in Tokyo to-day, has been charged with the duty of settling the student ques-

tion. But the Minister and the Secretary deny emphatically that they have sent in their resignations—the denial was made to a representative of the *Nippon*—and thus the rumour appears to be baseless.

We observe with some surprise that the *Japan Times* speaks of the two Chinese students lately deported as having been “expelled from this country at the instance of the Chinese Minister.” Our own information does not support that version. The Chinese Minister did not apply for the deportation of the students, nor is it at all likely that he would have made such an application. They were sent away solely at the discretion of the Japanese Government and in the interests of good order. Probably the *Japan Times* intends merely to suggest that the trouble at the Legation was the proximate cause of the deportation, but the language used appears misleading.

News from Peking says that a fresh disturbance has broken out at Chang-tung, some 3 or 4 miles south of Paoting. A battalion of troops and a squadron of cavalry have been sent to the place. The same telegram says that the rebellion at Kichou is spreading, but that the bandits in the north have fled at the approach of Ma's cavalry from Jehu.

The *Fiji Shimpō's* Peking correspondent sends a message to the effect that an Imperial Edict has been published announcing the determination of the Throne to abolish *likin*, which is described as a tax levied originally on account of war necessities and giving rise to all kinds of abuses in collection. The various Viceroys and Governors are therefore directed to compile returns showing the loss of local revenue likely to result from abolishing the impost, so that they may be adequately re-imbursed out of the increased proceeds flowing into the central Treasury as the result of tariff changes.

The same journal has a telegram from Shanghai saying that, in consequence of instructions from Peking, the Chinese commissioners proceeded, on the 29th ultimo, to sign the revised tariff, and that it received the signatures of all the Powers concerned except America, France and Russia. The American Representative is now on leave in Japan, and the French and Russian Representatives have not yet received authority from their Governments to sign.

It is stated that Captain Sato, of the Japanese garrison in Tientsin, is to be employed as adviser to the police in that city.

We read in the *Hochi Shimbun* that the much-talked-of China-Japan Bank is not unlikely to become an accomplished fact. The Government is said to be drafting a bill for presentation to the Diet next session. Twenty million *yen*, according to our contemporary, will be the capital of the Bank, and the Treasury will guarantee interest at the rate of 6 per cent. on the paid-up capital. Such a bank would doubtless absorb all the business done by Japanese merchants in China. To what extent it would attract Chinese clients, we can not express any opinion.

Wednesday, Sept. 3.

Prince Tsai arrived in Yokohama on the 1st instant by the *Empress of Japan*. From Tokyo various officials of the Imperial Household Department and the Chinese Minister went to meet him, and after a brief rest in Yokohama, the party proceeded by the 10.55

a.m. train to the capital, where they were received by Viscount Hanabusa, Vice-Minister of the Household Department, Count Toda, Mr. Oura, Chief of Police, the Governor of Tokyo, and a crowd of Chinese students. His Imperial Highness drove at once to the Seiyō-ken in Ueno Park. On the 2nd instant, the Prince was received in audience by the Emperor and lunched at the Palace.

It is stated that the Chinese students have decided to lay a statement of their grievances before Prince Tsai.

Thursday, Sept. 4.

The telegraph says that there has been an engagement between the insurgents at Kichou in Hunan and two battalions of the Wei troops which were sent against them. The engagement took place on the 24th of August. About 40 of the insurgents were killed or wounded, and the Imperial forces lost an officer and several men. Another cablegram relates that the leader of the insurgents has been captured and executed.

This is unexpected news. The general supposition was that the riots at Kichou and the killing of missionaries were the result solely of rumours circulated in connection with an epidemic of cholera, and that no special anti-foreign significance was to be associated with the untoward incidents. But now we hear of insurgents and a military engagement. It seems that China is becoming more and more unsafe for foreign life and property. Much was expected from the drastic preventive arrangements made at Peking last year in connexion with the Peace Convention but there has been no cessation of outrages. Quite the contrary, indeed. These attacks upon foreigners are assuming the character of negro-lynching in the United States, and the Central Government, to complete the analogy, seems just as powerless to deal with them as are the American Authorities to suppress lynching. Happily the Chinese have not yet resorted to the awful cruelty of burning people to death.

The number of Japanese advisers proceeding to China to take up posts in the capital or the provinces is increasing, and, as a matter of course, the men chosen in this country do not meet with universal approval. The *Nippon* is very vehement in its condemnation of a certain Mr. Tono Shujiro, selected by the Principal of the High Normal School, to serve as educational adviser to Viceroy Chang Chih-tung. How much of our contemporary's criticism is based on some personal pique we can not tell, but the fact that such remarks are published ought to incite to the exercise of extreme care all those charged with the responsibility of making selections. There will be failures. That is inevitable. There have been not a few failures among the European and American employees of China and Japan, and there will surely be some among the Japanese. But, on the whole, the European and American record has been excellent, and if Japan can rival it she may congratulate herself. It would be a great pity, however, should she fall below it, for if this attempt on China's part to make a new departure should prove a failure, her outlook will be darker than ever.

We observe that the *Asahi* has a telegram speaking of a project for replacing Liu Kun-yi in the Viceroyalty of Lian-kiang by Yuen Shih-kai, and appointing General Ma to be Viceroy of Chili in the latter's stead. These changes are supposed to be necessitated by

the old age of Viceroy Liu, but it is added that there is very little chance of their being carried out.

Friday, Sept. 5.

There has been an interchange of presents—as a matter of course—between the Emperor of Japan and Prince Tsai. His Majesty accompanied the Grand Collar of the Paulownia with a roll of brocade, and Prince Tsai presented three specimens of Chinese porcelain. We should not be disposed to say that the Emperor's choice of gift was the most appropriate possible, from the point of view of Japan's modern art manufactures, but in Prince Tsai's case there is no room for doubt: China still remains the greatest producer of ceramic wonders in the world.

The movements of His Imperial Highness on the 3rd instant are duly reported by Tokyo journals. We need scarcely say that the Prince lunched in the beautiful park at Koishikawa, having previously inspected the arsenal and that he dined at the Chinese Legation in the evening, though whether the repast was in pure foreign style or in the profusion of mixed meats for which the Chinese Legation has become famous under its present chief, we have no information. The Prince's host at Koishikawa was Prince Komatsu, whose acquaintance His Imperial Highness made in London.

KOREA.

Tokyo journals say that Mr. Kato Masuo's appointment as adviser in Korea is for three years at a salary of 600 *yen* monthly.

The death from phthisis is announced of Mr. Yu Kwi-hwang, formerly minister of foreign affairs in Korea.

Memories of old times are occasionally awakened by rumours of pirates infesting Korean waters. Tokyo journals state that the *Tsukushi* has been ordered to proceed to Sowan-do for the purpose of pursuing these pests.

The *Kokumin Shimbun* and the *Asahi Shimbun* have telegrams from Sōul saying that in response to Korea's application to have special envoys sent to her court on the occasion of celebrating the fortieth anniversary of the Emperor's crowning, Great Britain has decided to send Sir Claude MacDonald and Russia to send Mr. Waeber. Italy and Austria will also send envoys, though the names are not yet mentioned; France and America will not do so, and Japan, Germany and China are said to be still undecided.

A CORRECTION.

We have received from the editor of the *Kōbe Chronicle* a letter calling our attention to the fact that in our issue of August 28th a paragraph from an article in that journal was wrongly quoted, the word “household” being substituted for “leasehold.” The correction is just. We made the mistake, and we express regret for the fact, while, of course, withdrawing any criticism based on the erroneously quoted phrase.

The editor of the *Kōbe Chronicle* sends a covering letter, the insertion of which he demands, as a matter of right. Had he confined his remarks to a simple statement of our misquotation, we should of course publish his letter as readily as we make this acknowledgment. But since he appends certain injurious charges, we decline to give to his communication the hospitality of our columns.

THE POLITICAL CONTROVERSY.

Saturday, Aug. 30.

The *Chino Shimbun* explains that it is an error to say that the men who returned Mr. Kato Takaaki for the Diet are the section of Messrs. Kurume and Tanaka; in other words, the section that broke away recently from the *Seiyu-kai* and temporarily returned to its allegiance, only to kick over the traces again at the election. Mr. Kato, says our contemporary, was returned by the *Kokken-ha* (national strength party), which has no connexion with the *Seiyu-kai* being much closer to the Progressists. If that be so, it simply amounts to this, that Mr. Kato was not willing to enter the Diet under the patronage of Count Itagaki, though he did not object to being the elected candidate of a party which imposed upon him no conditions whatever.

Meanwhile the dispute between the two sections in Tosa—exclusive of the *Kokken-ha*—is said to be growing more intense; that is to say, the dispute between the *Seiyu-kai* partisans and the seceders represented by Messrs. Kusume and Tanaka. There will be some path to reconciliation we imagine.

Monday, Sept. 1.

The Tokyo newspapers continue the discussion of the Kato-Itagaki affair. Count Itagaki has been interviewed by a representative of the *Jiji Shimpō* and has made various statements, repetitions, for the most part, of what he had previously said or written. One thing, however, is now made perfectly clear, though, indeed, it was already fully believed by those acquainted with the parties to the dispute, namely, that Mr. Kato, before the result of the election was known, never hinted, however remotely, that he might agree to serve if elected without conditions of any kind.

We can well understand that where two men of such prominence are concerned, this question affords much interest to the Japanese public. But from the foreign point of view it has no special significance. However carefully we read the various statements and documents, we fail to detect the least deviation on Mr. Kato's part from the line of strict candour and integrity. He was asked to become a candidate, first by Count Itagaki and subsequently by representatives of the political section called the *Kokken-ha*. He refused both in almost the same terms and for the same reason. Count Itagaki accepted the refusal as final; the *Kokken-ha* representatives saw, as they supposed, a possibility of overcoming Mr. Kato's scruples could they reinforce their arguments with the eloquence of an accomplished fact. Therefore they proceeded to elect Mr. Kato, and in the issue Count Itagaki found not only that his own intervention had failed to secure the candidate desired by Tosa, but also that he had been secured by the intervention of others, and those others the representatives of a party in Tosa over whom the Count no longer possesses any control.

We can not discover that there is anything else in the incident. One little point appears for a moment not absolutely satisfactory for Mr. Kato. When he objected that his ignorance of Tosa's parochial affairs might prevent him from discharging the duties of the constituency's parliamentary representative with entire success, and when answered that Tosa made no demands whatsoever of that nature, he is said to have replied that human beings' minds were not cast in that unanimous mould, or words to that effect. Such a formula, says Count Itagaki,

holds good now just as fully as when it was uttered. And so it does, but with the difference that whereas its general value remains unchanged, its application to the particular case in question is materially modified. Public interest can not be roused about such a fine point of ethics. Count Itagaki might judiciously let the matter rest. Mr. Kato wisely refrains from breaking a lance in the controversy and it takes two to make a fight.

Wednesday, Sept. 3.

Count Itagaki has addressed to the politicians of Tosa a very admirable lecture as to the ethics of politics and of representative government. It would be a happy consummation if such principles as the liberal leader enunciates were carried into general practice, and their constant inculcation by men of influence and established reputation is one of the best means of achieving that end. But when passions are running high, as seems to be the case in Tosa at present, the patience to listen to sermons of pretty platitudes is not likely to be found. At such times men want leaders not preachers.

THE ARBITRATION PROTOCOL.

On the 28th instant the Arbitration Protocol is said to have been signed at the Foreign Office. This, of course, was a mere formality. The protocol is understood to have been long ago agreed upon, as explained in these columns, and its signature by the Representatives of Germany, France and England might have taken place much sooner, had there been any occasion for expedition in this particular step. The question to be submitted to the arbitral tribunal is understood to be simply whether the provisions of the revised treaties exempt from taxation the buildings standing upon land held under perpetual lease in the former foreign settlements. No other problems of any kind are to be discussed.

It is further understood, as explained by us some weeks ago, that, pending the decision of the arbitral tribunal, no further levy of the disputed tax will take place. So far as we can gather, the position taken by the Japanese Government in this matter is that circumstances rendered it impossible to refrain from collecting the tax when the question formerly came under discussion. Twenty-five per cent. of the foreign residents had paid; seventy-five per cent. were defaulters. To have deferred any collection from the latter while retaining the money of the former would have been obviously impossible. Therefore the first thing to be done was to place all on the same footing. Thereafter there would be no partiality or injustice in deferring the enforcement of further payments until the result of the arbitration was known.

CHOLERA.

A fatal case of true cholera occurred in the Hongo district of Tokyo on the 31st ultimo, and a case resembling cholera on the 1st instant in Honjo.

It is noticeable that even in districts fully supplied by the Water Works, Japanese labourers drink well water whenever the choice is possible. They brave the risk for the sake of the coolness of the water drawn from the well. There is a superstition in Japan against filling up wells, and probably a great number are still open in compounds where a supply from the Water Works is laid on.

"ODDITIES OF ARGUMENT."

The following letter appears in the columns of a local contemporary:—

Dear Sir,—With amazement I read in *The Japan Daily Mail* of this morning, in an article under the above heading, the following lines:—

"It (*Kobe Chronicle*) thinks that although Viscount Aoki spoke clearly of 'the rights of the householders being carefully defined by the title-deeds,' which do not say a word about houses, he nevertheless intended to include houses when he drafted the article about property held under the leases."

The words "which (title deeds) do not say a word about houses" which I have italicised, be it understood, are the words of the *Japan Mail* not the *Kobe Chronicle*.

Now, Mr. Editor, can you or any of your readers or contemporaries including the *Japan Mail* itself, tell me how it is possible that any man who is so utterly and deplorably ignorant of the subject he is writing about as the above words prove the Editor of the *Japan Mail* to be can have the effrontery and audacity to set himself up as an authority on the Perpetual Lease, House Tax or Treaty Rights question, to act as newspaper champion of the Japanese in the matter and correspondent for *The Times* of London? He stands convicted by his own showing of absolute ignorance of one of the fundamental facts of the case, and as all the badderdash and rubbish he has written and telegraphed all over the world must naturally have been based on a false hypothesis, he stands convicted also of having deliberately disseminated mischievous information calculated both to mislead the British Public and to injure the just cause of Foreigners in Japan.

However, let us hasten to enlighten the gentleman and take him out of his ignorance, or he may do even more mischief than has already been done.

Will he kindly refer to a Yokhama title-deed, and read the last few words therein, viz., "the buildings thereon shall become their (Japanese Government) property," and then say whether the title-deeds say a word about houses or not? If buildings are not houses what are they?

I and, I have no doubt, many other people have long thought that the *Japan Mail* has been very ill-acquainted with the subject it has been writing about, and now my suspicions are confirmed by the paper's own utterances.

Yours faithfully,

"TRUTH."

It seems scarcely necessary to reply to this letter, but on the difficult assumption that the writer is in earnest, we shall say a few words. Concerning the "utter and deplorable ignorance" that "Truth" lays at our door, the fact is that the point which he supposes us to ignore has been discussed several times in these columns, and the strangely far-fetched arguments that some persons have attempted to found on it, have been fully dealt with. "Truth" speaks of doubts which he in common with many people have "long" entertained as to the *Japan Mail's* acquaintance with the subject. He thus inferentially professes to be a reader of our columns, yet, with fine disregard of facts, he quietly dismisses as non-existent the full consideration given by us more than once to the significance of the very words which he now accuses us of never having seen! Such singular methods of controversy seem to pass current with a small section of this community, but in the end they merely injure the cause on behalf of which they are advanced.

As to the words themselves, they occur in the Nagasaki and the Yokohama title deeds, but are absent from the Hyogo and Tokyo deeds. Thus if they constitute "one of the fundamental facts of the case," their absence from the two more recently drafted forms of title deed is an unpleasant fact for "Truth" and his fellow-thinkers. But they do not constitute a fundamental fact. That is just the point. The Nagasaki and Yokohama title deeds provide that in the event of the lessee's failure to pay land-rent and to fulfil certain other conditions, the land leased to him shall revert to the Japanese Government, and any buildings that may

be standing on it shall become the property of the Japanese Government. To claim that the insertion of such a clause constitutes the buildings an object of the lease, is like claiming that if a landlord lets a house and stipulates that, in case of failure to pay rent, the house shall revert to the landlord, any furniture it contains becoming his property, therefore the furniture was leased as well as the house. That is precisely the illustration used by us months ago in discussing this very clause of the existence of which "Truth" declares us to be absolutely ignorant. And we further added that the presence of such a clause constitutes, in our opinion, a strong argument in precisely the opposite sense to that claimed for it by the opponents of the house tax, for if the hypothetical buildings formed part of the leased property, or were held under the lease, no occasion whatever would have arisen for making a special provision about their disposal in the event of reversion of the land to its owner. Indeed, the very wording of the clause is fatal to the interpretation given to it in some quarters, for it declares that in the event of the land reverting to the Government, the buildings thereon shall become the latter's property, which shows that they could not previously have been the Japanese Government's property, and therefore could not have been held under a lease granted by it. All these things were set forth by us months ago, and yet "Truth" professes to think that we are "utterly and deplorably ignorant of the very existence of such a clause."

We treat the point seriously though certainly the tone of "Truth's" letter does not encourage amicable discussion. With regard, finally, to the sentence from one of our recent articles, which "Truth" quotes and which he makes the basis of his attack, we have only to say that his attempt to discredit our argument seems to us an irrelevant quibble. It is impossible for him to have read the article in question without clearly understanding that our reference was solely to the objects conveyed by the lease. The *Kobe Chronicle* had represented Viscount Aoki as speaking of "the rights of the householders being carefully defined by the title deeds." As to that we observed that the title deeds "do not say a word about houses." Now we ask "Truth," in the interests of the signature he adopts, to point out one single word in any of the title deeds about the "rights of the householders." We do not confine him to the Tokyo and Hyogo title-deeds which from first to last make not the slightest reference to houses. We concede the Yokohama and Nagasaki title deeds, and we invite him to quote from them one solitary syllable which detracts from the substantial accuracy of the sentence on the strength of which he politely dubs all our writings "balderdash and rubbish." "Truth" appears to us to belong to that class of persons who if they found an *i* undotted or a *t* uncrossed in a copy of the decalogue, would at once deny the validity of the whole ten commandments. His letter resembles an attempt to blow a trombone note with a fragment of a tin whistle.

THE NIHYAKUTO-KA.

Monday, Sept. 1.

Mr. Wada Hikojiro, Chief of the Weather Bureau of the Department of Agriculture, says that the rice-crop this year will be above the average. The only region where the yield seems likely to be inferior is the Kwanto, and even there a few days longer

of fine weather will make a great change. Assuming the average yield to be 40 million *koku*, Mr. Wada expects a crop of 43 millions.

There is a centre of depression in the neighbourhood of Riukiu. It made its appearance on the 29th ultimo, but it seems likely to pass out to sea without visiting the main island. Thus the promise for the *nihyaku-toka*—the 2nd instant, not the 1st as previously stated by us—is good.

Thursday, Sept. 4.

The expected storm seems to have passed away, and the country is rejoicing in the fact that the critical *nihyakuto-ka* (2nd instant) proved tolerably fine throughout the main island. A large part of Kiushu was visited with rain, and strong winds are reported from various places, but altogether the record is fairly satisfactory.

Reports from the various localities indicate that only in the Kwanto and Hoku-rikudo districts is there likely to be any serious shortage in the rice crop. Other districts report either an average yield, or a yield slightly below the average. Kiushu expects more than an average output and Sendai is not yet able to speak positively. On the whole it is thought that if the weather holds nothing worse, a shortage of 10 per cent. over the whole will be the result.

These reports came from the *Nojishukenba*, that is to say, the agricultural experimental stations which exist at various places throughout the empire under the control of the Department of Agriculture and Commerce. It will be remembered that the experts of that Department have hitherto taken a more favourable view, their estimate being that the crop will come up to the average, if it does not exceed it. Whether they have now changed their opinion we do not know.

It has generally been supposed that when an average rice crop is spoken of, the quantity referred to is from 36 to 37 millions of *koku*. But we observe that Tokyo journals as well as the officials of the Department of Agriculture and Commerce, now mention 40 millions as the average figure. Assuming that estimate, a shortage of 10 per cent. would mean 4 millions of *koku*, or, say, 50 million *yen*.

Formosa seems to have been visited by a severe gale. The Tamsui river is reported to have risen 18 feet, and there is said to have been some loss of life. The northern part of the island was the region affected.

SALARIES OF DIPLOMATIC OFFICIALS.

The *Fiji Shimpō* has a strong article urging the necessity of an increase in the salaries of diplomatic officials. Our contemporary's arguments are pretty well summarized in the following comparative table, which it publishes:—

Place of Service	Salaries paid by England. Yen.	Salaries paid by America. Yen.	Salaries paid by Japan. Yen.
Italy.....	70,000	35,000	17,000
Russia.....	78,000	35,000	22,000
Spain.....	55,000	24,000	17,000
Turkey.....	80,000	20,000	—
America.....	65,000	—	20,000
Austria.....	80,000	24,000	18,000
France.....	90,000	35,000	20,000
Germany.....	80,000	35,000	20,000
Japan.....	40,000	24,000	—
Holland.....	40,000	15,000	14,000
Belgium.....	32,000	—	12,000
China.....	50,000	24,000	12,000
Korea.....	12,000	15,000	9,000
Egypt.....	60,000	—	—
England.....	—	35,000	22,000

"TREATY RIGHTS."

"Treaty Rights" has undertaken to answer the comments we made on his letter to a local contemporary. We quote the portion of his letter which relates to our remarks:—

The *Japan Mail* of the 29th August in a belated and feeble attempt to answer the letters under the above head which appeared in your issues of the 18th and 25th August, after wasting about half a column on ill-chosen irrelevant twaddle, commences with the following statement:—"The treaty says that certain 'property' shall be exempt from further taxes."

Allow me to state that the Treaty says nothing of the kind and does not contain any such words as *shall be exempt from further taxes*. This is misstatement No. 1. Will the *Japan Mail* endeavour to adhere to facts and not resort to the sophistry of inventing clauses for the Treaty? For the benefit of the *Japan Mail* I repeat again what the Treaty actually does say, viz.

"Existing leases in perpetuity shall be confirmed . . . and no conditions whatsoever other than those contained in such existing lease shall be imposed in respect of such property."

The words *no conditions whatever* . . . shall be imposed are very different from the words *shall be exempt from further taxes* and have a very much wider meaning, no matter what the *Japan Mail* may think or say.

Now I come to misstatement No. 2. The *Japan Mail* states that "Treaty Rights" "having set out by repudiating the limitation explicitly formulated in the Treaties . . . goes on to say that the exemptions contained in the title deeds are to be continued in perpetuity to holders of settlement property, &c., &c., &c."

How can claiming the conditions of title deeds of perpetual leases *which have been confirmed by Treaty* be possibly called "repudiating the limitation explicitly formulated in the Treaties? What utter bosh! On the contrary the claim can only be regarded as a correct and scrupulous adherence to the *limitation explicitly formulated in the Treaty*. The *Japan Mail* then quotes the following: "no tax, shall be levied on *renters* in the Foreign quarter for the keeping in thorough repair of Streets, Roads and Jetties and the making of Sewers and Drains," and asks the following questions, *Renters* of what? *Renters* of houses? I reply, *Renters* of *property*, i.e., the land and all that may be affixed thereto; in other words the *owners* or leaseholders whose land, to quote the actual words of the Title Deeds, "shall revert to the Japanese Government and the *buildings* thereon shall become their *property*" in the event of the non-performance of any of the conditions of the Title Deeds. I think I have said enough for the present to show clearly that the *Japan Mail* is utterly ignorant of the whole question. I recommend him to give his pen a rest and study the subject carefully for two or three months and after that he will very likely be capable of taking a more intelligent view of the case. Anyway, he will I trust then realize the necessity and advantage of adhering to facts.

The more this question is discussed the more difficult does it become to believe that there is any genuine desire on the other side to arrive at an understanding. Irrelevant quibbles about phraseology are invariably thrust by our opponents into the forefront of their argument, and before the weary task of clearing away this debris has been accomplished, the whole subject becomes hopelessly confused. "Treaty Rights," who, according to the journal he originally addressed, was to raise the controversy to a higher, purer level, resorts at once to this device of blowing windy verbiage into the eyes of his opponents and his readers alike. He sets out by attempting to convict us of "the sophistry of inventing clauses for the Treaty" because, in briefly summarizing a part of the 18th Article, we said that, according to its provisions "certain property is to be exempt from further taxes." If the years consisted each of a thousand days instead of 365, they would be all too short to deal with such quibbling. Of course the 18th Article does guarantee certain property against the imposition of any taxes other than those mentioned in the leases. That is absolutely true, and that is also the one fact relevant to the particular question we were discussing, namely, the house

tax. In the next place, "Treaty Rights" vehemently scorns our statement that he had "set out by repudiating the limitation explicitly formulated in the Treaties." What else, in the name of the commonest intelligence, had he done? The Treaties contain a provision relating to certain property. "Treaty Rights" declared that the provision must be read as relating to "property owners." In other words, an exemption having reference solely to a *thing*, was amplified by him into an exemption having reference to a *person*. Is not that "repudiating the limitation explicitly formulated in the Treaties"? If it is not, what on earth is it? A most vital repudiation too, for if the exemption be for "property owners" and for property owners alone, then the lessees of land can not claim such exemption in respect of their land since they are not "owners" of it but merely renters. Thus "Treaty Rights," in endeavouring to secure a privilege for house-owners, takes it away from land-lessees. A quaint plight his advocacy would result in for his fellow-residents. Later on he comes down to "renters." Having in one place asserted that the 18th Article of the Treaty refers to "property owners," in another he quotes from the lease itself a clause relating to "renters," and seeks to include these "renters" among previously defined "owners." As to looseness of phraseology, he really "takes the cake." But we asked him "renters of what? Renters of houses?" A most important question, which no one has yet attempted to answer. "Treaty Rights" shirks it like all the rest. "Renters of property," is his answer. Does he mean to pretend that the owners of houses in Yokohama settlement, the men who have built the houses with their own money and who can pull them down or sell them at any moment they please without the slightest reference to their *land-lord*, does he mean to allege that these house-owners rent their houses from the Japanese Government which leases the land to them? Is it not possible for any of the controversialists on the other side to meet this plain issue fairly and squarely? "Treaty Rights" is very happy in accusing others of "utter ignorance" and of not "adhering to facts," but if for one little moment, only for one little moment, he himself would endeavour to be commonly careful in his use of the English language, would try to recognise that when a legal document speaks of "property," it does not intend to speak of "property owner," and that an "owner" and a "renter" are two different things, and if he would do his subject the grace of adhering with some semblance of closeness to the issues raised, then perhaps some ray of light might be shed into these cimmerian depths. We had meant to refer to one or two other points in his writings, but even at the risk of being called "belated" we abandon the subject for to-day.

THE MISQUOTATION INCIDENT.

There has been some interest in observing our local contemporaries' method of dealing with the action taken by the editor of the *Kobe Chronicle* in the matter of a misquotation made by this journal. Well aware that, in spite of his minatory "demand" based on "Article XIII. of the Press Law," such a letter as his could not possibly find admission to these columns, the editor of the *Kobe Chronicle* addressed it to our local contemporaries. What is the

letter? It is a deliberate charge of the grossest dishonesty against the editor of the *Japan Mail*. He is accused of "absolute falsification of language," and "changing the meaning of a sentence by substituting one word for another." Moreover, it is plainly suggested that such falsification and alteration are among the *Japan Mail's* habitual methods of controversy, that journal being "quite indifferent in matters of accuracy." It would have been in accordance with the commonest principles of newspaper etiquette that the *Japan Herald* and the *Japan Gazette* should have declined to become media for circulating such a gross accusation against any journalist. They must have known perfectly well that when the editor of the *Kobe Chronicle* spoke of "absolute falsification of language" he was betrayed, by his extraordinary animosity towards the *Japan Mail*, into unreasoning anger, and so allowed himself to prefer a charge which the ordinary decencies of life should have forbidden. Yet both the *Herald* and the *Gazette* open their columns to this wretched slander, and constructively endorse it by the comments they add. It is not merely that the whole hubbub is a ridiculous storm in a tea-pot. We are accustomed to storms in tea-pots in Yokohama and in some other foreign settlements also. It is the obvious display of irrational rancour. Our mistake was of the simplest character. We misread the word "leaseholder" as "householder"—an error easily explicable. Among persons accustomed to observe towards each other the ordinary rules of civilized intercourse, the incident would have been treated for what it obviously was, a pure accident. No reasoning man could imagine that a newspaper editor, in controversy with a contemporary, would deliberately proceed to the fatuous device of "absolutely falsifying" the latter's language. We make allowances for the blind anger of the editor of the *Kobe Chronicle*. The iron of controversial discomfiture has entered so deeply into his soul that rational views can no longer be expected of him where the *Japan Mail* is concerned. Possibly the *Japan Herald* and the *Japan Gazette* also are entitled to some licence for the same reason. But we should have supposed that their consciences were still sufficiently active to restrain them from joining the *Kobe* journal in perverting into "absolute falsification" an obviously accidental error of transcription. The *Japan Gazette* goes farther than the *Japan Herald*. It speaks of our "extraordinary mistake vitiating an entire argument." That is the sort of sweepingly careless generalization to which the *Gazette* accustoms its readers. "An entire argument" forsooth! In an article of 125 lines, just 15 are devoted, *en passant*, to this word "householder." The whole of the remaining portions of the article, the really important parts of its arguments, are absolutely unconnected with the matter about which such a hubbub has been made. And the *Kobe Chronicle* too! One would suppose that it came into court with clean hands. Why, in the very letter which prefers this pretty accusation of "absolute falsification" it resorts to its familiar device of complaining about omissions in quotations, though such omissions are absolutely irrelevant, and in a recent issue it devoted a whole leading article to an attack on the Tokyo correspondent of *The Times*, the basis of attack being a piece of gross blunder on the part of the *Chronicle* itself. We do not allude to these matters by way of extenuating our own misquotation of a

word, or rather part of a word. We accept the whole responsibility for that. But it seems to us that there need not have been added to the silly intemperance of the editor of the *Kobe Chronicle* a display of entire indifference to ordinary journalistic etiquette on part of the *Japan Herald* and the *Japan Gazette*.

RUSSIA IN MANCHURIA.

The *Asahi* contains a telegram to the effect that Russia firmly maintains her resolve to organize and employ a force of Chinese soldiers in Manchuria. The Chinese Government, the telegram adds, is remonstrating against this step, but no definite understanding has yet been arrived at. Perhaps another piece of news yesterday published in Tokyo should be read in the same context. It says that the Chinese Governor-General of Manchuria has telegraphed to Peking that he is unable, with the forces at his disposal, to deal effectually with the bandits in the districts under his jurisdiction, and that the Russian General in spite of all remonstrances, insists on employing Russian troops for the purpose. The Governor-General asks, therefore, that re-inforcements be sent to him speedily.

We really do not see why Russia should not organise a Chinese force in Manchuria. England has a Chinese regiment at Weihai-wei, and what is more, England, with less good taste than practicality, actually used the regiment against its own Government in the Chili campaign. Moreover, the leaders of the Peking expedition in 1860 employed a "bamboo corps" of Chinese and found them very useful. Why should Russia alone be debarred from adopting that course? It may be very convenient and economical for her to form a regiment, or even three or four regiments, of Chinese who will act as railway guards, thus relieving her own troops of a troublesome function and also reducing to a minimum their appearance in Manchuria. Such a procedure might be at once financially advantageous and internationally wise. It is not easy for persons endowed with any sense of justice to perceive why a step which is legitimate for one Power should be illegitimate for another under precisely similar circumstances.

THE RELIGIOUS TROUBLE.

Monday, Sept. 2.

Count Otani's son declines to step into his father's shoes. The committee of the Aizan-ha who came to Tokyo some days ago hoping to effect the retirement of the present head of the Sect, have returned without accomplishing anything. Meanwhile it is understood that considerable cleansing of the Lord Abbot's house is taking place. Several superfluous *protégés* and certain fair enslavers have been dismissed, and altogether a new leaf is to be turned. These reforms were originally proposed on condition that the Temple's debts should be paid, but they are now being carried out gratis. It has further been decided that nothing shall be said at present about the missing half million *yen*. The money is understood to have been devoted to *undo-hi*. *Undo-hi* is a modern word, a deft form of expression, for it may mean legitimate expenses of promotion and it may mean money spent on bribery and corruption. In this case it is supposed to have been employed for the purpose of blocking the passage of the Religions Bill through the House of Peers. The Higashi Hongwan-ji folks have certain-

ly furnished an incomparable object lesson as to the necessity of that Bill, for a measure opposed by a sect in their condition, must necessarily be desirable from an ethical point of view. The attempt to induce Count Inouye to give advice as to the financial affairs of the sect has not been abandoned, and is now thought likely to succeed.

Thursday, Sept. 4.

A new element has been imported into the Hongwan-ji complication by the disappearance of Mr. Otani Yeijun, fourth son of Count Otani Koyei, Lord Abbot of the Higashi Hongwan Temple. The youth, who is twenty-two years of age, is said to have given his father some very outspoken advice which enraged the jolly Abbot so much that he abused his offspring in unmeasured terms. The lad left home immediately, and as his family imagined that he had gone to the residence of his uncle, Mr. Otani Koyen, in Tokyo, no special attention was paid to the incident. He has not since been heard of, however, and some uneasiness is now felt.

Meanwhile the affair of the beating of Vicar Atsumi has led to the removal of thirteen priests from their benefices and their deprivation of sacerdotal rank, while three others have lost their offices of committee-men though their temples are still left to them. These sentences are couched in legal phraseology and the articles of the Hongwan-ji under which they are pronounced are duly quoted. But the curious thing is that there has been no regular trial of the incriminated priests. It appears that in cases of special delinquency the constitution of the Shin Sect creates a right to pronounce judgment without the ordinary formality of an investigation in the presence of the accused. Naturally the sixteen priests, several of whom are men of considerable distinction, have refused to abide by this ruling. They have returned the punitory documents to Vicar Atsumi and declared their intention of appealing to the Home Department. It is estimated that the reform party, of which the sixteen priests are prominent members, includes about five hundred men of influence, each of whom can command the allegiance of a hundred families in an emergency, so that the schism in the sect would be a formidable affair if these drastic measures were pressed.

Friday, Sept. 5.

The *Asahi Shimbun* says that Count Inouye has consented to step into the Hongwanji arena and to separate the combatants. If that be true, the complication will have a satisfactory issue. But unless we are greatly mistaken in Count Inouye's character, he will insist upon reforms of such a nature as to severely tax the complaisance of the Sect's leaders. He certainly will not leave the poison of debauchery and corruption to work continuously in the frame of the patient he has taken in hand.

COUNT MATSUKATA.

Monday, Sept. 1.

Somebody having spread a report that Count Matsukata was disgusted with his trans-Asian trip and had declared his wish never to travel again by the Siberian line, the Count has taken the trouble to give a most emphatic contradiction. Speaking to a member of the *Nichi Nichi Shimbun's* staff, he says that nothing could possibly have been more comfortable than the journey or nothing better appointed than the carriages.

In the whole distance of 5,800 miles from Moscow to Port Arthur, the train passed through only two tunnels. The arrangements for sleeping, eating, bathing and taking exercise were of the most complete and luxurious nature. As a matter of fact the actual travelling took only 14 days, one day having been spent at Irkutsk. Thus the rate of travel was 416 miles a day, approximately, or a little over an average of 17 miles an hour. Certainly that is not a bad figure for a journey of 5,800 miles. The civility shown to the whole party in Russia was extraordinary, but it was almost surpassed by the attention they received on their journey. He speaks enthusiastically of the agricultural richness of the regions traversed. Farming is conducted on a grand scale and the crops of every kind looked most flourishing.

Friday, Sept. 5.

The Russian Minister of Finance appears have made a very interesting remark to Count Matsukata. The latter has communicated it to a representative of the *Chingai Shogyo*. Mr. de Witte said that the Chinese problem constitutes the great question now confronting Russia and Japan. In the south of China, other Powers have secured such a position, industrially and commercially, that no opportunity offers for either the Russians or the Japanese. But it is otherwise in the north. There a great field presents itself. Unfortunately, however, Russia's people seem to lack the faculties essential for manufacturing and trade development. On the other hand, the progress made by Japan in recent years, shows that she is eminently endowed with these faculties. Thus the situation becomes clear. Russia must afford to the Japanese every possible facility for utilizing their special qualities in the development of the regions where she has established herself. Instruction in that sense, Mr. de Witte added, had been issued to the authorities in Port Arthur and Talien. "And indeed," says Count Matsukata, "when I came to Port Arthur I found that the great financier had not been speaking off the book, for our party received a significantly warm welcome."

NOTES ON CURRENT EVENTS.

It is stated that the Cabinet has decided to remove from the budget the scheme for establishing a new university in Sendai. This question came before the Diet last session, and was vigorously taken up by a section of the *Seiyu-kai*, so that, in the end, the Minister of State for Education gave an assurance that the matter would be put through "in the near future." Coats must be cut according to cloth, however. The Treasury is not in a position to sanction the outlay. By way of compensation, a project was suggested in the form of establishing a high industrial school in Sendai and another in Nagoya. But Baron Sone, Minister of Finance, insists that such a project could not be reconciled with the general rule laid down by the Cabinet that no new undertakings must be included in the next Budget. The Baron proving obdurate in that respect, it appears that the "near future" of the Minister of Education must be pushed a little into the background.

A Japanese named Koyanagi Rokunosuke, who ascended Fujiyama on the 28th ultimo, says that on the evening of that day two rocks, about 9 feet in diameter, broke away

from the peak called Asahi-dake and came thundering down towards the eighth station. In the station at the time were Lieutenant Sakamoto and others. Happily the Lieutenant, hearing the noise, leaped out and summoned all the rest. One of the rocks struck the station and reduced it to utter ruins, after which the rocks continued their descent, with ever increasing velocity, towards the seventh station.

Some details of the attack on the stronghold of the insurgents in the south of Formosa are published. Apparently the locality is between Tainan and Kagi. The operations lasted six days, but we can gather nothing from the account except that the troops had to force their way through thick jungle and over precipices. A company worked a path round to the rear of the rebels' position while another company took them in front. The hamlet and stronghold were entirely destroyed, but nothing is said about casualties on the side of the insurgents. The Japanese had one man wounded.

It is reported that several persons have been arrested in Fukuoka on a charge of collusion with contractors to defraud the Wakamatsu Foundry of 8,000 tons of coal. The Foundry's lines are cast in evil places at present.

His Excellency Colonel Buck left Yokohama on Monday by the U.S.S. *New York*, on a trip to Yezo and subsequently to Port Arthur. Mr. J. Ferguson, Second Secretary of the United States Legation, was one of the party.

The *Jiji Shimpō* says that some time ago the Third Bank asked Messrs. Samuel Samuel and Company to undertake the task of selling 3½ million *yen* worth of Osaka harbour-works debentures in London, the programme being that if the sale could not be effected within that time at a minimum figure of 98, Messrs. Samuel Samuel and Company would themselves take over the debentures. According to our contemporary Messrs. Samuel Samuel and Company have now telegraphed that they accept the proposal. These debentures are now selling at 86 *yen* in the home market, so even assuming that 5 per cent. has to be paid to Messrs. Samuel Samuel and Company by way of commission, expenses, &c., there will accrue to the harbour works a sum of 93 *yen*, or 7 *yen* more than the figure obtainable in Japan.

The Treasury announces an issue of ten million *yen* worth of bills, the money to be paid in by the 15th instant, and the bills to be redeemed by the 13th of March, 1903. Tenders are invited, the rate of interest to be determined by the bidding.

The *Yayeyama* was floated off at length on the 1st inst. and is now lying in Nemuro harbour. She had been lying on the rocks for three months, operations to pull her off being interrupted time after time by storms or fogs. It is not often that a ship-of-war is saved after such an experience.

This railway was opened for traffic on the 1st instant from Fujisawa as far as Katase. Most unfortunately an accident occurred on the very same day. Two of the cars came into collision at Kugenuma, owing, it is supposed, to some mistake in time made at the Katase end. Eight persons were injured, five of them being passengers. It is said that the *jinrikisha* men are vastly pleased at this accident. The electric rail-

way threatened to deprive quite a number of them of employment, and they are prepared even to compete with it by undertaking the journey from Fujisawa to Enoshima for a fare of 4 or 5 *sen*.

As previously announced, the Chinese Prince Tsai, who reached Tokyo on the 1st instant, was received in audience by the Emperor on the 2nd instant, and lunched at the Palace. On the 3rd His Majesty sent to the Prince the Grand Collar of the Paulownia. It is not yet stated how long the Prince will remain in Japan, but probably the time will be about a week. His Highness projects a visit to Nikko and subsequently to Osaka.

We may state for the information of readers who have not kept themselves posted in such matters that Prince Tsai is the eldest son of Prince Ching, now so prominent in Chinese politics.

A leading merchant of Athens is said to have addressed to Japan, through the medium of H. E. Mr. Makino, a proposal for direct trade with some responsible Japanese man of business. The Department of Agriculture and Commerce has forwarded the proposal to the Chambers of Commerce in the chief commercial cities.

"SHIPS THAT PASS IN THE NIGHT."

O vanished barks, we pass upon life's sea,
How oft unheeding, give we thee no cheer,
No "Godspeed" as ye sail upon our lee!

O derelicts! that float athwart our side,
Whose storm swept decks, we never search
for sign
Of life, but leave to toss upon the tide.

O stately ships! whose sails are fully set
To catch each breeze, that blows from
Heaven starr'd vault,
From thy deep "hail," we lonely, comfort
get.

Life's voyage is short, and when in Heaven
safe

We give account to Harbour Master great,
Once more, we meet each long passed
vanished waif.

Once more we sigh to think how kindly
"hail"

And steady help, might oft have saved those
wrecks.

Had we cast off, from our dim eyes, Earth's
veil.

Then also once again, we gladly meet
The stately ships that gave us greeting
warm,

Then left us, cheered and helped, by memo-
ries sweet.

M. S. J.

KARUIZAWA NOTES.

The numerous foreign visitors at Karuizawa were favoured with lovely weather during the last week in August, and the Tennis Tournament being over, picnic parties and trips to Asama and the lava beds were all the rage. There has been no heat at Karuizawa this year. The thermometer has seldom risen above 70 in the day and has stood at from 55 to 65 during the night. Of heavy rain there has not been so much as has fallen elsewhere, though of mist and fogs there have been enough to satisfy even Scotsmen. On Saturday Aug. 30th a very successful closing concert was given in the Union Hall. The following was the programme:—

1. Organ Solo.....Mr. Tenney.
2. Vocal Solo.....Mr. Painter.
3. Recitation.....Miss Ross.

4. Vocal Solo.....Mrs. Irwine.
5. Male Quintette.....
Messrs. Pedley, Allchin, Topping, Scudder, Stevens.

Public Welfare Committee's Report.

6. Violin Duet.....Misses Landis.
7. Vocal Solo.....Mrs. Seel.
8. Recitation.....Mr. H. J. Sharp.
9. Vocal Solo.....Mr. Elwin
10. Male Quartette.....Messrs. Allchin, Topping,
Scudder, Pedley.
11. Vocal Solo.....Mrs. Irwine.
12. Mixed Double Quartette.....
Mrs. Topping, Mrs. Jones, Misses Howard & Jackson,
Messrs. Howard, Dovey, Padley, Stevens.

Miss Ross was at her best. Her first performance, which consisted of the recitation of a comic piece on the extreme prudishness of a certain maiden aunt so pleased the audience that they insisted on hearing her again, and she then rendered the following poem by Henry Lawson in the most exquisitely pathetic style. The closing scene was made so life-like that not a few in the audience were unable to refrain from tears.

They stood at the door of the "Inn on the Rise,"
May Carney looked up in the bushranger's eyes,
"O! why did you come? It was mad of you,
Jack,

"You know that the troopers are out on your
track!

A laugh and a shake of his obstinate head,
"I wanted a dance, and I'll chance it"; he said.

Some twenty odd bushmen had come to the
"ball"

And Jack from his youth had been known to
them all.

But bushmen are soft where a woman is fair,
And the love of May Carney protected him there,
And all that short evening, it sounds like
romance,

She danced with a bushranger "taking his
chance."

It was midnight, the dancers stood suddenly still,
For hoofs had been heard on the side of the hill;
Ben Duggan, the drover, along the hill-side
Came riding as only a bushman can ride,
He sprang from his horse, to the shanty he sped,
"The troopers are down in the Gulley!" he said.

Quite close to the homestead the troopers were
seen

"Clear out and ride hard for the Ranges, Jack
Dean";

"Be quick," said May Carney, her hand to
her heart,

"We'll bluff them a while, 'twill give you a
start."

He lingered a moment to kiss her of course,
Then ran to the trees where he'd hobbled his
horse.

She ran to the gate and the troopers were there,
The jingle of hobbles came faint on the air,
Then she gave a loud scream, but 'twas only to
drown

The treacherous clatter of slip-rails let down;
But troopers are sharp, and she saw at a glance
That some one was taking a desperate "chance."

They chased, and they shouted "Surrender,
Jack Dean"

They called him three times "In the name of
the Queen,"

And then from the dark came the clicking of
locks

The crack of the rifle was heard in the rocks,
A shout and a shriek and a rush of pale men,
And there lay the bushranger "chancing" it
then.

The sergeant dismounted and knelt on the sod.
"Your bushranging's over, make peace, Jack,
with God."

But the bushranger laughed; not a word he
replied,

But he turned to the girl who knelt by his side,
And he gazed in her eyes as she lifted his head.
"Just kiss me, my girl, and I'll 'chance it,'" he
said.

Mrs. Irwine's musical talent and exquisitely clear notes are too well-known to readers of this journal to need mention. She was of course encored and her second song under item No. 4 in the programme delighted the audience beyond measure.

The Public Welfare Committee's Report was read by Dr. J. N. Seymour. This Committee, it will be remembered, was appointed by the Karuizawa Foreign Community last year. An account of the meeting of foreign residents in Karuizawa held on August 24th, 1901, appeared in these columns at the time. The following was the gist of Dr. Seymour's report. The first Com-

mittee Meeting was held on August 26th, 1901, at the house of Mr. Hamilton Sharp. Present Messrs. Sharp, Johnstone, Warren, Landis and Seymour. Archdeacon Shaw was elected as Chairman and Dr. Seymour as Secretary. Another meeting was held on August 29th, when Mr. Hamilton Sharp was elected Vice-Chairman, and it was then decided that the Committee should be known by the title of "The Public Welfare Committee." The work accomplished by the Committee during the year may be thus summed up. They have obtained the advice and assistance of Baron Suematsu, who takes a great interest in all Karuizawa affairs and has of course considerable influence in the village as a large property holder. They have put themselves into connection with the head of the Karuizawa Sanitary Association, Mr. Sato Kiyoroku and with the head of the Police. As a result of their representation to various local authorities the number of refuse heaps have been decreased and decaying matter has been regularly removed; the paths have been improved in various ways; jinrikisha fares have been fixed, and a list of fares posted up in the village; various disputes as to rights of way have been settled and a map has been prepared showing what roads and paths are public and what private. Dr. Seymour stated that the Committee did not see their way to acting on a suggestion made at the Public Meeting last year referring to the reduction of taxation. They thought that it would create a bad impression on the local authorities if, instead of calling their attention to the insanitary condition of some parts of the village, they began to grumble about the rate of taxation. The Rev. C. Warren was chosen as Chairman of the Committee in the place of the late Archdeacon Shaw. Three new members of the Committee were elected Messrs. Gubbins and Forrest and the Rev. E. S. Booth, so that the full list now stands thus: Chairman, Rev. C. Warren; Vice-Chairman, Mr. Hamilton Sharp; Secretary, Dr. Seymour; Members of Committee: Mr. J. Johnstone, Rev. J. L. Dearing, Rev. T. M. Macnair, Rev. H. M. Landis, Rev. J. G. Waller, Rev. E. S. Booth and Messrs. Gubbins and Forrest.

The violin duet by the two sweet little daughters of the Rev. H. M. Landis was most creditably performed. Mrs. Seel's Italian song, a sacred piece, was encored. Mr. H. J. Sharp was unable to recite. His place was taken by Mr. Hamilton Sharp, who amused the audience by reciting a short grandiloquent oration contrasting the condition of the rich and the poor. Mr. Elwin, a young Missionary from China, who has the honour of having won the Singles Tennis tournament, has a tenor voice, and his first performance was so much liked that he had to appear again. While item 10 was being performed in a most pleasing style, the performers and the audience were quite upset by the barking of a dog. A negro song was being rendered which had a reference to a negro with his dog and his gun, and just at the close of one of the verses, a dog approached the entrance of the hall and gave a loud "bow-wow-wow," which so disturbed the equilibrium of the performers that they left the platform in convulsions of laughter and it was sometime before they could be induced to finish the song. Mrs. Irwine's last song was "The Death of Nelson." The double quartette consisted of a piece called "Good Night" which was most tastefully done. Great credit is due to the Rev. Geo. Allchin of Osaka for the manner in which he worked up the concert. This gentleman has a very fine tenor voice and was evidently born with music in his soul.

Mr. Hamilton Sharp stated at the meeting that the money collected after the Church Service on Coronation Day was to have been devoted to giving a feast to the Karuizawa School children, but that on consideration the Coronation Committee had decided to spend it in putting up a good strong swing in the school grounds. The iron work for the swing had been procured in Osaka by the Rev. C. Warren and the swing was now in working order. It was to be called "The Coronation Swing."

TREATY DRAFTING.

A CORRESPONDENT, signing himself "Unconvinced," sends the following letter to a local contemporary:—

Dear Sir,—Referring to the article in the *Japan Mail* of the 28th inst. headed "Oddities of Argument," I quite agree with the Editor that the intentions of the negotiators of the New Treaty are entitled to serious consideration when discussing the House Tax question, but I entirely disagree with his assumption that *land only* was in the minds of Mr. Bertie and Mr. Gubbins when they framed the clause in the treaty quoted by the *Mail* at length. On the contrary I think it is self-evident that *land and buildings* were meant. Mr. Bertie is personally unknown to most of us in the Far East, but Mr. Gubbins is well-known to many, and to no one better than the Editor of the *Japan Mail*, as the very last man to allow a clause in the Treaty to stand that might in the slightest degree be called ambiguous or equivocal. I maintain, therefore, that had Mr. Gubbins intended to mean *land only* he would have made use of the word *land* in the celebrated clause. As he did not but instead made use of the word *property*, not only once but twice, this is, I contend, *prima facie* evidence that he intended it to cover more than land, that is to say, *land and buildings*. What Mr. Bertie said "in effect," according to the *Mail's* reading of his words, and what he said *in fact* are very different, and I am of opinion that if it were possible to interrogate Mr. Gubbins as to his intentions, and he felt at liberty to answer the question, it would be in the sense indicated in this letter.

Land and Property, it must be admitted, are by no means synonymous terms, so why should such a stickler for correct phraseology as Mr. Gubbins be recognised to be, go out of his way to create a pitfall and stumbling-block for those who had to interpret his handiwork? That he should have made use of the word *property*, if he meant *land only*, is as incomprehensible to me as it must be to the Editor of the *Japan Mail*, and I would not insult Mr. Gubbins' sense of what is fit and right in the usage of the English language by making such a suggestion. If he did, however, I am reluctantly compelled to echo the words of the *Japan Mail*, and designate him together with Mr. Bertie as "the most careless drafters of a treaty that ever existed."

This is an interesting argument, so moderately and clearly stated that it immediately commands attention. We agree fully with "Unconvinced" that Mr. GUBBINS is one of the most unlikely persons in the world to employ loose and ambiguous language in drafting an international agreement of cardinal importance. But beyond that our views diverge from those of our critic. For in our opinion the now celebrated Article of the treaty presents no ambiguity whatever so long as it is read according to the plain sense of the language. The ambiguity commences only when we seek to read into the clause a significance much wider than its language warrants. It is quite true, as "Unconvinced" says, that "land" and "property" are by no means synonymous terms, but it is equally true that land is property. No term presents itself so readily to an Englishman's mind when he wishes to allude to a landed estate as the term "property." His everyday habit is to speak of so-and-so having a fine "property" in such and such a county, and if his hearers want particulars of the property, the first question they think of asking is "how many acres is it?" There is no occasion to elaborate that point. "Unconvinced" will readily admit that although "property" and land are not necessarily synonymous terms, they are interchangeable terms in ordinary parlance. Now if the drafters of the treaty had used the word "property" alone without any limitation or qualification, we should at once admit,

and have, indeed, often argued, that the term must be understood in its widest possible sense, namely, as covering everything possessed by foreigners within the limits of the settlements. "Property," as defined by the best lexicographers, is "an estate, whether in lands, goods or money," and if the word "property" used by the treaty-drafters had not been limited or qualified by its context, then it certainly would cover all the lands, goods and money to which foreigners in Japan have a legal title. But the term is distinctly limited and qualified by its context. The property is explicitly defined as "the property held under existing leases in perpetuity." By that definition all doubt is dispelled and every suspicion of loose drafting removed. For the leases are land leases and nothing else. The object leased is land not houses. No foreign resident in any of the settlements holds his house or other building under the perpetual lease by which his right to the land is created. Surely "Unconvinced" will agree that such is the case? When first this question presented itself to us, that is to say, long before it had become a matter of dispute or controversy, the eighteenth article of the treaty did not seem to offer the smallest ambiguity. We read it as it is written. What we saw in it was a provision with regard to the property held under the perpetual leases, which property can not, by any stretch of imagination, be construed in a wider sense than that of land. If, on the contrary, we attempt to impart to it a wider sense, two difficulties confront us. The first is to conceive that men like Messrs. BERTIE, GUBBINS and Viscount AOKI, to say nothing of the others associated with them in the work of drafting, would have employed the word "property" in the sense of "land and houses" while, at the same time, adding a limitation which explicitly restricts the meaning to land. The second is to conceive where the limit of the term is to be fixed, if the limit indicated in the Treaty be ignored. Assume the first difficulty overcome, assume that Messrs. GUBBINS, BERTIE and the rest, were guilty of a piece of drafting so loose as to be comparable to mentioning a house only in a lease where the furniture also is intended to be included—assume this, and we are still confronted by the question, what limits are to be set to this new "property" since the treaty limits are valueless? Obviously it then becomes necessary either to read "property" in its generic sense of "lands, goods, money and everything to which one has a legal title," or to assign an arbitrary limitation evolved from the imagination of the readers of the treaty. These are the difficulties which have always confronted us when we attempted to interpret the 18th article as conferring immunity from house tax. "Unconvinced" approaches the question in such frank terms that we venture to ask him two questions. The first is whether he really thinks that houses owned by foreigners in the settlements can be

considered as "held under the perpetual leases." The second is, if the property mentioned in the 18th Article of the treaty is to be interpreted as signifying more than land, is it used in an illimitable sense, and if not unlimited, what are the limitations and from what authority are they derived? The meaning of the Article itself must be the ultimate guide, and will be the arbitral tribunal's guide. But in the meanwhile folks in Japan are surely competent to arrive at an understanding as to the true significance of three lines of nineteenth-century English.

MISSIONARIES FOR MANCHURIA.

WE read in the *Nichi Nichi Shimbun's* Peking correspondence that sixty Russian missionaries have arrived in Peking for the purpose of proceeding to Manchuria. What sort of dimensions this missionary problem is to assume ultimately imagination refuses to conceive. It is not too much to say that Christianity has been forced upon China at the point of the sword. When the Peking Government had been beaten to its knees in 1860, and when the grip of England and France was at its throat, it was required to repeat a formula of tolerance and privileges, dictated by its conqueror, and the concessions thus obtained by force were afterwards extended by fraud. The wretched story need not be repeated here. It is already too familiar. Then began the missionary inundation. Not by units, or by even by tens, but by hundreds, the teachers of Christianity crowded into the country—good men, men of pure lives, men of noble motives, but, too often, men whose zeal greatly outran their discretion. In what light must China have regarded these new-comers? She knew why France had joined hands with England in the operations commencing with the attack on Canton in 1857 and ending with the capture of Peking in 1860: it was because a French missionary had been tortured and killed in Kwangsi. She saw that one of the uses France made of victory was to demand large privileges for Christian propagandists, and to constitute herself their protector; and she saw thereafter that wherever the missionary went, thither followed soon the gunboat. What then is the Christian missionary in her eyes? Is he not the forerunner of aggression and exaction; a vivid and constant evidence of the truth of his great teacher's terrible prediction, "I come not to bring peace upon earth but a sword"? Fate has never been crueller than she is when she throws the shadow of international politics over the lives of these heroically righteous men, to whom danger, suffering and death count for nothing so long as they can bring to their brothers and sisters in distant lands the comfort of the Gospel. But the interference of Governments in their behalf has all been a long series of miserable blundering, the outcome of which is appalling to contemplate. And like the opium disgrace, it has become too large to be corrected. Mag-

nitude excuses everything now-a-days. All sins are permissible provided that they are committed on a big enough scale. So, when Russia is about to withdraw her troops from Manchuria, sixty missionaries come to replace them—the relief of soldiers by preachers. Surely the synchronism is most unfortunate. If it could be read as the substitution of the gospel of peace for the gradus of aggression, China might welcome it. But history is not going to turn right back upon its tracks at this time of day, and China knows it.

BASEBALL.

A very pleasant game was played on Friday afternoon on the Yokohama Cricket-ground between a team composed of officers of the U.S. Flagship *New York* and a nine of the Y. C. & A. C. The sun, though hot, was pleasantly tempered by a fairly stiff breeze, making things very agreeable for the large crowd of spectators, among whom were Admiral Robley Evans and staff, and the senior officers of the flagship. The naval men went to bat first and made two runs in their first innings, to which Yokohama responded with one. The second innings was all in favour of the New Yorkers, the local team going completely to pieces in the field. As a result the visitors piled up five runs, and as Yokohama made nothing, they led at the close of the second innings by 6. But Yokohama's turn was to come. By smart pitching on the part of Dyer, and one or two strokes of luck, they dismissed the *New York* for nothing in the third, and then going in to bat rattled their opponents to such an extent that nine men romped in over the home plate. Needless to say "errors" were as thick as blackberries. The fourth innings saw the visitors again dismissed for a modest nothing, while the home nine rolled up four more runs, making them seven ahead. In the fifth the Naval men made 3, and dismissed the Y.C. and A.C. for nothing. Both scored in the next essay, the *New York* getting three men home, while Yokohama added six more to their already huge total. One of these was a splendid home-run hit by Edwards. The light was fading rapidly when the *New York* went in for the seventh and last innings and though Thorn, who had changed with Dyer, was in excellent shape, he had three runs made off him before the side were dismissed. The game thus finished: "New York" Officers, 17; Y. C. & A. C., 20. The teams were:—

"NEW YORK." Y. C. & A. C.
Midshipman Weaver.....C.....E. W. Kilby.
Lieut. Jolly.....P.....E. I. Dyer.
Lieut. Gheradi (Capt.)...1st B.A. E. McGlew.
Chaplain Chidwick.....2nd B. ... J. W. Thompson.
Ensign Osterhaus3rd B.D. H. Blake.
Ass't Surgeon Assesson...SS.(Capt.) C. H. Thorn.
Midshipman Adams.....L. F.E. B. S. Edwards.
Ensign JohnsonC. F.L. E. McChesney.
Mr. MullenR. F.E. J. Cowan.

RUNS.							
Innings.	1	2	3	4	5	6	7
"New York".....	2	5	0	0	3	3	4=17
Y.C. & A.C.	1	0	9	4	0	6	=20

"New York."—Chidwick, 2; Assesson, 3; Osterhaus, 4; Weaver, 1; Gheradi, 2; Jolly, 1; Adams, 1; Johnson, 2; Mullen, 1.

Y. C. and A. C.—McChesney, 3; Edwards, 2; Blake, 2; Thorn, 1; Thompson, 2; Kilby, 3; McGlew, 3; Dyer, 2; Cowan, 2.

Mr. W. L. Merriman was umpire; Mr. E. Mendelson, scorer.

With well shaded thermometers registering over ninety degrees of heat, and that in a very humid atmosphere, which was not tempered appreciably by the blustery south wind which raged at times, it seemed almost madness to attempt baseball on Saturday afternoon: nevertheless the ball players of the Y.C. and A.C. stuck to their engagement to meet the regular team of the *New York*, and in return for their temerity were defeated by one run to 21. The nine from

the U.S.S. flagship *New York* are prepared at any time to meet professionals, so that it is not surprising that the local men were outclassed: still the margin of defeat is without precedent in Yokohama annals. McChesney was the only one on the home side to score a run and he only managed it through the two men who followed him at the bat placing the ball well into the field. The Yokohama fielding was very poor, Kilby alone showing the visitors that baseball can be played here at times.

The positions and players were as follows:—
U.S.S. "NEW YORK." Y.C. AND A.C.
BruffC.E. W. Kilby.
O'BrienP.E. I. Dyer.
Cogswell1 B.A. E. McGlew.
Snyder2 B.W. L. Merriman.
Hurley (Capt.)S.S.C. H. Thorn (Capt.)
Reichling3 B.D. H. Blake.
VandemashL. F.J. W. Thompson.
SheanC.F.E. B. S. Edwards.
La LondeR.F.L. E. McChesney.

YACHTING.

Two 39-rater yachts started on Saturday, the prizes offered being first and second by the Club, both on club time handicap. *Mary* soon assumed a good lead and when they disappeared was well to windward and ahead of *Maid Marion*. Rounding the Nagahama buoy first she increased her advantage and came in an easy winner. *Maid Marion's* arbitrary allowance was ten minutes but even this left her over six minutes away from the first prize, which with two record points fell to *Mary*, one point and second prize going to the *Maid*. The wind was quite fresh south-easterly in the earlier stage of the race but fell lighter as the afternoon drew on.

Following are the corrected times:—
h.m.s. h.m.s.
Mary..... 4.41.48 | *Maid Marion*..... 4.48.05

The cruising class also raced for two prizes presented by the Club on arbitrary handicap, their course being round the Lightship to the Widow Buoy and back. Six started and for most of them, even under reefs, the weather proved rather trying. *Daimyo* took the lead half way out to the Lightship passing *Asagao* and drawing ahead during the windward work, but about a minute from the Widow Buoy, her gaff parted at the jaws. She and *Asagao* got round practically together, but in the running she fell astern all the time. *Asagao* finished and takes two record points, *Virginia* coming in second on her time allowance and winning second prize, but the remaining record point goes to *Daimyo*. Following are corrected times:—

	h.m.s.	h.m.s.
<i>Daimyo</i>	4.32.35	4.32.35
<i>Molly</i>	4.40.28	4.33.38
<i>Mosquito</i>	4.42.48	4.35.58
<i>Surprise</i>	4.40.31	4.28.41
<i>Asagao</i>	4.11.56	4.15.02
<i>Virginia</i>	4.37.40	4.26.20

The Mosquito Yacht Club boats raced round the Mandarin Mark Course for two prizes, one on Club time and the other on arbitrary handicap, with the result that *Vixen* won the former and *Edna* the latter.

LITERARY GOSSIP.

"Temporal Power," Miss Marie Corelli's new romance, was to be published by Messrs Methuen & Co. on August 28th in a first edition of 120,000 copies.

The flood of books on South Africa has surely subsided. Some 250 books dealing with the war were published in Great Britain up to the end of last year. These include history, reminiscences, politics, poetry, and fiction.

Before her death, Mrs. Alexander Hector—better known to the novel-reading public as Mrs. Alexander—had (says the *Athenaeum*) passed for press the proofs of a new novel entitled "Stronger than Love." The book will be published by Mr. Fisher Unwin.

"Lady Blanche Balfour: A Reminiscence," by the Rev. Dr. James Robertson, of Whittinge-

hame, a little shilling illustrated volume which Messrs. Oliphant, Anderson, & Ferrier publish, has a special interest at this time. Like numberless other men of eminence, Mr. A. J. Balfour owes more to his mother than he will ever be able to reckon up. She was a woman of exceptional beauty and nobility of character, who spent the best that was in her in the training of her children. "I wonder we are only what we are with such a mother!" exclaimed one of her daughters in conversation with the author.

Open confession, so runs an old saying, is good for the soul. We were reminded of the adage in glancing through Mr. Budget Meakin's excellent book, "The Moors," which has just appeared in London. Mr. Meakin quotes the following candid confession of a Moor:—"Do you want to know what our religion is? We purify ourselves with water while we contemplate adultery; we go to the mosque to pray, and as we do so we think how best to cheat our neighbours; we give alms at the door, and go back to our shop to rob; we read our Korans, and go out to commit unmentionable sins; we fast and go on pilgrimages, yet we lie and kill."

The long-expected volume of sonnets from the pen of Dr. Garnett has at last appeared. We quote a specimen of his imaginative verse:—

"BREVITY.

Windows in heaven, lakes in transparency;
Eve's waning hour, of light not all undrest;
The distant river's mimicry of rest;
Gleams for a moment given to the sea;
The passing face that snares thee innocently;
Unbidden tears; proud sob with pride repress;
Unlooked for look of Love; these bring Life zest
Savoury with the salt of brevity.
Briefness of life doth life to Life endear;
One mortal heart for all the Gods hath room;
Restriction moulds and rolls the suns aright;
By circumscription of compacted sphere
Welding to orbs that kindle and illumine,
The beamless dust of spaces infinite."

"A Century of French Romance" is the general title given to an admirable series of translations of famous French novels edited by Mr. Edmund Gosse for Mr. Heinemann. "Notre Dame of Paris" has been translated by Mr. Andrew Lang, who prefaces the volume with an interesting essay on Victor Hugo's novels. The volume contains four coloured plates after water-colour drawings by Louis Edouard Fournier, and numerous portraits of the great French poet-novelist. In the same series Feuillet's "The Romance of a Poor Young Man" is translated by Mr. Henry Harland, and is also profusely illustrated. Mr. Gosse provides each volume with a short biographical note, and for those insufficiently familiar with French to enjoy these masterpieces in the original language, the series will be a welcome one, for as translations go it would be hard to find better.

An old "tar" has recently prepared a handbook of nautical terms, says a contemporary, for the use of persons who intend to follow the sea. In order to correct popular belief our author gravely asserts that the berths on board ship do not necessarily add to the census. The hatchways are not hens' nests. The way of the ship is not the extent of her avoirdupois. The boatswain does not pipe all hands with a meerschauum. The ship does not have a wake over a dead calm. The swell of a ship's side is not caused by dropsy, nor is the taper of a bowsprit a tallow candle. The hold is not the vessel's grip. The trough of the sea is not dug out of the ship's log. The crest of a wave is not an indication of its rank. The buoy is not the captain's son. The men are not beat to quarters with a club. Ships are never boarded at hotels. The bow of a ship is not evidence of politeness. A sailor's stockings are never manufactured from a yarn of his own spinning. The sails of a ship are not made by an auctioneer, nor are the stays constructed by a milliner.

Celtic Ireland has long been articulate in song, and some of these songs are perhaps the saddest ever uttered by the heart of man or woman. Yet we imagine few collections of modern Irish poetry

will appeal more strongly to the reader, by reason of the pathetic circumstance of their making, than will "The Four Winds of Eirinn." The tiny book was written by Mrs. Anna MacManus, who, under the pen-name of "Ethna Carbery," had won a name for her writings in various Irish and American periodicals. Recently she married Mr. Seumas MacManus, another Irish writer of a talent in close sympathy with her, and went to live in Donegal. There she was busy with the preparation of this volume during the few months before death suddenly overtook her. The first poem in the book is one that has a sad correspondence with her own fate:—

"My Heart's Desire, my Treasure, our wooing time was brief,
From the misty dawns of April to the fading of the leaf,

From the first clear cuckoo calling
Till the harvest gold was falling,
And my store of joy was garnered with the binding of the sheaf.

There came another lover, more swift than I, more strong,
He bore away my little love in middle of her song;
Silent, ah me! his wooing,
And silent his pursuing,
Silent he stretched his arms to her who did not tarry long."

One day, while Mark Twain was connected with the publishing house which temporarily ruined him, he went into a book-store in New York, and picking up a volume, asked the price. He then suggested that as a publisher he was entitled to 50 per cent. discount. To this the clerk assented. "As I am an author," proceeded Mark, "it would appear that I am again entitled to 50 per cent. discount." Again the clerk bowed. "And as a personal friend of the proprietor," the humourist modestly continued, "I presume that you will allow me the usual 25 per cent. discount." Once more the salesman managed to produce an impressive bow. "Well," drawled the unblushing speaker, "under these conditions I think I may as well take the book. What's the price?" The clerk calmly took up his pencil and began to figure industriously. Then he announced the result with the greatest obsequiousness, "As near as I can calculate," said he, "we owe you the book and about 55½ cents. Call again."

PACIFIC LEVIATHANS.

As we have already noted, the first of the huge steamships which are going to dominate the Pacific trade for the next few years arrives in Yokohama on Saturday, when the big monster which will run in conjunction with the Northern Pacific fleet, the *Shawmut*, is due to arrive. Exactly a week after, on Saturday, September 13th, the new Pacific Mail liner *Korea* should drop anchor in our harbour. The *Shawmut* is primarily a "freighter;" the *Korea* is a passenger-carrier of the first class, though cargo-carrying will be by no means an unimportant portion of her work. The *San Francisco Call*, writing on August 15th said of her:—"The long heralded *Korea*, the first of the two new liners recently built for the Pacific Mail Company, arrived yesterday, fifty-four days from Newport News. She is said to be the largest steamship built in America and she looks it. Captain Seabury, Commodore captain of the Pacific Mail Company and commander of the new vessel, says she is the finest sea boat he ever handled and as she passed through some terrific weather he ought to know. Her size is something that can be realized best by comparison with familiar landmarks and other well-known vessels. She is 132 feet longer than the *China* and has fifteen feet more of beam. She makes the Pacific Mail dock look like a launch landing and gives to the *America Maru* the appearance of a dainty little steam yacht. Four times around her rail is almost a mile. She is 572.4 feet long, 63 feet beam and 40 feet deep. She draws twenty-seven feet of water and has a displacement of 18,000 tons. She is rated as a twenty-knotter and cost \$2,000,000. Each link of her anchor chain weighs eighty-seven pounds and the total weight of her three chains is eighty tons. She left New-

port News on June 18th. The United States steamship *Indiana* dressed ship as a mark of good-will toward the giant merchantman and the German cruiser *Vineta* dipped colours to the "biggest ship" as she started on her long voyage to the Pacific. She met with very bad weather in the Straits of Magellan and was five days coming through. She stopped at Montevideo and Coronel for coal. The *Korea* is provided with two sets of quadruple expansion engines, capable of developing 19,000 horse-power. She has fourteen boilers and fifty-six furnaces. Telephones connect all parts of the ship and the latest system of telegraphy directs her movements. Captain Seabury, who commands the *Korea*, has been in command of Pacific Mail boats for twenty-four years. Mr. Paul Rossiter has charge of the leviathan's monster engines.

AMERICAN TOPICS.

The *Evangelist* (New York), one of the oldest religious papers of America, has been purchased by Rev. Dr. J. N. Hallock, editor and proprietor of *Christian Work*, and consolidated with the latter paper.

Much interest is being shown in the equipment of the Germanic museum at Harvard University. The Emperor William's gift is expected to be extraordinarily handsome and complete; and, in addition, Austrian, Dutch, Danish, Norwegian, and Swedish scholars are offering their cooperation in the efforts that are being made to make this record of German activities in the arts and sciences the fullest in the world.

Commodore Joseph E. Montgomery, the Confederate naval officer who nearly captured General Grant during the Civil War, died in Chicago on August 4th. Commodore Montgomery was born in Carrollton, Ky., in 1817, and when the war broke out was engaged in river traffic. At the battle of Mobile bay he played a conspicuous part as well as at Fort Pillow and New Orleans, and at Memphis he lost his fleet. He was an intimate friend of Jefferson Davis. He lost his eyesight twelve years ago.

Solo whistling was recently introduced in New York as a feature of church services, and the popular approval accorded the innovation was such that it now promises to be more generally adopted. The success was scored in the Lexington-avenue Baptist Church, and the whistling was done by Miss Louise Traux. The announcement of the event resulted in the overtaking of the seating capacity of the church. In sweet round tones brimming with melody, Miss Traux rendered "Traumerei," "The Mocking Bird," and Mendelssohn's "Flower Song."

Suit is to be brought against the Toyo Kisen Kaisha by the United States Government to compel the payment of \$1,000, the fine prescribed by law for the unlawful entry of Chinese into the United States through the culpability of the carrying company. It is charged that through the negligence of the steamship company a Chinese, Dr. Yung Wing, managed to get ashore at San Francisco without examination, and was half way to his home at Hartford, Conn., before the authorities were aware of his arrival. Dr. Yung is a graduate of Yale of the class of 1854, and is probably entitled to enter the country providing his entry is according to regulations. In this case it is alleged that his entry was unlawful.

Reports to the U. S. Bureau of Navigation show that during the past fiscal year shipping commissioners at the seaboard shipped 108,554 men on American vessels. Of this number about 50,000 were Americans, of whom 35,000 were native born and 15,000 naturalised. The nationality of the other sailors shipped was: 16,000 Norwegians, Swedes and Danes, 13,897 British, 5,640 Germans, 2,297 Italians, 576 French and 19,957 of "other nationalities," which includes Spanish, Russians, Portuguese, Austrians and unclassified West Indians. No Chinese were shipped on American vessels in American ports, and only 521 were shipped on American vessels to foreign

ports. Wages disbursed under the shipping commissioners was approximately \$2,500,000. The average monthly wages paid to men of all rating, excluding masters, during the year, was: Passenger steamers, \$36.88; freight steamers, \$42.46; schooners in the foreign trade, \$29.12; schooners in the coasting trade, \$33.63. The average wages for all sailors was \$35.11 a month.

Senator W. P. Frye, of Maine, a member of the Paris peace commission in 1898, to settle the terms of peace between Spain and the United States, and the framer of the Ship Subsidy Bill, has announced his engagement to Miss Helen May.

The city of Altata, Mexico, has been struck by a tidal wave and a great number of the inhabitants have been drowned. Altata is on the Gulf of California, and exposed to the full sweep of any storms raging in the Gulf. The Mexican Government has undertaken relief measures for the afflicted inhabitants.

Lieut. L. J. Van Schaick, of the 27th U.S. Infantry, has been charged by a young Southern lady of good family, with failure to marry her. The complaint has been lodged with the War Department, and has created considerable comment. Lieut. Van Schaick was a gallant officer while in the Philippines, and was recommended for a medal of honour.

There has been another outbreak of bubonic plague in San Francisco, and, as on its first appearance in the city in 1900, great consternation prevails among the inhabitants. The first cases were found in Chinatown and that portion of the city is under strict quarantine, and the harbour is also strictly guarded. Up to August 20th there had been six deaths.

Mr. Robert Remington, a prominent New York society and club man, committed suicide at Newport on August 19th. It is believed that the cause which led him to commit the rash act was that he had been jilted by Miss Van Alen, the daughter of Mr. J. J. Van Alen, a New York capitalist, who was, in 1893, appointed by President Cleveland ambassador to Italy, but declined the honour although his nomination was confirmed by the Senate.

Senator Lodge of Massachusetts has again expressed his confidence in the ability of the Republican party to solve the difficult problem of civil government in the Philippine Islands. In a speech he expressed the belief that the voice of the people would be heard in the coming fall elections and that voice would be in favour of continuing the Republican party in power so that it could continue its great work in the Philippines.

His Holiness Pope Leo has finally decided that he will not appoint Monsignor Augusto Guidi, archbishop of Nice, as papal delegate to the Philippines. No reasons are given out at the Vatican for the withdrawing of Monsignor Guidi's name, as his appointment was originally decided upon, but it is believed that an American prelate will be appointed. Such an appointment would be gratifying to American Catholics and to the officials of the government.

Senator Mark Hanna, in an interview on August 17th said that the only logical outcome of the trend of affairs in Cuba would be the annexation of the island to the United States. The situation in Cuba was precarious in the extreme, and the commercial interests, not only of the United States, but of other Powers, demanded annexation. When the special session of the Senate convenes in November the question of the annexation of Cuba will no doubt be at once considered.

Right Rev. Thomas O'Gorman, bishop of Sioux Falls, has returned from Rome, where he was present during the negotiations between Judge Taft and the Vatican as to the friars lands. He brings with him an autograph letter from the Holy Father to President Roosevelt. The letter dwelt upon the amicable relations existing between the Roman Catholic Church and the

government of the United States, regarding the position and future of the friars in the Philippines. A mosaic picture sent by the Pope accompanied the letter, which was personally delivered by Bishop O'Gorman to the President. President Roosevelt will acknowledge both letter and picture.

President Roosevelt is reported to have called an extra session of the Senate for November, to consider the Cuban Reciprocity Bill.

A New York telegram of Aug. 13th states that Aimée White, the widow of Private Hays, of the 8th Infantry, met and shot Lieutenant Chaffee on New York Avenue, Washington, for alleged cruelty to her late husband.

The *Union Española*, a Spanish daily published in Havana, has printed a scurrilous article charging Mrs. Squiers, wife of the American Minister to Cuba, with intoxication. A telegram of August 7th stated that Mr. Squiers had complained to the Cuban Government that his wife had been insulted by the police while on a visit to the wife of the French Minister. As a result two policemen were discharged, three suspended and it was believed the incident was closed. Mr. and Mrs. Squiers were in Peking during the siege of the Legations.

Iowa occupies to-day, remarks *Bradstreet's*, a very important position from a political point of view. Two places in the Cabinet are held by its sons. Of these posts one is of the very first rank, the Secretaryship of the Treasury. Another Iowan is the Speaker of the House of Representatives, and still another, after a long career of prominent service, is chairman of the Committee on Appropriations in the Senate. The deliverances of the convention of the administration party in that state upon public questions are therefore of significance. The platform adopted at Des Moines while declaring that the Republican party stands by the policy of protection, yet asserts that it favours "such changes in the tariff from time to time as may become advisable through the progress of our industries and their changing relation to the commerce of the world." Further, the platform indorses the policy of reciprocity as the national complement of protection, and declares in favour of "any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly." These declarations are naturally interpreted as leaning very decidedly towards a more liberal fiscal policy.

Cornell University has just received an exceptionally valuable gift from Abraham Abraham, a Brooklyn, N. Y., merchant, in the form of the Egyptological and Assyriological library of the late Professor August Eisenlohr of Heidelberg University. The library contains more than 1000 volumes, comprising all the important publications on Egyptology down to 1891.

The seven-masted steel schooner *Thomas W. Lawson*, which was launched at Quincy, Mass., last month, is primarily intended for the Atlantic sea-board coal trade, but it is expected that she will be sent finally to the Philippines to engage in the island commerce with San Francisco. Her crew consists of only sixteen men. Fully loaded, she will have a displacement of 10,000 tons.

An Ontario electric power company has obtained a concession from the Queen Victoria's Niagara Falls Commission of the right to develop 400,000 horse-power on the Canadian side of Niagara falls. The Commission will receive from the company \$15,000 per year for the first 10,000 horse-power, \$10,000 for the second 10,000, 75 cents horse-power for all above 20,000, and 50 cents per horse-power for all above 30,000 up to 400,000. The company has deposited a forfeit of \$30,000 to bind the agreement.

Ten million dollars was paid in New York on August 12 to the syndicate that agreed to underwrite \$200,000,000 of stock of the billion-dollar steel trust. This makes a total of \$30,000,000 profits paid up to this time on an outlay of \$25,000,000. The syndicate, which is headed by J. P. Morgan & Co., was called upon to pay

only 12½ per cent of the amount it was pledged to raise and for which it was liable; so its original capital has been returned, together with a profit of 120 per cent., with something like \$40,000,000 still to be distributed.

The directors of Standard Oil Company have declared a dividend of \$5 a share, payable September 15. This is the smallest dividend declared for any quarter since August, 1899, when the same amount was declared. It compares with \$10 a share, declared on May 6 last, and of \$20 a share, declared in February, making total dividends thus far this year of \$35 a share. The dividends of previous years have been: 1901, \$48; 1900, \$48; 1899, \$33; 1898, \$30; 1897, \$33; 1896, \$31; 1891 to 1895, inclusive, \$12 a year.

Jackson county, Mo., is turning most of the revenue derived from liquor licenses to the construction of macadam roads. The *Kansas City World* says some 230 miles of these roads, centring in Kansas City and costing about \$1,250,000, have been built. Two-thirds of the license money is expended for road and bridge construction under the direction of the County Court, and a direct property tax of 15 cents on every \$100 valuation is also levied for the same purpose. Under the present system the county will in time be provided with public highways unequalled in any part of the country.

A new form of litter for carrying the wounded has been devised by Mrs. Chadwick, wife of the captain who commanded the flag-ship *New York* in the Spanish war. It is a simple arrangement of straps and slings supporting a broad canvas seat, and weighs only three and a half pounds. The *New York Sun* says of this invention: "It is no small thing for a woman to have solved the problem which has puzzled army officers and surgeons the world over. The litter for carrying the wounded which Mrs. Chadwick has devised is being praised as the simplest, lightest, and most easily carried device of the kind yet invented."

Mrs. John W. Mackay and her son, Clarence H. Mackay, have been appointed sole executors of the "Bonanza King's" will. It is said on the best authority that they divide equally the whole of the testator's estate, and they have joint power to administer it, neither being able to do anything without the consent of the other. The London mansion on Carlton House Terrace had already been given by Mr. to Mrs. Mackay. So the residence, with its valuable contents, and her jewels—which also are her personal property—escape the English death duties. It will take about a year to prove the will.

The latest addition to Mrs. Roosevelt's out-of-door toilet is a sunbonnet of white muslin and lace, strikingly suggestive in its make-up of the calashes that were so conspicuous a feature of the toilets of the granddames of a century or so since. Being made of the sheerest muslin, it is not warm, as sunbonnets generally are, and being plentifully trimmed with lace, it is dainty, becoming and bewitching. The fashion, inaugurated by the President's wife, is likely to be copied by every woman of means in the country fortunate in the position of a summer home, where, so adorned, she may spend the mornings strolling about. Already the fashion has found an ardent follower in the President's sister, Mrs. Cowles, who, immediately upon her return from London came for a stay of several days at Sagamore Hall.

The Brooklyn bridge is becoming a source of considerable expense to the communities that maintain it. Every few days accounts are published of the discovery of defective parts which must be replaced at considerable cost. It is not probable that this necessity is entirely due to faulty construction, although it may in part be owing to that cause. The chief trouble arises from the perishable nature of the material employed in construction. We are accustomed to thinking that iron and steel are very durable, but when exposed to the elements they deteriorate rapidly. This fact has so impressed itself upon the managers of the greatest railroad corporation

in America, the Pennsylvania Railroad Company, that it is now giving the preference to stone over steel for bridge building, and is erecting some very fine specimens of the former material. A stone bridge costs more to put up, but if the work is well done it will outlast steel and require less for maintenance.

The retirement from public service of a man so eminent in his usefulness as Ambassador White ought not to pass without mention, says *Bradstreet's*. He has decided to retire upon reaching the age of three-score and ten, which will be in November. The public service will be greatly the loser by the retirement of Dr. White. This distinguished scholar and diplomat has had a long acquaintance with public affairs. Nearly a half century ago he was an attaché of the United States legation at St. Petersburg, where many years later he returned as minister. In the intervening time he served as a professor in Michigan, a state legislator in New York, president of Cornell University and minister to Germany, besides acting upon various commissions of a public nature. He closes his public career as ambassador to Germany, a country in which a man of his tendencies and attainments found a special welcome. He has done excellent service in every post in which he has laboured, and he will carry into his retirement the well-earned regard of patriotic and thoughtful citizens.

Final trade returns for the United States fiscal year 1901-02 do not show much variation from the earlier totals. The total trade of the country was in the neighbourhood of \$2,285,000,000, a decline of about \$25,000,000 from the record fiscal year preceding. This was due, says *Bradstreet's*, to the falling-off in exports more than offsetting the gain in imports, the respective loss and gain being \$105,000,000 decrease for exports \$80,000,000 increase in imports. While specially large decreases were shown in exports of agricultural products, it is worth nothing that exports of manufactures, exports of products of the forest and of fisheries also fell off, and the only gain, in fact, in exports was in products of the mines. In imports, on the other hand, nearly all classes showed gains, the only important decrease being in receipts of food and animals. One-half all the gain, however, was in free-of-duty goods intended for use in manufacture, and articles of voluntary use and luxuries gained less than one-sixth. The decrease in iron and steel shipments was about \$19,000,000, or double the entire loss shown in all exports. Perhaps the most encouraging feature was the large gain in cotton-cloth exports, showing that we have gotten back our Chinese trade in that product. Taking the general class of manufactures exported, it may be said that a majority show an increase in value of 1902 compared with 1901, while some of the articles showing a decrease in exports show an increase in quantity, indicating that the reduction is due in some cases to reduced prices and not to reduced exports. In copper, for example, the exportation of ingots, bars, plates, etc., amounted in the fiscal year 1902 to 288,720,655 pounds, against 252,769,328 pounds in the preceding year, an increase of 35,941,329 pounds, against 252,769,328 pounds in the preceding year, an increase of 35,951,329 pounds; while the value was in 1902 \$39,190,619, against \$41,260,376 in 1901, a reduction of \$2,069,757.

The production of sulphur in the United States during 1901 was 7,690 short tons, valued at \$223,430, which was derived from Nevada, Idaho, Utah and Louisiana, in the order of the importance of their output. A comparison with the production during 1900 of 3,525 short tons, valued at \$88,100, shows an increase during 1901 of 4,165 tons, or over 118 per cent. in quantity, and of \$135,330, or over 152 per cent. in value. Nevada and Oregon returned to the list of producing states during 1901. The production of sulphur in the United States during 1901 is the largest annual record ever made. The quantity of sulphur consumed in the United States from foreign and domestic sources in 1901, including the sulphur content of iron pyrite, which is used

in the manufacture of sulphuric acid, amounted to 525,745 short tons. The use of iron pyrite in the manufacture of sulphuric acid has shown a remarkable increase since 1891. The sulphur content of the iron pyrite used in that year was 93,233 long tons. In 1901 the sulphur content of the imported pyrite amounted to 181,668 long tons, and that from the domestic production of pyrite was 105,671 long tons, a total of 287,339 long tons, or more than three times the quantity consumed in 1891. The imports of sulphur into the United States in 1901 was 175,210 long tons, valued at \$3,287,906, as compared with 167,696 long tons, valued at \$2,941,888, in 1900, and with 140,701 long tons, valued at \$2,523,203, in 1899. The estimated total of domestic consumption of sulphur was 469,415 long tons in 1901, as compared with 408,038 long tons in 1900, with 345,904 tons in 1899 and with 211,491 tons in 1891. Spot prices for Sicilian sulphur per long ton, ex steamer at New York, ranged in 1901 from \$20.75 in April to \$23.25 in December. The world's production of sulphur in 1900 was 577,420 metric tons, valued at \$10,698,494, as compared with 586,122 metric tons, valued at \$10,844,688, in 1899.

THIEF ON THE BLUFF.

Householders on Yokohama Bluff had best beware these days, for one of the smartest burglars the Japanese police have recently had to deal with is working his sweet will in their midst, and leaving not a trace behind. The other day he raided the house of Mr. F. Nabholz, No. 4 Bluff, and secured two gold watches. One of these articles had been lately specially sent out from Switzerland and was highly valued by its owner, but we fear he has seen the last of his valued possession. On Monday night Messrs. G. Philip and L. Kennard Davis were visited during their sleep by the enterprising burglar, though both gentlemen were blissfully unconscious of the fact. The midnight visitor is discriminating in his tastes. Despising the various trinkets, watch charms, silver ornaments, etc., of the sleeping bachelors, he contented himself with securing their pocket-books. These he took into the dining-room and after rifling them of all the paper dollars they contained thoughtfully left them behind on one of the chairs. Then he went to the pantry, opened the ice-chest, and finding a roast chicken inside made a meal of it, a meal which he liberally washed down with costly liquor. Refreshed, and well-set-up in worldly wealth, the thief, who had entered by forcing the bathroom window, left the house by the back-door, which he locked after him, taking the key away in his pocket, presumably for subsequent use. It seems that this is his usual procedure: three back-door keys of three different houses on the Bluff are missing after the surreptitious visits of this unwelcome gentleman.

SEALING IN KOREAN WATERS.

The Teikoku Suisan Kaisha (Imperial Marine Products Company) of Tokyo recently submitted a representation to the Department of Agriculture and Commerce urging the necessity for granting further State subsidies to the marine industry, more especially the seal fishery. The *Jiji* says in this connection that since a big colony of seals was discovered in the sea off Gensan, Korea, in the spring of last year by the sailing-ship *Kaio Maru* of the Imperial Marine Products Company, the attention of sealers, both foreign and Japanese, has been turned to the Japan Sea from the Pacific which had hitherto been the rendezvous of all the sealers. In the spring of last year over 600 seals were shot by crews of the *Kaio Maru*. This year as many as 6,044 were captured by the Japanese sealers, while an American establishment sent four schooners which are reported to have captured some 2,566 pelts in the new hunting ground. It is predicted therefore that foreigners will dispatch their vessels in large numbers to the Japan Sea next year.

COMMERCIAL NOTES.

The Enoshima Electric Railway, running from Fujisawa Station to Enoshima, was opened for business on September 1st.

Quite recently a number of influential persons of Niigata, Yamagata and Akita Prefectures held a conference in Yuno-hama, Yamagata, for the purpose of considering a proposal to lay a railway along the coast of the Japan Sea. It was resolved that an association called the Nippon Kaigan Tetsudo Sakusei-kai (Japan Sea Coast Railway Construction Association) should be organized for the purpose, that a railway be constructed from Shibata to Akita via Murakami, Shonai and Honsho, and that a petition be presented to the Two Houses of the Diet in the coming session, urging the necessity of laying such a railway. It was further agreed that the second meeting of the association should take place in Niigata on June 5th next year.

A general meeting of the promoters of the Hunan S.S. Company was held in the hall of the Nippon Yusen Kaisha on August 30th and was attended by Messrs. R. Kondo, M. Kato, K. Otani, Z. Yasuda and others. The report regarding the first payment on the Company's shares was read. It was then resolved that the inauguration of the new concern should take place on September 13th.

The regular general meeting of shareholders of the Tainan Ginko (Formosan Bank) took place in the building of the Bankers' Assembly Hall, Tokyo, on September 1st. Mr. Yagioi, President, occupied the chair. The meeting was attended beside the shareholders by officials of the Finance and the Imperial Household Departments, and others. The accounts for the first half of the current year presented by the Directors and passed at the meeting, were as follows:—

Net profit	86,198
Bought from last account	24,805
Total	111,003
To reserve	23,250
Special reserve.....	5,000
Reserve for equalizat on of dividend	3,000
Bonus	6,000
Dividend (9 per cent. per annum.)	45,000
Carried to next account	28,753

The foreign trade of Japan during the middle of August, namely the 11th to the 20th, shows that exports amounted to over yen 6,910,000 in value and imports to over yen 6,850,000, being an excess of exports by over yen 58,000. If a considerable quantity of raw cotton had not been imported into Kobe during the period the figures for exports would have been much larger. The details will be gathered from the following table:—

	11th to 20th. Yen.	From January. Yen.
Exports	6,910,264	142,698,510
Imports	6,851,843	165,453,880
Balance	58,421	22,755,370
Gold exported	460	307,583
Gold imported	631,224	9,218,776
Balance	630,764	8,911,193
Silver exported	14,737	635,707
Silver imported	9,949	1,713,769
Balance	4,788	1,078,062
Classified according to each port the following figures are obtained:—		
	Exports. Yen.	Imports. Yen.
Yokohama	3,806,599	2,247,956
Kobe	1,771,469	3,282,456
Osaka	534,576	230,891
Nagasaki	152,491	205,805
Hakodate	81,008	530,575
Niigata.....	18,247	—
Moji.....	344,201	296,192
Shimonoseki	10,280	43,134
Kuchinotsu	191,393	14,651
Total	6,910,264	6,851,843

LAW CASE.

RASPE v. NAGASHIMA.

In the Yokohama Chiho Saibansho on Monday morning, before Judge Yasuda, was heard an action brought by Messrs. M. Raspe & Co., No. 199, Yokohama, against Mr. Nagashima Tsukichi, No. 33, Sanchome, Onoye-cho, Yokohama. Plaintiffs were represented by Mr. Ideura and defendant by Mr. Anzai. Plaintiffs claimed from defendant payment of yen 240 with interest at five per cent. from March 1st this year until the execution of judgment, costs of the case to be borne by defendant.

Mr. Anzai said that from a legal point of view the plaintiffs had made a mistake in claiming the above sum, for which a promissory note was exchanged between the parties in connection with certain business. In demanding the sum, the plaintiffs noted down their name as Raspe Shokai, but there was no such firm in Yokohama. In consequence the plaintiffs' claim should be regarded as null and void. On the cheque, the name of a Mr. Miyagawa Kyujiro was described as being the sub-manager of the Specie Bank, but no such person was to be found on the staff of the Bank. Under the circumstances, the plaintiffs' case should be dismissed.

Mr. Ideura insisted that his clients were justified in claiming the sum as the owners of the note.

The Court, after consultation, announced that the case would be adjourned until September 5th.

A Chinaman living at No. 137 Yamashitacho, Yokohama, was arrested by the Kagacho Police on August 28th on a charge of theft and sent to the Yokohama Chiho Saibansho for trial. It is alleged that on the night of May 1st this year a fire occurred in the house occupied by accused with the result that four houses were burned down, the Chinaman stole some clothing and other articles belonging to his neighbours during the confusion. After the affair he was sentenced by the Yokohama Chiho Saibansho to pay a fine of three yen in connection with the outbreak of the fire.

A CASE OF MISTAKEN IDENTITY.

A rather serious mistake in identity appears to have been committed by the Police Authorities in Yokohama on Tuesday. The Public Procurator of the Yokohama Chiho Saibansho instructed the Water Police to arrest an American who was suspected of having stolen some jewellery from a foreign lady in Nagasaki and the Police acting from information received proceeded off to the *Doric*, then preparing to leave harbour on her long Pacific voyage to San Francisco. Here they arrested a gentleman whom they called "Dr. Francis Murphy" and charged him with being the "American citizen" who was wanted for theft. The gentleman denied being any such person, but the police persisted and brought him ashore. The unfortunate man was taken to the police station and the *Doric* sailed away. During the afternoon the arrested man proved that he was of British nationality and he was at once released from custody. He has laid his case before the British Consular authorities and intends taking further steps, we understand.

NEWS OF THE WEEK.

The Norwegian steamer *Trym* has been sold through Messrs. Becker and Co. to the Chiutsu Kisen Kabushiki Kaisha. The vessel changed her flag and ownership on Friday.

During a thunderstorm four persons in Kumamoto are reported to have been fatally struck by lightning on the afternoon of August 26th. Several houses were burned down.

For the first time this year no bad tea has been discovered by the Yokohama Tea Inspection Bureau among teas about to be shipped abroad. In past years the case was quite otherwise. Since the opening of the Bureau in 1888, not a year

has passed without the discovery of bad tea brought from the interior for inspection and in one year the quantity discovered amounted to over 7,000 lbs.

Prince Komatsu visited Prince Tsai on Sept. 2nd. At noon the following day a dinner was given in honour of the Imperial guest by Prince Komatsu in the Korakuyen Garden, Koishikawa.

Twenty blue-jackets belonging to the British cruiser *Argonaut*, now in Yokohama, who overstayed their leave, were arrested by the Kagacho Police, on August 31st and sent back to their ship.

At a dinner in New York recently, Lord Kelvin said New York was the most marvellously lighted city in the world, and must be the only spot on earth Mars sees. Mars is signalling only to New York!

There are now in the Philippines about 900 Japanese, including 590 men and 300 women. Of these, 399, consisting of 211 men and 188 women are new comers who arrived there up to the end of June this year.

The estate of Mr. Robert Arthington, of Leeds, who left £800,000 to missions, has yielded a million sterling. He desired that every tribe of mankind should have faithful copies of the Gospels of St. John and St. Luke, and the Acts of the Apostles.

The silk business transacted in Yokohama during the month of August was as follows:—Raw silk: exported, 7,317 bales; arrivals, 20,334 cases; sold, 14,109 cases; returned, 253 cases. Waste silk: exported, 405 bales; arrivals, 18,608 cases; sold, 3,209 cases; returned 479 cases.

Mr. Reitz, ex-State Secretary of the Transvaal, it is understood, will not return to South Africa, but intends going out to Sumatra to settle down. Dr. Leyds is also said to have some idea of going back to Java, of which he is a native, and in which he has many relatives and friends.

Mr. Andrew Burnett, of Montreal, is on his way to Japan. He comes as Commissioner appointed by the Dominion Government to look into the chances of developing trade between Canada and the Orient. He will be absent from Canada until about the beginning of the year.

On the morning of September 1st Prince Komatsu proceeded to the Palace and had audience of the Emperor. The Prince presented a report of his visits to the Court of St. James and other Courts in Europe. Count Matsukata was similarly received in audience by His Majesty. Subsequently the Prince and the Count were received by the Empress.

The estate of the late Mr. William Richard Sutton, carrier, of Golden-lane, London, which was sworn, on his death in 1900, at £8,673 1s. 2d., "so far as at present can be ascertained," now proves to be worth no less a sum than £2,095,860. The value was resworn in April last at £2,089,795, and again in August, producing the total above stated.

The Standard Life Assurance Company of England has been permitted by the Japanese Authorities to carry on business in Japan. Mr. Edward T. Brown, No. 50, Yokohama, is the local agent of the company. Five other foreign life assurance companies, which have their own agents in Yokohama, are now conducting business in this country under official sanction.

Admiral Evans, the Captain and Officers of the U.S.S. Flagship *New York* were "at home" on Saturday afternoon and it goes without saying that a most pleasant time was spent on the stately vessel. All Yokohama and his wife were present, but the exertions of the naval hosts never seemed to be over-taxed for a moment and the hours flew by as merrily as the proverbial marriage bell.

It is reported from Kobe that early on Saturday morning last no less than five sharks were captured by fishermen off Akashi. Two have

arrived for the Aquarium in the Nanko Temple and were on exhibition on Sunday. They are about seven feet in length. During this season local yachtsmen have seen sharks in the neighbourhood of Kobe, so that it is to be feared there may be others.

Earl Cadogan, who has just resigned the Viceroyalty of Ireland, has declined the offer of a Marquisate which the King was anxious to confer on him.

Mr. F. Wilson, who died of cholera on board the N.Y.K. steamer *Saikyo Maru* at Kobe last week, was the late Manager of the American Club at Manila.

The British Government have decided that the Imperial Exchequer shall defray the expenses incurred in entertaining India's representatives at the Coronation festivities.

Mr. W. E. H. Lecky, the eminent historian, will retire from Parliamentary life in October. He has sat for Dublin University since 1896. Mr. Lecky is 64 years old.

Mr. Thomas Henderson Whitehead, the home papers state, has been appointed joint manager of the Chartered Bank of India, Australia and China, in conjunction with Mr. Caleb Lewis.

Continental doctors are of opinion that the form of paralysis from which Mr. Steyn is suffering is curable, and that the disease is due to privations he has undergone and to overwork.

The *Arbeiter Zeitung* of Vienna declares that the recent assassination of officials in Russia is the work of a vast secret revolutionary society, which embraces the whole of the empire and numbers 12,000 members, who are drawn from every class of society. The society has ample funds and is well organized, and every member of it has sworn to give his life, if required, for the cause.

The Niell-Frawley Company will arrive in Yokohama by the new Pacific Mail liner *Korea*. On the same evening they will give one performance of "Secret Service," landing all the scenery and costumes necessary for the play. The Company is exactly the same as played this drama in the Grand Opera House at San Francisco during the last fortnight of August.

Several days ago a number of officers belonging to the *Admiral Nakhimoff* and another Russian war-vessel, now in Kobe, proceeded to Otsu, a town in Shiga Prefecture, where the Tzar of Russia was assaulted by a police constable about ten years ago while on his way to Tokyo. The party visited a dealer in *tabi* (Japanese stockings) living in Tobutsu-machi and gave him cash presents in recognition of services rendered by him on that occasion.

Notification No. 38 issued by the Communications Department on September 2nd announces the following modification in the first clause of Art. IV. of the foreign press telegraph regulations:—

Messages hitherto written in Japanese to be transmitted between Japan and Shanghai may now be written either in Roman characters or in German. Roman characters may also be used in the case of messages passing between Japan, Peking, Tientsin and Chefoo, instead of Japanese as heretofore.

We have been asked by the Yokohama Water Police to make a correction of our Wednesday's report concerning the case of Dr. Francis Murphy who was taken into custody on Tuesday on a charge of theft and who was released shortly afterwards owing to lack of evidence. The point is that it was not the Water Police that arrested the foreign gentleman on board the *Doric*, by which he was about to leave Yokohama for America, but the Settlement police.

In reply to a question in the House of Commons recently, Mr. Brodrick stated the quantity of jam consumed by troops in the field during the continuance of the war was 34,582,762lb. The average consumption per man was nearly 80lb. over the entire period of the campaign. The

most popular varieties were gooseberry, apricot, and marmalade, with plum jam coming next. Strawberry jam only totals 2,400,000lb., while no other single fruit, except the peach, can claim 200,000lb.

M. J. Batalha de Freitas, Portuguese *Chargé d'Affaires* in Tokyo, who, with his charming wife, has been visiting London, was robbed of jewellery to the value of nearly £1,000, while staying at the Hotel Cecil. The thief, a young scene-painter, was found in their bedroom after lunch by Madame de Freitas, and was arrested as he was running away. The jewellery included a diamond necklace, three diamond rings, a gold buckle, three diamond brooches, a gun-metal watch, diamond sleeve links, a diamond stud, a diamond pin, a watch and chain, and other articles.

Yokohama Yoshiwara was again the scene of a disturbance on the afternoon of September 3rd when Mr. Mizushima Yoshio and several others belonging to the Yokohama Salvation Army visited the quarters. No sooner had the party begun their open-air addresses than stones came hurtling over their heads and a struggle ensued for a while between the Salvationists and employees of the brothels, in the course of which Mr. Ito Tomojiro was struck on the head. Several arrests were made by the police.

A London telegram states that the P. and O. Company is building three cargo steamers of over 10,000 tons each. The new steamers are probably intended for the China trade, which is being rapidly developed. The *Sardinia*, a passenger steamship of 6,700 tons, was recently launched for the same company, and four mail steamers, each of 10,000 tons (*Moldavia*, *Mongolia*, *Marmora*, and *Macedonia*), are in course of construction for the Australian trade. With these additions the gross tonnage of the fleet of the P. and O. Company will be 370,500 tons.

The reclamation work along the foreshore of Honmoku, Yokohama, which is now suspended in consequence of scarcity of funds, will be resumed in the near future. Quite apart from the promoters concerned in the undertaking a capitalist, who is said to be a native of Wakayama Prefecture, has come forward and intends to undertake the work independent of the Yokohama-gumi, and the Otaui-gumi, by which corporations the scheme was originally planned. It is stated that Mr. S. Tezuka, President of the Yokohama Shogyo Ginko, who is a native of Wakayama, has been the means of procuring the intervention of the capitalist.

Under the auspices of the Yokohama Sportsmen's Association (Japanese) a competitive shooting meeting will be held at the Tsurumi Range near Tsurumi Station, on September 21st commencing at 7 a.m. The exercises will be taken part in by sportsmen from various places in the country, who are invited thereto. In a circular distributed by the Association, it is stated that those desirous of participating in the meeting are requested to send application to the Association's office now open in the premises of the Kanamaru Fire-Arms Store in Nichome, Honcho, Yokohama, not later than September 17th and that a fee of three yen is charged per applicant. The number of gunners on the occasion is limited to one hundred in all.

It appears that a split has been created among the chief officials of the Uraga Dock Company. From a paragraph appearing in a Japanese journal we gather that in the spring of this year a dispute arose between the chief officials and a section of shareholders, in the course of which the latter applied to the Yokohama Chiho Saibansho to select inspectors from among the chief officials for the purpose of clearing up a certain affair. As a result, Mr. Seki Kotaro and five others were chosen inspectors, and as investigations progressed it became necessary to consult Messrs. Sakurai Kamezo and Ikedo Shozo, of the Board of Auditors. The latter refused to acquiesce in the proposal and accordingly the inspectors instituted legal proceedings in the Yokohama Chiho Sai-

bansho against the Board, on a charge of having violated the Commercial Law. The case will come up for hearing in the Court on Sept. 17th.

We read in a London paper that the Rev. Sidney Swann, vicar of St. Aidan's, Carlisle, (formerly of Kobe) accomplished the remarkable feat of bicycling from Carlisle to London in 24 hours. The distance is 301 miles. The *Yorkshire Post* states that, starting in bad weather, he was wet through at Penrith, and asking for half a chicken at Preston to carry him through the night, could only get—uncooked sausages. At Coventry, with 91 miles to go, he was 40 minutes behind time. This had become 45 minutes at Towcester, and as he was resuming his journey he was knocked down by a collie dog. In the fall he had his knee cut, and was badly bruised. He limped on, notwithstanding, and at Stoney Stratford he found that he had three hours and twenty-five minutes left to ride 52 miles, and to his joy he succeeded in reaching London by four minutes past two, just 24 hours after he had started from Carlisle.

One of the old customs still generally observed by the Japanese is the "Niju-roku-ya" (twenty-sixth night). By the expression "Niju-roku-ya" is meant that at a certain hour on the night of the 26th of July (old style lunar calendar) the moon rises in three separate forms on the eastern horizon and those who see this phenomenon are blessed beyond compare. Last Saturday, Aug. 30th, being the "Niju-roku-ya" the elevated spots about the town such as Takashima-yama, Ise-yama, etc., were crowded by many citizens, while the pier, the Bund, and the shores of Honmoku were likewise densely packed. In the harbour, a bright spectacle was presented by the appearance of many lighters and boats tastefully decorated with lanterns, which were provided for the amusement of fashionable people. The moon rose shortly before 2 a.m. in its ordinary guise, but the sightseers appeared well satisfied. On the pier an accident happened. A woman named Kudo Kichi of Sanchome, Motomachō, Yokohama, while watching the moon, lost her balance and fell into the water. She was rescued by the Water Police.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In our last Summary we extracted from the *Tetsugaku Zasshi* a short account of Dr. Christlieb's lectures on "The Essentials of Christianity," which were published soon after their delivery and obtained such a large sale that in June last a second edition was issued. The work itself, together with other books published by the Shinrissha, has been kindly forwarded to us by Pfarrer H. Haas and we are therefore in a position to review Dr. Christlieb's able lectures at greater length. Dr. Christlieb, as is no doubt known to many of our readers, laboured in this country as a missionary of the "General Evangelical Protestant Missionary Society" from 1892 to 1899. The lectures were originally delivered in German during the winter months of 1897 and 1898, and interpreted by the Rev. R. Minami. Mr. Minami's Japanese was taken down by a stenographer. The object of the lectures, as stated by Mr. Minami in his preface to the work, was to show that Christianity, notwithstanding all the changes which it has undergone, still retains its fundamental characteristics, and collaterally to furnish an exposition of the tenets of the body of Christians called "Liberals." Mr. Minami asserts that the Christianity of the Twentieth Century will certainly be liberal Christianity. The work covers 421 6in. pages. It is divided into 4 chapters, the headings of which are (1) Christianity is a Religion; (2) Christianity deals with our Relationship to God; (3) Christianity is an Historical Religion; (4) Christianity is an Ethical Religion. Dr. Christlieb informs us in his introductory remarks that in these lectures he states his own personal views only, and that his various assertions are not to be understood as always representing the teaching of the church to which he belongs,

though in the main they do represent the teaching of the missionaries who have been sent to this country by that church and the views of the liberal section of German theologians. The subdivisions of the chapters are very numerous. Without following them all we give a brief outline of the main argument of the book. In Chap. I. the nature of religion is examined, the sundry definitions that have been given of it considered, the psychological use of religion and its necessity are treated of and a short account is given of the various existing religions. At the close of the chapter the peculiar character of Christianity is discussed under the headings: (a) God, (b) Man, (c) God and Man, (d) Man and Man. Chap. II. opens with a discussion of the question of the existence of God and with a critical review of the various proofs it is customary to hear alleged as evidence of that existence. Dr. Christlieb comes to the conclusion which so many other scholars have reached, namely, that God's existence can neither be proved nor disproved. His opinion on this question I here give in his own words, as translated by Mr. Minami, thus:—*Moshi makoto ni Kami ari to seba, kore wo shōko tateru koto ga dekiru ka to iu koto, nawo hiroku iu to, Kami no yūmu (有無) wo shōmei suru koto ga dekiru ka, to iu mondai de aru. Gwanrai yūshin shōko-ron to iu to, nani-bito demo Kami ga aru to shinjī-nakereba naranu yō ni—iwayuru hitsuzen no ri wo motte bemmei suru koto ga dekiru mono da to omou ga, watakushi wa sonna koto wa dekinu to kangayeru. Shikashi mata sore to dōji (同時) ni, Kami wa sonzai shite oranu to iu koto mo, akiraka ni bemmei suru koto wa dekinai to omou (p. 85).* Dr. Christlieb goes on to observe that were the proofs of God's existence incontrovertible among educated men and women there would be no atheists.* The fact of their being such persons shows the inconclusiveness of the proofs of God's existence furnished by theologians and others. But though the certainty of God's existence cannot be established, there are, says Dr. Christlieb, probabilities that favour the idea of his existence. These the Doctor discusses. Next the methods of God's revealing himself to mankind are set forth—Revelation and the Bible's connection therewith. Then follows a statement of the various views held on the nature of God and of His connection with mankind. Chap. III. in dealing with historical Christianity discusses the nature, character and teaching of Christ and the evolution of the system of doctrine known as Christianity. Dr. Christlieb's views on the Divinity of Christ were stated in the last Summary. In Chap. IV. when discussing the ethical character of Christianity Dr. Christlieb devotes a few pages to a comparison of the teaching of Buddhism and Christianity on the subject of ethics and then proceeds to discuss individual and social ethics. In the closing pages of the work Dr. Christlieb urges those who accept the teaching of the Church to confess Christianity openly. (*Kiristokyō wo ka to mitometa mono ga, kyōkai ni zoku suru no wa, issu no gimu de aru.*) Mr. Minami's Japanese is very easy to understand and the arrangement of the numerous subjects discussed seems to us to leave nothing to be desired. The work sells at 50 sen a copy. The first edition appeared on August 1st last year.

The *Jiyū-ha Kiristokyōgi Yōmoku*, compiled by the Rev. R. Aoki, a pastor belonging to the Doitsu Kyōkai, gives an account of the special tenets of the Japanese branch of the General Evangelical Protestant Missionary Society. Among the articles of faith No. 3 declares that Christ's nature is essentially the same with that of other men, but in Article 5 the Confession of Faith declares that Christ came into the world as a messenger of God to reveal Divine mysteries. After having defined religion as a means for bringing the finite soul of man into relation with the infinite Being that exists, this little book goes on to tell us that religion rests for its authority on an ethical basis, and that its aim is to satisfy the

* It would have been better had Dr. Christlieb said agnostics instead of atheists, since most philosophers object to the latter term as illogical on the ground that the non-existence of God is unprovable—(WRITER OF SUMMARY.)

feelings, the reason and the conscience of man. Man's intercourse with God, it asserts, is that of mind with mind carried on in a direct manner without the need of any medium of communication whatever. (*Kami to hito no kwankei wa chokusetsu nari, seishin teki nari, matsuri ya gi-shiki wo yōsezu.*) The Bible, though it contains all the truths of religion, is not free from errors. It is a reproduction of the notions of the age in which the various books were compiled, and it does not vouch for the accuracy of all that is recorded.

The Seikōsha, 23 Kami-tomizaka, Koishikawa, Tōkyō, has issued a little book consisting of some 34 pages entitled *Ibutsuron to Kami no kwanen* (Materialism and Ideas of God), the thoughts contained in which were furnished by the Rev. Hans Haas and put into Japanese by the Rev. R. Aoki. In this book Mr. Haas says that in Germany some fifteen years ago materialism lost its hold on the minds of the majority of thinkers and that now it is only held by medical men, cranky scholars and extreme socialists. The great scientists and the great philosophers have long rejected the theory. This being so, it is surprising that in Japan materialism should be as rife as it is. There is a reason for this. Japanese thought has always been intensely pantheistic. Pantheism and materialism, though apparently very different from each other, both agree in uniting spirit and matter in an inseparable manner. To the pantheist there is no God apart from creation and the materialist knows no spirit apart from matter. Japanese pantheism has helped to strengthen Japanese materialism. Then modern science, by showing that matter is indestructible, that energy is for ever conserved, and by its atom and molecule theories, has done much to strengthen the cause of materialism in this country and to produce the notion among the Japanese that, properly expounded, matter is the chief cause of all existing phenomena. Darwin's treatises on evolution as read by the Japanese have all preached materialism. In opposing materialism the ground that Mr. Haas takes is that the theory is subversive of morality, that it cuts away the very foundation of virtue and renders man the slave of mere physical force.

Dr. Schiller's *Kami no Kwanen to Kinsei Tetsugaku*, published by the Shinrissha, is an attempt to show that modern German philosophers include in their systems explanations of the nature of the Deity that harmonize with their theories respecting nature and its divers operations. According to Dr. Schiller the assumption of the existence of God is necessary to the philosopher, as only on this supposition can he give anything like a satisfactory explanation of actual existences and their origin. But religion is in many respects quite independent of philosophy, continues Dr. Schiller, and philosophy can in no way invalidate its position in the world. The God that exists, according to Dr. Schiller, has both self-consciousness and personality.

* * *

To the *Nipponjin* (No. 167) Mr. Sakaeno Tetsu, a well-known Buddhist writer, contributes an article entitled "The present State of Religion and its Reform," of which the following is the gist: In Japan people generally are not much interested in religion and know little of its real state or of the changes which are taking place in the opinions held by those connected with various religious sects. Both among the Buddhists and Christians there are parties who are quite dissatisfied with traditional teaching. The opinions held by the Buddhist and Christian new schools of thought may be thus briefly stated:—(1) It is maintained that free and thorough inquiry into religious questions should be encouraged, so that in this respect there may be no difference between religion and science and philosophy. (2) It is held that historical research has shown that the Buddhist and Christian sacred writings are not entitled to the worship which they receive. (3) It is contended that the study of comparative religion has made it clear that no one religion has a monopoly of truth, and that it is therefore the duty of the followers of one religion to recognise the merits of other creeds. (4) It is said that religion is only one among many factors in

effecting the various reforms that have taken place in the world. (5) Religion is regarded as existing specially for the good of society, and it is thought that it should deal with all social questions in a practical manner, explaining them in a way that shall be conducive to high class morality. The views held by the orthodox schools, both Buddhist and Christian, in opposition to the above may be thus stated:—(1) Religious belief depends on authority and on dogma, without which it has no solid foundation. (2) The Holy Scriptures are God's revelation and are not to be measured by man's limited intelligence. (3) There is only one true religion. (4) All that is good in civilisation has come from religion. (5) Religion is separate from both morality and social progress, and occupies a rank of its own. The difference in the views of the two parties is radical. One party holds that religion exists for the sake of morality, that even if it be granted that there are supernatural elements in it these elements were imported to it only for the sake of producing a stronger impression on the minds of men and that all references to a future life are only useful as bearing on men's actions in this life; that religion is only valuable as a spring of action, in a word, that religion as a mere object of belief is useless. The other party maintains that religious salvation comes by faith only, and that to produce faith is the main object of all religious teaching whatever, that there is merit in belief, though it may be followed by no actions whatever; that comfort of mind is the thing most desired by human beings, and that this can only be attained by believing in the power of certain agencies to ward off the punishment which offended Deity would otherwise inflict. With one party the supernatural element in religion is pre-eminent; with the other, if allowed at all, it is quite subordinate to other considerations. Granted that peace of mind be the main object to be attained in the view of both schools of thought, that preached by the orthodox is of a negative kind, consisting of the removal of anxiety about future punishment; that preached by the unorthodox is decidedly positive, consisting of a thorough enjoyment of all the many good things which this life of ours when properly regulated places within reach. It is a characteristic of the new school of religious thought that for the most part all the so-called supernatural elements of religion are eliminated and its ethical teaching alone is relied on. The ethical good to be found in religion can be appropriated by all—even the most highly educated. We are not of those who say that religion is only for the recluse or that it is a device for inducing weak-minded men and women to lead lives they would not otherwise lead. We believe that it is something that everybody needs. Religion is nothing more than the entertaining of fixed ideas as to the kind of life it behoves man to live, and the endeavour to live up to those ideas. As a means of deepening our religious feelings we can make use of the teaching of Shaka, Christ and Confucius alike. It is character-forming that is wanted; and whatever tends to help forward that we should welcome.

In No. 168 of the *Nipponjin* there is an article entitled *Meiri* (名利) *no nen wo ronjite, Bushidô no hei ni oyobu*, the object of which is to point out that the Bushidô system of morals is responsible for a serious misconception as to the relative value of reputation and profit. According to that system the former is to be esteemed above all things and the latter is to be despised. Reputation is associated with what is right; gain with what is wrong, say the maxims of the Bushidô. But in reality, observes the writer we are quoting, all that is required in life is that men should act fairly, and if they do this, both reputation and profit are on an equal footing. The idea that to maintain a good reputation and at the same time to enrich oneself is an impossible course to follow prevails throughout this country, and that is the reason we are so poor. The Bushidô, following in the wake of Confucianism, has no doubt taught us much, but it has at the same time led us astray in attaching to posthumous fame undue importance. To represent fame to be invariably attained as the result of rectitude is to

misrepresent facts. The praise that each generation of men bestows on its contemporaries or its predecessors depends on ever varying imperfect standards of conduct, and therefore to represent reputation to be one of the chief things a virtuous man should seek for displays ignorance of the relative value of moral qualities.

* * *

Several small books published by I'Abbe F. Ligneul lie before us. One called *Yotsumeya Jiken to Genkon no Gakusetsu*, covering 21 pages, endeavours to connect the Mombushô Woman's Reader affair with the teaching of Dr. Katô Hiroyuki and Dr. Inoue Tetsujirô. Dr. Katô is not mentioned by name, but it is plain that he is alluded to. The Reader referred to was compiled by Mr. Ochiai Naobumi, who, solely on account of the beauty of the language used, without considering sufficiently that the subject chosen was objectionable, inserted a passage which contained an allusion to a shop established in the Bakufu days for the sale of certain drugs and appliances that were put to an improper use. The book, however, has already been condemned by the Mombushô and in no way represents the opinions of any responsible officers of the Department, or even of the compiler who inadvertently inserted the passage in question. What connection such an affair has with the ethical theories advocated by Doctors Katô and Inoue we fail to see, and hence we think that the title chosen by M. Ligneul is unfortunate and that for controversial purposes a tract of this sort is likely to do little good. To make a casual affair of the kind referred to the basis of an argument condemnatory of a system of morality that has no perceptible connection with that affair seems to us calculated to do much harm to the cause M. Ligneul pleads.

The 公人 *Kôjin no risô* is the title of another little book just issued by the Sansaisha of which M. Ligneul is the author. It furnishes a sketch of what M. Ligneul conceives to be the ideal public man. It dwells on the necessity of the State's employing servants that command the respect of the communities where they serve, points out the evils resulting from bribery and corruption, in a word, furnishes a model of the kind of public man Japan needs at the present time.

Another pamphlet of about 20 pages published by M. Ligneul and Mr. Mayeda Chôta deals with the Histories of foreign countries used in Japanese Middle Schools. The title of the book is *Chûgakkô Kyôkwa Seiyôshi no Gairon*. As might be imagined, it is the misrepresentation of certain events connected with Christianity that M. Ligneul most strongly objects to. The book opens with a quotation from Mr. Yoshioka's *Seiyôshi* (Western History) which describes the rise of Christianity in terms of which M. Ligneul strongly disapproves. The passage quoted becomes the text of a longish sermon on what did actually take place when Christ commenced to teach.

As an all-round controversialist M. Ligneul has few equals in the Christian Church. There are not many objections to Christianity, come from what quarter they may, that he leaves undiscussed.

* * *

In the columns of the *Jiji Shimpô* Dr. Takakusu Junjirô, one of the pupils of the late Professor Max Müller, has published a series of articles on "The interchange of thought between Europe and India" which are of considerable interest. They are too long to be dealt with thoroughly here. We confine ourselves to making extracts from them of passages bearing on religion. Dr. Takakusu commences by giving on account of the learned investigations that have been carried on in Europe of the question of the relation of Indian to European thought, and shows that in view of the assumption that modern European civilisation is the best form of civilisation the world has ever produced, the origin of the ideas which form the chief basis of that civilisation is a matter of no little interest. The following is what he has to say on Buddhism. What is called Northern Buddhism is that form of the religion found in China, Japan, Tibet and Mongolia; Southern Buddhism is that found in Ceylon,

Siam and Burma. In the former case the scriptures are written in Sanskrit; in the latter in Pali. The essential elements of the system of teaching known as *Mahayana* (*Daijô*) come from the Northern form of the creed; those of the *Hinayana* (*Shôjô*) from the Southern. The Southern form is the historical form; the Northern, the philosophical. The territory occupied by the Southern Buddhists does not measure more than one-tenth of the whole area of Buddhism, but in literature the influence of this section of Buddhists has been enormous and most of the translations published in Europe have come from the Southern Buddhists. Though living in a Buddhist country we are dependent on Western scholars for minute knowledge of the creed. This is somewhat of a disgrace to our scholarship. Dr. Takakusu gives a long account of the manner in which Indian thought entered Europe by means of the Greek philosophy, which undoubtedly borrowed largely from it. Among other instances he quotes the case of the Pythagorean doctrine concerning the transmigration of souls, which he says was undoubtedly derived from India, the division of nature into five elements (fire, air, earth, water and space), the principles of geometry, and such practices as the rejection of beans as an article of food. Christianity too, proceeds Dr. Takakusu, was much affected by Gnostic teaching which had its origin in Indian philosophy. The division of man's inner nature into mind, soul and will, together with other theories and ideas, doubtless came from India. Dr. Takakusu goes on to endeavour to show that some Christian stories are drawn from the same sources as those found in a slightly altered form in Indian literature.

* * *

It seems that a certain lawyer called Shindô Kyoshû, unknown to fame, after abusing things in general, has published a small book on Christianity, the title of which, *Oshiroi wo arai otoshitaru Yaso*, is designedly offensive. We have not seen the book, but we find a review of it in the *Nippon* the gist of which we give below:—That the sayings and doings of great men who lived in ancient times have been exaggerated and falsely represented is well known. The author of this work is not a religious convert but a lawyer, and it would seem as though he had chosen Christ as a subject on which to give vent to his spleen. As a literary production the book is very low down. The language is unrefined, the writing is discursive to a degree, the object of the work is to discredit Christianity by representing that its originator was unworthy of the trust reposed in him. The book contains, according to the *Nippon*, a great deal of most objectionable matter by means of which the author aims at creating a prejudice against Christianity. Among some of the astonishing things asserted in this book one represents the Gospel account of the miraculous birth of Christ to have been derived from an account of Shaka's birth current in Judea at the time when the Gospel narrative was first put together.

* * *

The *Tôyô Gakugei Zasshi*, a magazine that of late years has usually been exclusively devoted to the discussion of dry, technical subjects, contains a report of a speech made to students by Baron Kikuchi, the Minister of Education, the title of which is "The decline of Thought is more to be feared than the decline of Morals." Dr. Kikuchi is said to have spoken in the following strain:—The reform of character is comparatively easier than the elevation of thought when it has been thoroughly debased. One cannot read what appears on p. 3 of our daily newspapers without feeling that the state of thought that it represents is very deplorable. Some people say that the various scandals that are recited are designed to encourage virtue and to discourage vice, but they are known to have the opposite effect on the majority of readers. The unscrupulous manner in which men are attacked and the vaguest rumours afloat exaggerated and enlarged upon till the public is induced to believe that some grains of truth at any rate are to be found at the bottom is a disgrace to our civilisation. There seem to be no class of people with such short memories as our

journalists. With purely political ends in view men that they have represented as base at one time are held up as types of the highest nobility at another. . . . As for the love stories that are now published in this country known as *Ren-ai no Shōsetsu*, to me it seems they can do nothing but harm. What I would specially urge on students is the necessity of their paying less attention to the faults and weaknesses of others and more to their own defects. We have a proverb which says *jibun no atama no hai wo oyē* (Chase the flies away from your own head). There is far too great a tendency among students to pen and to utter grand words about the misdeeds of other men while the writers themselves are little better than those they condemn. When the Pharisees of old acted in this manner to a fallen woman, Christ said, "Let him that is without sin among you cast the first stone." Our stone-throwers are usually no less guilty than those whom they attack.

There are in Tōkyō some 600 papers and magazines, says the *Chūō Kōron*, and out of these about 70 are religious organs. In the whole of Japan it is calculated that there are some 200 religious organs in circulation. What are these publications doing to help forward the progress of Japan? asks the *Chūō Kōron*. Very little, we imagine, is the reply given. The article quoted then proceeds as follows:—These religious periodicals may be divided into 4 classes. (1) Those with established principles, which aim at influencing the public in favour of these principles. (2) Those whose object it is to investigate religion seriously and which publish criticisms of all kinds bearing on religion. (3) The organs of special sects and advertising organs. (4) The organs of individuals and those periodicals that have no distinctive characteristics of any kind. The magazines and papers belonging to the first two categories are very few; most of those issued belong to one of the two latter classes. Even those periodicals belonging to the first two classes lack the elements of strength found in foreign journals. As Mr. Ozaki Yukio observed some time ago, in our magazines there is not much matter that will bear translation into a foreign language and insertion in Western magazines. We observed in a friend's house a number of religious magazines that had never been opened, and on inquiry as to why they were not read, received the reply that no busy man could waste his time in reading abusive religious articles. The great defect of our religious literature is its extreme narrow-mindedness. *Semaki Nihon, semaki shūkyō no semaki shūha no mata semaki tōha no semaki kanjō, shōtotsu wo kaita shūkyō zasshi ga, ōi kara muri mo nai.* "This remark is reasonable enough, for our magazines for the most part only record the petty squabbles and failings of the small factions of small sects of a small religion in little Japan." Among existing religious magazines, proceeds the *Chūō Kōron*, those that in our opinion are most worthy of mention are:—(1) The 精神界, *Seishin Kai* (Buddhist). Though we do not agree with its principles, its earnestness and ability we cannot but admire. (2) The 警世, *Keisei* (Christian). This is Mr. Matsumura's organ. It is much read by young men and has considerable influence. (3) *Seisho no Kenkyū* (The Study of the Bible). This is Mr. Uchimura's organ. It aims at publishing the newest criticisms and comments. (4) The *Shin Bukkyō* (New Buddhism). This is the organ of the new school of Buddhists. Much of the matter it publishes is first-class, but unfortunately its pages are covered with material extracted from very inferior organs. (5) The *Rikugō Zasshi*. This is partly devoted to the discussion of religion and partly to the ventilation of various social questions. But its tone is extremely earnest. There are a few other fairly good Buddhist magazines, but of the great majority of Buddhist organs it may be said that controversy and not reform is their chief object. (*Gaishite Bukkyō Zasshi wa kan-kwa wo shu to sezu shite, kenkwa wo shu to suru ga dai-tasu de aru.*)

The *Toki no Koye* (War Cry), the organ of

the Salvation Army, has published tables of statistics showing a decrease in the number of prostitutes, which this paper attributes to the efforts of the Salvation Army and other Christians. The first table gives the total number of prostitutes in Japan between 1897 and 1901 as follows:—1896, 39,079; 1897, 47,055; 1898, 50,553; 1899, 52,274; 1901, 40,195. The campaign against prostitution began in 1900, and it is maintained that as a result of this more than 12,000 prostitutes abandoned the profession. The following table shows the decrease in various cities and prefectures:

City or Prefecture.	No. of Prostitutes in 1900.	No. of Prostitutes in 1901.	Decrease.
Tōkyō	6,871	5,158	1,713
Osaka	6,275	5,253	1,022
Hokkaidō	2,322	1,867	455
Kanagawa Ken.	2,659	1,879	780
Hyōgo Ken.	2,812	1,211	1,601
Miyagi Ken.	2,704	1,820	884
Aichi Ken.	1,904	1,445	459
Toyama Ken.	972	659	323
Shizuoka Ken.	1,000	673	327

According to a table drawn up by "Colonel" Bullard the figures for the Tōkyō-fu stand as follows:—

Places.	No. of Prostitutes in 1899.	No. of Prostitutes in 1900.	No. of Prostitutes in 1901.
Yoshiwara...	2,891	2,419	2,395
Susaki	1,832	1,489	1,300
Shinagawa...	687	528	551
Shinjuku.....	554	430	413
Senji	423	318	240
Itabashi.....	222	193	175
Hachioji.....	161	138	103
Fuchū	55	52	39
Chōfu	57	56	42

Thus it appears that between 1899 and 1901 the decrease in Tōkyō alone was 1,713 or about 25 per cent of the total number of prostitutes. What other causes may have partially contributed to this result we are not told. It is said that the demand for women in factories has made it easier for the prostitute class to find a means of making a living. Some newspapers regard with disfavour the sudden release from all restraint of so many women of loose virtue and assert that if public prostitution is decreasing, private prostitution is more prevalent than ever. The question evidently has many sides. And the subsequent careers of released prostitutes is a subject on which the public naturally desires to receive information.

Under the title of *Kirisutokyō seinen ni Keikoku suru* (Reproof for Christian Young Men) the *Tōkyō Maishū Shinshi* writes as follows:—America is a Christian country, but of late years there has been a great falling off in the number of Divinity students, though statistics show a very large increase of students in secular lines of life. This is regretted in America, as the increase of corruption in all the various walks of life in that country needs the counteracting influence of religion. In Japan for some years all the existing theological training schools have been ill supplied with candidates. The subject has been discussed at various Missionary conferences without effecting any fundamental change in the situation. Various improvements of the method of teaching in Divinity Halls and of the curricula in use have been proposed, but we doubt whether any changes of this kind would attract the kind of young men it is desired to obtain. The trouble is that at the rate of payment prevailing pastors find it extremely hard to maintain the social status to which they are accustomed, and which is maintained by their relatives and friends. Were their faith and devotion strong enough, they would gladly sacrifice their social rank in the cause of Christ. But there are very few men to be found who believe in Christianity to the extent of foregoing all worldly distinctions whatever for its sake. The weakness of the faith of our young Christians, then, may be said to be the chief cause of the present poor supply of Divinity students.*

* We have constantly seen it asserted that a poor Christian in Japan is at a great disadvantage, but this is true only among occidentalised communities. In old Japan among the very best people poverty was at a premium. The ragged scholar or moralist was considered the highest type of humanity. Men

CORRESPONDENCE.

JAPAN'S EDUCATORS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Japan Weekly Mail* of Aug. 23rd appeared an article entitled "Japan's Educators." The writer, recognizing the ability of certain foreign professors and the value to Japanese education afforded by their presence upon the faculties of our Universities, deprecates the fact that under present conditions foreign educators have no worthy and permanent place in the ranks of the country's teachers. " * * * Japan would have been greatly richer could she have retained these men not merely as employees but as life members of her service. * * * it is an unqualified pity that the Japanese have always adopted the policy of using the foreigner merely for such a period as may suffice to equip a native remplaceant."

As one interested in education, may I use your columns and express a few thoughts occasioned by your observations and deepened by the sentiment of that article?

The article quoted was written concerning men of science, and is eminently true; but its statements are no less true when applied to teachers of foreign languages. At present there is great demand for the teaching of English and German in Government schools; and there seems no reason to suppose the demand will be lessened. Yet what is the position accorded the foreign teacher who accepts an appointment in such a school? If I am correctly informed, it is only that of an "employee," having less vital connection with the school than the janitor who cares for its buildings. He is assigned his share of the teaching—usually conversation—and in the conduct of his classes is allowed freedom of method; but upon the faculty he has no place, or voice except advisory, granted by courtesy to some because of their personal influence. Not only is he not the head of the language department, but he has little or no share in the arrangement of courses and no opportunity to co-ordinate the sub-branches in a way to render the work of each and all efficient.

Making no mention of this humiliating position, in which no self-respecting foreign educator worthy of the name will continue except out of missionary zeal for the good of Japanese education, this method is to the last degree unpedagogic and detrimental to that progress in foreign languages which the Government so desires to attain in its public schools. The day of anti-foreign feeling is or should be past, especially in the fraternity of scholars, and to assign the foreign teacher to a subordinate place of no official influence, such as he is expected to accept in no nation of advanced scholarship, while the native teacher who often cannot express himself even fairly in English or German is entrusted with the entire management of the department is nothing short of suicidal to the interests of education.

From the standpoint of humanistic culture, as well as from the viewpoint of practical education, English and German are destined to become for Japan what Greek and Latin have been and are to England and America. If they are worthy of such a place, they are worthy of being taught not only by the best methods but also by the best teachers; and it is only reasonable to affirm that for the practical teaching of the language and literature, the foreigner, be he English or German, should be assigned a position from which his influence can affect not only his own classes but also the entire department, not to dominate but to co-operate, so unifying its branches that translation, reading in the original, composition and conversation may be made mutually helpful, to the end of a well-rounded mastery.

With but few note-worthy exceptions, no foreign teacher worth calling an educator can be long retained in connection with a system which so handicaps his efficiency and limits his power; neither are men of scientific skill likely to be secured for possible permanency so long as the openings afford no more attractive future. Again, no far-reaching advance in English or German education can be effected until a better pedagogy is adopted by the framers of these courses.

It is indeed "a fine thing to walk alone," but it is a greater honour to walk well: and to-day when in all lands the question of pedagogy is receiving renewed scientific attention, it behoves a nation ambitious for its scholarship to look to its own method of education and not voluntarily deprive itself of opportunities that in many cases already lie within reach in the person of young foreign teachers, who if a field for genuine scholarly activity were opened

actually gloried in poverty. This spirit remains in most of the great centres of Japanese life, and in country villages and towns it is as strong as it ever was. It is not hatred of poverty, then, that is the chief cause of the phenomenon to which reference is made in the *Maishū Shinshi's* article quoted above.—(WRITER OF SUMMARY).

before them might be made permanent forces in the ranks of Japan's educators. Whereas at present in nine cases out of ten these teachers, if of the stuff men are made, will at the end of two, three, or five years when they ought to have attained a clear comprehension of the situation and developed an ability to master its needs, return to their native lands or turn to other occupations.

There is a science of language teaching which not every speaker of languages possesses, and the true teacher is an educator. Those who are called from abroad to teach should be true teachers and for such every opportunity for usefulness and continued service should be afforded not for their sake but in the interests of education.

A FRIEND OF EDUCATION.

Karuizawa, August 26th, 1902.

THE CHRISTIAN DAIMYO.

CHAPTER V.

Capture and destruction of the monastery of Hieizan.—Plot of the Shogun Yoshiaki against Nobunaga.—The neighbourhood of Kyoto ravaged.—Fall of Yoshiaki, of Naito and the Miyoshi family.—Danger which Shirai the lord of Sangajima incurred.—Takayama Ukon succeeds Wada's son.—His revolt against Nobunaga.—Dedication of the Church of Kyoto.—The feast of Easter at Takatsuki.

After routing his enemies at Otsu, Nobunaga at first pursued the fugitives to the very foot of Hieizan. He even prepared to attack them in their monastic stronghold, but not feeling himself equal to undertaking a siege, which would perhaps be prolonged, at a time when winter made known its presence by spells of unusual cold, he took the resolution to postpone the chastisement which he held in reserve for them, and to return to Gifu. He was not unaware that, thanks to this respite, a great number of the conspirators would leave Hieizan before his return and thus escape his vengeance. He consoled himself, however, by the thought that the bonzes would not evade the ruin to which he had irrevocably devoted them.

The following year (1571), Nobunaga came as usual to pass a part of the summer at Kyoto. During the time that he was there, there was nothing out of the ordinary in his conduct and the bonzes, always on the look-out, began to feel re-assured. Towards the end of September he again took the road to Gifu accompanied by a strong body of attendants. But hardly had he left Kyoto when his troops, abandoning the high road, threw themselves on the town of Sakamoto, situated at the foot of Hieizan, and forming part of the domain of that powerful monastery. In the twinkling of an eye the town was set on fire at its four corners and thanks to the smoke driven all over the side of the mountain, the troops climbed unperceived the paths that led to the summit and surrounded the monastery. All these movements were executed with such rapidity that the bonzes did not perceive what was going on till they were surrounded on all sides.

This news fell like a thunderbolt on the city of Kyoto. Envoys of the Emperor and the Shogun came to Nobunaga and tried to soothe his anger but in vain. Immense sums which the bonzes offered as ransom had as little effect. Seeing then that their fall was inevitable, the bonzes fulminated from the height of their ramparts all the maledictions of the gods on the impious *samurai* who dared to attack this sacred place. Superstitious as the Japanese are, several already experienced remorse, but Nobunaga reassured them by declaring that the angry gods had commissioned him to punish these libertine bonzes. After a stubborn resistance, three thousand bonzes were put to the sword along with their wives and children. The entire monastery was delivered to the flames (September 29th, 1571). As a reward for the great courage he had shown during this campaign, Akechi Mitsuhide, the favourite vassal of Nobunaga, received Sakamoto with all the lands of the bonzes, that is to say half of the province of Omi.

This success seemed to have inspired Nobunaga with a frenzied desire to make war on the bonzes. Having learned that several of his enemies had been received with open arms at the celebrated monastery of Osaka he sent thither his

troops with orders to make it undergo the same fate as that of Hieizan. And thus for eleven years he waged a desperate war on the bonzes of the different provinces, especially on those of Settsu, Ise and Kaga, places where they enjoyed illimitable power. His antipathy to the bonzes was such that he profited by every occasion to annoy them. In 1580, two rival sects, that of Jodo and that of Hokke, had the imprudence to refer to him a theological difference. He consented to act as their arbiter but on condition that the champions of the sect beaten in the discussion should be put to death. The bonzes thought at first that it was a joke, but this terrible man kept his word. The representatives of the Hokke sect, having hesitated for a moment before answering an objection of their adversaries, were beheaded and all the bonzes of that sect had to leave the province, after having paid a large ransom. From Nobunaga dates the fall of the temporal and even of the spiritual power of the bonzes. They never recovered completely from the terrible blows he dealt them, not even under the Tokugawa, their fervent followers and warm protectors.

While Nobunaga was thus breaking down the power of the bonzes, the Shogun Yoshiaki, tired of the irksome protectorate under which Nobunaga continually kept him, sought by every means in his power to free himself. Already on the death of Wada he had wished to act as master in naming as governor of Kyoto, Ueno Kiyonobu, without even notifying Nobunaga. Observing afterwards that the latter was nowise disposed to renounce the power he had acquired by his military successes, Yoshiaki hatched a vast plot with all the *daimyo* whom he knew to be hostile to Nobunaga. Matsunaga, the murderer of his brother, and Miyoshi Yoshitsugu, were both connected with this conspiracy. In his capacity of the Shogun's vassal, John Naito, *daimyo* of Kameyama, found himself very naturally in the number of the conspirators, and repaired to Kyoto with his brother Gemba-no-Kami and 2,000 *samurai*. Yoshiaki, with whom faithful followers were then very rare, was so touched at this spontaneous devotion that he augmented Naito's revenues by 10,000 *koku*. Knowing that Naito was a Christian, he dispensed him from taking the oath of fidelity according to the Buddhist usage, and was satisfied with his word only. It is probable that Shirai of Sangajima and Ikeda Tango-no-kami of Yao, both vassals of Miyoshi, also belonged to the Shogun's party, although they did not take part in the different combats which followed. The son of Wada as well as his uncle Takayama remained neutral: it is possible that their recent mourning authorized them to take this attitude.

From the beginning of this conspiracy the Christian *daimyo* who were implicated in it, fearing for the safety of Father Froez, who was established at Kyoto, urged him to retire into their territories till the troubles had blown over. But the religious, wishing to assist at the consummation of this plot, contented himself with seeking an asylum in a village near the capital. In doing so he only imitated the example of a great number of the inhabitants of Kyoto who, every time that a war was on the point of breaking out, took refuge in the neighbouring villages. The *samurai* themselves sent thither their wives and children. During Father Froez's absence, Naito lodged several Christian *samurai* in the church, so as to protect it against the attacks of the ill-disposed.

Learning what was going on in Kyoto, Nobunaga set out instantly with an advance guard composed of 6,000 horsemen. Shibata Katsue was to follow with the bulk of the army, which amounted to about 40,000 men. The great bell of the Shogunate palace soon announced to the soldiers of Yoshiaki that Nobunaga was at the gates of Kyoto, and that they were to hold themselves in readiness for an attack. Yoshiaki's warriors were numerous enough to fight with an advantage but, as happens generally in an army composed of different elements, there were as many opinions as there were chiefs.

Nobunaga encamped outside the town. Then, hoping to gain over Yoshiaki by persuasion, he

sent him during the space of four days courier after courier in order to show him how much he had been wrong in rejecting his protection, and in listening to the advice of his own confidants. To all these remonstrances Yoshiaki turned a deaf ear. Nobunaga, seeing that his exhortations remained without effect, thought he had better have recourse to violence; he therefore ordered his troops to cut off the food supplies of the town by sacking the adjacent villages. Then were witnessed frightful scenes. The *samurai*, always greedy of plunder, threw themselves on the peasants, destroying their houses and extorting from them by blows of their swords the little money they had buried on the approach of the enemy. Those that could offer a ransom that was judged suitable, saved at least their lives; the others were pitilessly massacred and thrown into the flames. Father Froez only escaped death by chance. On the approach of the pillagers he concealed himself in a stable under the straw, thinking that he would be safe there, so much the more as the village to which he had retired offered a very considerable collective ransom. Men and goods were spared but, as fowls had not been included in the agreement, the marauders pursued with shots of their arquebuses the hens and ducks, lodging thus a ball in the hat of the unhappy Froez, who dared not stir from his hiding-place.

Before these menaces, the feeble Yoshiaki bent and submitted to Nobunaga. But scarcely did he see Kyoto freed from the presence of the foreign troops, than yielding to the advice of the Governor, Ueno Kiyonobu, and Hosokawa Fujitaka he revolted anew. Nobunaga returned immediately to Kyoto and deposed Yoshiaki from his position as Shogun. The latter repaired at first to the house of his brother-in-law, Miyoshi Yoshitsugu (41) at Wakae, then after having wandered in all directions, he came to rest at Tomo (Bingo), where he died in 1597, aged 61 years. He was the 15th and last Shogun of the family of Ashikaga, which had for 238 years presided over the destinies of Japan.

On his arrival in Kyoto, Nobunaga commanded his troops to occupy the town. The inhabitants knew by experience that such an order signified pillage, in a word, ruin. The lower part of the town, occupied by the common people, turned aside the wrath of the conqueror by bringing him its submission and ransom. Nobunaga had humanity enough to content himself with the submission of these poor people and gave them back their money. The upper town, the residence of the Emperor, the Shogun, the nobles, and the wealthy citizens, entered also into negotiations with Nobunaga, but unfortunately it was so audacious as to try to impose conditions on a conqueror who never accepted any. In an instant this part of the town was delivered over to pillage. Nearly one hundred temples and 6,000 houses became a prey to the flames (July, 1573).

John Naito, who had occupied the church throughout all these troubles, delivered it over intact to Father Froez, as soon as the latter returned to Kyoto. Naito had the grief of announcing to the religious that the fall of the Shogun had equally led to his own, and that he would have henceforth to put his entire domain in the hands of Nobunaga and go into exile. Before leaving Kyoto, Naito invited his brother, Gemba-no-kami, to become converted, together with his eldest son. Gemba-no-kami consented and received the name of Julian in baptism. In a little time he died and his wife and three children found an asylum with Shibata Katsue. Naito disappeared, so to say, from the political stage for several years. His reappearance only took place in 1593, during the expedition to Korea.

The same year (1573), Nobunaga declared war on Miyoshi Yoshitsugu. The latter, having been surrounded in his castle of Wakae, committed suicide, and Wakae was given to his vassal, Ikeda Tango-no-kami, the Christian *daimyo* of Yao. It was in this place that Ikeda constructed a church, some years after, and that he invited the Christians, even those of the neighbouring provinces,

(41) Miyoshi married the sister of Yoshiaki.

to the religious festivals. The castle of Okayama (Kawachi) fell to another Christian lord, George Okayama, who distinguished himself afterwards by the munificent presents he bestowed on the Jesuits, whether in his own domain or elsewhere.

On the death of Miyoshi Yoshitsugu all his family became forgotten. His relations, among whom was Yamashiro-no-kami, retired into Shikoku and lived in concealment.

Shirai of Sanga, alone of this family, found grace in the eyes of Nobunaga and retained the domain which he had possessed up to that time, as well as the castle of Iimori. However, for unknown reasons, Shirai resigned in favour of his son Mancio, who then became a vassal of Nobunaga. In spite of this clemency the Shirai none the less detested Nobunaga, who had thus ruined their family. It is even certain that the old Shirai had a hand in one of the numerous plots which were being continually formed against the conqueror. The latter got wind of the fact and ordered Sakuma Nobumori, one of his generals, to go to Iimori and put Shirai to death along with his son.

Happily for the two, Sakuma was a man of generous disposition and it went against his grain to execute the two accused. He therefore advised the father, whom he knew almost to be guilty, to hide himself for a certain time, whilst he would lead his son Mancio to Kyoto in order that he might justify himself before Nobunaga. Mancio had no difficulty in establishing his innocence, for the son had declared for Nobunaga when the father had sworn to overthrow that personage. This *ruse de guerre*, as much practised among the Japanese as among the Scots in "the '45," had this advantage that, whatever was the result, one member of the family found himself on the winning side. Mancio was treated, then, with entire justice, but his father was exiled to Nagaura (Izumi). Shirai consoled himself in his ill-fortune by taking to preaching. He even succeeded in establishing there a pretty flourishing Christian colony, and a church which he built at his own expense.

Whilst the Shirai were struggling with these difficulties, the family of Wada passed through greater troubles still. Wada's son, already known for his incapacity, saw with grief that his best retainers turned towards his cousin Justus Takayama, who was then the ideal of a young *daimyo*. He therefore conceived for Justus a profound hatred and resolved to rid himself of this rival. Ill-advised by the retainers of his own party, the son of Wada, to put an end to Justus, sought to fasten a quarrel on him. In order to understand what followed, the reader must bear in mind the facility with which the *samurai* drew their swords. Wada struck Justus a blow, whereupon the latter severed the fingers of his adversary's right hand. The servants of the two antagonists joined in the quarrel and the struggle became terrible. Justus remained the victor and Wada died several days after of the wounds he had received. It is thus that Dario Takayama, the father of Justus and the nearest heir (42), became *daimyo* of Takatsuki. It was not until some time after, when the memory of the sad death of Wada's son was almost effaced, that Dario ceded the *daimyate* to his own son Justus, better known under the name of Takayama Ukon.

It was written that Ukon would experience during all his life the greatest adversities. The long series began on the morrow of his nomination. Araki Murashige, suzerain of the province of Settsu, after having at first submitted to Nobunaga, revolted against him. Ukon, being a vassal of Araki had, whether willing or unwilling, to submit to his will and to send him in token of fidelity, his eldest son and his sister as hostages. Nobunaga's first blows fell on Ukon, who was besieged in Takatsuki castle. As he refused to surrender, Nobunaga, extremely irritated, gave him to understand that if he persisted in his stubbornness, he (Nobunaga) would massacre all the Christians and among them the religious. Ukon, who knew Nobunaga too well to be deceived as to the gravity of this menace, was in the greatest embarrassment.

He sent in all haste a messenger to Father Organtino, then in Kyoto, to ask his advice. At the same time Nobunaga wrote a letter to this religious pressing him to use all his influence over Ukon to bring the matter to a pleasant termination. Father Organtino repaired immediately to Takatsuki and pointed out to Ukon that he could not dream of thus resisting Nobunaga after having accepted his authority. Ukon yielded to this reasoning and promised to obey the wishes of Nobunaga. But the thought of the hostages, the tears of his mother and his wife, left him in the saddest perplexity. After having spent long time in prayer in his oratory he declared that his sacrifice was made: he would go and place himself at the disposition of Nobunaga, but would not deliver to him the citadel. Before quitting the fortress next day, accompanied by Father Organtino he had his hair shaved and clad himself in the garments of a recluse. Having been conducted into the presence of Nobunaga he prostrated himself at his feet and awaited his will. The latter, forgetting his anger, advised him to let his hair grow again and to resume his ordinary dress. He even condescended to console the afflicted father who, to obey him, had exposed his son and his sister to certain death.

Meanwhile Dario, Ukon's father, went immediately to see Araki to whom he declared that he would never abandon his cause. This promise calmed Araki, exasperated at the defection of Ukon, and he even consented to surrender the hostages. Like the loyal vassal he was, Dario sustained the siege with a courage worthy of a better cause. But he had soon to yield to the forces of which Nobunaga was able to dispose, and Takatsuki capitulated. Dario was condemned to death, but, on Ukon interceding for him, Nobunaga commuted the punishment and sent him into exile at the house of Shibata Katsue, *daimyo* of Kitanosho (Echizen). Dario bore his banishment like a Christian. He and his wife devoted themselves to the preaching of the Gospel and had the joy of forming in their place of exile a sufficiently numerous Christian community which the religious visited several times in the sequel. (43)

The fall of Takatsuki was the signal for the ruin of Araki. Defeated in several engagements, he was finally deposed and sent into exile. Ukon re-entered into possession of Takatsuki but, to prevent any possible trouble for himself in the future, Nobunaga dismantled all the strong places in his dominions (1579).

These incessant troubles did not prevent the Christian religion from spreading more and more. Already in 1576, the environs of the capital counted 20,000 neophytes, of whom only 300 resided in Kyoto itself. However modest this last figure may seem, the Jesuits considered that the moment of issuing from the catacombs had come, and that their little oratory should be replaced by a more imposing church. This was also, moreover, the great desire of the Christians, who keenly felt the small figure their church cut in the midst of the magnificent temples with which the capital abounded. All vied with each other in devotion and generosity. Without speaking of the liberality of the *daimyo*, the simple Christians offered their little objects of value and sometimes deprived themselves even of the necessities of life. The most zealous travelled among the Christian communities of the neighbouring provinces to collect alms intended for this enterprise. The pagans even contributed to it. Murai Sadakatsu, then governor of Kyoto, assisted the Jesuits with his money and his protection. But scarcely did the sacred edifices begin to rise above the ground than the bonzes uttered cries of alarm: the foreigner was going to establish definitively in Kyoto. From this time no efforts were spared to arrest the progress of the works; presents offered to Nobunaga, menaces addressed to the governor, all the springs were put in movement. Murai had at first tried to flatter the vanity of the malcontents by making them foresee that, thanks to this church, the name of Kyoto would be borne to the ends of the earth. All was useless: these observations only caused the more exasperation. Impatient at so much resistance, Murai had recourse to force and

threatened to visit with the most rigorous punishment all hostile demonstrations. He went in person to encourage the Jesuits to push on the works with more vigour and offered them building material and workmen. This was an extraordinary help, for the palace of the Shogun, that of the Emperor as well as the dwellings of the Kuge, of which Nobunaga had, some years before, ordered the reconstruction, had required such a quantity of wood, that Murai had forbidden all private persons to take wood from the provinces adjoining Kyoto, whence a great increase in the price of these materials resulted. Finally in 1577, the new church was opened under the vocable of the Assumption of Our Lady, in memory of the fact that, 28 years before, Xavier had landed in Japan on that festival.

At certain great solemnities of the year, the *daimyo* and Christians of the neighbourhood of Kyoto repaired in great numbers to the new church. This practice of holding great reunions was equally observed in the other places where there was a church worthy of the name. Thus the religious make mention of reunions at Takatsuki, Iimori, Yao, Wakae and Okayama castles, of which the *daimyo* or Christian lords took on themselves all the expenses. On Easter, in the year 1581, the reunion took place at Takatsuki, 15,000 Christians attending it. Mass was chanted and an organ played an accompaniment. A monster procession brought the religious ceremonies to a conclusion. In the afternoon there were public games. The star of these rejoicings, so indispensable to the Japanese people, was a negro, whom the Jesuits had brought from the Cape of Good Hope. Nobody could bring himself to believe that the epidermis of this individual was really so black as it looked, for never had a similar sight been seen in Japan. The negro was such a success that Nobunaga, then in Kyoto, having heard of him, desired to see this phenomenon. When Father Organtino conducted him to the palace, Nobunaga was so astonished that he thought at first there was some trickery in it. The negro had to undress even to his loin-cloth to convince Nobunaga that his entire epidermis was of an equally dusky shade. Then all Kyoto ran to see the sight; everyone wanted to see the negro. Nobunaga got up a great fête in his honour and retained him in his service.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE KING'S CRUISE.

London, August 28.

His Majesty King Edward landed at Brodick, Island of Arran. It is stated that he is now thoroughly restored to health.

MONT PELEE AGAIN ERUPTS.

Mont Pelee has again erupted violently.

KING AND KAISER.

The King of Italy has arrived at Potsdam and been cordially received by the Kaiser.

ROOSEVELT AND THE MONROE DOCTRINE.

President Roosevelt, speaking at Augusta, Maine, vigorously re-affirmed the Monroe doctrine and declared the preparedness of the United States to enforce it. America would be no longer a colonising ground for any foreign Power.

RUSSIAN TEA DUTY.

London, August 29.

In connection with the telegram reporting the imposition of a Customs Duty of 3 roubles per pound on tea imported into European Russia, the word pound should read poud.

KING GOES DEER-STALKING.

The King participated in deer-stalking at Arran and shot a stag.

LORD ROBERTS.

Lord Roberts has been presented with the freedom of the town of Dover.

(42) Wada's other brother, Francis, *daimyo* of Sawa and vassal of Matsunaga, perished with the latter in a new revolt against Nobunaga (1576).

(43) *Alcune lettere*, p. 129.

A SWIMMING RECORD.

Holbein has made another unsuccessful attempt to swim across the English Channel. He was taken out of the water in an exhausted condition within one mile of Dover. He swam 53 miles in 22 hours, making a record.

THE TRIPLE ALLIANCE.

London, August 30.

The King of Italy was entertained at a State banquet in Berlin last night. The Kaiser in toasting King Emmanuel referred to the renewal of the Triple Alliance, which continues in its old strength, having woven into itself the lives of the three peoples.

The King of Italy in reply said, "Our nations will advance along the path of civilization protected by this old alliance, which is now recognized as the most effective safeguard of peace."

THE KING.

Later.

The King spent yesterday at Colonsay.

THE CHINESE COMMERCIAL TREATY.

Imperial approval of the Anglo-Chinese commercial treaty having reached Shanghai, the treaty will be signed to-day. The Chinese Commissioners signed yesterday the protocol of the tariff and it comes into force on the 31st of October.

GENERAL YAMANE.

General Yamane, who has recently been commanding the Japanese forces in China, has been appointed Military Attaché at Peking. It is believed in Peking that he will be entrusted with the re-organization of the Chinese army.

"LIKIN" STATIONS ABOLISHED.

August 31.

An Imperial Edict issued at Peking abolishes the *likin* stations throughout China and declares that during the negotiations for the new commercial treaties with foreign States, an understanding has been reached for an increase of export and import duties.

THE TREATIES WITH CHINA.

London, Sept. 1.

Mr. Conger, U.S. Minister to Peking, has been instructed to conclude a treaty with China similar to the Anglo-Chinese Commercial Treaty.

Contrary to expectations the Anglo-Chinese Commercial Treaty was not signed on Saturday.

Sir James MacKay refused to sign owing to the indefiniteness of the Imperial Decree on the question of the surtax.

Sir James MacKay cancelled a passage which has already been taken out.

It is understood that the terms of the treaty are not questioned, but that the matter in dispute is one of the interpretation of the Decree.

FRESH ERUPTIONS.

London, Sept. 2.

An English steamer has arrived at Castries from Fort de France. She reports a terrible eruption of Mont Pelee at 9 o'clock on Saturday evening.

Refugees report that Morne Rouge has been destroyed and that Le Carbet has been swept by a tidal wave. Two hundred perished.

MR. CHAMBERLAIN AND HIS SPEECH.

Mr. Chamberlain has been interviewed on the subject of his recent speech. He said that the nation would not consent in time of

peace to support a standing army of a quarter of a million of men.

STORM IN SOUTH AFRICA.

There has been a fierce gale in Algoa Bay; seventeen sailing vessels, two tugs and a number of lighters are on shore. Many lives were lost.

IRISH AFFAIRS.

London, Sept. 3.

The Crimes Act has been extended to the whole of Connaught and Munster, except Kerry, and also to the cities of Dublin and Limerick.

"LIKIN."

The *Peking Gazette* says the edict should read that *likin* will be abolished when all the Governments have agreed to the increase of the import and export duties.

THE MARTINIQUE ERUPTION.

Later.

An unofficial telegram received in Paris says that 1,000 people were killed at Martinique. Two cruisers are embarking refugees.

SOUTH AFRICAN AFFAIRS.

The (Cape) Assembly has adopted a progressive amendment on the Indemnity Bill asking for an extension of the powers of the Imperial Martial Law Commission.

Sir J. Gordon Sprigg had previously announced that he had already communicated with the Imperial Government on the subject.

This will probably lead to the Colonial Commission being dropped.

THEIR MAJESTIES IN SCOTLAND.

London, Sept. 3.

Their Majesties visited Stornoway and had an enthusiastic reception.

THE ALGOA BAY STORM.

Of the wrecks in Algoa Bay all were foreign vessels except one. The loss of life was about 70.

(SPECIAL TO THE "JAPAN MAIL.")

THE "SAIKYO" CHOLERA CASES.

Kobe, August 29.

Doctor Tani, of the N. Y. K. steamer *Saikyo Maru*, and one of the serving boys have died of cholera. The ship has been quarantined for five days. The passengers were all well this afternoon when the Kobe manager of the N.Y.K., Mr. Yatsui, visited the quarantine hospital.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE SHAH.

Saigon, August 29.

The Shah of Persia has arrived at Paris and has lunched at Rambouillet with the President of the Republic.

THE KING OF ITALY.

The King of Italy is at Berlin.

ARCHBISHOP FAVIER.

Monseigneur Favier is better.

THE SIAMESE REPRESENTATIVE.

Saigon, August 30.

President Loubet has received the Representative of Siam.

FLOODS AT CALCUTTA.

Great inundations have taken place at Calcutta. Many hundreds of lives have been lost.

EARTHQUAKE IN MINDANAO.

News from Manila says that earthquake has taken place at Mindanao. Sixty people have been killed.

FRENCH NEWS.

Saigon, Sept. 1.

An Imperial Edict issued in Peking

suppresses the *likin* stations throughout the whole of China.

At Biralabi near Lake Tchad the garrison repulsed and put to flight the Touaregs, who had many casualties. Tranquillity is restored.

DIPLOMATIC CHANGES.

Saigon, Sept. 3.

The French Government has appointed M. Viourd, who is now Ambassador at Berne, to be Ambassador at Berlin; M. Bompard, who is now an official in the Ministry of Foreign Affairs, to be Ambassador to St. Petersburg; and M. Jufferaug, now Minister to Denmark, to be Ambassador in Washington.

ANOTHER VOLCANIC ERUPTION.

There was a terrible eruption on Aug. 30th of Mont Pelee. Morne Rouge was completely destroyed and an earthquake wave swept Carbet, killing 200 persons.

(FROM THE "JAPAN HERALD.")

HEAVY RAINS IN INDIA.

London, August 29.

Heavy rains have occurred in India.

In Nepal the rivers overflowed, and several hundred lives have been lost and great damage done to property.

A "SHELL" LINER ASHORE.

The "Shell" liner *Trocas* is ashore at Perim.

AMERICA AND CHINA.

London, Sept. 2.

In consequence of the conclusion of the Treaty with China, a Corporation has been organized in California, with a capital of one million dollars, for the purpose of promoting trade with China.

It is also reported that arrangements are proceeding to induce China to buy American Cotton through the New York Exchange instead of the Liverpool Exchange.

The American capitalists are said to be planning to establish banks in the various business centres of China.

THE "TROCAS" REFLOATED.

The "Shell" steamer *Trocas* (which was reported to be ashore at Perim) has been refloated.

ACCIDENT TO PRESIDENT ROOSEVELT.

London, Sept. 3.

President Roosevelt and a party of friends, while driving from Pittsfield to Lennox, collided with an electric car.

The President escaped with a few cuts and bruises.

The horses, which were driven by a member of the escort, were killed.

THE RUSSIAN SUCCESSION.

The Tsaritsa has had a miscarriage. There are no complications.

DEATH OF PANMURE GORDON.

Mr. Henry Panmure Gordon, the well-known expert on Chinese and Japanese finance, has died suddenly.

(Henry Panmure Gordon was the senior partner in the firm of Panmure Gordon, Hill & Co., Stock Brokers. He served four years in the Royal Hussars and afterwards entered the firm of Lindsay & Co. at Shanghai and subsequently at Hongkong. He commanded the Shanghai Mounted Rangers during the Taiping rebellion. When he returned to England, after a five years' residence in China, he joined the London Stock Exchange. He was born in 1837.)

(FROM THE "JIJI SHIMPO.")

RUSSIA AND JAPAN.

London, August 27.

The Tokyo correspondent of the *Cologne Gazette* reports that a Russo-Japanese treaty is about to be concluded and that an ex-Minister of State of high rank is among the members of a pro-Russian association.

VENEZUELA.

The Government forces bombarded Shuda Dovoriver(?) for 48 hours but could not capture it.

The rebel army defended the position obstinately. Three thousand British residents have asked the British Authorities for the dispatch of a war-ship.

Both Government forces and rebels are behaving in a very disorderly fashion.

SIR BROOKE BOOTHBY.

Sir Brooke Boothby, Secretary of the British Legation in Tokyo, is transferred to Brussels.

RUSSIA AND MANCHURIA.

London, August 30.

Russia has prohibited Germans from residing in Manchuria. This action is believed to be based on Russia's intention of occupying Manchuria permanently.

GENERAL GASELEE.

General Gaselee, Commander-in-Chief of the British forces during the troubles in North China, has been appointed Commander-in-Chief of the forces at Lucknow, India.

SOUTH AMERICAN TROUBLE.

Colombia is demanding an explanation from the Nicaraguan Government of recent events in the isthmus.

JAPANESE CORONATION SQUADRON.

London, August 31.

A farewell banquet was given at Cardiff in honour of Admiral Ijuin and the officers of the *Asama* and *Takasago*. Sir E. J. Reed, M.P. representing that city, said in the course of the proceedings that the Anglo-Japanese Alliance was most essential and did honour to both countries.

The officers of the Japanese Squadron visited the coal-mines afterwards.

TURKEY AND RUSSIA.

The Turkish Government has refused to give its consent to the passage of Russian torpedo-boats through the Dardanelles.

SOUTH AMERICAN TROUBLES.

Gun-boats have again opened fire on Ciudad Bolivar.

CYCLONE IN SOUTH AFRICA.

A cyclone has swept over Port Elizabeth. Thirty-eight vessels, including fifteen steamers, have been blown ashore.

(FROM THE "N.-C. DAILY NEWS.")

WELCOME RAIN IN AUSTRALIA.

London via Bombay, August 23.

The protracted drought has been broken in New South Wales and Queensland.

THE TENNIS CHAMPIONSHIP IN THE U. S.

The tennis championship reported on the 15th instant as won by the Brothers Doherty was the Long Island championship.

BLACK SHEEP IN EVERY FLOCK.

London via Bombay, August 26.

Two privates of the Fourth Middlesex Regiment who stole their coronation medals from two Indian native soldiers have been publicly drummed out of the army at Aldershot after having been stripped of their uniforms. The King who is deeply interested in the matter has telegraphed to Aldershot stigmatising the affair as a cruel and disgraceful theft.

MR. MARKHAM BACKS DOWN.

London via Bombay, August 28.

Mr. Arthur B. Markham, M.P., in a letter to Messrs. Wernher, Beit & Co., unreservedly withdraws the unfounded charges made by him in the House of Commons on the 19th of March, 1901, and subsequently repeated to his constituents, and expresses sincere regret for having made them. Messrs. Wernher, Beit & Co. have accordingly withdrawn their action against him.

A COMMERCIAL TREATY BETWEEN TURKEY AND PERSIA.

London via Bombay, August 29.

An understanding in principle has been reached between Persia and Turkey, under the auspices of Russia for a treaty of commerce embodying a specific tariff on the basis of most favoured nation treatment. This is a corollary to the reported recent Russo-Persian treaty.

A TAP TO THE WEDGE.

There are indications that a campaign is beginning in the Russian Press in favour of the total or partial abrogation of the Anglo-Russian Agreement of 1873 regarding Afghanistan. The *Norve Vrenya*

in a further article apparently inspired mentions that Russia made a formal declaration to Great Britain two years ago suggesting a modification of the Agreement.

FOR BABY'S SKIN
SCALP AND HAIR

Something for Mothers to Think About

EVERY CHILD born into the world with an inherited or early developed tendency to distressing, disfiguring humours of the skin, scalp, and blood, becomes an object of the most tender solicitude, not only because of its suffering but because of the dreadful fear that the disfiguration is to be lifelong and mar its future happiness and prosperity. Hence it becomes the duty of mothers of such afflicted children to acquaint themselves with the best, the purest, and most effective treatment available.

That warm baths with CUTICURA SOAP to cleanse the skin and scalp of crusts and scales and gentle applications of CUTICURA Ointment to instantly allay itching, irritation, and inflammation, and soothe and heal, to be followed in the severest cases by mild doses of CUTICURA RESOLVENT are all that can be desired for the alleviation of the suffering of skin-tortured infants and children and the comfort of worried mothers has been demonstrated in countless homes in every land. Their absolute safety, purity, and sweetness, instantaneous and grateful relief, speedy cure, and great economy leave nothing more to be desired by anxious parents.

Complete External and Internal Treatment for Every Humour. Consisting of CUTICURA SOAP, to cleanse the skin and scalp of crusts and scales, and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. Sold throughout the world. Aust. Depot: R. TOWNS & Co., Sydney, N. S. W. So. African Depot: LENNON LTD., Cape Town. "How to Cure Baby Humours," free. POTTER DRUG AND CHEM. CORP., Boston, U. S. A., Sole Props., CUTICURA REMEDIES.

YOKOHAMA: SATURDAY, SEPTEMBER 13TH, 1902.

SUMMARY OF NEWS.

PRINCESSES TSUNE AND KANE will return to Tokyo on September 6th from Nikko.

BARON WATANABE ex-Minister of Finance, is on board the P.M. new steamer *Korea*, due here on Sept. 15.

TRAFFIC on Ohana and Yu, on the Sanyo Railway, has been interrupted since September 8th owing to a storm.

THE funeral of the late Dr. S. Nagayo, who passed away on September 8th, took place in

the Aoyama Cemetery on the 12th, the cortege leaving the residence of the deceased in Azabu at 1 p.m.

THE *Asama* and *Takasago* are expected to return to Yokosuka some time in October. They are now passing the Mediterranean.

PRINCE TSAI has made a donation of *yen* 400 to the Tokyo School for the Dumb and Blind, which institution he visited on September 7th.

THE long wooden bridge connecting Enoshima with Katase, which had been damaged by the recent heavy weather, was repaired on September 8th.

LIEUT.-GENERAL OSEKO, Commander-in-Chief of the Seventh Army Division, Hokkaido, is reported to be lying seriously ill at Sapporo, suffering from dysentery.

THE Japanese Standing Squadron, consisting of the flag-ship *Hatsune*, *Asahi*, *Mikasa* and other vessels arrived in Maizuru on September 8th from a cruise in Korean waters.

A RUSSIAN Lieut-Colonel, who acted as one of the reception commissioners of Prince Komatsu during the latter's stay in Russia, arrived at Shimbashi on September 9th and put up at the Imperial Hotel.

BARON SHIEUSAWA, now in Europe, wires home that he and his party will leave London for Japan on September 12th and embark on the N.Y.K. steamer *Kanagawa Maru* at Port Said.

FIRE occurred in Dojima, Osaka, on the afternoon of September 8th and resulted in the destruction of six houses. The building of the Dojima Rice Exchange was safe. Several persons are reported to have been injured.

A BLUE-JACKETS' club, the organization of which was lately effected, will be opened at Yokosuka on September 11th. The opening ceremony is expected to take place on the 21st when Ministers of State, journalists, principal business men and others will be invited.

THE completion of a floating-dock at Sasebo was celebrated on September 6th, but the affair does not appear to have been attended with success. During the proceedings, an accident occurred and one workman was fatally hurt while several others received slight injuries.

MR. ERNEST FOXWELL, formerly professor of Political Economy in the Tokyo University, has an excellent article in the current number of *Blackwood's Magazine*. Residents in Tokyo particularly should not fail to read it, for they will recognise many of the personages whom the author mentions.

AN official telegram from Okinawa Prefecture announces that on September 2nd about 500 fishing-boats were overtaken by a storm in the archipelago and driven out into the ocean. As the result of a search made by the steamer *Kanagawa Maru*, 16 fishermen have been recovered alive since.

ON the afternoon of September 3rd Mrs. Loyds, while engaged in shopping at the Nikko Shokai, a curio store in Sanchome, Bentendori, Yokohama, was robbed of *yen* 40 which she had placed in her money-bag at her side. The matter was at once reported to the Police Authorities. The lady is staying at the Grand Hotel.

ACCORDING to the *Shanghai Times*, the German press considers President Roosevelt's recent speech on the Monroe doctrine as a declaration to Eng-

land that she must quit the American continent. New York advices are said not to bear out this explanation, and instead it is said that the feeling of friendliness towards Great Britain was never stronger in the States than now.

As the result of an arrangement entered into between the Third Bank and Messrs. Samuel Samuel & Co. for the sale of Osaka Harbour Construction Bonds by the latter on the London market, quotations for the bonds are steadily rising in Osaka and elsewhere. For instance, on September 5th the bonds were quoted at *yen* 86.40, showing a rise of *yen* 1.40 per bond. Holders are firm.

THE Tokyo Municipal Office has opened a subscription list for the relief of the families of victims in the recent Torishima catastrophe. The subscription list will be closed on September 25th. The money collected will, it is reported, be taken by the *Higo Maru* early next month to the Bonins, Hachijo and other islands, where the bereaved families reside.

ONOUZUKA JUKICHI, a *sendo* in the employment of Messrs. Helm Brothers, No. 42, Yokohama, was arrested by the Bluff Police on the morning of September 5th on a charge of theft and sent to the Yokohama Chiho Saibansho for trial. It is alleged that on the night of September 4th the accused stole two bales of sugar from No. 65 lighter belonging to the firm.

REAR-ADMIRAL UYEMURA was appointed on September 5th Chief Judge of a court-martial which will shortly be held in the Yokosuka Admiralty for the purpose of making inquiries into the circumstances attending the stranding of the despatch-boat *Yacyama* off Nemuro about three months ago. Captain Taguchi was in command of the vessel when the accident took place.

As already reported, tenders were invited by the Tokyo Street Railway Company for the supply of a large quantity of plant. Messrs. Sale & Co., of Yokohama, were successful in the matter of supplying carriages and accessories at a cost of *yen* 288,000, the highest offer being *yen* 650,250. For the supply of rails, the China and Japan Trading Company secured the contract at *yen* 195,664; the highest price tendered being *yen* 247,574.

THE Nippon Yusen Kaisha steamer *Riojun Maru*, while on her way from Shanghai to Bakan, struck a rock near Quelpart on August 31st but her cargo and passengers are reported to be safe. The accident is believed to be due to the rough weather that prevailed several days ago. Upon receiving this news, the Mitsu Bishi salvage steamer *Oura Maru* left Nagasaki on September 4th for the scene. The Naval authorities of Takeshiki, Tsushima Island, also dispatched a torpedo-boat destroyer to render assistance.

THE Toyo Kisen Kaisha steamer *Rohilla Maru*, which arrived in Yokohama on September 6th from Hokkaido is reported by Japanese papers to have had a narrow escape about 8 a.m. the same day when off Boshu. The weather was so rough that the vessel often rolled to 42 degrees, but by the clever management of her Captain and the pluck of her crew the steamer was kept afloat. Her cargo was partially damaged but the passengers are all safe. She left Otaru on the 3rd for Yokohama via Hakodate, laden with a large quantity of coal and manure.

THE CABINET AND THE BUDGET.

Saturday, Sept. 6.

Whenever the time comes for finally drafting the Budget, rumour busies itself with the stability of the Cabinet. Broadly speaking, the demands made by the various Departments of State are said to total 280 million *yen*, whereas the revenue amounts to 240 millions only. Under these circumstances Baron Sone is reported to have adopted the very natural contention that the Departments must reduce their demands by 40 million *yen*. But the Departments profess inability to make reductions aggregating more than 20 millions, and since ends can not be brought together on that basis, there is trouble. Baron Sone, according to some journals, has washed his hands and retired to his tent, declaring that he will not emerge until the rational policy of cutting coats according to cloth is adopted. It need scarcely be said that the air is full of rumours, and that many political meteorologists detect symptoms of a centre of depression which will soon develop into a big storm. Others, *e.g.* the *Niroku*, go back to the old *Sat-Cho* question, so that altogether the atmosphere is troubled.

Tuesday, Sept. 9.

Tokyo journals insist that the Cabinet is in trouble about the Budget. They compare the situation to that which existed as between Viscount Watanabe and the Ito Cabinet last year. Baron Sone is taking a stand resembling that taken by the Viscount, though the details are different. The Baron insists that all the Departments must cut down their demands for appropriations, and that the land tax must be restored next year to its former figure, $2\frac{1}{2}$ per cent., in strict accord with the programme mapped out at the time of raising it to 3.3 per cent. in 1898. But some of the other Ministers of the Cabinet do not approve of restoring the old rate, and some of them insist that money must be found, the Minister of Communications, for example, being a vehement opponent of postponing extensions of the railways, the telegraphs and the telephones; the Minister of Education maintaining that the Cabinet's promise about starting universities must be kept, and the Minister of Justice declaring that an increase of the Judiciary's emoluments must no longer be delayed. How all these views are to be reconciled with Baron Sone's resolution, is the problem now harassing the Cabinet. Some journals allege that the ancient question of Administrative reform is also creating a difficulty, the Chief of the Legislative Bureau, Mr. Okuda, having drawn up a scheme which many of the Ministers find too drastic. There must be some fire, of course, where there is so much smoke.

Thursday, Sept. 11.

A curious incident has occurred in connexion with the political trouble which newspapers and news agencies represent as existing in Japan at present. The *Chiuo Shimbun*, as our readers know, published recently a statement to the effect that Baron Sone insisted on the reduction of the land tax next year to its original figure of $2\frac{1}{2}$ per cent. in accordance with the provisions of the law passed at the time of increasing the Tax in 1898. His colleagues of the Cabinet being opposed, however, to such a course, in view of the needs of the Exchequer, Baron Sone—so the *Chiuo* said—had retired to his villa at Katase and was playing the part of Achilles in his tent. But Baron Sone now

denies that there is any truth in this statement, and declares further that no newspaper could have had his authority to make it, inasmuch as he has not held communication with any newspaper on the subject. The *Chiuo's* answer is that it obtained the news from Mr. Sasa Tomofusa, a well known politician, the leader of the Imperialists; that it has perfect confidence in his veracity; that it also believes Baron Sone to be a thoroughly upright man; that to insist upon the restoration of the Tax to its original dimensions would be precisely in accord with his established reputation; and that, finally, it is ready to confront Mr. Sasa with any one denying his allegation. There is here, obviously, some misunderstanding, but misunderstandings are common and unimportant when their consequences can be discounted. The main point is that Baron Sone's attitude towards the Land-Tax question may now be assumed to be in accord with that of the rest of the Cabinet.

Meanwhile all sorts of rumours are current. It is useless to reproduce them. They bear the character of the stories usually circulated at times of budget compilation. There is some difficulty. Of that no doubt can be entertained. But there must always be a difficulty in arranging the finances seeing that the source is found unavailable from which, according to the original plan, funds were to have been obtained for carrying out the extraordinary undertakings of the *post-bellum* programme. The undertakings themselves could not be abandoned altogether: they had been carried too far for that. On the other hand, domestic loans have proved impossible. Therefore a good deal of trimming, paring and adjusting is inevitable. Some people talk of Count Matsukata's return to power, but others justly say that high as is the reputation he enjoys for financial ability and resourcefulness, he can not make bricks without straw, and is therefore very unlikely to step into the breach at such a moment. All must agree that Count Katsura's Cabinet has been remarkably successful. The Count has shown himself one of the very foremost of Japanese statesmen, and whatever the issue of this crisis may be, he will emerge from it with a very high reputation.

One thing seems quite certain, namely, that there are rocks in the stream of Japanese politics and that until they are removed every Japanese statesman who launches his skiff is destined to make shipwreck after a brief voyage. The *Kokumin Shimbun* writes with excellent sense on this subject. It points out that for many years the political parties have been crying out for administrative reform and financial reform, and that rapid changes of Cabinet render it impossible to achieve either object. The Katsura Ministry is known to have these matters in hand and to be resolutely bent on putting them through. Therefore its continued tenure of power is in the nation's best interest. But the public appear to think that changes of Cabinet are a pleasant excitement, and that nothing is lost to the country by such incidents. It is a case of perpetually swopping horses in mid-stream.

It is for that reason, evidently, that Marquis Ito holds his Party in check and remains quietly in the background. In fact he has declared openly more than once that what Japan wants before everything is stability of administration. He will not lend himself to any agitation tending to changes of Cabinet merely for change sake. But, if rumour be correct, some of the *Seiyu-kai* leaders are

impatient of the Marquis' self-effacing attitude and would fain force him into the arena. How much truth there may be in such stories we can not tell. They seem to emanate from politicians whose own interests would be served by premature action on the part of the *Seiyu-kai*.

It will probably occur to many of our readers that the principle of collective responsibility is being carried very far in this country. Formerly the common complaint among discontented politicians was that Cabinets as a whole did not recognise their responsibility for the procedure of one member. But now, even though the whole of a Cabinet with the exception of one portfolio-holder, be in favour of a certain policy which he condemns, all are expected to resign. That, at least, is the idea informing the various rumours circulating to-day.

The organs of the *Seiyu-kai* flatly deny that there is any intention whatever of reviving the old Liberal Party under the leadership of Count Itagaki. That story has merely been "put about" by those that wish it to be true. Meanwhile the dissensions in Tosa have been adjusted. Apparently the members expelled from the local branch of the *Seiyu-kai* have been, or are to be, reinstated, but we find some ambiguity in the explanations of Tokyo journals as to this matter.

THE TOHOKU UNIVERSITY.

The problem of the Tohoku University is attracting attention. We explained it in a recent issue. The Minister of State for Education, speaking in the Diet last session, consoled the advocates of the university by promising that it should be erected "in the near future." In connexion, however, with the compilation of next year's Budget a rumour went abroad that the "near future" was to be construed somewhat liberally. Thereupon Messrs. Sudo and Fujisawa, newly elected members for Sendai, waited upon the Minister and asked the Government's intentions. They seem to have been satisfied with what they were told, but the public—or, at least, the section of it that is interested in the subject—continue to propound questions. They are answered by the *Kokumin*, which makes the obvious comment that grand projects are all well and good where unlimited funds are available for carrying them out, but that where funds are lacking projects must wait. The State's grant on account of education was 1,067,000 *yen* in 1888, and in 1902 it was 6,890,000 *yen*, having increased six-fold in that time. In the same time the local taxes increased from 24,500,000 *yen* to 49,880,000 *yen*. Of course these local taxes are applied to purposes other than education, but the educational grant constitutes a principal source of outlay. The *Kokumin* does not profess to think that the national effort on account of education is yet nearly sufficient, but it justly denounces the idea of developments out of proportion to the State's income, and it still more strongly denounces the obvious fact that these educational questions are being dragged into the arena of party politics.

SIR JAMES MACKAY.

Sir James Mackay, according to a telegram in the *Fiji Shimpō*, has finally started for England. He has left Shanghai by the *Oceanien* and will pay a visit to Japan on his way home.

PRINCE TSAI.

Saturday, Sept. 6.

Prince Tsai is "doing" Tokyo with considerable industry. His Highness must have been edified when, at the banquet given in his honour at the Chinese Legation, the Minister made a speech in the Japanese language, thanking his guests for coming and proposing the health of the Emperor of Japan as well as that of the convives. Japanese newspapers give the text of this speech, and from it we learn that his Excellency is to be credited with an innovation, for he combined the health of his guests with that of the Sovereign. The "space of sanctity" seems to have been bridged over with more practicality than ceremony, if that was the case. But was it the case?

The Prince spent the 4th viewing the lions of the city. Yesterday morning he was to visit the Chinese students at their residence on Surugadai. That, probably, proved an interesting episode of his sojourn, but we have no particulars as yet.

To-night His Imperial Highness is to dine with Baron Komura.

Monday, Sept. 8.

Prince Tsai visited the Chinese students at Surugadai on the 5th instant. Some 400 assembled to meet him and after inquiring as to the nature of their studies and expressing much satisfaction therewith, the Prince delivered a short address. He warmly congratulated his hearers on their fortitude in coming to a distant country, and braving separation and difficulty for the sake of acquiring knowledge. Such conduct showed genuine patriotism. "We are all patriots, I hope," said his Imperial Highness, "but to you who have done these things the credit of exceptional love of country must be awarded." He then went on to say that during his travels abroad and his observation of men and things, he had come to the conclusion that the spirit of Occidental learning might be summarized in eight ideographs, namely, to know oneself, to know others, to be diligent and to conquer. There was nothing new in all this. Still less was there anything inconsistent with the teachings of the Sages. Islamism, Buddhism, Christianity and Confucianism, they all had a common basis, "know thyself." The immortal apothegm of Confucius was never to be forgotten, "grieve not to be unknown of others; grieve only not to know others." The fountain of all success was in one's own heart. Self-culture could not fail of reward. But above all what a man had to guard against was drifting with the time. It was his function to lead the time, not to be led by it; to amend the evils of the day, not to succumb to them. Mencius had said "value your own purpose." The grand rule of life could not be expressed more pithily. All history showed that no man had ever achieved great success without absolute adherence to the path of reason. To approach one's work with passion, was to turn deliberately from the path of reason. A man must cultivate large-heartedness and equanimity. Among the sages of old time, there was not one that had failed in the duty of utilizing his own gifts. It was certainly a humiliation to be inferior to others, but, knowing that inferiority, to make no call upon one's own energy and capacity, was a far greater humiliation. The Prince concluded by saying that he valued nothing more than talent; that he should not fail to report to the Throne the earnestness of their application and the patriotism of their purpose, and that he did not doubt the advent of an era of

reform when rulers and ruled thus came to know each other. For himself, he had no claim to learning. He felt diffidence even in addressing them. But he could at least exhort them on behalf of their common country.

To this admirable address Mr. Chang Ying-hsu, a Chinese student now in the Imperial University, made answer on behalf of his fellows. His reply was singularly brave and outspoken. He said that the students who came to this country under official auspices, found their path quite smooth. But such was not the case with the private students. These had to depend largely on the assistance given them by their Minister. That assistance was not forthcoming. The Minister showed little disposition to assist them. He even alleged that his duties lay in the direction of foreign affairs and did not extend to looking after students. On the other hand, none of the military and naval schools in Japan was open to any Chinese student without the Minister's guarantee. Thus it resulted that these schools were closed to the private students, who, finding that they could not achieve their purpose of equipping themselves for the service of their country, had no recourse but to return home. They earnestly begged the Prince to represent their case to the Throne, so that an inspector of education should be sent to Japan with full powers to manage the students' affairs.

The Prince made no comment on this statement. He merely promised to bear the students' request in mind. Subsequently His Imperial Highness visited several schools and after expressing himself much pleased with what he had seen, returned to the Seiyō-ken. He is to proceed to Nikko on the 9th instant.

Thursday, Sept. 11.

Prince Tsai left Tokyo for Nikko on the 9th instant. He is to return to Tokyo on the 11th and will leave again on the 12th for Kyoto. After a night in Kyoto the Prince will go on to Nara and Osaka, thence proceeding to Kobe, and after visiting Suma and Maiko on the 14th, he will push on to Hiroshima. A ship from China is waiting for His Imperial Highness at Shimonoseki.

In a short speech made by the Prince at the banquet given in his honour by His Excellency Baron Komura, His Imperial Highness alluded in very high terms to the action of Japan during the Chinese crisis of 1900, and especially to the wise and friendly policy pursued by Baron Komura as this country's Representative in Peking. Such acts, the Prince said, constituted a practical illustration of the ties that bind Japan and China together, ties of race, ties of literature and ties of continent. He was profoundly convinced that they would walk together in the future, and by their joint efforts the fortunes of Asia would be restored.

This last expression may sound somewhat apocryphal in the ears of "yellow-peril" believers; but we do not read the Prince's words in the sense of a military revival. They seem to refer rather to the rescuing of Asia from her material inferiority. The Chinese language is very pithy and pregnant. And like our own tongue, it is not always absolutely explicit. Such an expression, for example, as "to restore the fortunes of a country," may be very variously interpreted unless it has some explanatory context. The ideographs employed by the Prince in this case mean literally to "shake up." They are generally used in the sense

of our translation, and they might be applied to an empire, to a political party, to a commercial firm or even to a family.

We may add in this context that 23 new Chinese students, 15 of them Government cadets and 8 private, arrived in Moji on the 9th instant and left at once for Kobe. They are from Kouchow in Chekiang.

MARCUS ISLAND.

It appears that if the *Kasagi* had remained another day at Marcus Island her people would have met Captain Rosehill. The *Kasagi*, unable to find anchorage and fearing for her supply of coal, left the island on the 29th of July, after landing a small party of marines under the command of Lieut. Akimoto. On the very next day Captain Rosehill's schooner hove in sight—not on the 31st, seemingly, as was stated in the telegram published by us on the 6th instant. The accounts conflict as to whether the schooner's boat met a boat in which Lieut. Akimoto put off to prevent a landing, or whether the two boats crossed each other inadvertently. At any rate Captain Rosehill did land, and was immediately shown the document left by Mr. Ishii of the Foreign Office in Tokyo, declaring Japan's claim, as well as a letter from the United States Minister in Tokyo. Captain Rosehill seems to have behaved admirably. He was much disappointed, indeed; which was natural enough in view of the trouble and the expense he had incurred. But he at once signified his intention of acquiescing. He asked, however, that as he had brought with him two scientific experts and as some of his people were sick, his party might be allowed to land and spend a few days on the island. This was agreed to, and the experts proceeded to make a minute examination of the place, including borings to ascertain the geological conditions. Captain Rosehill had brought with him a full equipment of every kind, including twenty-four varieties of seeds. These last he distributed among the inhabitants of the Mizutani hamlet, to their great satisfaction. He said that his first visit to the island had been made in 1890, when he found it uninhabited. He visited it again in 1897, but the sea was then too rough to permit a landing. Under any circumstances, he added, although his own hopes were frustrated, it was a matter of satisfaction that the island now had settlers to develop its resources. Altogether his behaviour was that of a straight forward, sensible man. The *Kokumin Shimbun* states that he carried a deed of conveyance from the United States Government, and that the deed was in English and Japanese, but we think that very unlikely, for unless the United States Government had foreseen the presence of Japanese settlers, which it certainly did not, there would have been no occasion to use the Japanese language. Captain Rosehill sailed away on the 7th of August.

NAGASAKI HARBOUR.

There is trouble about the Nagasaki harbour. The work was to have been finished this month at a total outlay of 3,100,000 yen, but suddenly the Mayor, Mr. Yokoyama, asked the Town Assembly for an extension of two years and a further grant of 2,590,000 yen. This has led to much agitation, and it is alleged that inquiries set on foot by the citizens have revealed some very questionable proceedings. The whole matter has been appealed to the Home Department.

THE CHENCHOU MASSACRE.

A Chengtê (Hunan) correspondent of the *N.-C. Daily News* sends to that journal the following account of the Chenchou massacre:—

The teacher and cook have arrived from the above city and from them we have the following additional information concerning the murder of Messrs. Bruce and Lewis on the 15th of August. For weeks the cholera has been depopulating the cities along the Yuan River. In Changtê they died daily by the score, and from reliable reports, the same can be said of the cities west of here. Chenchou is built on a hillside and in the centre of the city is a famous spring from which the people obtain much of their water. This was reported to have been poisoned by the foreigners and hence the high death rate. For a few days before the trouble, talk of evil intentions could be freely heard on the street, but the foreigners did not consider it of sufficient importance to speak to the officials about it.

On Friday afternoon, about 3 o'clock, Mr. Lewis was studying with his teacher and Mr. Bruce was in his room across the hall, when, "in an instant," the house and street became crowded with people. Mr. Bruce at once sent to the Chihfu for protection, but it was too late. They drew him by his hair out of the room and into the yard where, with clubs, stones, knives, swords, and torture, they soon killed him.

Mr. Lewis and his teacher went out at the back door into the yard and started to climb up on an old shed, when a stroke from a spear brought the former to the ground. With the same instruments as used above his body was soon beyond recognition. Eyes were knocked out and the bodies otherwise mutilated beyond recording here. After this the mob destroyed all foreign books and other articles they could not use. The trunks and boxes were broken open but not any of the poison could be found. When the crowd had almost disappeared, the Chihfu arrived and had the bodies moved into their respective rooms.

A few facts are worthy of notice.

(a).—On the same street and a few doors away were stationed soldiers for their protection.

(b).—To the rear and adjoining the mission compounds was a military camp.

(c).—The Fu and Hsien yamêns were within a reasonable distance to grant relief.

(d).—The Chihhsien was the same man who was in Changtê in 1900 and refused to turn his hand to help us. It remains to be seen whether such a man shall be allowed to direct the affairs of a district in which foreigners reside.

The deputy postal clerk from Yochou was in the city and had just established an office and intended to open other offices in the principal cities between there and Kueiyang, Kweichou. After the mob left the chapel, they demolished the office, and beat the clerk and postmaster so that the former will likely die as a result of his injuries. The postmaster is the son of an intelligent and friendly military official of Changtê.

One of the remarkable features of this shocking affair is the absence of all excitement caused by the news. People are beginning to think that the killing of missionaries must be regarded as a normal incident of contemporary history in China. It is strange, too, that a Chinese population should be so easily persuaded to believe a charge of fiendish and wholesale cruelty against men whose lives are devoted to benevolent deeds. Evidently the missionary is still altogether misunderstood by the mass of the people in China. That they should count him a political agent rather than a religious propagandist is not wonderful. But it is wonderful that men who devote themselves solely to philanthropic deeds and whose pure, noble lives are constantly before the eyes of the Chinese people, should in a moment of panic be regarded as deliberate authors of their fellow-beings' wholesale destruction. The latest intelligence with regard to this affair is that the district magistrate has been deprived of his office for negligence, and that the Governor of Hunan has been ordered to arrest the ringleaders of the riot without delay. It may be said of China that she is the only country in the world where local magistrates are held responsible for mob violence. We do not hear of magistrates in

America being degraded after a lynching or in Ireland after a moonlighters' outrage.

"ODDITIES OF ARGUMENT."

"Truth" addressing a local contemporary—apparently he suffers from some fine diffidence which prevents him from addressing himself direct to the journal with which he is engaged in controversy,—returns to the discussion of the perpetual lease question. His letter, as might have been expected, shows signs of the sense of discomfort under which he labours, for he accuses the *Mail* of "false statements" and "trickery," these being the hysterical refuge of the defeated controversialist. They would put "Truth" out of court in any case conducted according to the rules of ordinary civility, but the anonymous newspaper correspondent of Yokohama is a law unto himself, and we must put up with his vagaries. The gist of "Truth's" last letter is contained in the following paragraphs:—

There is, however, one point I would venture to set the *Mail* right upon, and that is as regards the *obje* t of the Perpetual Leases. If buildings did not in any sense constitute an object of the Lease, how could the failure to erect buildings nullify the Lease, and how *is justice* could entire buildings worth possibly *yen* 100,000, be confiscated by the Japanese Government in the event of non-payment of one year's rent or non-fulfilment of any other condition of the Lease?

For over 40 years the Title Deeds of our Perpetual Leases have served to cover our perpetual right in entire properties, land and buildings, and if the *Mail* denies this fact, will it kindly inform us what evidence exists of the ownership of the buildings. When I bought my property I bought the perpetual right in the Land with all appurtenances thereto, and the only evidence I possess of ownership of that perpetual right is the Title Deed of Perpetual Lease.

To suggest the simile, which the *Mail* proudly boasts of having made months ago, that our Perpetual Leases might as well be held to apply to furniture, which is moveable, as to buildings, which are immovable, is as senseless and childish as it is misleading and deceptive.

Here, then, we are on something resembling solid ground. To be sure, it is ground that has been trodden again and again in the past, but another peculiarity of the Yokohama anonymous correspondent is that he exercises the privilege of ignoring all history prior to the moment of his taking up his pen, and that vagary also must be endured.

His first point is that if buildings did not in any sense constitute an object of the lease, failure to erect buildings could not nullify the lease. We imagine that under no circumstances other than the desperate circumstances in which the newspaper opponents of the house tax find themselves, would the objects leased by a deed be sought outside the four corners of the deed. Under no other circumstances would an attempt be made to prove that a deed which explicitly conveys land and nothing but land, and which does not say one word about buildings as forming part of the objects conveyed—under no other circumstances would an attempt be made to prove that such a deed conveys buildings. However, let us take "Truth's" argument. Buildings have to be erected on the leased land, therefore buildings are leased as well as land. What was the origin of this—not a clause in the lease itself, be it observed, but a regulation with reference to the land? The origin, as frequently explained on previous occasions in this controversy, was to prevent inconvenient land speculation on the part of outsiders. By the desire of the foreign Consuls themselves that regulation was enacted. No idea of the kind existed when the title deeds were drafted. The land in question being that at Nagasaki, which was

to be allotted to foreigners without any payment whatever, it seemed possible that, unless a regulation were framed compelling the holder to erect buildings of some kind, outsiders, who had no intention whatever of settling in Nagasaki, might acquire large tracts for the purpose of subsequently selling them to *bonâ fide* residents. In the case of the Yokohama settlement, also, the land having been given free of charge, a similar regulation seemed essential. But in the case of Yedo, Hyogo and Osaka, where an upset price was paid, the regulation being plainly superfluous, ceased to stand among the conditions of sale. We mention these facts—old and hackneyed facts—simply because "Truth" appears to attach importance to his argument about the conditions of sale, but, even though the history of this particular condition were not what it is, we should be unable to draw from it any inference such as "Truth" draws. One might as well say that to lease certain buildings to a man on condition of his keeping a livery stable there, would mean that one leased to him the carriages and horses he might use in his business. To that "Truth" may perhaps retort by repeating the last paragraph of his letter, namely, that the horses and carriages are movables whereas the buildings are immovable. Are the buildings immovable indeed? Can not they be removed at any moment without in any way effecting the lease? Are they not frequently removed?

Apart, however, from the actual value of these conditions as to compulsory building and confiscation of buildings in the event of default, we would ask "Truth" what should be done about settlements where the leases contain no confiscation clause and where the condition as to building was never imposed. If it be contended that because of the existence of that condition and that clause, buildings are to be considered as included in objects leased, by what contrivance are buildings to be included where no such clause and no such condition exist? How are the settlements at Tokyo, Hyogo and Osaka to be saved?

"Truth" further points out the injustice that would result from confiscating costly buildings because of failure to pay one year's land-rent, unless such buildings constituted an object of the lease. A simple question will expose the fallacy of that argument:—If the buildings constituted an object of the lease, how could they be confiscated by the lessor? They might revert to him, but they could not be confiscated by him. The title-deed, however, does not speak of "confiscation." "Truth," perhaps, used that word without fully considering its bearing upon his own argument. What the title deed says is that, in the event of failure to pay rent, "the buildings shall *become* the property of the Japanese Government." Obviously, therefore, the buildings are not the property of the Japanese Government so long as the land remains lawfully in the hands of its lessee. They *become* the Government's property only in the event of the land's reverting to it through the tenant's default. Now, if the buildings are not the Government's property, how by any conceivable possibility can they be said to have been leased by the Government to the landholder?

When "Truth" has answered these questions, it will be time enough to consider his contention that he holds the houses on his land under the perpetual lease. But in that context another question may be added:—"Did he buy the appurtenances

on his land from the Japanese Government, or did he buy them from their previous owner, the lessee of the land? Does he now acknowledge them to be the property of the Japanese Government?"

THE YOKOHAMA TRADE EXAMINATION SOCIETY.

Last month the *Yokohama Boyeki Kenkyukai* were asked by the Customs Authorities to give an opinion about the new commercial treaty concluded between England and China. They have now sent in their reply. On the whole it is favourable to the treaty. They admit that the abolition of *likin* is a most important desideratum, and they do not think that, in the face of such clear engagements as China has given, there need be any serious fear of her failure to carry out the compact, especially as she retains the right to impose whatever taxes she thinks fit upon goods not intended for export. It is of course questionable whether she will be able to give complete effect to the terms of the treaty in regions where her sovereign power is curtailed—the Society evidently allude to Manchuria—but that is a point which England must be supposed to have taken into full consideration. In some quarters an apprehension is entertained that the abolition of the *likin* stations will throw out of employment a large number of officials, who may thus be expected to join the disaffected classes. That is a point to which the Yokohama Society is not disposed to attach great importance. But there are certain other qualifications of their approval. Of these the chief relates to the rates fixed for the new customs duties. They think that the rate upon imports should not exceed 12½ per cent. This figure is founded on the theory that according to Japan's present treaty with China the former is entitled to claim entire immunity from inland taxation for any goods upon which she pays 7½ per cent. at an open port—namely, 5 per cent. tariff duty and 2½ per cent. commutation duty. Assuming, then, that the Chinese Government is to have a net increase of 5 per cent., the total leviable becomes 12½ per cent. instead of 15, and the former figure seems ample in the Society's estimate. Coming down, then, from the general question to particulars, the Society maintain that coal, cotton and silk-cocoons should be placed in a special category. Coal exported from Japan to China can not be said to go into the interior at all. It is consumed at the open ports or in their immediate vicinity. Thus it pays no *likin* under present circumstances, and to lay on it a heavy impost in commutation of a tax by which it is not now burdened, can not be called just. Cotton is governed by different conditions. Japan wants Chinese cotton for her mills. Last year she took 6½ million *yen* worth, and she can not afford to have it come to her at a cost heavily enhanced by duties. She does not buy large quantities of silk cocoons from her neighbours, but she does buy some, and is likely to buy more. At all events, they are an important item in the prosperity of her silk-weaving industry. If these various modifications are made, the Society see no reason to object to the revised Treaty. They have confidence, they say, that its vital features have received full attention from the British negotiators. Not the least interesting point in this opinion is the Committee's declaration of faith in China's promises, or, perhaps it would be more correct to say, in the inevitable character of

the engagements into which she has entered according to the text of the treaty. The language of the 8th Article, binding her to abolish all *likin* stations wherever found as well as all internal-tax stations, and on no pretext whatever to re-establish them, leaves no room for evasion. If Japanese merchants place faith in China's promises in this matter, foreign merchants will possibly find themselves somewhat re-assured. The full text of the treaty has not been published, and we are therefore unable to say how far Japanese newspapers' rendering of the 8th Article, as quoted by the Yokohama Society, is accurate. Indeed the whole of the news recently arriving with regard to this question is perplexing, for whereas, up to a very recent date, we had understood that the British Government, supported by mercantile opinion in Manchester and by the China Association in London, had admitted the impossibility of abolishing the *likin* stations altogether—in view of the fact that the *likin* levied upon native Chinese goods, with which, of course, the foreign negotiators have no manner of concern, is much larger in bulk than the *likin* levied on foreign goods—it would now seem that the total abolition of the *likin* stations has actually been agreed to, and that a provisional order in that sense has been issued by Imperial Decree.

THE WEATHER.

Monday, Sept. 8.

Another storm threatens. The last missed us, and truly there have been so many non-materializing wolves that people begin to anticipate complete immunity. However, there is no mistaking the import of this gusty, rain-dashy, horribly muggy weather. We are certainly on the edge of a disturbance. It reached the neighbourhood of Shikoku on the 6th, having set out from Riukiu on the 5th, and it ought to be upon us—if it is coming at all—before these words are published. The past week has been a terribly stormy time in the seas adjacent to Japan.

The floods are out again between Yokohama and Tokyo, submerging the pear orchards entirely. When our special messenger came down from the capital last evening the big Kawasaki bridge was almost awash and the railway authorities were uncertain whether any further trains would be allowed to cross that night. A large corps of coolies, burning flares, were watching the line in the vicinity of the bridge.

Tuesday, Sept. 9.

The sea at Odawara was rougher than ever on the 6th instant, and the police were obliged to exert all their strength, aided by the firemen—five of whom were wounded—in rescuing people from inundated houses. By the 7th instant the violence of the sea had somewhat subsided.

Osaka was visited by the storm on the 7th. There was much stripping of tiles in the town and surveying stations were blown down. Kobe's troubles began from the night of the 6th, but we have as yet no statement of damages. Kyoto was reached by the depression on the 7th, and from thence it passed to Yamada in Ise and to Hamamatsu. Strange to say, Sakata in Uzen telegraphs a gale on the 7th, but how the storm got there we do not see unless it has emerged into the Sea of Japan. Tokyo and the low-lands between the capital and Yokohama are suffering from flooded rivers but there is nothing very serious as yet.

Incoming vessels tell of very heavy weather outside Tokyo Bay. The *Saikio Maru*, from Kobe, had a very rough passage indeed; perhaps one of the roughest she has experienced in recent years. The German mail steamer *Princess Irene*, which left Yokohama at 9 o'clock on Saturday morning, must also have had a terrible dusting, as she did not arrive in Kobe until 4 o'clock on Monday afternoon.

Wednesday, Sept. 10.

The storm is said to have passed away. It travelled through Kiushiu and emerged into the Japan Sea on the 7th instant. The places that suffered most were Kagoshima, Miyazaki, Kochi, Fukui, Hiroshima, Matsunaga, Ki-no-misaki, Tadotsu, Okayama, Osaka, Kobe, Kumamoto, Saga, Nagasaki, Isezaki, Saseho, Fukuoka, Tsu, Hamamatsu, Nagatsuo, etc. It finally touched Hakodate. It need scarcely be said that these names represent, not the order of the storm's journey, but the order of its violence. Service on the Iyo Railway and the Sanyo Railway is suspended, and Tsuruga was visited by a somewhat serious tidal wave. There are many reports of damage from various districts, but the list need not be given in detail. The Okinawa Governor sends word that 500 fishing boats were driven out to sea, but most of them made the shore ultimately.

Thursday, Sept. 11.

The Tonegawa rose 11 feet on the 8th, and finally burst the embankment of the Hiuchi marsh in Saitama prefecture, spreading rapidly over the neighbouring district and submerging some 70 houses in Kawabemura and Toshima-mura. The flood increased during the day and by evening 200 houses were almost completely covered with water. The people, however, fled in good time, and there was no loss of life. The local authorities have organized vigorous measures of relief. It is stated that food and shelter will have to be supplied for 6,787 people, the inhabitants of 1,021 houses, during a period of some three weeks. Three thousand acres of arable land have been inundated. It will be impossible to take any immediate steps for repairing the embankment. There is said to be no resource except to wait for the subsidence of the flood.

THE RUSSIAN SQUADRON.

The *Svet*, according to a telegram to the *Asahi Shimbun*, urges the insufficiency of the Russian squadron on the China station in view of the Anglo-Japanese alliance, and suggests that the squadron be raised to five times its present strength. Of course Englishmen can not see anything strange in such a contention, for it is their own constant habit to advise an increase of British force in Far-Eastern waters, on the ground that the present squadron is not equal to the combined squadrons of this and that Power or to the single squadron of some third Power. These are the kind of contentions that underlie all the policy of Occidental States in the Orient, and the only question that presents itself to the speculative mind is where a limit to the competition is to be found and whither it will ultimately lead. Regarded as it stands at present, the thing is a veritable case of the rocks on which the nigger supposed the universe to rest: there is no bottom. Fancy the light that must shine on such doings in China's eyes. Presumably she thinks. Anyhow she

has people that think for her. What, then, does she think to be the purpose of all these warlike preparations? If she answers her own thoughts in accordance with the promptings of common sense, she ought to convert her whole empire into a Boxers' camp, and we should then see those serried millions stand in armed panoply which brought a nightmare to the Kaiser and furnished a graphic phrase to Sir Robert Hart. Perhaps too she sees the comic side of it all. Perhaps she asks, over her afternoon tea, why those foreigners, instead of spending vast sums on armaments which have no utterable object, why they don't agree to a fixed establishment and send back all the rest. There is a precedent. On the platform of the Tientsin station when the marines assembled that were to proceed to Peking as Legation guards, 25 out of the contingent of 100 Englishmen were counter-marched to their ship because the French and the Russians were found to have sent only 75 men each. The balance of power was of cardinal importance; the protection of foreign life and property, quite a secondary consideration! Why not now make the hypothetical partition of China a secondary consideration and raise to the first rank of essentials abstention from uselessly squandering the money of the European tax-payer? Say what we may, we representatives of the foremost files of time are the apostles of force. Our civilization is the civilization of force. How enormously superior in that respect was the civilization founded on the philosophy of Confucius and Mencius!

"CENTAUR."

We observe that a correspondent signing himself "Centaur" states, in the columns of a contemporary, that we appear to have lost sight of the condition as to the necessity of erecting houses within a certain time on the lands held under perpetual lease, and also of the condition "that the land was liable to forfeiture if within a specified time after purchase, buildings of a value proportionate to the value of the land were not erected thereon." "Centaur" has evidently failed to follow the course of the discussion or he would know that these matters were dealt with months ago in our columns. Under the circumstances he will doubtless excuse us if we refrain from going over the ground again, more especially as the matter was touched on in our issue of the 6th inst. A word may be added, however, about "Centaur's" paraphrase of the second condition. He says that "buildings of a value proportionate to the value of the land" had to be erected. The words of the regulation are:—"Allotments of land will be made only to *bonâ-fide* residents, and renters of land will be required, under penalty of forfeiture of title-deed, to erect, within six months after date of title-deed and in accordance with these Regulations, buildings of a value of not less than, on water lots \$150 for each 100 *tsubo* measurement; on rearge, \$50." It can scarcely be said that such buildings were in proportion to the value of the land. The point is not vital, but it has some interest as showing that the object of the condition was merely to save the land from falling into the hands of speculative outsiders, a fact further established by the exordium of the regulation:—"Allotments of land will be made only to *bonâ-fide* residents."

CHINA'S EDUCATIONAL PURPOSES.

Mr. Kano Jingoro, Principal of the High Normal School, has returned from his trip to China and brings with him some interesting intelligence. In Peking he met the Minister of Education, who had desired to visit Japan himself, but being prevented from doing so, had asked Mr. Wu to go in his place. The Viceroys Liu and Chang, who have been prominent in promoting the movement for sending students to Japan, are understood to have laid great stress on the necessity of equipping these students as speedily as possible, so that they may return soon to China and take part in organizing the elementary schools which the Government contemplates establishing. For it really does seem that the Chinese Government seriously entertains that purpose, and, of course, if it sets about the task resolutely, the reform will overshadow everything done in the past, and will be radical in the best sense of the term. Liu and Chang, being in haste to begin, insist on rapid preparation of students to act as teachers. But there is no royal road to learning. Japan went nearer to discovering such a road than any nation in history. We, who are in the position of the prophet's own countrymen, are apt to forget what she did; but truly the system of education she was able to organise in a few years, starting from the difficulty of having no material whatever to work with in the shape of a teaching staff, is worthy of a little wonder. Mr. Wu Ju-lung is said to be now devoting much time to the inspection of elementary schools in Japan. We advise him to extend his inquiry to the beginnings of these schools, since that is the feature having chief practical interest for his country at present. To return to Mr. Kano, however. He seems to have acquiesced in the view that China badly wants some rapidly equipped students, but he impressed upon the Minister of Education the fact that, whatever steps be taken to supply immediately pressing needs, the process of education can not be "hustled," and that, side by side with these *sokusei* students, lads must be sent to Japan to begin from the first rung of the curriculum and climb the ladder with leisurely and duly ordered steps. The Minister seems to have acquiesced, but he explained that in the meanwhile China had to think about the machinery for use in the organization of elementary schools, and Mr. Wu is now examining that matter. For one thing China must be prepared, namely, to find that her earliest essay in organizing elementary schools for the new education will be more or less of a disorderly scramble, as it was in Japan. But she has to go right on through evil report and good report, assured that perseverance will reach the goal finally.

Mr. Kano also visited the Police School in Peking. There four Japanese are the principal instructors. Mr. Kano took the opportunity to speak of the necessity of amending laws as well as organizing a police force. That is certainly true, but at the same time, it is also true that if the existing laws of China were purely and intelligently administered there would not be much to complain of.

There were meetings between Mr. Kano and Princes Chun and Kung. He told the latter that the lessons of loyalty and patriotism inculcated in Japanese schools are based on the precepts of the Sages Confucius and Mencius; a statement which doubtless proved agreeable to its hearer. Prince Kung

is presumably the son of the celebrated statesman who made his first acquaintance with international affairs when, a pale and perturbed youth, he met Lord Elgin in 1860, and appended his signature to a treaty as to the contents of which he had scarcely any knowledge. Why should he indeed? With the muzzle of a pistol to his head, a man does not pause to ask the meaning of a formula he is required to repeat. The present Prince seems to be as enlightened as was his illustrious father, which is saying much. Mr. Kano told him something of the mistakes Japan had made at the beginning, and the difficulties she had encountered, when starting her new educational system, and how she had stuck to her work, correcting, altering and retracing, so that at length she found herself fairly in the path.

Prince Chun, the son, we suppose, of Prince Kung's successor at the Tsung-li Yamén in 1884, showed much interest in the *Kobun Gaku-in* (School for the Spread of Literature), which Mr. Kano has founded in the Hongo district of Tokyo. Mr. Kano told him that there are now 170 Chinese lads studying there, and that great difficulty is found in imparting knowledge to them, owing to the varieties of dialect they speak. In a huge empire like China, differences of dialect are inevitable, but Mr. Kano suggested that educational purposes and general progress would be greatly promoted by establishing a standard language in the north and south of the country.

Mr. Kano visited Prince Hsu and Prince Ching and found them both thoroughly sympathetic and very earnest about the necessity of educational progress. It would seem from all this that there is a remarkable consensus of opinion among the political leaders in Peking.

Mr. Wu Ju-lung having asked to have explicit discourses on the Japanese educational system, its beginnings and its development, Baron Kikuchi, President of the Imperial University, has made arrangements for the delivery of a week's lectures in the University Hall by men of distinction in the Japanese world of science. Among the names of the lecturers we observe those of Professors Matsumura, Arima and Noda. Mr. Wu is to leave Tokyo on the 24th inst.

A STRANGE STATEMENT.

In the *Nagasaki Press* of September 8th we find the following quotation from the *Kobe Chronicle*, and we assume that it is correctly given:—

"And while on the subject of the *Times* it will interest readers in Japan if we add that it was altogether against Mr. Michie's advice that a certain resident of Tokyo was chosen to supply the London journal with Japanese news, and he gave more than one warning on the subject which passed unheeded."

Although the Nagasaki journal quotes the above, it condemns it in no measured terms, justly remarking that if Mr. Michie were alive "we are sure he would resent very strongly the use in this way of views privately expressed." Yes, in truth, not even the memory of the dead is respected by the editor of the *Kobe Chronicle* in the bitterness of his animosity against the editor of the *Japan Mail*. It is the old story: no hatred can equal the hatred of the man who is haunted by consciousness of having returned evil for good. Not the injured but the injurer never forgives. As for Mr. Michie, he was one of the dearest and most valued friends of the Tokyo correspondent of *The Times*. They exchanged letters constantly, and it was with

the correspondent of *The Times* in Tokyo that Mr. Michie spent one of the few days of his last sojourn in Japan. He was no more capable of grasping a man by the hand in token of hearty friendship and at the same time endeavouring to stab him behind his back, than he was of deliberately crossing to the other side of the road when a charitable deed invited him to this. It is not for the sake of *The Times'* correspondent that we write these words. It is because of the shocking injury done to the memory of one of the truest and best natures that ever graced human being.

And since the subject has been thus brought forward, since for the sake of injuring the reputation of the *Times'* correspondent in the estimation of those—and they were deservedly many—who loved Mr. Michie and whose keen sorrow for his loss is still fresh, since for that sake an insult is thus put upon the dead man, we think it right to say that the chief instrumentality through which the Tokyo correspondent of *The Times* established relations with that journal in 1894, was the instrumentality of this very Mr. Michie. On the eve of the China-Japan war, coming to this country with the hope of promoting the cause of peace, for which he would at any time have given his life, Mr. Michie at once proceeded to Nikko where his friend was staying at the moment, and the two men, returning together to Tokyo, did what they could to avert the impending catastrophe. It was little, alas! they could do, but the joint effort helped to cement their friendship, already of 10 years standing, and it was on that occasion that Mr. Michie offered to use his influence in the sense indicated above. So untrue is the statement made by the editor of the *Kobe Chronicle*; a statement which, if true, would be one of the grossest breaches of confidence ever perpetrated, and which, being diametrically opposed to the facts, is a cruel libel on the loyalty of a departed friend.

"TREATY RIGHTS."

"Treaty Rights" still objects, but does not press the objection, that we have tampered with the wording of the Treaty "in such manner as best suits our contentions." Truly it is difficult to understand why, when a tax on houses is the only subject under immediate discussion, the Treaty's stipulations should not be considered with regard to taxes alone. As to tampering to suit our contentions, can a clear understanding be promoted by such recriminations?

"Treaty Rights" now propounds three questions, which he invites us to answer. We shall do so to the best of our ability, and in quoting the questions we use "Treaty Rights'" italics.

The first question is, "what is the specific property referred to in the above sentence?" namely, in the sentence "of course the 18th article does guarantee certain property against the imposition of any taxes other than those mentioned in the leases."

We answer, the specific property referred to is the property now held in the settlements under leases in perpetuity; that is to say, landed property, since land alone is held under the perpetual leases.

The second question is:—"What are the names of the Taxes against the imposition of which Article XVIII. guarantees such property?"

We answer, land tax, land rate, and all taxes that may hereafter be levied in respect of land.

The third question is:—"What are the names of those taxes mentioned in the leases which (taxes) are referred to in the above extract?"—namely the extract quoted under question 1.

We answer, the taxes included in the payment which the lessee is required to make annually to the Japanese Government on account of the land conveyed to him by the lease; that is to say, land tax, land rate—a local tax—and all other taxes that may hereafter be levied in respect of land.

We do not mean to say that these taxes are specifically enumerated in the lease. The total payment only is mentioned there. But the fact that land tax is included in that payment is explicitly stated in the fifth Article of "The Arrangement relative to the Foreign Settlement at the Port of Hyogo and Osaka." It is not to be expected, of course, that in any of the conventional documents signed before the *Meiji* system of taxation was elaborated, exact mention can be found of taxes included in that system but not in existence at the time when the conventions were drafted. However, the broad fact now recognised by the Japanese Government, after consultations with Foreign Powers, is understood to be that the Revised Treaties exempt foreign land-lessees from any payment of taxes on account of their lands other than the taxes already included in the payments called for by the leases. Hence it is that no registration fee is charged for registering transfers of land—though, strictly speaking, such a charge would fall under the category of a "new condition" rather than under that of a tax.

Perhaps our contention will be clear to "Treaty Rights" if we put it in this form:—Land alone being held under perpetual lease, land alone is entitled to the exemptions granted by the Revised Treaties; the chief of such exemptions being that no taxes shall be imposed on the land other than those already included in the payments called for by the lease.

Having thus endeavoured to answer "Treaty Rights'" questions as frankly and clearly as possible, we proceed to notice his next point, namely:—"With regard to the rest of the *Mail's* article all I can make out of it beyond a quibble as to whether foreigners own or rent property notwithstanding that the editor ought to know perfectly well that the position of foreigners is that they own perpetual leases of land with all appurtenances, is a futile effort to prove that because I claim the conditions of title deeds of perpetual leases which have been confirmed by Treaty, I am repudiating the limitation explicitly formulated in the Treaty. In other words, the *Mail* maintains that because I am claiming what has been confirmed, therefore I am repudiating what has been confirmed."

It is just here that the radical difference of opinion exists between "Treaty Rights" and ourselves. His proposition is:—"Foreigners own perpetual leases of land with all appurtenances;" and among those "appurtenances" he includes houses. That is his contention, we imagine. At least so it appears to us. Now it is possible that such contention would be valid according to English law; namely, that where land is leased for building, all buildings erected on it are to be regarded as appurtenances for fiscal purposes and as held under the lease. But such a proposition has no reality in the eyes of Japanese law, and it is by Japanese law that the Treaty must be interpreted, so far as concerns property held by foreigners in Japan.

Japanese law distinctly separates buildings from the land on which they stand, for taxation purposes, and also separates them for purposes of ownership. Thus, when a sale of land is registered, any buildings that stand on it have to be registered also, or they do not pass into legally recognised possession of the person acquiring the land. Further, no land-owner is liable to pay taxes on buildings that stand on his land unless such buildings are registered as his property: the tax on the buildings is leviable from their registered owner, who may be, and frequently is, distinct from the owner of the land. Japanese law, is, we believe, identical with the law of many other countries in these respects, but how far that may be the case we do not undertake to say. It is enough to point out that under Japanese law houses are not included among appurtenances of land, and since Japanese law is the law by which the treaties have to be operated, the words, "property held under leases in perpetuity" indicate a limitation which is ignored when an attempt is made to include houses in such property.

Probably this is the cardinal point at which the views of "Treaty Rights" diverge from ours, and if he has not apprehended the point, it may well have seemed to him that in speaking of limitations formulated by the treaty we were setting up an untenable contention. We had not thought it necessary to recapitulate the question of the law applicable, as it had been previously set forth in our columns.

"Treaty Rights" suggests we should "employ our ingenuity in endeavouring to prove" that there has not been a violation of the treaty in the matter of the third condition of the "title deeds." We find that suggestion rather vague. If "Treaty Rights" will state explicitly the condition to which he alludes and the manner in which it has been violated, we shall be very happy to discuss the matter. It is possible that we may entirely agree with him.

We do entirely agree with him when he says that distraint proceedings should have been avoided and that they have left a bitter taste in the mouths of foreign residents. That they could easily have been avoided, we are also convinced, but the discussion of that point would take us to ground which had better, perhaps, be avoided.

CHINESE NEWS.

Saturday, Sept. 6.

Symptoms of an anti-missionary movement are reported from Taichow in Chekiang, and it is also stated that bills calling upon the people to expel the teachers of the foreign faith have been posted all over Canton. Evidently this perennial question is as far as ever from being settled. It began to be urgent in 1865 when the Abbe Mabileau was murdered in Szchuan, and it has grown in urgency ever since. But there appears to be neither remedy nor serious idea of attempting to discover one. The Powers go on contentedly treating the symptoms and leaving the malady itself entirely untouched. What are all these murders, burnings and beatings except symptoms? When a man is suffering from cholera no physician imagines that a cure can be effected simply by restraining the patient's convulsive movements. We come back, in the end, to Wensiang's celebrated declaration of 1871. The evil is far more palpable and far more dangerous now than it was in the day of that great statesman, but the time seems to have passed for effecting any

radical cure. Wensiang predicted that unless the trouble was firmly grappled with in those early days, it would ultimately become uncontrollable, and his forecast has been amply verified.

Monday, Sept. 8.

There is a silly rumour that Russia has protested against the last article of the new commercial treaty between England and China, the ground of protest being that the article impairs China's suzerainty, and the protest being accompanied by a threat that if the article is suffered to stand, Russia will not evacuate Manchuria. Many roles are assigned to Russia by the newsmongers, but that of guarding Chinese sovereignty against England, which has entered into an alliance with Japan for the explicit purpose of protecting the Middle Kingdom's integrity, has at least the merit of novelty. Russia's evacuation of Manchuria depends upon the fulfilment of certain clearly stipulated conditions, and were she to import wholly new matters into the question, she would be committing a most unlikely breach of faith.

Both in the north and in the south of China the telegraph says that vigorous measures are being adopted to subdue the insurgents. In Kwangsi the Governor, Wang Chichun, and in Chili General Ma are collecting troops and preparing to restore order. It would be hopeless to attempt to follow these various movements geographically, but the impression conveyed by it all is that China is in a very disturbed state. If she could save the money expended every year on the work of dealing with insurgents, she would have little difficulty in discharging her other obligations.

A telegram to the *Asahi Shimbun* says that Viceroy Yuan's eldest son, a youth of twenty-four, has been attacked by cholera, and that the Viceroy summoned a Japanese physician, whose aid is likely to prove successful.

Tuesday, Sept. 9.

It is stated that the Empress Dowager has definitely put down her foot and declared that before the end of this month the nuptials of Prince Chun and Yung Lu's daughter must take place. No one, or at least very few people, know what happens within the gates of the sacred precincts at Peking, or by what hopes and ambitions the Camarilla surrounding the Throne are swayed. But when first this story of the Prince's marriage came to hand, it had a corollary to the effect that Prince Chun was already betrothed to a lady whom he loved, that she declared her intention of committing suicide if the match were broken off, and that in spite of Yung Lu's great influence, the proposed union would not take place. But the Empress Dowager permits no such scruples. "These are dangerous guides the feelings." So the love troth is to be ruthlessly severed. Alas, alas!

A telegram from Peking says that Ku Hun-ki, Minister of Foreign Affairs, sent in his resignation on the plea of his forces being inadequate for the discharge of the duties devolving on him. But the Emperor has replied that his ability and loyalty are well known; that he must not depreciate himself, and that he had better remain in office.

Friday, Sept. 12.

Shanghai's opposition to the new Treaty seems to be growing. It is doubtless a case of the old distrust. The merchants think, as they thought in the case of the abortive

Alcock convention of 1868, that no deity can have intervened to suddenly smoothe away all the difficulties hitherto alleged to be blocking the path to the abolition of *likin*. The fact is that the Chinese have hitherto set up such a good case in defence of their non-observance of what foreigners claimed as treaty rights, that a complete metamorphosis of their situation can not now be readily credited. Sir Robert Hart himself pointed out, with the force of facts and unquestionable authority, that China is really a congeries of principalities, each having its own local autonomy and its own budget, and that to extend to them all a fiscal arrangement which ignored these differences, was an almost impracticable task. Doubtless the long-headed merchants of Shanghai want to know now how the impracticability has been removed. It must be assumed that their scepticism is very deep-rooted, for they see plainly enough that the abolition of the present system of internal-taxation stations, and their replacement by a system under which the revenue hitherto collected by them would come from the coffers of the Imperial customs, must materially promote the centralization of administrative authority in China, which centralization is regarded, rightly or wrongly, as a great desideratum. For our own part, we sometimes ask ourselves whether centralization would have been an advantage in the days of Boxerdom when the field of mischief was happily restricted because no free channels existed for the spread of the *virus* to the provinces.

A telegram to the *Jiji* from Peking explains the reason of Russia's animosity, or alleged animosity, to the new commercial treaty just concluded by Great Britain in Shanghai. The sentiment assigned to Russia is a desire to prevent the large access of power that must come to the Imperial Customs under the new arrangement. We find great difficulty in believing this to be true, but assuming it to be a well-founded statement, such a line of action on Russia's part would certainly not commend itself to reasoning minds. Russia may be said to have absolutely no interest in the import trade of China, at least in that portion of it which falls under the purview of the Imperial Maritime Customs. The abolition of *likin* and the removal of obstructions to the free ingress of foreign merchandise do not concern her in any way. Therefore her opposition to the treaty on account of the increase of power its operation would bring to the Customs must be termed eminently unwarrantable. Besides, the Imperial Maritime Customs is a purely Chinese institution. It happens to have a British subject for its Inspector General, but the control may pass into German or American hands when the inevitable laws of nature decree a new shuffling of the cards. When Sir Robert Hart was chosen for this high trust in 1863, after the fiasco of the Lay-Osborn flotilla, he was 28 years of age. He is now, therefore, 67, having for nearly 39 years—it will be exactly 39 next November—served China and served the best interests of humanity and of civilized progress with rare ability and still rarer tact. Certainly the much abused *Tsung-li Yamèn* never showed sounder insight than when, in appointing Sir Robert, they wrote:—"In the opinion of Chinese and foreigners, you are a man of loyalty and experience and you will doubtless make redoubled efforts to show yourself worthy of the functions now entrusted to

you." It is England's good fortune to have such men available for such posts, and most assuredly no one can say that under Sir Robert Hart's regimen the slightest favour or partiality has been shown at the expense of any nationals or to the undue advantage of others, while as for his discharge of the duties, and very much more than the duties, of his post, the world's applause is unanimous. Opposition to any extension of the functions of the Customs under Sir Robert's sway, especially when that extension is conceived in the best interests of all countries trading with China, would be a display of small-minded jealousy such as Russia is not in the habit of showing. It would be on a par with the exultation expressed by Baron Gros in one of his despatches when, commenting on the retention of French troops in Chusan after the original purpose of their presence there had ceased to exist, he said that they prevented England from establishing a second Hongkong off the mouth of the Yangtse. France and England were then allies; their troops had just been fighting shoulder to shoulder, and a second Hongkong would have been a place freely open to every nation of the world and presenting the same advantages, the same privileges and the same protection to the peoples of every clime and every flag.

It is stated that Mr. Wu Ting-fong is to remain for another year in Washington. The reason assigned by the correspondent of the *Jiji Shimpō* is that the United States Government has signified its unwillingness to receive the official proposed by China as Mr. Wu's successor. Washington gains by this incident, for certainly it is very improbable that any exchange which removed Mr. Wu would be a change for the better from the American point of view. Mr. Wu is one of those Chinamen not infrequently met who to an absolutely faultless use of the English tongue adds conversational powers of an altogether exceptional order. The writer of these notes recalls vividly a discussion he had with Mr. Wu seventeen years ago on the subject of affairs in Korea and Japan's relations with that country. The scene was Mr. Wu's house in Tientsin where he was then serving on the staff of that greatest of nineteenth century Chinese, Li Hung-chang, and the discussion, commencing at 10 a.m. lasted until 12.40 p.m. The writer left Mr. Wu's presence profoundly impressed with his grasp of the subject in all its phases, diplomatic, international, legal and philanthropic, and had difficulty in remembering Mr. Wu's nationality so faultless was the latter's English and so unfailing his command of all its resources. The Chinaman, when his business is to appeal to reason or to advocate it, is, probably, one of the most logical thinkers of any nation.

KOREA.

Saturday Sept. 6.

News from Söul is to the effect that the British Representative in that city has given to the Korean Government notice of his country's desire to revise the Anglo-Korean treaty. The treaty was concluded in 1883 and ratified in 1884—one of the last prominent acts of Sir Harry Parkes' life. It contains a provision that revision may be effected after an interval of ten years, a year's notice being given by either of the high contracting parties. Failing such notice, the life of the convention is *de facto* extended for another period of ten years.

The second period terminates in 1904, and consequently due notice has now been given. This revision will be a matter of some interest, but it seems that many a decade must pass before either China or Korea will be in a position to claim such a revision as Japan obtained, with infinite pain.

Wednesday, Sept. 10.

It is stated that a Gingseng trust has been formed. The production of this root is not large. Korea gives fifty thousand lbs.; America, twenty thousand; and Japan, forty thousand. There is a very great difference in price. The Korean Government, by uniformly maintaining a State monopoly and carefully controlling production, has managed to keep the price of Korean Gingseng at 30 *yen* a lb. In America there is a trust, which maintains the figure at 20 *yen*. But the Japanese producers do not protect themselves in any way, and the result is that their Gingseng fetches only one *yen*. Such is the statement made by a news agency which has supplied an item to Tokyo newspapers, but it is obviously an incomplete statement, for if the quality of the Japanese root were equal to that of the Korean, it is incredible that such a difference as 29 *yen* per lb. should exist as a result of mere middlemen's manipulation. However, Messrs. Oshikura Masayoshi and Sayegawa Jitsutaro, having conceived the idea of a trust, have managed, it is said, to carry it, and have secured the coöperation of the Mitsui Bussan Kaisha which farms the trade in Korea.

Thursday, Sept. 11.

The *Jiji Shimpō's* Sōul correspondent telegraphs that the Korean Government has decided to erect a small arms factory in Sōul at an outlay of 210,000 *yen*. The work has been undertaken by the Mitsui Bussan Kaisha in conjunction with the Sharyo Kaisha (Vehicle Company) of Tokyo. It will be a remarkably cheap factory if the total cost is only £21,000, but probably that will be found to be only a beginning of outlays.

Friday, Sept. 12.

Old troubles are recalled by the latest news from Sōul. It will be remembered that when Japanese sway was supreme in the Korean capital after China's defeat in 1895, an edict was issued ordering the cutting of the top-knot. There resulted much disturbance and even a recrudescence of the Tong Hak commotion, for whereas people can be reconciled easily enough to ethical changes, they rebel vehemently against meddling with their clothes or their coiffure. The Japanese got the discredit of having suggested this unwise sumptuary law, though it was proved that they really had nothing to do with it, and though it was known by well-informed persons that the Japanese had not ventured upon such rash legislation in their own case, the old *yaro no atama* having been driven out of vogue by a popular ditty not by an ordinance. That is all very fine where every-day folks are concerned, but where it comes to the head-gear of soldiers, queues and top-knots are scarcely manageable, and since Korea is now beginning to provide herself with soldiers, the recruits have been ordered to cut their hair. Against that "tyranny" some kind of opposition has been organized, and, at the same time, there is a strong official protest against devoting funds to the repair of the old palace. The Emperor is represented as being much enraged. His Majesty has issued

peremptory orders for immediate hair-cutting on the part of officers and soldiers alike, and several changes have taken place in official circles, Li Chongkon, Chief of Police, being placed under arrest, and a Ki Chiyong, Chief of the Records Bureau, and Min Yonghwan, chief of the Bureau of Accounts, being removed. Other names are mentioned, some as having been newly appointed and others dismissed, but truly the telegrams (*Jiji* and *Asahi*) are far from being intelligible. Altogether seven officials seem to be affected.

THE RICE CROP.

Monday, Sept. 8.

The Department of Agriculture and Commerce has just issued figures showing the result of its information as to the probable yield of rice this year. The figures embody estimates received from all the provinces on the 2nd instant, namely, the *nihyakutoka* :—

	Koku.		Koku.
1892.....	41,429,676	1898.....	47,387,666
1893.....	37,267,418	1899.....	39,698,258
1894.....	41,859,047	1900.....	41,466,734
1895.....	39,960,798	1901.....	46,914,943
1896.....	36,240,351	1902.....	39,804,639
1897.....	33,039,293	Average	40,856,217

The average here set down is that for the seven-year period ended in 1901, excluding the two years of maximum and minimum yield. If the present warm weather continues, the crop may yet come up to, or even pass, the average. It is now, according to the estimates, 2.6 per cent. below the average and 15.2 per cent. below last year's crop.

Friday, Sept. 12.

There has been a steady rise in the market quotations for rice during the past few days. The figures now ruling are :—

	Quotation on 11th YEN.	Quotation on 9th YEN.
September deliveries	14.40	13.74
October deliveries	13.96	13.67
November deliveries	13.58	13.275

DEATH OF DR. NAGAYO SENSAL.

We regret to have to announce the death of Dr. Nagayo Sensai, which took place on the 8th instant at the age of 65. Dr. Nagayo had long been before the public as head of the Sanitary Board. He began life at 17 by studying medicine under the Dutch at Nagasaki, and he was the first to establish a vaccination office in Tokyo, at Shitaya. That was in 1875. He filled many offices, and at the time of his death he was a Court Councillor and member of the House of Peers. He fell sick some time ago, and his illness having assumed a serious form on the 16th of last month, the Emperor raised him to the first Rank of the third Grade and conferred on him the First Class Order of the Mirror.

The Emperor and the Empress have granted *yen* 800 towards the funeral of the late Dr. S. Nagayo, who passed away on September 8th. Their Majesties also granted a sum of *yen* 500 toward the relief of sufferers in Hiroshima Prefecture by the recent storm.

NOTES ON CURRENT EVENTS.

A telegram to the *Asahi Shimbun* says that Messrs. Tata & Company of Calcutta have obtained from the Indian Government a concession for working mines in central India. The project is said to be of very great magnitude, so great, indeed, that the largest production of steel in the world will

be the result. The next question is, what is going to be done with all this steel?

On her return voyage from Marcus Island, the *Takachiho* passed close to Tori-shima, the scene of the recent eruption. She reports that the volcano has almost ceased to be active. When she first visited the place the crater was belching forth volumes of smoke visible from a distance of about 20 miles, but now there is only a faint white puff, suggesting nothing of the recent furious activity. That is interesting. But who will be tempted to make his habitation again on such an island?

The Emperor and Empress have given 1,000 *yen* to relieve the families of the sufferers.

From the 4th instant the sea at Odawara showed signs of abnormal disturbance. There was no wind of any force nor yet any rain, but the sea grew angrier and angrier, till at last, on the 5th instant, a wave some 60 or 70 feet in height, reared its huge crest and came bearing down on the coast, washing away 19 houses of fishermen and more or less injuring or inundating over a hundred. The figures are uncertain, but it is evident that a great deal of damage was done. Happily no lives were lost. Doubtless the wave represented a result of the greatly disturbed state prevailing in adjacent waters throughout the whole of this month.

There is talk in the columns of newspapers opposed to the *Seiyu-kai* of resurrection of the old Liberal Party under Count Itagaki's leadership, and the consequent break-up of the *Seiyu-kai*. These journals represent the leaders of the *Seiyukai* as impatient because Marquis Ito does not lead them into the seats of power. They, of course, know a great deal more than he does about the proper times and seasons for ministerial changes, and they want to take advantage of their knowledge. All this sounds like the thought begotten of the wish.

The objects of Mr. Consul Hisamizu's visit to South Africa are said to be investigations pointing to the engagement of Japanese subjects in agricultural operations and the expediency of starting a direct line of steamers to the Cape. It seems to us that a long time must elapse before there are sufficient openings to warrant the establishment of such a line, and as to farming, one has to remember that stock-raising, in which the Japanese have no experience, is among the chief enterprises of the South African settler. Still where there is stock-raising there must also be crop-growing, and as the Japanese show pre-eminent ability to get the most out of the land they farm, it is possible that openings may exist for them in the newly annexed territories. Mr. Hisamizu has written a letter speaking in very fine terms of British colonization, so far as he had an opportunity of examining it, and saying that Dutch and German colonization can not be mentioned in the same breath.

Mr. H. Wilson is in charge of the United States Legation during the absence of Colonel Buck in the north. We fear that the Colonel, who as our readers know, left Yokohama a few days ago with Admiral Rogers in the *New York*, must be having a stormy time in the Pacific.

Dr. Kitasato is said to be now engaged seeking an antidote for the bite of the *hamu*, a poisonous snake which infests the Riukiu Islands. The great Pasteur obtained

a serum which was used with success in India and elsewhere, but it appears that serum employed in this manner must vary according to the kind of snake. In fact, the serum is manufactured by taking the poison of the snake, inoculating an animal with it, and thus obtaining a substance wherewith human beings may be treated. Dr. Kitasato is said to have collected a thousand *hamu* for the purpose. It appears that from 30 to 40 people in the Riukiu Islands, especially Oshima, lose their lives annually from *hamu* bites. The only remedy now known to them is to cut off the bitten member, and even that drastic resource has to be immediate.

There has not been any special alacrity on the part of the public to subscribe for the last issue of ten million *yen* worth of Exchequer Bills. The tenders received up to the 9th instant, when the allotted period came to an end, totalled only some four million *yen*, so that it becomes necessary for the Bank of Japan to take over the remaining six millions. There can not be much money seeking investment in Japan when Exchequer Bills carrying some 7 per cent. interest, find so few purchasers.

YOKOHAMA SPECIE BANK.

The half-yearly general meeting of shareholders of the Specie Bank took place in the building of the institution on the afternoon of September 10th. Mr. N. Soma, President, occupied the Chair. The meeting was attended by about 70 shareholders. The accounts for the first half of this year passed at the meeting were as follows:—

Yen.
Total income 7,224,672.143
(Including *yen* 544,156.193 brought over from last account).

Total expenditure 5,259,598.878

Net profit 1,965,073.265

To be disposed of as follows:—

Ordinary reserve 200,000

Special reserve 100,000

Dividend 1,170,000

(Six *yen* fifty *sen* for old shares, new shares and second new shares; three *yen* twenty-five *sen* for third new shares.)

Carried to next account ... 495,073.265

Mr. Soma then addressed the meeting as follows: Gentlemen—I have the pleasure, in submitting to the meeting the forty-fifth report, to say a few words with regard to economic conditions and business prospects during the term under review. Generally speaking, the economic world of Japan showed some tendency towards recovery owing to the favourable prospects of trade in the previous term, but business men in commercial and industrial circles still kept a strict guard as to their transactions and no new enterprises were planned. The price of silver fell considerably and consequently the trade with China was in a state of abeyance for a while, thus discouraging the spirit of the people generally. As might have been expected under such circumstances, the Bank of Japan and other principal banks in the country took steps to lower the rate of interest, but the condition of business remained stationary, there being no strong demand for funds. The coffers of the various banks were full of deposits. In short, the money market was not at all disturbed during the period. As to foreign trade, according to the report of the Customs Authorities, exports amounted to over *yen* 110,000,000 and imports to over *yen* 130,000,000, showing an excess of imports over exports by over *yen* 20,000,000. The figures were nearly the same as those of the corresponding period last year. There was an inflow of specie amounting to over *yen* 6,000,000. Now turning to business prospects abroad, the economic condition of the United States was as bright and prosperous as ever. In England, general business began to revive on account of the conclusion of the South

African campaign. The trade with India was favourable on the whole. Under the circumstances, while the domestic business of the Bank showed a considerable falling-off the banking business with the outer world was conducted as smoothly as could be desired, with the exception of China where, as above stated, owing to the fall in the price of silver and irregularity in the rates of exchange the greatest inconveniences were experienced by the Bank. I am glad, however, to be able to present satisfactory accounts despite the discouraging prospects during the term and this is, I believe, mainly due to the measures of precaution adopted by the Board of Directors.

Y.A.R.C. SWIMMING COMPETITIONS.

A series of swimming races and diving competitions, under the auspices of the Yokohama Rowing Club, came off on Saturday afternoon at the Bathing Barge, and gave very good sport. There was a large—indeed uncomfortably large—crowd of spectators. The diving exhibition which was to have been given by Mr. Forrest Seabury had to be postponed till next Saturday.

The arrangements were under the charge of a Committee consisting of the following:—Mr. H. C. Litchfield, President; Mr. F. J. Hall, Captain; Dr. E. Wheeler, Mr. H. A. Poole, Mr. W. Goddard, Mr. F. Lammert, Mr. M. Schellenberg, Mr. C. Thwaites, Mr. O. Strome, Hon. Treasurer, and Mr. H. E. Hayward, Hon. Secretary.

I.—100 YARDS (Open).

H. Goddard	Scratch	1
W. B. Mason	5 seconds	2
S. H. Kuhn	5 seconds	3
W. M. Carst	5 seconds	0
H. A. Poole	6 seconds	0

Five of the six entered for this event started, Irwine not going out, and Goddard, Mason and Kuhn made a very level race of it, the first named just winning by a stroke from Mason. Goddard's time was 1.35

II.—RUNNING HEADER FROM SPRING BOARD.

J. F. Marques	1
W. M. Carst	2
A. Kingdon	3

In this Marques and Carst ran each other very closely. The former however won by 52 points to Carst's 50, Kingdon getting 38 points.

III.—LONG DIVE.

J. F. Marques	1
A. Kingdon	2

There were only two competitors in this event, Marques winning with a dive of 110 feet, against Kingdon's 102½.

IV.—HIGH DIVE.

W. M. Carst	1
J. F. Marques	2

Of five entries only two went out—Carst and Marques, the former winning by 56 points, out of a possible of 60, against Marques' 43.

V.—¼ MILE (Open).

H. Y. Irwine	5 seconds	1
H. A. Poole	20 seconds	2
H. Goddard	Scratch	0

Three started in this contest, Poole, Irwine and Goddard. Irwine led over the first lap, Goddard second and Poole last. The first half was covered in 4.32, and Goddard gave up. Irwine finished easily ahead of Poole, the latter, considerably pumped, going over the course for second place. Time, 9.58.

VI.—RUNNING HEADER FROM TOP OF BARGE.

J. F. Marques	1
W. M. Carst	2
H. Goddard	3
H. Y. Irwine	0
A. Kingdon	0

There were five competitors and Marques won with 49 points, Carst, 47; Goddard, 44; Irwine, 38; Kingdon, 34.

VII.—100 YARDS (Non-winners).

W. B. Mason	Scratch	1
W. M. Carst	Scratch	2
L. Thompson	5 seconds	3

Mason won a close race from Carst, Thompson being a good third. Kingdon gave up. Time, 1.40½.

YACHTING.

A race to Uraga of yachts belonging to the cruising class took place on Saturday afternoon for two prizes, the first presented by "H.G., Shanghai," and the second by the club, both prizes on arbitrary handicap. Only two started at 1 p.m., *Surprise* and *Virginia* (late *Ideal*). The latter led for some little time, having obtained a good start, but once out in the open the larger craft began to go away. The wind was fresh north easterly and kept them going hard. On the course down to Uraga, *Surprise* still further increased her lead and finished 21 minutes to the good. Following were the times:—

	h. m. s.
<i>Surprise</i>	3.52.00
<i>Virginia</i>	4.13.00

The 21-raters were started at 2.15 p.m. for three prizes, the first by the Hon. Secretary on arbitrary handicap and the second and third by the Club on Club time. The result was quite an exciting finish between *Pele* and *Edna*, the former crossing the line 12 seconds ahead of the latter. *Yugao*, however, won the first prize on her allowance of 10 minutes, the second prize and 2 points going to *Vixen* and the third with one point to *Pele*.

Following are the corrected times:—

	Corrected Club.	Corrected Arbitrary.
	h.m.s.	h.m.s.
<i>Winsome</i>	4.07.55	4.07.55
<i>Pele</i>	3.58.30	3.58.30
<i>Edna</i>	3.58.42	3.58.42
<i>Yugao</i>	4.04.31	3.57.14
<i>Vixen</i>	3.56.52	4.00.05
<i>Pima</i>	4.08.56	4.04.18

The course was 8½ miles, Tsurumi-Mandarin Bluff.

ENGLISH CRICKET.

The following table shows the relative positions of the English counties in the cricket championship on 15th August:—

	Played.	Won.	Lost.	Drawn.	Points.	Percentage.
Yorkshire	22	10	1	11	9	81.81
Lancashire	20	7	3	10	4	40.00
Notts	19	5	3	11	2	25.00
Sussex	20	5	3	12	2	25.00
Warwickshire	13	4	3	6	1	14.28
Surrey	20	5	4	11	1	11.11
Kent	17	7	6	4	1	7.69
Worcestershire	18	4	5	9	—1	11.11
Somersetshire	15	5	7	3	—2	—16.66
Essex	16	2	3	11	—1	—20.00
Middlesex	14	3	5	6	—2	—25.00
Gloucestershire	16	3	7	6	—4	—40.00
Derbyshire	13	2	5	6	—3	—42.85
Hampshire	12	2	6	4	—4	—50.00
Leicestershire	15	1	4	10	—3	—60.00

MR. WILLIAM E. GEIL.

Another illustration of the originality of American ideas has reached Japan in the person of a man who is making a tour in the world in the interests of an independent study of Mission work. Missions have been reported by Secretaries and other officers sent out to see and report the work done by special denominations, they have been reported by Missionaries themselves and by those who have not seen the work but have reported what they heard. Here is a man evidently seeking an impartial and unprejudiced view, without denominational trammels or special theories to defend or exploit, but with eyes and ears open to learn and report what is to be seen and heard. A year and a half has already been spent in the islands of the Pacific, the Philippines and Australia. The first volume of his investigations has already been printed in Australia and the first edition was sold before it was off the press. We shall look with interest for the results of his investigations while in Japan. Let every one rest assured that Mr. Geil's ear is open to any facts that may be supplied from any source concerning the subject of his investigation.

THE THREE-LETTER RATTLE.

WE have received two more communications from the editor of the *Kobe Chronicle*. The first filled us at the outset with much though chastened joy. It said that unless we published our correspondent's original letter within three days, he would prosecute us for breach of the Press Law. Some years ago, we forget exactly how many, the same editor threatened us with a law-suit in consequence of some pinch or sprain, we forget exactly which, he had sustained in a discussion with us. Owing to our constitutional inability to be accurate we fell into the error of imagining that the menace had some meaning, and were thus betrayed into anticipating the pleasant pastime of witnessing a trial at law instituted by one editor against another because the former, engaging in a fight with the latter, had sustained some hurt. We therefore replied, in effect:—"Wade in and win. But remember that if you try to assault and batter other people, you must expect to be yourself drubbed occasionally." To our great disappointment the suit never came off. Discretion or timidity, we forget exactly which, appears to have intervened. That is why we call our present joy "chastened." For unfortunately the prospect is too good to materialize. It is always something to assist at the making of a record, and a suit at law instituted by one journal against another because the latter had accidentally misquoted three letters in a word of nine, would be a record quite unlikely to be surpassed or even equalled until newspapers begin to be published in the moon. We do not think that the Press Law obliges an editor to be a party to the process of libelling himself. We do not think that when it requires him to publish a letter of correction, it contemplates even a letter containing a malicious slander. If that is the kind of unreasonable process enacted by Japanese legislators, there would be some interest in ascertaining the fact. But we have not leisure to be the *corpus vile* of these investigations. Another consideration also influences us. We shall presently explain it. Meanwhile, here is the letter:—

CORRECTION OF A FALSE STATEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

7 Sakaye-machi, 1-chome, Kobe:
September 1st, 1902.

SIR,—My attention has been called to the following statement in the *Japan Mail* of Thursday, the 28th August, in an editorial headed: "Oddities of Argument":—

"The *Kobe Chronicle*, at this eleventh hour of the day, has discovered the above form [in which Article XVIII. was drafted], but failing altogether—none so blind as those that will not see—to appreciate its significance, goes on to say 'what appears perfectly clear from the Blue-book is that the Japanese Government or its plenipotentiary was perfectly aware that in exempting household property in the Settlements from any varying of the conditions, &c.' 'In exempting household property!' How sweetly the whole question is begged. There is not one solitary word in the Blue-book to show that 'household property' was in the mind of the Japanese negotiator, and there are very plain words to show that it was not in the mind of the British negotiator. Yet the *Kobe* journal calmly talks of what the Japanese Plenipotentiary was aware of when he excepted household property!"

Now the actual words of the passage which you pretend to quote from the *Kobe Chronicle* are as follows:—

"What appears perfectly clear from the Blue-book is that the Japanese Government or its plenipotentiary was perfectly aware that in exempting *leasehold* property in the Settlements from any varying of the conditions, and continuing the *status quo*, it was making a concession for 'value received.'"

You have therefore substituted the word "household" for "leasehold," and having thus changed the meaning of the sentence, and omitted the concluding clause upon which the argument depends, you proceeded to comment upon the false issue thus raised.

Since January, 1900, when I refused to exchange the *Kobe Chronicle* with the *Japan Mail* on the ground that discussion was useless with a controversialist who showed himself quite indifferent in the matter of accuracy, I have only occasionally seen your journal, but those few occasions have been sufficient to show that you continue to employ against the *Chronicle* your favourite methods of perversion by paraphrase and garbling by omission of context. As the real views and opinions of the *Kobe Chronicle* are fairly well known in Japan, both among Japanese and foreigners, a reply to such untrue charges as a rule seemed unnecessary, more especially when the journal bringing them was the *Japan Mail*. It is otherwise, however, when you proceed to the absolute falsification of the language used, and change the meaning of a sentence by substituting one word for another in a passage marked by inverted commas. When the case reaches that stage, it seems about time to insist on retraction and to take steps for drawing public attention to your methods of controversy.

I therefore now demand, under Article XIII. of the Press Law, that you insert this letter of rectification in the *Japan Mail*, according to law, in as prominent a position as the garbled passage, both in your daily and weekly issue, and thus correct the statement you have untruefully attributed to the *Kobe Chronicle*.

I am sending this letter to the Press in order to direct public attention to your methods of controversy.

I am, Yours truly,

ROBERT YOUNG,

EDITOR, *Kobe Chronicle*.

I send you herewith a copy of the *Kobe Chronicle* of the 15th August, in which the article whose words you pretend to quote appeared.

The other consideration alluded to, as inducing us to publish this letter, is that, in addition to our constitutional inability to be accurate, we labour under the disadvantage of having a tender heart, and it would grieve us to be instrumental in marring the great glee of the editor of the *Kobe Chronicle*. We have found him a curious and diverting study. Not interesting. We can not say "interesting," because interest involves the idea of importance, more or less, and it would really be too rash, even for inaccurate folk like ourselves, to pretend that the editor of the *Kobe Chronicle* is an important personage. Of course he thinks himself important. That is quite human, and there is a great deal of refreshing humanity about him. Hence it is that he speaks of our "being assured" that he doesn't see the *Japan Mail*, though really what he sees or does not see has never been to us a matter of either speculation or inquiry, and we are now only languidly diverted by his confession that for two years he has studiously avoided reading a newspaper of whose methods he now undertakes, nevertheless, to pen a full and complete analysis. The adjective "interesting" therefore is inadmissible in this context, but "curious," let us say "curious." There are some readers of the *Kobe Chronicle* in Tokyo who apply habitually to its editor a pet name—it is always a good sign to have a pet name. They call him a "wriggling shyster." But, for our part, we do not admit the correctness of the epithet. We have observed the editor of the *Chronicle* in

various phases of his career. Before the exigencies of a subscription list intruded upon his licence, we have seen him anonymously running fierce and uncompromising tilts in the columns of another journal at Christianity and all its professors, and when the troublesome words "business interests" began to have significance for him, we have seen him promptly take the "d—d sharp turn" of the Yankee editor and leave the missionaries severely alone. We have also seen how, in the early days of gilded sunshine, Japan and all things Japanese presented themselves to his eyes through an atmosphere of tolerance and approval. And we have seen how, when, he became an exile from the fleshpots, the political, administrative and social landscapes of these islands assumed for him a sombre, repellant and even hateful aspect. But from first to last the constancy of his character has impressed itself upon us: a writer splendidly faithful to the principle of burying the essentials of a controversy in a dust of subordinate trivialities. It has seemed to us as we saw him unflinching engaged on his fine task of pulling exiguous periwinkles out of lilliputian shells with microscopic pins, it has always seemed to us that here, if anywhere, the acme of meticulousness had been attained. In the eyes of the philosopher all complete types, even a Caliban, have beauty. Therefore we found this spectacle agreeable. And when, after many years of industrious delving among side issues, the *Chronicle's* hour of glee dawned, we did not grudge a small twinge in our own toe for the sake of the delight the editor experienced. After being pulled again and again from his preening perch by that nasty ogre, the *Japan Mail*, and after having had his poor face rubbed again and again in the mire of controversial discomfiture, at last the grand hour of delivery had chimed. He detected the *Japan Mail* in the blunder of misquoting three letters in a word of nine. Memorable, magnificent triumph! Proclaim it throughout the land! Publish it in all the newspapers! The mighty were fallen! The time had at last arrived to dance upon the carcass of that nasty *Mail*, and to sound loudly the three-lettered rattle. It was an orgie of ecstasy; an intoxication of delight. We can not bear to mar the enjoyment, and it is owing to that sentiment of softheartedness that we publish the first letter.

But why, oh why, did not the happy editor remain satisfied? Why, oh why, did he not continue dancing gleefully on his self-erected mound of motes and molecules and springing his three-letter rattle for all it was worth? That is what we ask distressfully. For he has sent us another communication:—

CORRECTION OF ANOTHER FALSE STATEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the assurance that I do not see the *Japan Mail* you seem to have become perfectly reckless. My attention is called to another garbled quotation purporting to be from the *Kobe Chronicle* and appearing in your issue of the 2nd inst. You there say:—

"The *Kobe Chronicle* had represented Viscount Aoki as speaking of 'the rights of the householders being carefully defined by the title-deeds.'"

That statement is quite untrue. The passage which you pretend to quote appears in another part of the same article of the *Kobe Chronicle* (August 15th) from which you have already (August 28th) given one false quotation, and read in full:—

"There is a memorandum by Viscount Aoki, dated a few days later than the interview mentioned above, in which it is admitted that the question of the foreign Settlements is one deserving special attention, but, he said, 'the rights of the leaseholders are carefully defined by the title-deeds, and too well guarded by the principles of civil law that (sic) any apprehensions on this score should be entertained.'"

You have now substituted the word "householders" for "leaseholders" just as before you altered "leasehold" to "household." Following up the false issue thus raised, you go on to say that because of this statement in the *Kobe Chronicle* you had originally remarked that "the title-deeds 'do not say a word about houses.'" Now do you mean to assert that you, a controversialist of twenty years' experience, made two misquotations from the same article, both misreadings being vital to the issue, in the one case reading the word "leasehold" as "household" and in the other making "leaseholders" into "householders," and did so in all innocence? Because, if you do make this claim of innocently misquoting, you convict yourself of as gross recklessness in the matter of controversy as any man was ever guilty of—a recklessness that if you have any sense of shame should render you forever dumb. The unfortunate thing for you is that in both cases the garbled quotation admirably suited your argument.

I leave you to rest on which horn of the dilemma thus arising that (sic) you choose. Meanwhile I demand under Article XIII. of the Press Law that this letter of correction and refutation shall be inserted in full in the same type and in the same column of the *Japan Mail* as the false statement appeared.

I am, Yours truly, ROBERT YOUNG,
Editor, *Kobe Chronicle*.

Now this is very painful. It hurts us to have to kick down the meticular mound and shatter the three-letter rattle. Here we have the editor of the *Kobe Chronicle* coming forward with a fresh charge of misquotation. Carried away by the inebriety of his three-letter discovery, he has become thirsty for fresh laurels. Formerly, the grand find was that "household" had been erroneously written for "leasehold." Now the second stupendous discovery is that "householders" has been written for "leaseholders." Upon that broad basis the editor builds a towering edifice of accusation. It is quite evident that these two misquotations can not have been unintentional. They both suit the argument of the *Japan Mail*. Therefore that journal must have deliberately falsified a text which it professed to quote verbatim. If it did not deliberately falsify, if it innocently fell into error, then, as a controversialist of 20 years' standing, its editor has been guilty of recklessness which, if he has any sense of shame, should render him forever dumb. He is invited to impale himself on the sharp horns of that ugly dilemma. But here is where our grief for the editor of the *Kobe Chronicle* comes in. Here is where we feel that he has been horribly unwise in dropping his little rattle and ceasing his pretty dance on the dust heap. For this second misquotation is not ours at all. It was perpetrated by "Truth," a correspondent of the *Japan Gazette*. Our article of September 2nd, on which the editor of the *Kobe Chronicle* founds his new accusation, was in answer to a correspondent of the *Japan Gazette* who had addressed himself to that journal over

the signature of "Truth." The article was that and nothing else. We reprinted verbatim the first portion of his letter. There it was, staring the editor of the *Kobe Chronicle* in his face. There; in plainest type, were the words of "Truth" containing the term "householders" and attributing it to the *Kobe Chronicle*. Upon "Truth's" letter and upon "Truth's" letter alone we commented. By no conceivable possibility could any one reading our article imagine that we had any other text. Very well then. The editor of the *Kobe Chronicle* knew perfectly well that the misquotation, so far as concerned our article of the 2nd instant, was wholly "Truth's" and in no sense ours. He also knew perfectly well, if he read the article out of which he has manufactured his new but lamentably cracked tin trumpet,—and we must assume that he did read it—he knew perfectly well that "Truth" professed to be quoting from our article of the 28th of August. This latter article was in the possession of the editor of the *Kobe Chronicle*. Indeed, it was out of it that he had constructed his three-letter rattle. Yet before fulminating against us an accusation either of deliberate deceit or of controversial impotence, he did not take the common, most common, precaution of examining the article from which "Truth" quoted in order to see whether the mistake was really ours or whether it was "Truth's." Had he fulfilled that simple preliminary, he would have found that the word which "Truth" transcribed "householders" appeared as "leaseholders" in our article. Now this is curious. It begins to become quite interesting. Who is to be impaled on the horns of the dilemma? We do not think of sending "Truth" a lawyer's letter. We do not think of charging him with "absolute falsification." He has made a trivial error, an error which did not affect either his argument or ours. But what is the editor of the *Kobe Chronicle* going to do about it? He has now to deal with the complication that "Truth" misquoted us. But we correctly quoted the *Kobe Chronicle*, and thus the editor of the *Kobe Chronicle*, on the most careless conceivable blunder of his own, has erected a horribly sharp-horned dilemma whereon the *Japan Mail* was to impale itself. Will he now charge "Truth" with "absolute falsification" and offer the horns to that slightly inadvertent gentleman? Or will he pull his forelock—if he has any forelock, for truly he keeps so little "hair on" in his numerous controversies that the tresses must have been become very scanty by this time—will he pull his substantive or shadowy forelock and tender a profound apology to the editor of the *Japan Mail*? Or will he get off his dust heap, throw aside his three-letter rattle and lie down quietly himself on the horns? And what is he going to do about the immaculate

accuracy to which he has always laid such clamorous claim? Why, oh why, did he not remain content with his dustheap and his rattle? No one grudged them to him. And for ourselves we are unfeignedly sorry that the poor man has dug and fallen into such a thorny pit.

THE LATE SIR FREDERICK ABEL.

Sir Frederick Augustus Abel, K.C.B., F.R.S., G.C.V.O., D.C.L. Oxon., D.Sc.Cant., whose death is announced, was the first baronet, created in 1893. According to *Men and Women of the Time* he was born in London in 1827, and was known principally in connection with chemistry and explosives. His published works are: "The Morden History of Gunpowder," 1866; "Gun Cotton," 1866; "On Explosive Agents," 1872; "Researches in Explosives," 1875; and "Electricity Applied to Explosive Purposes," 1884. He was also joint-author with Colonel Bloxam of a "Handbook of Chemistry." Sir Frederick Abel had been President of the Institute of Chemistry, the Society of Chemical Industry, and the Society of Telegraph Engineers and Electricians. He was Professor of Chemistry at the Royal Military Academy from 1851 to 1855, and was Chemist of the War Department from 1854 to 1888. In 1883 he was one of the Royal Commissioners on Accidents in Mines, and President of the Committee on Explosives from 1888 to 1891. He had been Organising Secretary of the Imperial Institute from 1887. He was President of the British Association at the Leeds meeting, 1890. He has also been President of the Iron and Steel Institute, Chemical Society, Institute of Chemistry, Society of Chemical Industry, Institute of Electric Engineers, and Chairman of the Society of Arts. He was Albert, Royal, Telford, and Bessemer Medallist. He was created C.B. in 1877, and Hon. D.C.L., Oxford, in 1883, and was made a K.C.B. in the same year.

ANOTHER BURGLARY ON THE BLUFF.

A few days ago we chronicled some of the achievements of a smart burglar who has been making things rather lively for some Bluff residents during the past week. Another burglary—probably effected by the same clever cracksmen who supped on roast chicken and wine at Messrs. Philip and Davis' house on Monday night, after getting through with the more important business in hand—occurred on Wednesday night at No. 37, Mr. Bennett's house, now occupied by Mr. Strauss. It appears that the Police, who, however, decline to give any information, had some suspicion that some house in the neighbourhood would be visited that night, and a detective was posted in the compound of Mr. Eyton's house, No. 35, opposite the entrance to No. 37, and two more policemen, we believe, on Mr. Vincent's premises, not far off. Mr. Strauss appears to have been out to dinner, and returning at about 1 a.m. met the burglar, a young and slight built man just coming from his house. Mr. Strauss ran back into the road and raised an alarm, shouting "dorobo," and in a minute or so the detective and a party from Mr. Eyton's house were on the spot, other police coming up a little later. But in the meanwhile the thief had made good his escape, probably over the fence at the bottom of the garden, and nothing more was seen of him. A gold and a silver watch were found missing on an examination being made. How the burglar got in has not been explained, the servants' stating that the entrances were locked; but it is not difficult in the lax condition of doors and windows at this time of the year for a clever housebreaker to obtain entrance to a house.

News from Shizuoka says that a mountain called Gobasaki-yama, in Saizu-mura, Tagata district, began to rumble about the middle of August, the noise being repeated six times a day on an average. The inhabitants of the neighbourhood are panic-stricken lest an eruption take place.

LITERARY GOSSIP.

Dr. Conan Doyle has made \$7,000 out of his war pamphlet. With \$5,000 of this he has established a South African scholarship at the University of Edinburgh. The rest of the money he has invested in gold cigarette cases for friends abroad, who have helped in the work of distributing copies. These cases are to be inscribed: "From friends in England to a friend of England."

Some private friends of the late Mr. George Murray Smith, the *Athenaeum* says, have expressed their sense of his public services in connexion with the "Dictionary of National Biography," as well as their own personal feelings towards him in the form of a memorial tablet, which, by permission of the Dean and Chapter, is now placed in the crypt of St. Paul's. A portrait of Mr. Smith has also been "presented" to Mrs. Smith for her life, on condition that it should ultimately be offered to the National Portrait Gallery.

The appearance of Ainsworth's "Rookwood" in the attractive Windsor edition (Gibbings) recalls the savage attacks that were at first made both on that novel and on "Jack Sheppard"—Turpin figuring in the former tale. The powerful description of this highwayman's ride to York—the most remarkable part of the work—was said by some to have been written by Maginn; but the novelist himself has told us that it was the result of twenty-four hours of his own continuous work. When the description was in proof he went over the ground between London and York to verify the distances and localities and was not a little surprised at his accuracy.

The last published number of "Living London" recalls the origin of the contest for Doggett's Coat and Badge—the oldest water race in London. It was begun by Thomas Doggett, a Drury-lane actor of the early Georgian period, who left a sum of money for the race, to commemorate the accession day of the first Hanoverian monarch *i.e.* August 1, 1715. This money furnishes a waterman's coat and a silver badge—the latter as large as a pie-dish and bearing the white horse of Hanover on it—and is open to any six young Thames watermen who desire to compete. The course originally was from the "Swan" at Chelsea. The event has existed for nearly 200 years.

The late Mr. Kegan Paul possessed a polished pen which he used all too infrequently. The following sonnet was written in a period of great physical distress:—

I hoped awhile that I had borne enough,
And found some respite: I admired the trees
Shaking their snowy blossom on the breeze.
Heard the gay thrush, and rooks, whose voices rough
In quarrel over bits of garden stuff,
Sounded to me like childhood's melodies,
And brought the memory of country leas,
And groves of elms beneath a sea-beat bluff.
Yet once again pain grips me as a foe:
Oh, grant me, Lord, to suffer and be still;
The country I would think on is the hill
Of Calvary; and may I only know
My crucifix and learn Thy gracious will,
All springtide sights and sounds I could forego.

Mr. Kegan Paul used to give it as his firm conviction that nearly every book sent to a publisher was sure to be fairly considered. The legends of first-rate works having gone the round of all the publishers in London had an extremely small amount of truth in them in the judgment of this experienced member of the fraternity. But fewer good books were submitted to publishers nowadays than formerly, he used to add. To be successful, Mr. Paul used to say, a publisher should not have very highly developed literary tastes of his own, as in this case he would inevitably be tempted to accept books unlikely to prove commercially successful because they fell in with his own literary ideals, and, on the other hand, to reject those which might do well on the opposite ground.

That the power of reviews to promote the sale of books is greatly weakened has become a commonplace remark in late years. It is enunciated

with melancholy concreteness by a correspondent of the *Athenaeum*, who writes:—"In reference to that branch of letters which has generally been esteemed the highest, it appears that some forty favourable reviews can no longer sell a dozen copies of a book. Such at least is the experience drawn from two recent volumes. Criticism may err, but if any interest in the higher departments of literary art remained, surely a consensus of approbation would, at least arouse some curiosity. In England, at all events, serious art seems daily more despised. Instead we have personalities and popular clichés, snippets which debauch the memory, and stories which degrade the taste."

Messrs. Williams and Norgate will publish next October the first number of a new quarterly known as the *Hibbert Journal*, to be issued under the sanction, and with the support, of the Hibbert Trustees. It will be devoted to the discussion of religious, theological and philosophical subjects, and its pages will be open to writers of ability and learning, irrespective of the particular doctrines they may be known to support or to suppose. The journal will be avowedly liberal in character, under liberalism being understood impartiality to every seriously-held point of view in the religious world, whether in the orthodox forms of historical Christianity, or in the forms of those who dissent from them. It will be an organ of the broadest possible catholicity. The editors (Messrs L. P. Jacks and G. Dawes Hicks) will be assisted by an editorial board consisting of scholars of the most various schools of thought. Amongst the latter are the Deans of Ely and Durham, Dr. John Watson, Prof. Cheyne, Dr. Drummond, and Mr. Montefiore, whilst Sir Oliver Lodge, Prof. Gardner and Prof. Muirhead will represent science and philosophy.

In his article on Bibliomania in the July *Cornhill* Mr. Andrew Lang has a quiet, sensible word on the Kelmscott Press books. He says: "They are pretty books, and most creditable to the taste of Mr. Morris, but as they are not very easily read one feels no ardent desire to possess them." Others think very differently, we know. As for book-collecting in general, Mr. Lang gives sound advice. "The lowly collector desires to acquire books of value. He has, I think, three courses open to him. First, he can collect what people do not desire to-day but will desire to-morrow. . . . Let him 'get in on the ground floor.' Let him collect the *juvenilia* of Mr. Stephen Phillips—if there are any—or the manuscripts of novels which fail to-day but will be esteemed by posterity. I can let him have one or two of my own, at a low figure, being anxious to realise. American collectors may apply. By such artful prescience of a future demand the humble collector may amass things that will not disappoint him at his sale. But it needs heaven-sent moments for this power of forecast. The second plan for the impoverished bibliophile is to make a collection valuable in the mass, though not very expensive in detail. This may be done by cleaving to a single subject. . . . The third way is to consider how much you can afford to spend yearly on books—not modern things, but *Books*—and then, avoiding waste on dubious trifles, to purchase only one really good thing every year or half-year, or as your finances may permit. This is the most satisfactory plan of all, and the last which I could practise." The *Academy* once knew a fourth way tried with considerable success, as far as entertainment went. A dozen young fellows met once a fortnight to eat beef steaks and produce books picked up on the bookstalls at a price not exceeding 6d. each. But such lowliness could hardly enter into Mr. Lang's view.

FETE AT HONMOKU.

An enjoyable fête was given on Friday at Honmoku, organised by Mrs. J. P. Mollison. It proved a great success, quite a large party being present. The "bathing box" was gaily decorated with bunting, and the fine band of the U.S. Flagship *Kentucky* played many excellent musical selections. We append the musical and other programmes, without comment, except to

offer a word of praise to Mrs. Mollison for the excellent entertainment. Her own singing was quite delightful.

Consul-General E. C. Bellowes, in opening the proceedings, said he had been asked to begin the programme by making a few remarks with regard to the object calling them together. He had also been cautioned to be brief, an admonition which was unnecessary. In a community such as this, composed of probably 2,000 foreigners, they must necessarily have more or less sickness, and in cases of illness they had to depend upon the resources of only one hospital—the General Hospital. Experience had taught the community with regard to the conduct of this hospital that the amount derived from the few paying patients was quite insufficient to maintain the equipment of that institution in such a condition as was desirable. A few foreign ladies had taken the matter into consideration, and had decided to rectify this state of affairs. They had met with a most generous response from all nationalities; everyone who had been approached had contributed willingly of his means for the benefit of the sick. But the movement had been hitherto limited most to the ladies. There were many young men who came to these shores for profit or pleasure who were stricken down by disease, and who were compelled to have recourse to the hospital. The idea was that there should be a foreign trained nurse in charge of the hospital staff. As he had already said, those who had been approached contributed most generously, although it certainly was not with a thrill of pleasure that one usually received the bearer of a subscription paper—(hear, hear, and laughter). The ladies, he repeated, had taken the matter up most enthusiastically, and Mrs. Mollison had not only given a handsome donation but had also entered into the present project and with the help of some friends had brought about this afternoon's entertainment. The efforts already exerted had been awarded a full measure of success, and the committee of the hospital had expressed their sympathy with the object in view. He invoked the hearty assistance of those present towards the very laudable object of providing the hospital with a trained foreign nurse.

The programme was then gone on with, the items being as follows:—

1. Selection.....The Band.
2. Introductory Remarks.....Mr. E. C. Bellowes.
3. Conjuring.....Professor Celluloid.
4. Comic Song.....Mr. G. G. Brady.
5. Selection.....The Band.
6. Song, from "San Toy".....Mrs. J. P. Mollison.
7. Stump Speech.....Sergt. Snyder.
8. Comic Song.....Mr. C. Aslet.
9. Coon Town Echo.....Miss Snowdrop.
10. Selection.....The Band.

By kind permission of Captain Stockton and Officers, the Band of the U.S.F.S. *Kentucky* played during the afternoon from 3.30.

The music played by the band of the *Kentucky* was as follows:—

- | | |
|--------------------|---|
| March..... | C. Friedmann. |
| | The Admiral. |
| Overture..... | A. Leutner. |
| | Jubilee. |
| Waltz..... | J. Ivanovici. |
| | Danube Waves. |
| Selection..... | G. Lueders. |
| | King Dodo. |
| Ballade..... | F. Jordan. |
| | The Song that reached my Heart. |
| Mazurka-Russe..... | L. Ganne. |
| | La Czarine. |
| Albion..... | C. Bactens. |
| | Grand Fantasia on Scotch, Irish and English Airs. |
| March..... | R. Eilenberg. |
| | Victorious America. |

LAW CASES.

RASPE v. NAGASHIMA.

Judgment was delivered in the Yokohama Chiho Saibansho on Friday morning, by Judge Yasuda in the case brought by Messrs. M. Raspe & Co., No. 199, Yokohama, against Mr. Nagashima Tsunekichi, of Onoyecho, Yokohama, claiming yen 240 with interest at five per cent. from March 1st this year until the execution of judgment. The plaintiffs' case was dismissed with costs.

HIOKI v. SAMUEL SAMUEL AND COMPANY.

The action filed by Mr. S. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan, Heiman & Co., Yokohama, against Messrs. Samuel Samuel & Co., Yokohama, claiming re-

covery of yen 226,250, which was expected to come up for hearing in the Yokohama Chiho Saibansho on September 6th, has been postponed indefinitely.

ALLEGED ASSAULT IN TOKYO.

An action recently begun in the Tokyo Chiho Saibansho by Mr. Francis Goquiaria, a Spanish resident of Tokyo, against Mr. Chogo Taisuke, of No. 4, Ichome, Nagatacho, Tokyo, charging the latter with having assaulted him was dismissed by the Court on September 6th owing to lack of evidence.

THE JOVANSSEN CASE.

Mr. R. G. Hopkins who has been confined in the Negishi prison for some weeks in connection with the adultery charge brought against him by Mr. Adolph Jovanssen, was released on bail of yen 250 on September 6th.

SUMI v. VANTINE & CO.

The suit brought by Mr. Sumi Rikichi, of Osaka, against Messrs. Vantine & Co., No. 268, Yokohama, claiming yen 8,550 damages for non-delivery of 300 bicycles, will be resumed in the Yokohama Chiho Saibansho on Friday morning. Plaintiff will be represented by Mr. S. Hioki and defendants by Mr. R. Masujima. The last hearing of the case took place in June this year.

SUIT AGAINST A MINISTER.

A suit has been filed in the Tokyo Chiho Saibansho by Mr. Sugimoto Katsuraburo, author of a work called the Toyo Risshi-hen (Biography of Eminent Persons), against Baron Utsumi, Minister of State for Home Affairs, alleging that the defendant had injured the rights of the plaintiff in connection with his work. From a paragraph appearing in the *Jiji* we learn that the plaintiff, having obtained copyright for his book published the first, second, third and fourth volumes of the Toyo Risshi-hen between October, 1897, and June, 1898, and is now busily engaged in compiling the fifth. Meanwhile a book calling itself the Meiji Kokumin Kikan was published by Baron Utsumi, Mr. Hashimoto Chujiro, proprietor of the Kokuko-sha (a publishing office), and a third person. On reading over the book, the plaintiff came to the conclusion that the Home Minister had stolen from the Toyo Risshi-hen materials for his book; hence the action.

BELLIGERENT RIVALS.

Legal proceedings are about to be instituted, says a Japanese paper, in the Osaka Chiho Saibansho by the Imperial Brush Company of Osaka against the Royal Brush Company of the same place charging the latter with having disregarded the regulations for the control of workmen issued by the Osaka Municipal Authorities some time ago. As already reported in these columns, the Royal Brush Company was established in Osaka in the spring of this year by Japanese and foreigners jointly, namely Messrs. Takata Kyuemon, Hara Kisuke, a Frenchman, a Briton and an American. In the Imperial Brush Company, which is an old concern run by Japanese, was an official named Mr. Honda Takeji who is thoroughly acquainted with the affairs of the establishment. He joined the new company soon after its organization and about the beginning of June he begun inducing skilled workmen employed by the Imperial Brush Company to go over to the rival company. He seems to have been very successful. As a matter of course, the business of the old establishment has been gradually declining and in consequence a representative of the Imperial approached the new company, requesting them to stop the practice. His effort seems to have been useless.

BLACKMAILING.

Mr. Kikuchi Einosuke, editor of the *Hoken-Ginko Jiho*, a weekly magazine devoted to insurance and banking business, published at Hibiyamachi, Kyobashi, Tokyo, was taken into custody by the Kyobashi Police on Sept. 6th on a charge of blackmailing. It is alleged that he

obtained money (about yen 15) from Mr. Matsumoto Taisuke, a Director of the Imperial Life Assurance Company, in Tokyo, by publishing in his magazine a series of statements highly injurious to the reputation of Mr. Matsumoto.

ASSAULT BY SENDOES.

A serious affair took place in Yokohama harbour between three French blue-jackets, belonging to the battleship *Redoubtable*, and three *sendo* on the afternoon of September 6th. As a result, one of the blue jackets was injured very seriously on the head and is now lying in the General Hospital in a grave condition. The origin of the affair is that about 6 p.m. the blue-jackets hired a boat at the French Hatoba for the purpose of returning to their ship, the boat being manned by three *sendo*. The charge was fixed at one yen 20 sen. When the boat was within a short distance of the ship the *sendo*, it is said, demanded two yen instead of the rate fixed. The demand was flatly rejected. Thereupon one of the *sendo* took up a large stick and attacked one of the foreigners inflicting severe injuries on the head and rendering him insensible. Another blue-jacket was injured on the face, though not seriously. Knowing that if the boat should now go to the ship the assailants might be seized, they turned and rowed back to the Hatoba, whence the *sendo* fled, leaving the three blue-jackets behind. The latter then went for assistance to the Grand Hotel whence officers were summoned by telephone from the Kagacho Police station, and the two wounded blue-jackets were at once taken to the General Hospital for treatment. The assailants have not yet been arrested.

We learn in reference to the serious affair, in which two French blue-jackets were severely injured by three *sendo* in Yokohama harbour on September 6th, that the latter were all arrested the following day in the house of Takahashi Yaozo at Shimmei-machi, Kanagawa, where they had concealed themselves. They were sent to the Yokohama Chiho Saibansho for trial. They are named Takagi Fukumatsu, 23 years old, Tanemonoya Matsukichi, 18 years, and Tsuruoka Raikichi, aged 24 years. It may be added that the injured French sailors, who were taken to the General Hospital for treatment, are gradually recovering from their injuries.

NARCOLEPSY, THE SLEEPING DISEASE.

The remarkable case of a French girl of St. Quentin, recorded recently in the Press, who for the past nineteen years has been in a state of hypnotic catalepsy, establishes a record in what has come to be known among medical men as Narcolepsy, or Sleeping Disease. The first practical observations in this strange malady date back to 1819, when a certain Dr. Winterbottom, stationed in Denin, was struck with the frequency of its occurrence among the natives of that region. Scientific investigation by medical experts in Europe led to the recognition of narcolepsy as a specific disease of the brain. Medical history can show few rarer symptoms than those caused by this malady, and even in these days the world of surgery must acknowledge, as it has done in the case of Marguerite of St. Quentin, that remedies hitherto available have practically proved useless.

That the disease, which is of the nervous order, is not by any means a new one is evidenced by the well-established fact that Napoleon I. was subject to narcoleptic fits. The disorder is found to affect two classes of subjects, namely those possessing a highly strung nervous system and those of preternaturally dull intellect, in which case the nervous system is invariably found to be of the lowest possible order and almost non-existent. In the case of Napoleon, whose brain was of the highest type, certain historians have not hesitated to attribute to narcolepsy his strange periods of apathy and inactivity, notably at Fontainebleau in 1814, on the eve of his abdication, and subsequently at Malmaison, after Waterloo, and even in the short days of that epoch-turning campaign, it having been clearly

established by Corvisart, his body physician, that previously, in the beginning and at the height of his career, he had suffered several attacks of the then unnamed narcolepsy, the best known being that historic sleep of thirty-six hours after his first defeat of Aspern, when his physician and servants failed in their attempts to wake him and gravely feared for his life. In his masterly work, "The Last Phase," Lord Rosebery, while admitting his perplexity in accounting for these mysterious periods of inactivity and indecision of Napoleon in some of the most acute crises of his life, hints at a belief in the theory of influences cognate to narcolepsy.

One of the most extraordinary cases of narcolepsy is undoubtedly that of Louise Lateau, and is well within the memory of the middle-aged. Louise, a girl of the working classes, at the age of 18 became subject to periodical trances lasting each for several days, during which she bled from the hands, feet, and side. The case, which obtained European notoriety, did not fail to catch the notice of the superstitious, particularly among the Roman Catholic peasantry of France and the Continent, by whom the phenomenon was declared to be a miracle. For several years the unfortunate girl was the subject of a heated medico-religious controversy, the doctors ascribing the fits to nothing stranger than narcolepsy, while the clergy maintained a theory of the manifestation of Divine power, there being still many who believe in the latter contention.

One of the strangest traits of this disease is that the patient, when the trance is over, even though it may have lasted during months, or even years, resumes the thread of his activity at the exact point at which it was snapped by the attack. A wonderful case in point is cited, of a British naval officer who fought at the Nile, by M^{de}. de Menaceine in her work on "Sleep." This officer, while giving the word of command to some gunners during the battle, received a shot in the skull, which drove the bone inward, depriving him of all consciousness. For fifteen months he lay in Greenwich Hospital in a state of trance, speechless and immovable. An operation was eventually performed, which proved successful, the patient waking up and finishing the command he was in the act of giving when struck by the shot. Mr. Forbes Winslow mentions the case of a farm-hand at Timsbury, near Bath, who slept for seventeen weeks, and waking up eventually could not be convinced that he had slept longer than usual, till shown that the crops had been gathered in and the seasons changed. The case of a French soldier wounded at Bazeilles in the French-Prussian war, and described by Dr. Mesnet, of Paris, is hardly to be surpassed. For two years he became subject to active narcoleptic fits, during which he could walk about, roll cigarettes, and drink, but could neither see nor speak.

Another form of narcolepsy is what is called by Dr. Prichard dipsychia—dual personality or divided consciousness. In these cases the patient may possess two (or more) personalities entirely different, a separate memory belonging to each part, with separate divisions in the will and general character of the subject. Cases have been known in which a patient has gone to sleep for two years, and awakened requiring to learn everything anew. A second narcoleptic fit has supervened, and the patient has returned to the original stage of knowledge which existed before the first attack. The most wonderful case of this kind is cited by Dr. Lewis Bruce of a Welshman who spoke both English and Welsh previous to his first narcoleptic fit. After recovery from the first trance he could speak Welsh only, being totally unable to understand English. Recovery from a second attack found him in the position of understanding only English, and no Welsh.

Medical authorities, it would seem, are not yet sufficiently advanced to attribute narcolepsy to any clearly specific cause. Autopsy of a given subject reveals the existence in the brain of a centre of necrosis or simply dead matter. The evolutionist maintains that the malady is due to a recurrence of type, and points to the existence of certain animals, such as the marmot or porcupine, which hibernate for long periods of the year. In his belief that man is the highest existing product

of the evolutionary process, he points triumphantly to narcolepsy as a remnant of our prehistoric past as lower animals, which has by some unaccountable means strayed into the present.

THE CHRISTIAN DAIMYO.

CHAPTER VI.

Nobunaga takes up his residence at Azuchi.—He gives fêtes there.—The Jesuits establish there a church and a college.—Conversion of Sasaki and Takeya.—Nobunaga's suspicions.—General Hashiba.—Akechi's plot.—Nobunaga's death.—Dictatorship and fall of Akechi.—Samboshi, grandson of Nobunaga, is named his successor.—Hideyoshi's ambition.

After the fall of the Shogun Yoshiaki, Nobunaga continued to govern Japan under the title of "Naidaijin," Minister of the Interior. Of all the dignities which had been offered him, whether by Yoshiaki or by the Emperor himself, this title alone was accepted. (1576).

During a certain time Nobunaga entertained the idea of conferring the Shogunate on Yoshihito, second son of the Emperor, as had been already done in the time of Go-Daigo (1334), but fearing lest Yoshihito might imitate the example of Yoshiaki, he desisted from this project. It therefore became necessary for him to shift his residence nearer Kyoto, the rallying-point of all the disaffected and too far from Gifu. To establish himself in Kyoto itself was scarcely pleasant to him: the atmosphere of that hostile city did not half agree with him. To obviate this double inconvenience, he resolved to found a new town, which would become the seat of his government and the residence of the *daimyô* and *samurai*. His choice fell on Azuchi, pleasantly situated on the borders of Lake Biwa and only one day's journey from Kyoto. In 1568 he commenced the construction of the new city and whenever the affairs of Kyoto and Gifu allowed him he went there and superintended himself the work, which extended over eight years. Finally in 1576, he left his residence at Gifu for ever and installed himself at Azuchi, which he called his paradise. From the description the Jesuits have given of it, Azuchi was indeed the wonder of Japan. Nobunaga's palace, with his tower one hundred feet high, the dwellings of the *daimyo*, all situated in a delicious spot, formed an enchanting prospect.

As Nobunaga wished, Azuchi became the centre of military life. All the *daimyo*, who had recognized his authority, remained there ordinarily with the majority of their soldiers. It was there that Nobunaga gave those splendid entertainments, of which the relations of the Jesuits give an enthusiastic account. On such occasions the *daimyo*, competing for the good graces of their master, rivalled each other in offering the richest presents to Nobunaga, and in displaying the greatest luxury of dress. In 1581, there was a carousal at Azuchi to which more than 100,000 men had been invited. To speak only of the Christian *daimyo*, who took part in it, Takayama changed his garments seven times, donning each time richer raiment than before. Ikeda made himself remarkable by having in his train fifty horsemen dressed in Chinese brocade. As for Nobunaga himself, he displayed unheard of splendour. Every instant he changed his costume in a tent, which the Jesuits had offered him on this occasion, and dazzled the assistants, as well by his luxury as by the dignity with which he executed the movements prescribed by the most minute etiquette.

True Japanese as he was, Nobunaga not only loved to make a parade of his brilliant costumes, but he was also very sensitive to the compliments which were made to him by the foreign doctors. He experienced an almost childish joy when the latter expressed to him their admiration on the subject of the site of Azuchi and of the splendour of his palace. He then answered modestly:—"You must have seen more beautiful palaces in Europe," remaining convinced at the same time, however, that the entire world had nothing equal to it. Thanks to his cleverness, however mingled a little with Italian diplomacy, Father Organtino, a native of Naples, had in an eminent degree the gift of pleasing Nobunaga, from whom he obtained

moreover all the favours he demanded. Father Organtino having expressed the desire to establish himself at Azuchi, Nobunaga, who had sworn that never, besides the pantheon he was constructing there, in which his own image was to occupy the first place, would any temple be tolerated in that city, authorized him to build there a church and a college for the children of the nobles, on a site which he offered himself to the Religious. Thanks to the facility with which Japanese houses can be taken to pieces and put together again, the Jesuits got transported from Kyoto to Azuchi, a large structure, which some years before they had put together at the former town, with the intention of using it as a school. The enthusiasm which the Christians showed under these circumstances was admirable. Takayama alone furnished 1,500 workmen. In a month all was finished. Nobunaga went himself to see the installation of the Jesuits, and above all to see their college, which opened with 25 pupils. He much approved of this school where pupils learned, in addition to the Japanese arts, the sciences and the European languages. He exhibited much pleasure on hearing a musical tune which Jerome Ito, son of the *daimyo* of Obi, (Hiuga), executed on a European instrument.

Father Organtino did not occupy himself solely, however, with education. Continually in touch with the *daimyô* and the *samurai* of the higher classes, he exhorted them to instruct themselves at least in the Christian religion. Sasaki Yoshikata, ex-*daimyô* of Mitsukuri (Omi), was the first to follow this counsel. From the time that Nobunaga deposed him, Sasaki had lived with all his family in the very residence of the conqueror. The resignation with which the Christian religion teaches one to support the inevitable reverses of life, struck Sasaki so strongly that he resolved to become a Christian. In 1581 he received baptism along with his wife. His children were about to follow his example, when the sudden death of Sasaki decided otherwise. In the eyes of the *kerai* and of the relations of the deceased, this death was the manifest chastisement of the angry gods, and the children of Sasaki had accordingly to defer their baptism until a later period (44).

Takeya, the most celebrated connoisseur in swords of Nobunaga's epoch, was converted also at this time (45).

Although Nobunaga had never experienced the least desire to embrace the foreign religion, he loved to listen to discussions on its doctrine, and with this object in view, he invited the Religious from time to time to expound the truths of the Faith, even in his Palace. One day when Father Organtino had spoken with extraordinary conviction, Nobunaga took him aside and, with his sceptical air, asked him if he really believed himself what he had just taught the others. "Formerly," he added, "I put the same question to the bonzes, and they told me that they considered Buddhism useful for the common people, but that they themselves did not believe in it. Organtino remained confused. Then, after a moment's silence he approached a terrestrial globe and, indicating with his finger the distance which separates Japan from Italy: "That the bonzes," said he, "should dupe the people in order to live at their expense, that can easily be conceived; but that we, Europeans, should leave our native land, and our relatives, to come to the ends of the earth to lead a laborious existence, with the sole object of spreading a religion in which we do not believe ourselves,—is that possible? Your Lordship knows us too well to judge us capable of such an action."

Nobunaga no more doubted the sincerity of the Religious, but from this moment he asked himself if their brains were not somewhat touched. However he loved them none the less for it, and profited by every opportunity to extol their disinterestedness.

Whilst Nobunaga was revelling in the delights of his paradise, his general, Hashiba Hideyoshi, waged war against Mori Terumoto, the powerful *daimyo* of Yamaguchi, and one of the few in Japan

who dared to still hold out against the power of Nobunaga.

Nothing is more curious than the life of this Hideyoshi, a perfect type of so many of his compatriots who, of very low origin, dabble a little in every business and end by attaining the highest dignities. The son of a wood-cutter, Hideyoshi was born in 1536, in the village of Nakamura (Owari). He was at first called Tokichiro, but his simian exterior earned for him from his infancy the nickname of the "Monkey." He changed his name as often as he changed his condition. Admitted into a monastery, he was driven from it for having attempted to set it on fire. Enrolled among the bandits of Hachisuka Masakatsu, he was made prisoner by Nobunaga's troops and became a stable-boy. Accused of theft he would have been put to death but for the intervention of Nobunaga, then simply *daimyo* of Kiyosu (Owari). The latter, divining the uncommon qualities that lay concealed beneath that excessively unprepossessing exterior, took him into his service (1559). Tokichiro was then 23 years of age. Thanks to the kindness of his new master, the "little monkey," as Nobunaga was in the habit of calling him, became a *samurai* under the name of Kinoshita, then a general and *daimyo* of Himeji (Harima) under that of Hashiba Hideyoshi (1577). Assisted onward by military successes, Hideyoshi became in some sort the generalissimo of Nobunaga. Already he had subjugated a great number of *daimyo* and at this moment, he was struggling with Mori of Yamaguchi (1582).

After useless efforts, Hideyoshi despatched a courier to Nobunaga, declaring that with a reinforcement of 30,000 men, he would be strong enough to crush his adversary. On receipt of this message, Nobunaga, then at Kyoto, ordered Akechi Mitsuhide to assemble all the troops at his disposal and to proceed to the succour of Hideyoshi. Akechi, a man of very low origin, owed all his fortune to Nobunaga. Besides the spoils of the bonzes of Hiei-zan, he received still other domains, among them those of Kameyama (Tamba), which John Naito had to abandon after his disgrace. In spite of all these favours, Akechi hated Nobunaga with all his soul. The reason of this hatred, is not very clear. Some historians pretend that while drinking *sake* with his vassals, Nobunaga had jokingly tapped Akechi on the head with his fan, a pleasantry which the latter took very ill. Others say, on the contrary, that during a journey which Tokugawa Ieyasu had made to Azuchi a short time before, Akechi, who was entrusted with the duty of attending to the visitor, displayed more luxury than was necessary, and that the susceptible Nobunaga, offended at this, in a moment of anger struck Akechi on the face with his fan, an insult which a *samurai* could not brook. All these reasons seem rather childish. The real one was that, like so many ambitious vassals of this epoch, Akechi wished to overthrow his master in order to reign in his place. It looks even as if the Imperial Palace had some knowledge of the plot, for soon after Nobunaga's death, the *kuge* Kanroji Dainagon brought Akechi the title of Shogun (46).

The truth is that Akechi formed a conspiracy in which, all those who had any reason to complain of the rigor of Nobunaga, took part. Ota Nobuzumi, *daimyo* of Amagasaki (Settsu), and son-in-law of Akechi, was one of the first to enter into Akechi's views. Nobuzumi was the nephew of Nobunaga, but as the latter had killed his father, Nobuzumi had sworn to avenge his death. The two Shirai also joined the conspirators. Their rancour towards Nobunaga had only grown since the exile of Sanchez. Akechi knew this and seeing that they were already in his power, he promised them half of the province of Kawachi if they espoused his cause (47). On this occasion several other *daimyo* made use of the traditional trick of which we have before spoken and which seems, to judge by Scott's "Waverley" and R. L. Stevenson's "Master of Ballantrae," to have been equally resorted to by the Scotch nobility on a certain memorable occasion. We mean that while the son offered his assistance to

(44) *Annali del Giappone* 1582, 1583.

(46) *Taiko-ki*, *roppen no roku*.

Akechi, the father remained faithful to Nobunaga, the object being to keep the land in the family.

On receiving Nobunaga's order, Akechi gathered all his troops in haste and, quitting Kyoto, repaired to Kameyama. There he openly declared to his officers his design of killing Nobunaga. Money scattered lavishly, promises and threats, rallied them all to his side. That very evening he doubled back on Kyoto, and on the next day at a very early hour, his men, ready for the attack, only awaited Akechi's signal. In the twinkling of an eye the Honno-ji, a temple in which Nobunaga had taken up his residence, was invested; and the discharge of arquebuses gave the alarm throughout the neighbourhood. Nobunaga was about to get up, when all at once he heard the tumult in the courtyard. Hastily he opened one of the sliding doors, but at once a hail of arrows fell on him. Wounded on the shoulder, he drew out the arrow himself, and getting hold of his sword bounded into the midst of the assailants. Soon another wound inflicted by an arquebus obliged him to retire to the interior of the temple. He had still strength left to shut the door, but he fell as soon as he had done so, never to rise again. The servants and *samurai* running to the help of their master, were slaughtered, and the flames of the temple, which was set on fire, consumed their corpses as well as that of Nobunaga. Only the negro, whom the Jesuits had given to Nobunaga, escaped the disaster and took refuge with the Religious. Nobunaga's eldest son Nobutada was installed in the temple of Myokaku-ji. When news of the fatal affray was brought to him he repaired immediately to the Honno-ji, accompanied by the Governor Murai. But seeing the temple entirely enveloped in flames, he went to the palace of Nijo where, attacked by Akechi, he committed *harakiri*, and Murai followed his example. These events took place on Wednesday, June 22, 1582.

Nobunaga was only 49 years of age when he died. With him disappeared, if not the greatest, at least one of the greatest men in the modern history of Japan. Without overlooking the merits of Hideyoshi and Ieyasu, the two successors of Nobunaga, the latter is still the greater. The part which he took in the pacification of the country and the centralization of power, was by far the most difficult and even the greatest. But where Nobunaga shows himself superior in, is that immoveable confidence in his own strength; in other words he had no fear of the foreigners. Under the aegis of such a man Japan might perhaps have succeeded in bridging the abyss which separates it from us. Hideyoshi and Ieyasu were thrown, on the contrary, in veritable consternation by the handful of foreign missionaries and merchants, and in their fear they retarded by three centuries the progress of the Japanese people. Yet the most regrettable aspect of the case is that they communicated their terror to the nation at large, which has not even in our own day, been able to rid itself of it.

On the very day of the death of Nobunaga, Akechi marched on Azuchi with his whole army. Gamo Katahide, the faithful servant of Nobunaga, wishing to save at least the wife and children of his master, immediately conducted them to his castle of Hino (Omi). After a feeble resistance Azuchi opened its doors to the enemy. All the treasures and works of art that Nobunaga had amassed there became the prey of the conquerors. Father Organtino, fearing that the vengeance of Akechi would also extend to the proteges of Nobunaga, made his pupils embark and sought to gain the opposite side of Lake Biwa. But Akechi reassured him and promised that he would protect the Christians even in a greater degree than Nobunaga had done. He even bade his own son conduct this Religious to Kyoto, in order that nothing unpleasant might occur to him on the way. In acting thus, Akechi justly reckoned that the Jesuits would use their influence to win over to his side the Christian *daimyo*, especially Takayama. After an orgie of three days, Akechi and his soldiers returned laden with plunder to Kyoto. Scarcely had they left Azuchi, when fire burst out in every part of the town. Nobuo, the second son of Nobunaga, and regarded as of somewhat

feeble intellect, had just set it on fire. In a little time the flames destroyed what it had taken the genius of Nobunaga about 15 years to create.

Having reached Toba, Akechi placed there a garrison and did the same at Shoriuji. With the rest of his army he advanced into the province of Settsu to encounter Hideyoshi, of whose march in the direction of Kyoto he had just learned.

In effect on receiving the news of Nobunaga's death, Hideyoshi immediately entered into negotiations with Mori. The latter, seeing that in spite of his desperate resistance he would succumb in the end, declared himself ready to conclude peace. Hideyoshi, concealing the fact of Nobunaga's death, succeeded in imposing all his conditions on his adversary. In order to consolidate this treaty, Mori gave his uncle Mori Hidekane as a hostage, while Hideyoshi delivered Mori Takamasa, a vassal of Nobunaga, to the *daimyo* of Yamaguchi. The next day Hideyoshi marched on Kyoto. In the meanwhile Takayama, learning of Nobunaga's death while on the way to assist Hideyoshi, returned by forced marches to his own country. His situation was most precarious. His fortresses at the gates of Kyoto, having been dismantled by order of Nobunaga, would in all probability fall at once into Akechi's hands. Akechi could at least take all the family of Takayama as hostages, according to the general practice at that time, and thus oblige the latter to attach himself to his party. Akechi believed, however, that he could dispense with this precaution, convinced as he was that Takayama, recently treated so severely by Nobunaga, would profit by this opportunity to turn his grievances to account. In this Akechi deceived himself. Takayama set out with 1,000 men with the intention of attacking Akechi. This example was soon followed by his two neighbours, Ikeda Nobuteru and Nakagawa Kiyohide. The encounter took place at Yamazaki, on July 1st. Akechi, whose soldiers were overladen with booty and consequently incapable of fighting properly, were unable to sustain even the first shock. Hundreds of corpses soon strewed the battle-field, while Takayama had only one man killed. Henceforth Akechi's men had no more confidence in their chiefs and, more preoccupied with putting their booty in a place of safety than of defending a too risky cause, they nearly all took flight. Then the peasants, either to avenge themselves for the ill-treatment that the *samurai* were hardly sparing of, or to enrich themselves with the spoils, fell upon the fugitives, taking from them their booty, their horses and even their arms.

Seriously wounded, Akechi took refuge at first in the castle of Shoriuji but next morning, accompanied only by several devoted friends, he took the road to Sakamoto. He never arrived there, for the peasants beat him to death at the gate of that town. This happened on July 2nd, 1582, twelve days after the murder of Nobunaga. The two Shirai had accompanied Akechi to Sakamoto, but seeing their hopes vanish with the life of Akechi, they fled into the province of Yamato, where they found an asylum with Tsutsui, *daimyo* of Koriyama.

On the very day of Akechi's defeat at Yamazaki, Hideyoshi arrived just in time to witness the victory of Takayama and of his two colleagues. At the same time came Nobutaka, the third son of Nobunaga, who had just put to death at Osaka Ota Nobuzumi, his cousin and the accomplice of Akechi. When, two days after, Hideyoshi and Nobutaka arrived at Sakamoto all was over, the wife, the children, and the servants of Akechi had perished in the flames. There remained the head of the traitor which the peasants brought to Nobutaka. The later had it sewn on to the body and nailed on a gibbet, a punishment reserved for great criminals. Thousands of *samurai* heads were brought to Kyoto and fixed on spikes around the ruins of the Honno-ji. The principal fugitives were sought, and a price was put upon their heads. Among them were the two Shirai.

While these barbarous acts were being carried out, Takayama, uneasy on account of the Azuchi church, went thither with all speed. Seeing that all had been destroyed in the vast

fire, he invited the Jesuits to come and live with their pupils at Takatsuki.

The church of Sangajima was near to perishing also in the disturbance. The pagans sacked it and destroyed several houses of Christians, after having carried off from them everything moveable that they contained. Happily for this parish, Hideyoshi confided the government of Sangajima to a Christian lord, known only under the name of John Juichi. It was due to the zeal of this lord that the Christians of the isle were able to escape complete ruin.

As soon as order, which all these events had troubled, was nearly established, other difficulties arose on the subject of the successor of Nobunaga. Of his two surviving sons, the eldest, Nobuo, being generally regarded as of weak mind, the second son, Nobutaka, considered himself naturally qualified to succeed his father. But far from wishing to let himself be supplanted, Nobuo made good his rights and the *daimyo* united in council declared, some in his favour, some for Nobutaka. Hideyoshi solved the difficulty by proclaiming Samboshi, son of the unfortunate Nobutada, Nobunaga's heir. Samboshi was then only three years old and Hideyoshi gave him his two uncles Nobuo and Nobutaka, as tutors. As to himself, he remained contented with the office of guardian of the child: in other words he arrogated to himself the government of Japan. Meanwhile Samboshi was placed in the citadel of Gifu with a revenue of 300,000 *koku*.

No one misunderstood the ambitious views of Hideyoshi, and from all sides protests were made. But Hideyoshi refusing all compromise, the *daimyo* separated only to take up arms. Shibata, Katsue, brother-in-law to Nobunaga, and Takikawa Kazumasa, *daimyo* of Kuwana (Ise), espoused the cause of Nobutaka, while Tokugawa Ieyasu embraced that of Nobuo. Both parties declared war on the usurper, Hideyoshi.

NEWS OF THE WEEK.

It is confidently stated by Japanese papers that Baron Ishiguro will be appointed successor to the late Dr. Nagayo Sensai, President of the Central Sanitary Association.

The sailing-ship *Juntoku Maru*, with 33,000 salted salmon, 63,100 salted *masu* and other fish on board, is reported to have left Hakodate for Yokohama on September 5th. This is the first shipment this year.

Prince Tsai, now on a visit to Nikko, has contributed *yen* 100 to the Toshogu Shrine, and a sum of money to the Nikko primary school. On September 10th His Highness visited Princesses Tsune and Kane in the Choyo kan, Nikko.

The N. Y. K. steamer *Tategami Maru*, about which fears have been entertained, arrived safely at Moji on September 7th from Chefoo despite the rough weather. She left the latter port on the 1st, but owing to a storm of wind and rain her voyage was much protracted. When off the Korean coast, the steamer rescued a fishing-boat manned by Japanese.

About 8 p.m. on September 6th Suzumoto Seikichi, of No 11, Ichhome, Minami Sakumacho, Shiba, Tokyo, was arrested by the Bluff Police on a charge of theft at Hachiman-yama, Nakamura, and sent to the Yokohama Chihō Saibansho for trial. It appears that he stole a bicycle, valued at over *yen* 100, and a coat from the house of Mr. Otsuka Kyujiro, No. 13, Nichome, Motozonochō, Kojimachi, Tokyo, on the night of the 5th and came to Yokohama the following day.

On September 10th a petition was sent to the Department of Agriculture and Commerce by Mr. Tamura, President of the Deep Sea Fishery Encouragement Association asking that suitable rewards should be given to the Captain and crew of the steamer *Kaio Maru*, of the Imperial Marine Products Association, who discovered a large colony of seals off Gensan last year. The petitioner urges that by this discovery the country has secured a source of great profit and the

matter should not be overlooked. In fact, as many as 6,044 seals amounting in value to yen 132,968 were captured by Japanese sealers this year in the Japan Sea.

A Norwegian steamer is reported to have been wrecked in the Loochoo archipelago several days ago on her way from Manila to Yokohama. Doubtless she was blown ashore and lost during the recent typhoon. The vessel, laden with 4,800 bags of sugar, left Manila on August 29th bound for Yokohama, where she was expected to arrive about September 13th. The consignee of the cargo is a Chinese merchant of No. 192, Yamashitacho, Yokohama. It is not known whether her captain and crew were saved or not.

Fears are entertained that the Chinese-owned steamer *Sang-leong*, which was on a voyage from Rangoon to Amoy with a cargo of rice, has foundered with all hands in the typhoon of the 2nd Aug. She was due at Amoy on the 3rd Aug., and had called in at Singapore and shipped upwards of 300 Chinese passengers. Life buoys bearing her name were picked up in the neighbourhood of Swatow, so that there seems to be little doubt as to her fate. This is the typhoon which the steamer *Decima* encountered when she sustained considerable damage.—*China Mail*.

A Japanese paper states that the Authorities will shortly give sanction to the promoters of the Yokohama Railway which will run between Yokohama and Hachioji. In view of the probability of the railway being worked with success the bonds to be issued in connection therewith have already been applied for and the work of construction will be started as soon as sanction has been obtained. The above work was originally planned by the Communications Department, but owing to financial trouble the project was postponed.

John Lyons, a fire-man belonging to the U. S. cruiser *New Orleans*, was taken into custody by the Isezakicho Police on a charge of theft on the night of September 4th. It appears that the fire-man with two comrades visited the Teikoku Hyohinkan, a bazaar in Theatre street, about 9 p.m. and purchased some toilet articles for yen 15 from a fancy goods stall there. While the man in charge of the stall was busy counting the money the fire-man stole a bottle of perfume, valued at 60 sen, and, some tooth-powder, valued at 10 sen, from the stall, but was detected. He was at once taken to the Police Station where he confessed his crime, the articles being found in his shoe. The man paid for the articles and was released.

Prince Tsai, of China, visited the Tokyo Imperial University, the Botanical Garden at Koishikawa, the Tokyo School for the Dumb and Blind and other places on September 7th. In the evening the Prince gave a banquet to his temporary residence, the Seiyoken, inviting thereto Major-General Yamane, Lieut-Colonel Shiba and others who went through the siege of Peking in 1900. On the afternoon of the 8th His Highness was expected to come to Yokohama, where preparations have been made by the Chinese residents to welcome him. The Prince's suite, nine in number, have received decorations ranging from the Second to the Sixth Class Order of Merit.

Chiga Shu, a clerk belonging to the Yokohama Post and Telegraph Office, was taken into custody by the Kagacho Police on September 9th on a charge of fraud and sent to the Yokohama Chiho Saibansho for trial. It is alleged that on August 27th when a representative of Mr. James Hutchison of No. 163, Yokohama, applied for the transmission of a parcel to Kusatsu, Joshu, the accused demanded a fee of 55 sen, although in reality the fixed charge is only 28 sen. As a matter of fact, the clerk affixed stamps representing 28 sen and sent it to its destination, the balance being pocketed by himself. The matter was brought to light by the Chief of the Office a few days ago with the result above stated.

The *North China Daily News* announces the death of the Rev. Dr. Stephen L. Baldwin,

Recording Secretary of the Missionary Society of the Methodist Episcopal Church, which occurred on the 28th July, in Brooklyn, from typhoid fever. He was sixty-seven years of age. Dr. Baldwin was born at Somerville, N.J., and entered the ministry in 1858. From 1859 till 1882, with the exception of two years, he was a missionary in China. For four years while in China he was Superintendent of the Foochow Mission, and for several years he edited the *Chinese Recorder and Missionary Journal*. He assisted in translating the Scriptures, the "Discipline" of the Methodist Episcopal Church, etc., into the Fukien colloquial dialect. Ill-health caused him to return to the United States with his family in 1882. In June, 1889, he was elected Recording Secretary of the Missionary Society.

EUROPEAN TOPICS.

The record for throwing the cricket ball is held by Mr. A. E. Manby, employé of the London and South-western Bank. The record throw is 138 yards 2 feet.

The recent article of the *Novoe Vremya* with reference to the interests of Russia in Korea was translated at some length by the *Globe's* St. Petersburg correspondent and appeared in that journal on July 29th. As we have already published the gist of the article, it is not necessary to reproduce the translation now.

John Watts died on July 29th from pleurisy, at the early age of 41; a famous jockey in his day, one against whom there was no breath of suspicion as to his honesty. He rode the winners of many classic races, including the Derby four times, and St. Leger five times. For the King, then Prince of Wales, he won the Derby on Persimmon in 1896. Of late years Watts had given up riding, and had taken to training racehorses.

The recent pigeon race from Lerwick proves very conclusively that birds can travel at the rate of a mile a minute, the pace of the winners being an average of 1,400 yards a minute, and that allowing nothing for delays and stoppages. But as pigeons do not fly in the dark, these must have been considerable. On the whole, it must be admitted to be a very moderate statement of fact that a good homer can cover more than a mile a minute.

The Cretan Government has just concluded with a representative of Signor Marconi an agreement for the installation of his system of wireless telegraphy on the island. The *Astý*, of Athens, states that in the next Session of the diet of the island, credits will be asked for the complete equipment of various points on the coast with Marconi installations. The idea is to establish efficient communication with passing ships of the various lines.

The storm in which four French submersibles dispatched from Cherbourg on July 26th were caught was of a kind to place the seaworthiness of the new craft to a severe test—about the first to which they have been subjected. The *Temps* states that the boats were much knocked about, but they bore themselves well, and though compelled to run for shelter to Re Chansey islands, emerged in such good condition that they were able to complete their voyage to Brest.

The Brussels newspapers reported on July 30th that Capt. Harry Taylor, a King's Foreign Service Messenger, and bearer of diplomatic dispatches, has been robbed at the Northern Railway Station in Brussels, where his pocket-book, containing a ticket from London to St. Petersburg, his passports, and dispatches, was taken from him. Capt. Taylor immediately reported the matter to the authorities. The pocket-book was subsequently found empty in the lavatory of a café.

Some day the district served by the Uganda Railway will interest Great Britain more than it does at present, and it is, consequently, well to know what are the agricultural features of the place. The staple crop is at present potatoes, for which

there is a large demand, although in a limited market. It is said that two crops of potatoes can be obtained in one year and European vegetables and fruits of all sorts grow well and find a fair local sale. The cultivation of potatoes is carried on on a considerable scale at a place called Kikuyu.

Some time ago rats from a ship that went down off Sable Island, near Nova Scotia, succeeded in reaching the shore, and soon multiplied to such an extent as to become dangerous to the settlers. Then cats were imported, and these, says *Science*, kept the pests in check until a passing ship left a pair of foxes on the island. Soon foxes overran the island in every direction. They killed not only all the rats but the cats as well, and at the present time the Sable Island Government is considering the advisability of an active crusade against them in their turn.

M. Doumer, ex-Governor of Indo-China, has profited by the Parliamentary vacation to go to Russia and submit to those in authority his views on the Franco-Russian situation in the Far East. He may possibly push on through Siberia to Korea and Japan. M. Doumer is keen on railway penetration in China by Yunnan, and for "constant, unyielding, unflinching pressure on China from France on the south-western side, and from Russia on the northern." China would find herself squeezed and prove squeezable.

The new German Lloyd steamship *Kaiser Wilhelm II.* was successfully launched at the Vulcan ship-yard in Stettin on August 12th in the presence of Emperor William. The *Kaiser Wilhelm II.* will be the largest and is designed to be the fastest ship in the world. Her dimensions are:—Length, 707 feet; beam 71½ feet; depth, 39 feet and draught 29 feet. Her displacement is 19,500 tons. She is to be of 39,000 horse-power, and will have accommodations for 1,000 cabin passengers.

From a notice in the London *Gazette*, it appears that Lord Kitchener, upon his elevation in the peerage, has taken the name, style, and title of Viscount Kitchener of Khartoum and of the Vaal, in the Colony of the Transvaal, and of Aspull, in the county of Suffolk. The viscountcy, in the absence of male issue to his lordship, is to go in remainder to his daughters, if any. In the event of there being no issue, the remainder is to go to his lordship's brother, Colonel Henry Kitchener, and his heirs, or to the other brother, Major-General Walter Kitchener, and his heirs.

The Tsar and Tsaritsa were present at the Government Shipbuilding Yard on the Galerney Island, St. Petersburg, recently, to witness the launch of the Russian battleship *Orel*. Her displacement is 13,516 tons, and her coal bunkers have a capacity for 1,275 tons. The battleship, which is expected to attain the speed of 18 knots, is fitted with engines of 15,800 horse-power. Her armament will consist of four 12 in. guns and four 6.1 in. guns in revolving turrets, and a number of 2½ in., 75 mm., 47 mm., and 37 mm. quickfiring guns. She is fitted with four torpedo tubes.

One of the differences in the decorations of the streets for August 9 (said a London paper on July 21th) from those for June 26 is likely to be the great increase in Japanese flags. For some reason or other they have only just begun to appear in London in any quantity. There is every political reason why this flag—a red ball on a white ground—should be familiar, and it is sufficiently different in character from European flags to have aesthetic value. One may also hope to see more Danish flags in evidence. If policy suggests the frequent use of the Japanese flag, Royal affection demands that decorators give point to Tennyson's claim, "All of us Danes in our welcome of thee, Alexandra."

The latest instalment of General de Galliffet's memoirs gives a curious and striking illustration of what tremendous issues may hang upon a very small failure of strict duty. He had to give his opinion of Marshal Bazaine's proceedings in

Mexico, and instead of concurring with General Castelnau that he ought to be removed from his command, urged that to do so would injure the position of the Marshals of France. It is practically certain, says a French paper, that if General de Galliffet had spoken out then Bazaine would never have received high command in the German war, and the whole history of Europe might have been different.

During a miners' demonstration at Newcastle on Saturday, reported in the *Newcastle Journal*, one of the speakers stated that one of the earliest instances of coals mined in the region had reference to a long past Coronation. The coal was sent from Ryton to London for the Coronation of Edward III., which took place in January, 1328.

A curious subject for discussion was before the last meeting of the Hygienic Council of the Seine. M. Guiguard presented a report on the sale of a cigar known as "antiseptic." The *Journal* says it is claimed for the cigar, which is composed of aromatic products, and contains no tobacco, that it produces abundant smoke without being lighted, and permits persons unable to use tobacco to enjoy the illusion of smoking without the evil effects. M. Guiguard, however, pronounced the cigar injurious as introducing into the mouth an excess of hydrochloric acid, or of ammonia, and urged that its sale should be forbidden.

Toole's jubilee as an actor—and did ever anyone see Toole and not laugh?—recalls many of his humorous tricks. Perhaps the best practical joke he ever brought off was after he had been photographed in the get-up of old Eccles. Without changing his clothes, he went out into the street as he was, and walked to the house of a parvenu, notorious for his pride. The door was opened by a flunkey, and a vista of flunkies was seen down the passage. "Would you tell Mr. Smith," said Toole, in his beautifully clear enunciation, "that his brother from the workhouse has called." It is still unknown whether the message was delivered.

In the House of Commons on July 31st, Mr. Carlile asked the Secretary to the Admiralty whether he had any official report to show that, owing to the coal premium in China, the cruiser *Terrible* had only put in 18 days' sea time during 18 months on the station, and the squadron was unable last year to carry out its usual sea exercises; and, if so, would he say what steps, if any, had been taken to remedy such a state of affairs.—Mr. Arnold-Forster: No report to the effect suggested has been received. The squadron did not carry out the annual cruises in company last year for various reasons, but lack of coal was not one of them. There is no shortage of coal on the station.

Sir W. H. Preece, in an article in *Page's Magazine*, after describing Marconi's relations with the Post Office, sums up the position as follows:—Unfortunately, Mr. Marconi was captured by a financial syndicate, and his relations with the Post Office were severed. Nearly six years have elapsed, and yet the system has not yet reached the practical stage. It is still experimental. Mr. Marconi's ambition is evidently to conquer great distances. From Europe to America, and from America to South Africa, has attractions for him greater than a good, sound practical system between Guernsey and Sark. It is not wanted across great oceans; it is wanted across narrow, rocky channels, and between tide-swept island homes.

Lieutenant E. D. Johnson, who won the King's Prize at Bisley exemplifies in striking fashion just the type of young fellow who left the desk for the war. He is an accountant in the City, and being champion of the North London Rifle Club, offered his marksman services to his country, and went out to the war in the Rough Rider Company of the Imperial Yeomanry, in which he served for fourteen months, and gained a commission. He joined the Cadet Corps of the London Rifle Brigade when he was fourteen, and at the age of 26 he has brought honour to the regiment, of which he is now a second lieutenant. It appears

that when quite a youth he gained a reputation as a swordsman, being particularly expert at rapier and dagger play according to the Italian method. "Do you drink or smoke?" he was asked as soon as he had gained the King's Prize. "I do both," was the reply, and, suiting the action to at least part of his words, he lighted the soothing pipe before being "chaired" round the camp.

At a meeting of the Dover Corporation on July 29th it was stated that it was proposed to level down the noted Shakespeare Cliff, which is 300ft. high. The Deputy Mayor said that he understood negotiations had been going forward from the National Harbour contractors for levelling down this cliff to use the chalk for reclamation work. Sir Wollaston Knocker, the town clerk, explained that he understood the proposal came from the military authorities, who stated that the range of the heavy guns at one of the new batteries was interfered with by the cliff, and the War Office therefore proposed to dismantle it. A resolution of remonstrance was ordered to be sent to the proper authorities.

It is stated that the Commander of H.M.S. *Psyche* issued a proclamation on July 17th at Ruatan (the chief of the Bay Islands, of Honduras) that Great Britain, in accordance with the treaties between the United States and Honduras, withdrew all jurisdiction over the Bay Islands, and any claim to the allegiance of the natives. At the same time, the President of Honduras proclaimed that the islands belonged to Honduras, and guaranteed protection to property and religious rights. The two proclamations caused very great excitement and indignation. What was almost a panic arose through fear of the military and conscript laws of Honduras, and most of the inhabitants threatened to leave the islands at once. The population is almost exclusively of British origin, coming from Jamaica, and English is the only language spoken. Many residents threatened to drown their children rather than allow them to become Hondureans, believing that the change in sovereignty means the ruin of the islands. British Honduras is now the only British possession in Central America.

The *Yuzhnaya Rossiya* (South Russia) publishes the following particulars of the new Russian battleship *Kniaz Potemkin Tavricheski*. She was built in the Admiralty Yards, Nikolaieff, on December 27th, 1897, launched October 9th, 1900, and commissioned June 21st this year. Her length over all is 378 ft. 6 in., and at the water-line 371 ft. 25 3/8 in.; beam, 73 ft.; draught, 27 ft.; displacement, 12,600 tons; engines, 10,600 h.p.; speed, 16 knots. She is fitted with Belleville boilers, the two groups aft being heated by coal, and the one group forward by petroleum. Of coal she carries 670 tons and of petroleum 580 tons, which together give her a radius of action of 3,393 miles at a speed of 9.3 knots. Her armour extends 237 ft. along the load-line on each side, with a thickness of 8 in. and 9 in., and is continued to the ends fore and aft with a thickness of 3 in.; at the lower casemates it is 6 in. thick, with a run of 156 ft. on each side; and at the upper casemates, or battery, for a length of 168 ft. on each side, the thickness is 5 in. The armament consists of four 12 in. Canet guns of 40 calibres, sixteen 6 in. Canet guns of 45 calibres, fourteen 2.95 in. Canet guns, six 1.85 Hotchkiss guns, six machine guns, two Baranovski landing guns, and five submerged torpedo-tubes—one at the bows and four broad-side.

COMMERCIAL NEWS.

During last month 40,915 bales of sugar were imported into Yokohama.

Tenders were invited by the Tokyo Shosen Gakko (Navigation School) on September 8th for the construction of a training-ship with four masts, aggregating 2,200 tons. The Kawasaki Shipbuilding Yard secured the contract at yen 528,730, undertaking to finish the vessel by the end of January, 1904. The Osaka Iron Works and the

Uraga Dock Company tendered at 535,000 and 54,480 yen respectively.

A tramway company to be called the Naka Kamachi Basha Tetsudo Kaisha will shortly be established by Mr. S. Ikeshimamura and 41 others in Osaka-fu. The company is backed by a capital of yen 150,000 and its projected route is from Tamazukuri Station, on the Kankai Railway, to Hiraoka-mura, Naka Kawachi district, a distance of 6 1/2 miles. Application was made to the Osaka Municipal Authorities on September 10th for sanction.

The export of fish oil from Yokohama is steadily increasing. Generally speaking, says a Japanese paper, over yen 800,000 worth is exported abroad every year, namely to Germany, Hongkong, Belgium, France, England and Australia. Owing to the poor catch of fish in Hokkaido waters and elsewhere this year the output shows a falling off, whereas orders are forthcoming from those countries. As a matter of course, prices are now rising steadily here and holders are firm. Below is a table showing the business done at Yokohama during the past three years:—

	Quantity. Lbs.	Value. Yen.
1899.....	7,544,305	456,440
1900.....	10,474,032	752,554
1901.....	13,053,315	902,372

Apart from the immense profits accruing from the fishery business, the mining industry in Hokkaido is progressing satisfactorily. In 1901, the total quantity of various minerals forwarded from the island to Japan proper and abroad amounted in value to yen 6,640,861. The figures show an increase of twenty per cent. as compared with the previous year and of over tenfold as against 1892. The total quantity of coal exported from Hokkaido during last year amounted to a little over 1,450,000,000 lbs., representing yen 5,250,000 in value, and the mineral is now largely produced in the Yubari, Utashinai, Horonai and Kushunbetsu mines. The kerosene industry is said to be likely to become a profitable enterprise in the island.

The Osaka Alkali Company, of Osaka, held an extraordinary general meeting of shareholders on September 10th in the Sakai-ro. Matters relating to the redemption of debentures amounting to yen 217,900 and the raising of debentures to the extent of yen 270,000 were the principal topics of discussion. Objections were made by a section of the shareholders with regard to the raising of further debentures and in consequence the meeting broke up before any decision was arrived at. It is stated that an arrangement was subsequently made to the effect that Mr. I. Tanaka and four others, representing the shareholders, will further consider the question with the chief officials.

The complication between the Imperial and the Royal Brush Companies, of Osaka, seems to be going from bad to worse. News received by the *Jiji* from Osaka is to the effect that the Royal Brush Company, while still employing every possible means to induce workmen to leave the Imperial, has engaged a number of *soshi* and gamblers for the purpose of obstructing workmen of the rival concern. Accordingly the latter is exhausting all available measures to prevent its workmen from being taken away. Not satisfied with this, the Imperial recently prosecuted the Royal Company before the Police Authorities, alleging that the latter had violated the regulations for the control of workmen, issued by the Municipal Office, but the case was dismissed.

THE ROYAL FAMILY AS ANGLERS.

One of the attractive articles of the very attractive summer number of the *Fishing Gazette*—which contains much excellent reading for anglers and many interesting illustrations—is that by Mr. R. B. Marston, the editor, giving some particulars of members of our Royal Family and the rod.

The King, it seems, is not a very keen fisherman, not half so keen as his brother, the late Duke of Edinburgh, or his son, the Prince of Wales, but it is quite a mistake to suppose that his Majesty has never taken any interest in fishing. As a youth he fished in the Highlands, and when as Prince of Wales he rented Abergeldie on the Dee he used to fish for salmon now and then, though, as old Donald Morgan says, his Majesty was "not awful enthusiastic." Lord Knollys, however, recently informed Mr. Marston that the King on one occasion caught a 21lb. salmon on the Floors Castle water on the Tweed.

As regards the Queen, we have long known that she is a keen disciple of Izaak Walton, as is also Princess Victoria, and they often fish together when in Scotland. Her Majesty has killed salmon in Ireland, and so deadly is the "Alexandra" fly, named after her, that its use is prohibited on many waters. The Prince of Wales is perhaps the keenest and best angler our Royal Family has produced, and will spend long days on Deeside enjoying the sport. Then the Princess Louise, Duchess of Argyll, and the Duchess of Fife are devoted to angling. When in Canada Princess Louise had grand sport with the salmon. The Duchess of Fife has had many good days' sport on the Dee, near Mar Lodge, and spends much of her time with her children in the enjoyment of her favourite sport while the Duke is deerstalking.

Those jolly specimens of Young England, Prince Edward and Prince Albert, sons of the Prince of Wales, are, Mr. Marston also tells us, both keen on fishing, and each of them caught a nice lot of roach with the fly recently; even little Princess Mary was successful in landing one. Last month the young Princes tried their hands at the trout in a Norfolk stream, and Prince Albert (aged six) got a brace and Prince Edward (aged seven) half a brace, with the fly, March Brown and Black Gnat. The fact that they were able to send a trout to the King, who was then staying at Sandringham, and a brace to their parents in London, afforded them as great pleasure as the catching of the half-pounders. They have taken as many as fifteen or twenty roach each of an evening.

CORRESPONDENCE.

A RECENT INCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the telegram in to-day's *Japan Mail* announcing the disgrace of two men in the 4th Middlesex Regiment, I should like to state for the information of those of your readers who may not be aware of the fact, that these men cannot be privates in His Majesty's Regular Forces as there is no such Regiment in the Regular Army as the 4th Middlesex Regiment. This is evidently the volunteer battalion of the Regiment. At this time of the year Volunteer Regiments are frequently brigaded with the Regulars at Aldershot for two weeks training.

Faithfully, etc., C. T.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent of the 6th instant, who signs himself "C. T." and who writes under the heading of "A Recent Incident," is evidently unacquainted with the British Army, as by his letter he has shown himself entirely ignorant of that force.

The 4th Middlesex, to which he refers, is a regular line battalion, raised, together with the 3rd, some three or four years ago when an addition was made to the Army. Previous to that time the 4th Bttn. was a Militia one, but it is now the 6th, consequent on two more battalions having been added to the two already existing, the old 57th and 77th, so that his assertion that it is a Volunteer regiment is absolutely incorrect.

"ONE WHO KNOWS."

Miyanoshita, September 7th, 1902.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reference to the letter of "One who knows" in to-day's *Japan Mail*, I am perfectly aware of the increase in the Battalions in the Middlesex Regiment, but I still maintain that unless there is an error in description the two men were Volunteers and not Regulars. There is no 4th Middlesex Regiment of Regulars; there is a fourth Battalion of the Middlesex Regiment, but there is only one Middlesex Regiment.

In reference to the fire-eating warrior who wrote to the *Herald*, with his details of men who hail from Middlesex and wear the uniform (isn't it wonderful, Mr. Editor, what a lot of information you can cram from the monthly or weekly papers) and his challenge that I dare not write over my own name: well my name is of too little local importance to warrant my thrusting it before the public, but if he will apply to you, sir, you have my full permission to satisfy him. And then what is our warrior going to do? Blow me from a gun; send me to a General Court Martial, or, as it is my first offence, will C.B. meet the case?

Faithfully yours, C. S.
Yokohama, September 9th, 1902.

A PROTEST.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of this morning I find my name associated with a concert held at Karuizawa on Saturday last. I protest that a most impudent and unwarrantable use has been made of my name in this connection.

I was asked indirectly by one Hamilton Sharp to contribute to the programme. I took the trouble to wire to Karuizawa asking to be excused, this was subsequently confirmed by letter. I never had the remotest intention of assisting at the concert and I gave excellent reasons for declining. I can only characterise the use of my name as gross impertinence on the part of the committee.

I am, dear Sir, yours faithfully, H. J. SHARP.
Yokohama, September 5th, 1902.

"BUSINESS TRAINING FOR COLLEGE GRADUATES."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of Sept. 2nd, an article on "Business Training for College Graduates" appeared. In a late issue of *The Trumpet*, a missionary journal published in Tokyo, an article on vacation and graduates was contributed by a professor of the Higher Commercial School.

I do not like to suggest plagiarism, but, it seems to me as if one or the other of the writers had borrowed considerable material from one or the other of the articles.

Compilation may be a good method with some people in working up material for newspaper contributions or school essays, but sometimes, what frequently happens in American newspapers, the "deadly parallel" may be drawn,

Respectfully, A. READER.
Nagasaki, Sept. 4th, 1902.

(The article was taken from *Leslie's Weekly* and duly acknowledged.—*Am. J. M.*)

KOBE BEEF.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to my letter of August 20th on the subject of the treatment of cattle shipped at Kobe for the Yokohama meat market, whilst they are on the N.Y.K. Co.'s steamers, as I have not observed that my very much under-stated description of their sufferings called forth any expression of public opinion in your columns, I would ask whether it is possible that the community are totally indifferent to the treatment of the animals which supply them with such an important article of food as beef?

Not being a resident of Japan, I am unaware if there is such a factor for the protection of dumb beasts either amongst foreigners or Japanese, as a "Society for the Prevention of Cruelty to Animals," for if there be, I should say that this is certainly a case where its influence should be brought to bear upon the company in question.

I am, yours, etc., HUMANITARIAN.
September 4th.

THE FETE AT HONMOKU.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It will be gratifying to your readers interested in the Ladies Fund for the increase of the Nursing Staff in connection with the Yokohama General Hospital to know that thanks to the generous response of the Public in the purchase of tickets, to the liberality of the Gardener's Association in presenting free of charge the flowers sold, and to that of the *Box of Curios* in the matter of printing tickets and programmes, also to the kindness of numerous friends in assisting in various ways, Mrs. Mollison has been able to hand over to Mrs. Bellows the substantial sum of *yen* 350.20.

Yours faithfully, JAMES P. MOLLISON.
Yokohama, 10th Sept., 1902.

A QUESTION FOR THE SCHOOLMEN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Please allow a trespass upon your patience to use the power of the press to enlighten the conscience of those who sit in Moses' seat.

Is it right or is it wrong to use the word 主 (主人)? Bearing upon this point, please allow this quotation from the published utterances of the Reverend Canon W. J. Edmonds, B. D., British and Foreign Bible Society, Exeter, England:

"There is no more striking example of a gracious influence upon translators than the use of the word 'Lord.' As we read our New Testament in English, as we read a great part of the Old Testament in English, and as you watch the chastened and refined expressions of cultivated Christian men, you feel that there is a growing sensitiveness as to what word should be used."

He quotes also the Reverend Henry Martyn: "The royal books in the Bible have suffered more than any other books from want of dignity in the men who translated them."

If God exist has He any name?

Is He not so far One as to need no name?

Did He not refuse to allow a name to be applied to him when Moses at the burning bush pleaded for a name?

If He had a name would it be wise to use it among a people who have many gods?

If we wish our God to be their God is it wise to print His name in *katakana*?

CHAN-CHAN-BOZU.

BOILERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I ask of you the favour to publish in your paper, the enclosed extract from the *Morning Post* of July 17, 1902?

It may prove interesting to some of your readers.

Yours faithfully,

DENYS LARRIEU.

Representing in Japan Messrs. Delaunay
Belleville & Co.

Tokyo, September 8th, 1902.

The Report of the Boiler Committee.—Except Sir William Allan and a few of the thick-and-thin opponents of the Belleville boiler very few people will be found to endorse the report of the Boiler Committee. Even these few, indeed, will find in it but scant subject for congratulation, for the committee, while condemning the Belleville, holds to its opinion that "the advantages of water-tube boilers for naval purposes are so great, chiefly from a military point of view, that, providing a satisfactory type of water-tube boiler be adopted, it would be more suitable for use in his Majesty's Navy than the cylindrical type of boiler." So far the committee is unanimous, and confirms what has always been written in this paper, that the water-tube boiler has come to stay. After all, if we were now starting a steam engine for the first time the water-tube boiler would seem the more rational form. There have been difficulties in the working of it, of course. But we should have had considerable difficulties with all our machinery if in the early days of the adoption of steam we had worked at pressures that we now regard as insignificant. It would be idle to trace the progress of pressures as expansion progressed, but are we not asking too much of new methods with present pressures? Let us put it in another way. We have known the cylindrical boiler for somewhere about seventy years. We have known the water-tube boiler as a factor in Navy life for possibly a decade. Is it fair to compare the performances of the one and the other?

The Belleville Boiler.—But I will go further. I will avow myself the unalloyed champion of the Belleville boiler. I care not a snap of the fingers for the report of the committee. I declare it to be all wrong. I blame the Admiralty for having had the weakness to yield to a half-hearted report—the first one of the committee—and I appeal to facts. What about the trials of the *Good Hope* and the *Leviathan*—both fitted with Belleville boilers and with no mongrel conglomeration of some water-tube and cylindrical? What about the four ships of the "Formidable" class now in the Mediterranean—all fitted with Belleville boilers? Are they not successes? Has any single competent engineer who has learned how to work Belleville boilers ever complained of them? Bad fitting and bad work aboard have been the causes of the nonsense talked about Belleville boilers. They may or may not be the best water-tube boilers, but they have done all that was required of them when in proper hands, and they are doing so day by day. Some people talk about the *Powerful* and her long delay in getting to work, but they do not know the

difference between engines and boilers, and in the case of the *Powerful* it was the fitting of one of the engines that was at fault. Let us have done with cant, and, if possible, let us undo the great mischief which we have done by abolishing in the Navy the introduction into future ships of the best boiler of the day. There are defects in it; there are other water-tube boilers which have many points to recommend them; but for the present, in spite of any committee and in spite of the Admiralty, the Belleville is the best boiler there is for big ships. Destroyers and such small craft are not under consideration. But ask the engineers who have learned to work Bellevilles.

THE BLUFF GARDENS.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—May I ask you who extends an invitation to the Public, to the Bluff Gardens this afternoon to hear the Band of the *Redoubtable*?

If the invitation comes from the Committee of the Ladies Lawn Tennis Club, it may be as well to remind the Public that under the terms of their lease the Bluff Gardens are Public Gardens, open to the Public any day, with the exception of a very few days a year, I think not more than three, of which notice must be given. The Gardens were laid out with money subscribed by all Residents, and the lease granted to the Ladies Lawn Tennis Club stipulates that after reserving a certain area (probably exceeded) for the use of the Club, they keep up the remainder as a Public Garden. As no notice is on the gate to this effect, and probably not many of the General Public remember these facts, the Gardens are not used to the extent they would be if this were more generally known. Considering that the Ladies Lawn Tennis Club acquired the control of the Gardens under these special conditions, I would recommend a notice on the gate to this effect, as I know many residents and visitors have a diffidence in using the Gardens, thinking them the private property of the Tennis Club.

Yours faithfully, "PRO BONO PUBLICO."

[The notice was published in the local press, we understand, "on behalf of the Ladies Lawn Tennis Club."—ED J. M.]

CHRISTIANITY IN CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 5th inst. in an editorial on the arrival of sixty Russian Missionaries at Peking for distribution in Manchuria, you have some short comments on the religious problem in China, to which Protestant Missionaries will not object. On the contrary they will emphasize what you say about certain objectionable interference, meddling and assumptions on the part of prelatists. There is trouble ahead beyond question.

But now you include the following :—

It is not too much to say that Christianity has been forced upon China at the point of the sword. When the Peking Government had been beaten to its knees in 1860, and when the grip of England and France was at its throat, it was required to repeat a formula of tolerance and privileges, dictated by its conqueror, and the concessions thus obtained by force were afterwards extended by fraud. The wretched story need not be repeated here.

Your present correspondent has been a Chinese missionary for over fifty years. He has considered it a part of his duty to make himself fairly familiar with the course of history over there. With its wars especially he has tried to keep up. He is not aware of facts that will justify the assertion that Christianity has been forced upon China at the point of the sword. They may have escaped his attention. He will consider it a favour if you will introduce him to the authority that will supply his lack of information. The war of 1842 was on account of twenty thousand chests of opium which the Chinese seized and destroyed. The war of 1857 also was on account of the British flag being hauled down on the *lorcha Arrow* by the Chinese Authorities. Christianity had nothing to do with it in either case.

The facts, so far as Christianity is concerned, which I know to be true from statements made by parties concerned in the affair, were these. The Hon. Wm. B. Reid was sent out to represent the United States. He was sent out to make exclusively a commercial treaty. He stood ready to take advantage of the treaty of peace being then discussed by Britain and France. Three treaties, the English, the French, and the American, were all made and signed within less than ten days of each other. Americans rather congratulated themselves on their peaceable acquisition of concessions which the English and French were extorting by force. It was a delusion. The concession to America were in reality a tribute to English and French gunpowder and were also a display of Chinese cunning. They took pains to find out what the English intended to insist upon, and hastened to respond to the Americans in advance

thus saving "face" by an appearance of voluntariness.

As to the French participation we have good historical grounds for believing that the death of a priest played a small part in the affair. The real purpose was to prevent England from getting an undue advantage in a final settlement. So she allied herself with England and had an equal voice in the conclusion. Yet it is true that France did then pose as a defender of the faith and make use of the priests to gain secular ends just as the priests made use of her to gain ecclesiastical ends. The mutual alliance is kept up to this day, and sooner or later will lead to renewed outbreaks. Protestant missionaries are opposed to the whole coalition.

And now on the American treaty. Dr. Williams was the American Secretary of Legation. The English Chinese Secretary of Legation was a man also kindly disposed towards missions. These two persons consulted together and agreed upon a policy. Then Dr. Williams went to Mr. Reid and asked him, if in the provisions of the new treaty there could be incorporated an article granting religious toleration. Mr. Reid replied that his instructions were definite: he was to negotiate a commercial treaty only, and he had no authority to make a request for a toleration article from the Chinese. Dr. Williams asked if he and the other Secretary could persuade the Chinese to insert it would Mr. Reid allow it to stand? Mr. Reid replied that if done voluntarily by the Chinese, at the request of the Secretaries and without any use of his name or authority he would raise no objections. The two Secretaries then began their conferences, on their own account, with the Chinese diplomats. They were both well-known and highly respected, and they soon won the diplomats over. The concession on their part was the freest and most spontaneous thing in the whole treaty. The British treaty followed, all as planned. When Mr. Reid got back home he found he had made himself very popular by his supposed origination of the article in favour of soul liberty and intellectual enfranchisement in the great empire of China. It was the two Secretaries that did it and the Government had nothing to do with it.

WILLIAM ASHMORE.

Karuizawa, Sept. 6th.

[We will reply to this so soon as space permits.—ED. J. M.]

DEATH OF PROF. VIRCHOW.

Professor Rudolf Virchow, whose death is chronicled in another column, was a celebrated German pathologist, anthropologist, and politician, and was born at Schivelbein in Pomerania, Oct. 13, 1821, and studied Medicine at Berlin. We find in *Men and Women of The Time* that in 1849 he was appointed Professor of Pathological Anatomy at Würzburg, and soon became one of the foremost exponents of the so-called Würzburg School. In 1856 he returned to Berlin as Professor; here he did excellent work in the newly-founded pathological institute, which at once became the centre of independent research among the younger men of science. He always took a great interest in politics, and contributed important speeches to the parliamentary debates. His attitude from the first was ultra-liberal. He passed as the originator of the celebrated phrase "Kulturkampf," or the war of the State against a reactionary Church. In 1887 he was deprived of the rectorate of Berlin University, owing to the violence of his political opinions, but was reinstated in 1892. At the Naturalists' Conference at Innsbruck in 1869 he was one of the founders of the German Anthropological Society. In 1873 he became a member of the Academy of Sciences. He also took a great interest in the spreading of scientific knowledge amongst the people, and was since 1866 part editor of a series of popular lectures, to which he has contributed essays on various historical and scientific subjects. His principal works are: "Cellular Pathology," 4th edit., 1871; "Morbidity Tumours," 3 vols., 1863-66; "Collection of Treatises on Scientific Medicine," 1856; "Collection of Treatises on Public Medicine and Epidemiology," 2 vols., 1879; During the last illness of the Emperor Frederick he was constantly in communication with the late Sir Morell Mackenzie. On the occasion of the completion of the fiftieth year of his connection with Berlin University in November, 1897, he was the recipient of most flattering proofs of the respect in which he was universally held. In 1898 he came to London and lectured before the Royal Society, his speech upon this occasion being most generously appreciative of the labours of English scientific men.

"OUR WEDDING."

Regarded from the new vicar's point of view, it must honestly be conceded that in Slowdon parish the good seed had certainly fallen upon stony places. The parish had long—very, very long—groaned under the misrule of the old vicar. He was a bad man and a bad vicar, and there was open and undisguised relief when he was at last gathered to—no, perhaps it would be as well not to particularise as to the exact locality to which he was gathered. One of his parishioners who hated him the most was wont to say, before the much-wished-for event took place, that he would "never die." "You see, of course he can't go to heaven, and they only want one Leading Gentleman in the other place," she would wind up with conclusively. However, be that as it may, he *did* die, and was gathered to "somewhere," and the parish heaved a great sigh of relief.

Scarcely, however, had his last breath and their sigh of thanks-giving ascended into the empyrean when a great and paralysing fear fell upon them, for it was rumoured that the new man was a High Churchman, possibly even a Ritualist. The dreaded news spread about the parish like wildfire. The daily services sent a shudder through the entire community; lights upon the altar drove a goodly proportion of the congregation into the chapel on a Sunday; and as for the week-day services, those who attended them could with ease be counted on the fingers of one hand. Possibly, too, the collection at every service somewhat stimulated their unfaithfulness.

At the end of the first year of the new order of things the vicar and curate were fain to confess to one another that the church was emptier and the aforesaid chapel much fuller than ever before. "It is disheartening," said the vicar. "It is disgraceful," said the curate, who was all for the pile of faggots. "They will come when they are educated to it," quoth the Archdeacon primly when the matter reached his ears. "They must be *made* to come," was the sentiment of the Archdeacon's wife; she, too, was of the pile of faggots type of intellect, though she did not go on to say how the "making" was to be brought about. What the Bishop said is known only to his wife; his best prayer was for peace; the divagations of his clergy filled him with dread and horror, and he retired for a week's rest cure into Wales. Undoubtedly there were faults on both sides. The vicar was very, very far from being an extreme Ritualist; but country communities move slowly, and are much more tenacious of their religious liberties than their brothers of the large towns; once frighten them and they will all run like a flock of sheep.

"They will see the beauties of our methods in time," said the good vicar.

But at the end of the second twelve months there were fewer people in the church than ever and the chapel built on a transept.

About this time some relief was afforded to the faithful by the news that the daughter of the vicar's churchwarden was going to be married shortly. There had not been a "pukka" wedding before during the new vicar's reign. He spoke rejoicingly: "Now we will show them what a splendid ceremonial, what a truly beautiful Sacrament of the Church, a wedding can be made." "Yes, we will let ourselves go," the curate made answer. His Oxford days were not so very remote, and slang sometimes would crop out despite his studied pains to forget; visions of processions and recessions danced before his eyes, even the faintest whiff of incense seemed to rise in imagination to his long-famished nostrils.

Then—then came the crushing blow. The wedding was fixed in Lent. After one strong and forcible remonstrance addressed to the bride-elect, in answer to which "she spoke very flippantly and in a most unbecoming manner"—this was the curate's description of what had passed (as a matter of fact she was marrying an officer, home on privilege leave, and they had to be back in India by a given date)—the vicar collapsed, feebly contenting himself with saying there should be "no decorations" and "only one hymn." Not so the curate. He was back yard, and daily eyed the wood-stack in his own back yard with evergreater longing.

"I should refuse to marry them," he said.

But the vicar would not go that far. Possibly he was wise in his generation; also he had a "whip" out for a new organ and vestries, and the churchwarden was generous and had a long purse.

To make matters worse, the bride was very popular among the parishioners, and, go where he would on his ministrations, the poor curate could hear of no subject but "oor wedding." "Did he go to see Mrs. Binfield recovering from the arrival of her fourteenth baby, it was, 'I must mind and get well, sir, or I'll be mi-sin' oor wedding.'"

With old Mrs. Wallis, a chronic sufferer from "the wind," it was the same story. "Middlin,' Sir—*very* middlin'—in answer to an inquiry as to her health. 'I do seem to have no strength in me, and I dinna fancy me food, but I'll manage soomhows to get to the church to see oor wedding.'"

"They have no business to be having any weddings now," he was moved to say. "There is a Canon of the Church of Edward the Fourth's reign in 1476 forbidding marriages in Lent."

"Dear, dear, Sir, just fancy that; did the King really say so?—well, I hope as our King'll not prevent oor weddin'."

With old Grandfer Taflom, nay, in the very infant school the burden of their tale was always the same, and the hateful words "oor weddin'" seemed to be entwined in every act of his life.

When he spoke of the Canon of the Church of 1476 to Mrs. Rankin he had some misgivings. Certainly she was one of the two supporters of the daily services, but, on the other hand, she was a cousin of the bride and her little girl was to be a bridesmaid.

"Yes?" with a lack of interest in his view, "well, I do think it would have been nicer to have had it in the summer, for then Jennie could have worn white muslin; you can't think what a duck she looks in white muslin with a blue sash. Edward IV. really!" this very absently after a reiterated statement on his part. "Very interesting! but I must say I do hope the vicar is going to allow us to have red carpets. No! Well, I must speak to him about it. Jennie is certain to catch cold if she stands on the stone floor in thin shoes, poor mite. Oh, and don't you think he might as well have decorations? The children would look so sweet marching through a bower of greenery and primroses."

But from Mrs. Hancock, dear true heart, the other attendant at the daily services and the very type and essence of a good Churchwoman, he certainly had made sure of sympathy and of meeting righteous indignation second only to his own, and had somehow overlooked the fact that her idolised son was a brother officer of the bridegroom-elect and was to be "best man—at oor weddin'", and it was a great shock to find her ignoring the Canon of the Church of 1476, and to hear her actually join in roars of laughter when Captain Hancock coarsely inquired whether it were a "Pom-pom," or a "Long Tom," "perhaps only a *Maxim*, eh Parson?"

"What I really want to know is," she said, "whether you think the vicar will stand on *quite* the bottom one of the chancel steps, so that Walter will be standing near the Norman column. I should like his profile to show against the column; he has such a good profile, just like Forbes Robertson."

"Oh, yes; and we wish 'Oh, perfect Love' to be sung to a different tune, like this, &c."

The curate had perforce to fall back upon Mrs. Maitland for sympathy. Of course, she had never yet failed in sympathy with anybody; but that was just it; she would as readily sympathise with the religious sufferings of a Turk, or even a Jew, whereas every sound Christian knows that it is meritorious in the extreme to persecute a Jew. She was not a Churchwoman in any sense of the word, and would give alms to the necessitous poor quite regardless of whether they were or were not regular attendants at church, and had been known to speak of herself as a Protestant—you can go no lower.

True, she had nursed the curate day and night for three weeks in the great Influenza year; but then she had also nursed Job Wheeler when he broke his leg, and it is common knowledge that he is a Dissenter.

On this occasion she did not fail the curate, though she did ask "if a prohibition against marriages in Lent were in the Prayer-book," but she did not allow the ghost of a smile to illuminate the Canon of Edward IV. and the harrowing account of the spiritual indifference of Mrs. Rankin and Mrs. Hancock.

"You must make allowances, you know," she said; "you see, all women always go quite cracked over a wedding—its part of our heritage." And by-and-by he went home feeling quite soothed, and almost forgetting that Mrs. Maitland was a Protestant.

The culminating point in the history of the curate's martyrdom was reached when the vicar said, "I think you will have to go to the wedding reception; one of us had better do so, I think, and I don't want to." This was the very last straw. On the day following the festivities he was hailed by John Maitland, who had been away from home, with "Well, and how did our wedding go off?" in his cheeriest voice. There was a high wind, and, as Mrs. Maitland said afterwards reproachfully, "you know you are a little deaf, John." But what Mr. Maitland heard sounded very like:

"Jam our wedding."

But, of course, the curate could not have said that, in Lent, too! —*Westminster Budget*.

THE LOIS OR ABORIGINES OF HAINAN.

Of the history of these people little or nothing is known. Having no written language, no records exist, and being a reticent people, very little can be learned of their traditions. Geographically, they now occupy the south central or hilly part of Hainan, into which they have been forced by successive waves of

immigration of more highly civilised people from the mainland of China.

The various tribes of Lois differ from each other in language and in some of their customs, but resemble each other in physical appearance. They are more lithe and supple than the Chinese, and the face has a keener look, the eyes are blacker and the nose sharper. They may be roughly divided into three classes according to the style of hairdress of the male portion of the population. One, called the large knot, combs all the hair of their unshaven heads up to the forehead, where it is ingeniously tied into a knot and the remaining end wound round this and tied with a string; these live toward the north-east in the district of Dengang. The southern Lois twist the hair up on the top of the head, where it is fastened with a long bonehair-pin. The women in this section tie the hair as a horse's tail is tied in muddy weather. This knot being at one side of the head gives them a jaunty appearance. The south-western Lois part the hair from ear to ear over the back of the head, tie the fore part in a knot on the forehead and twist the back part, and bringing over one ear, fasten the end into the knot in front. The tiny little wooden comb with which this toilet is made is then stuck into the knot.

In the matter of dress they cling to their own costume, which consists of little more than nature provided them with. In former years a law was made by the Chinese, compelling the Lois when coming out to market to come with shaven head and properly dressed, but this law is not enforced, and one frequently sees these wild sons of the forest come to market with only a loincloth on. The native costume consist of a short coat open straight down the front, which is lapped over and held in place by a girdle. Instead of trousers, the Large Knots wear two pieces of cloth suspended from the waist. The women of all classes of Lois wear short coats and skirts that do not quite reach to the knee.

The materials for their clothes are tree cotton, the fibre and bark of trees, and the cotton cloth sold to them by the Chinese. The women are well tattooed on the face, arms, and ankles. The chief difference one notices in the feminine attire in passing through the country is in their ornaments. Hair ornaments of bone and silver are numerous in one section, in another, large brass ear-rings are the style. I have seen as many as eight or ten brass rings in each ear, and these rings are so large that the wearer hangs them over her head for convenience when at work. Beads, thirty or forty strings on wire, forming a heavy collar, which the wearer seems to consider a more necessary part of her apparel than her coat, are the chief ornament in another region.

Of the language characteristics a traveller can get very little. I noticed that the Large Knots and the south-western Lois did not understand each other, and in order to communicate both fell back on their scanty knowledge of Chinese. The south-western Lois have a well trilled *~* which is not found in Chinese dialects in Hainan. The idiom seems to be different too, for a young Lois, when asked what a little jaw bone was that he had tied around his neck with a string, said it was a bone-dog. Another when asking for some carambola seeds said seeds-carambola. These south-western Lois are divided into thirty-six clans. The writer spent a week in the Duigang Family Village of the Dokang or Many Harbours clan a short time ago, and the observations on pursuits and customs refer chiefly to this clan, though they may be true of others.

The Lois obtain a living by farming and the chase. Very little is planted besides rice, of which they have several good varieties. The fields are prepared for planting by buffalo feet treading the stubble down into the mud. When the grain is harvested, only the ears are cut off and stacked in the village threshing ground, where it is trodden out by buffaloes. Of the buffalo and the cow, one sees many more white and mottled ones than among the Chinese herds, for the Lois have not the superstitious fear of bad luck brought by white animals. The upland is cultivated only in small patches, where sweet potatoes and a few greens are planted. They have scarcely any fruits, but everything that is alive is meat with which to dress the rice. A young Loi returning from grazing his cow showed me the contents of his pouch—the pouch which every Loi carries together with a knife tied at the back of his waist—three small rats, several crabs, an eel, and some snails. This made what he considered a savoury addition to his supper of rice and whisky.

The women work along with the men, and besides weave the coarse cloth of which their clothes and blankets are made. It is almost impossible to buy any cloth of them, as they say they cannot make enough for their own use, but needles and floss will sometimes induce them to exchange their goods when money is no inducement.

After harvest the young men amuse themselves by getting up hunting parties when spears, bows and arrows, and guns, the latter in surprising numbers, are brought out for use. The chase usually ends in

rounding up a deer, wild boar, or some jungle fowls. They observe a curious custom in the division of the game. The one who hits it first gets the head and hind-quarters; if the animal did not drop at the first shot, the one who hits it the second time gets the fore-quarters, and all the others who participate in the hunt, and even those who happen along at the butchering, are given a piece. They have no market towns; occasionally companies of from ten to forty men take loads of rice, skins, deer horns and sinews, dried mushrooms, dried canna leaves, roots for dyeing purposes, and other forest products to the southern coast, to Loongmun or to Namfong, where they get salt, clothes, trinkets, or ammunition in exchange. The provisions for the round trip are carried with them and their meals are prepared on the banks of streams in the most primitive fashion. Rough cocoa-nut shells answer as bowls and any two little sticks do as chop-sticks. The fire is started with flint, and having once got a light they carry it from place to place on a rope of twisted straw or on a knot of wood.

I have seen no trace of ancestral or idol worship among them except as they have been introduced by the Chinese. A three-sided stick driven into the ground beside the door of the house and on which a face had been drawn was all that I discovered of visible objects of worship. One woman who was ill was seen to take branches of trees or shrubs and hang at the gable end outside the house. The dry branches thus hung at nearly every house told where sickness had been. They have priests who exorcise evil spirits; some of the villagers had strings tied around the wrists which the priest had tied on, and for the removal of which the priest's offices must again be asked for. After a hunting party, the head of the game is roasted; in the evening the young men gather in the hut of the successful hunter, and after some chanting, the roasted head is offered to the spirits.

An interesting experience was the meeting of a funeral procession of a great man of a neighbouring clan, the Dokang or Many Streams. The procession was as weird an affair as anything could very well be in broad daylight. Our first glimpse of it was a brilliant mass of red colour lit up by the sun from behind; this proved to be the fancy headgear of the leaders of the procession. Others following were feathers, paper tridents, and branches of various shapes stuck in the knot of hair on the forehead. Then came gaily-dressed women, men and children on horseback, a crowd of ordinary people walking, and behind these about seventy men carrying the coffin; they formed a big square, and as they proceeded, they jumped and pranced at intervals with their burden, uttering wild yells, to which the crowd which preceded and followed the coffin answered in kind, making the hills and woods echo. Later we heard the procession wailing on its return from the burial.

The dwellings of the Lois are built of bamboo and thatch. In some regions the houses have floors of beautiful rattan several feet from the ground. In others there is a low seat around two sides of the room which serves as bench and bed. In cold weather the company gather around a genial camp fire at one side of the room, each squatting on a little piece of wood, and men and old women alike peacefully smoke their long pipes, the coarse tobacco for which they cultivate themselves. Of musical instruments I saw two kinds; one a Jew's harp, and the other a flute which is peculiar, in that it is blown by the nose; it gives forth a soft but very musical sound.

They are a restless improvident people. If the rice crop fails, there is famine; if the harvest has been a plentiful one, they make up all the surplus rice into whisky, and it is almost impossible to find some of them sober. Under such circumstances brawls and fights between clans are frequent. The Dragon Family villagers whom we visited had only last year returned to the original site of their village after having been fugitives. Four years before the Buyin clan came, plundered their rice, cows, pigs, and chickens and burned their huts to the ground. The villagers escaped with their lives to the hills near by where, for three years, they eked out a bare existence on game and roots while their rice fields lay unworked. Doubtless the Buyin clan had had provocation for coming, and doubtless the Dragon Family helped themselves to whatever they could from neighbouring fields during the time of their exile.

Through the drunkenness of the Lois as well as through the cupidity of Chinese, it has come to pass that most of the rice fields have passed by mortgage into the hands of the Chinese, who let them out to the Lois to work on shares. Naturally it galls the Lois to see the lands that belonged to their fathers gradually passing out of their possession and, on very slight provocation, a Loi will lie in wait for the hated owner when he comes to collect his harvest, and shoot him. At times several clans unite and plunder the carters who are taking the rice out to the sea shore. This danger is so great that carters demand a third of the value of the grain for the two days it takes them to get it out.

Chinese towns in the outlying districts are all built with a stockade or with a high wall around them, with loop holes from which to repel the invaders. Ruined buildings and even whole towns told us of the successes of the Loïs. In an insurrection the Chinese officials are wholly unable to deal with the rebels effectually, so the usual way is for the official to arrange a meeting with some of the Loi chiefs at which, by dint of presents or honours of some kind, the Loïs are persuaded to go home and live at peace again for a time.

But very few if any foreigners not resident in the island have been through the Loi country. Several parties have attempted it, with the usual result of a few days' journey into the border and a return around the outer edge of the island. The tall pampas grass and the underbrush grow so rapidly and luxuriantly that the paths are not kept open, and as there are no bridges and no ferries, the streams must be forded. This is impossible in the rainy season, and even in the dry season is attended with some difficulty owing to the stony and uncertain bed of the Sanghoe River, which must be crossed and recrossed a dozen times from Lokang to the river's source. In wet weather leeches abound, and none but those acquainted with travel in leech-infested districts can appreciate this difficulty. Practically the only way to get across the streams, through the brush, and over the rough mountain paths, is on foot or on horseback.

The greatest difficulty in crossing this country lies in the lack of coolies who know the road and in finding food by the way. The Hainanese coolies rightly fear the unknown Loi region and the Loïs themselves fear each other too much to go far from home. Besides, the Loïs are too lazy to care to carry your loads farther than to the first village beyond their own where you are likely to find all the able-bodied men have hidden to avoid being called upon to help you on. Delays of this kind are long and frequent, so that from three to five po must be counted a very day's journey.

There being no markets and no inns, the traveller must thrust himself upon the hospitality of the headman of the village. One's usual experience upon arrival and inquiry for rice is to be told there is no rice. After a search, sometimes personally conducted by the travellers, some paddy is found. We must wait for this to be hulled and cooked before a meal be eaten. Stores and game must be relied upon for dressing for the rice. It is impossible for a large party of travellers to make any progress under such circumstances. Attacks by robbers have to be guarded against, and for this reason a party of less than six or eight is hardly safe. Two or three Loïs carrying guns are often met, who, when questioned, say they are out hunting, but who could easily turn robbers if the travelling party is sufficiently small. The control of the Loïs has always been a problem with the Chinese and promises to remain such unless forces other than military work among them.—*N.-C. Daily News.*

WHY SOME MEN ENLIST.

The Rev. E. J. Hardy—the well-known Army chaplain of Hongkong, who was recently in Japan on furlough—in a little book, "Pen Portraits of the British Soldier" (Unwin), just published, tells us that men enlist for the queerest reasons. One he knew did so in order to learn to read and to write in a military school. When a boy he had always been a truant from school, and when he grew up he was ashamed of his ignorance, which he hoped to remove in the Army. Another, who knew that he would soon die of consumption, became a soldier to have the honour of a military funeral. How he managed to pass the medical examination is a mystery. Probably he passed himself off for another man. Vanity and love of dress have their effects, and a large number of men enlist for the sake of the "clothes."

The soldier sometimes adopts curious ways of bringing himself into notice, as witness the following:

Once in Bermuda I expressed a hope that an individual would not again come into punishment cells, and that it would be better for himself if he did not. He replied that he did not think it well for a soldier to be altogether without crime. "What do you mean?" I asked. "Well, sir, it's this way. If a man is never made a prisoner and brought to the orderly room, his commanding officer forgets all about him; but if he commits a few crimes, and then pulls himself together, the Colonel will say: 'So-and-so has been giving no trouble lately; we must do something for him.' So they look out for a soft billet and give it to him."

The "advertising advantages of crime" must, however, be very doubtful, and cases of the kind cited must be few.

The leisure-time of the soldier is by no means overlooked by those who have his welfare at heart, and in almost every barracks there are a library and a recreation-room. In the former

are picture and other papers, and books that are frequently changed; in the latter, a bagatelle and sometimes a billiard table and other games. Mr. Hardy once asked a man in hospital what kind of book he would like to get out of the library. He replied, "Well, sir, I can read almost anything except the life of a General!"

Mr. Hardy has a good deal to say about the soldier in love. It appears that at some of the dancing-halls in London there are notices displayed to the effect that the shilling charges for entrance do not apply to soldiers in uniform, who are admitted free.

One of these proprietors, being asked why the presence of Tommy Atkins was so much desired, answered: "You see, if we can attract a good proportion of the affable military men, we secure a greater number of lady visitors. You know the attraction there is for the female heart in a scarlet coat. And plenty of pretty girls frequenting a dancing-hall is what brings in the class that pays."

Soldiers find little difficulty, we are told, in making the acquaintance of the girls that eventually occupy married quarters, but the woman who "enlists" in the Army has a good deal to put up with, which we can very well believe.

VISCOUNTESS BEACONSFIELD.

There has always been a good deal of mystery about the story of the late Viscountess Beaconsfield, and in the *Gentleman's Magazine* for August Mr James Sykes endeavours to throw some light upon it. It has been asserted that Lady Beaconsfield was originally a factory girl, and that Mr. Lewis first saw her going to her factory, "beautiful and with bare feet." He there and then fell in love with her, educated her and married her, died and left her very rich, and then she married Disraeli. This statement is made on the authority of Mr. Augustus Hare, who took it down from the lips of Mrs. Duncan Stewart, of Liverpool, who was very intimate with the Beaconsfields.

Lady Beaconsfield "never displayed any manners or culture which might not have been acquired by King Cophetua's beggar maiden," but Mr. Sykes after a full examination of the available evidence stamps the factory-girl story as an invention. The

question of her paternal parentage is obscure, but he says it is evident that Mary Anne Evans—as her maiden name was—was with her mother moving in good society in Clifton when Mr. Wyndham Lewis "picked her up." She afterwards came into possession of Taynton Manor and gave the estate to Disraeli, who sold it by auction—probably to pay his election bills.

There certainly seems to have been nothing of the faint-hearted about Disraeli's wooing. It appears that for some time after her husband's death Mrs. Lewis lived in retirement at his Glamorganshire seat. One day she saw a gentleman leisurely walking up the drive, carrying in one hand a bag and in the other an umbrella. "Gracious, Jane!" she exclaimed to an old lady who used to attend upon her, "there's that horrid man Disraeli coming up the drive. Run down to the door and say I'm not at home." Jane did so, whereupon Disraeli with grave deliberation answered, "I know. Take my bag to a bedroom and prepare luncheon. I will wait till Mrs. Lewis comes downstairs." On another occasion it is reported that Mrs. Lewis said with a sigh and a flush, "Oh dear, what can I do with this gentleman?" "What can you do with him?" echoed her maid. The lady again flushed and again sighed, and laconically replied, "Marry him, I suppose." And she did.

Of Disraeli's great attachment to his wife there is ample evidence. It is said that on one occasion a friend of his had the bad taste to expostulate with him for always taking his wife with him on his visits. "I cannot understand it," said the graceless man, "for, you know, you make yourself a perfect laughing-stock whenever your wife goes with you." Disraeli fixed his eyes very expressively upon his friend, and said "I don't suppose you can understand it, for no one could ever in the wildest excursions of an insane imagination suppose you to be guilty of gratitude." Lady Beaconsfield died in 1874, and what the loss of his faithful partner meant to Disraeli may be inferred from what he said to Lord Malmesbury: "I hope some of my friends will take notice of me now in my great misfortune, for I have no home, and when I tell my coachman to drive home I feel it is a mockery!"

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE TSARITSA.

London, Sept. 4.

It is officially announced that the Tsaritsa has had a miscarriage, without complications.

ACCIDENT TO PRESIDENT ROOSEVELT.

President Roosevelt and party while driving in a brake near Pittsfield (Massachusetts) collided with an electric car. The President escaped with bruises; but several of the party were injured; a detective accompanying them was killed and the driver had his skull fractured.

MARTINIQUE.

London, Sept. 6.

There has been a fresh eruption at Martinique; 200 persons perished.

SOUTH AFRICA.

Sir J. Gordon Sprigg has introduced four new bills for raising a loan of £2,795,400 for improving the harbours, irrigation and railway works.

Sir James L. Hulett, an authority on the South African native problem, and Speaker of the Legislative Assembly of Natal, has been interviewed in London and told his interviewer that he deprecates the introduction of Chinese labour for the mines.

THE GERMAN MANOEUVRES.

The Hon. Mr. St. John Brodrick, and Generals French, Ian Hamilton, and Kelly-Kenny have started for Germany to attend the German manoeuvres.

THE FRESH ERUPTION.

London, Sept. 7.

The news of the fresh eruption on Sept. 4th is confirmed.

PROMINENT BOERS AND MR. CHAMBERLAIN.

Generals Dewet, Botha and Delarey had

a two hours' conference with Mr. Chamberlain at the Colonial Office. Lord Kitchener and Lord Onslow (Parliamentary Under-Secretary for the Colonies) were present. The conference was protracted because the generals spoke in Dutch which had to be interpreted sentence by sentence. Later General Botha revisited Mr. Chamberlain.

It is reported that the generals made various proposals which were not accepted, and which, according to one version, they soon abandoned and contented themselves with minor suggestions. According to another version they departed dissatisfied, and are going to Holland forthwith.

THE JAPANESE SQUADRON.

The warships *Asama* and *Takasago* are at Lisbon, where the King received the captains of the vessels.

THE BERLIN MANŒUVRES.

Lord Roberts, Mr. Brodrick and party have arrived at Berlin where they will be the guests of the Emperor.

OBITUARY.

Professor Virchow.

AMERICAN COMMERCIAL MISSION TO THE FAR EAST.

The steamer *Oregon* is being fitted out at Seattle for the purpose of taking about Nov. 15th a party of American manufacturers with exhibits on a six months' cruise to Russia, China, Japan, the Philippines, the Straits Settlements, India, Mauritius, South Africa, Australia, Hawaii, in view of the expansion of American commerce.

THE CAPE INDEMNITY BILL.

The General Indemnity Bill has passed the third reading in the Cape Assembly.

THE WEST INDIAN DISASTERS.

UNFORTUNATE ST. VINCENT.

London, Sept. 7.

The Rapapa river in the island of St. Vincent is a stream of fire a quarter of a mile wide. The Souffriere Mountain is considerably lower in height, a mass at the summit having evidently been blown off.

GERMANY AND HAYTI.

The Commander of the German gunboat *Panther* gave the Haytian gunboat *Crête à Pierrot* five minutes to land her crew. The Commander demanded 15 minutes, which were allowed. The moment the crew left the ship she burst into flames. The *Panther* thereupon fired 30 shots at the *Crête à Pierrot* and sank her. The *Panther* acted on orders from Berlin. Her action is not regarded in Washington as a breach of the Monroe doctrine.

THE AMERICAN TREASURY SURPLUS.

The accumulation of gold in the Washington Treasury is now 573,000,000 dollars and is increasing at the rate of a quarter of a million daily, without any prospect of cessation.

London, Sept. 8.

There has been another eruption at St. Pierre on the Island of St. Vincent. It began at 9 o'clock on the evening of the 3rd inst. and lasted till 11 o'clock next morning. The outburst was longer and more violent than the first.

THE KING.

The King endured easily a long day's deer-stalking in Sutherlandshire.

GERMAN WARSHIPS SINK A HAYTIAN GUNBOAT.

London, Sept. 8.

German warships in the roadstead of Gonaives have sunk the Haytian gunboat

Crête à Pierrot, which recently confiscated a cargo of arms and munitions of war on a German steamer at Cap Haytien.

[Gonaives is a port on the west coast of Hayti and Cap Haytien is on the north coast. The *Crête à Pierrot* was a steel gun vessel of 940 tons, length 210 feet, beam 30 feet, and she carried one 6.2 in., one 4.7 in., four 3.9 in. quickfiring guns and six machine guns.—ED. J. M.]

NEW ASIATIC STEAMSHIP COMPANY.

London, September 11.

There has been formed in America an Asiatic Steamship Company. The company is organized in New York and will run one steamer monthly from New York to the Far East.

THE ST. LEGER.

Later.

The result of the St. Leger is as follows:—

Sceptre.....	1
Rising Glass	2
Friar Tuck	3

(RECEIVED AT THE LEGATION OF FRANCE.)

MARTINIQUE.

Saigon, Sept. 7.

Morne Rouge has been destroyed at Martinique and the survivors have been received at Fort de France. It is stated that the eastern end of the island, through a distance of more than a mile, has disappeared in the sea.

FRANCE AND SIAM.

Saigon, Sept. 7.

The negotiations in progress in Paris between the French Government and the Siamese Ministers, are in good train and will soon be concluded.

(RECEIVED BY THE FOREIGN OFFICE.)

MARCUS ISLAND.

The *Takachiho* returned this morning to Yokosuka from Marcus Island. She reports that, on the 31st of July, Captain Rosehill reached Marcus Island, but that everything had been satisfactorily arranged.

THE KING OF ITALY.

The King of Italy, who recently proceeded to Berlin, returned to Italy on the 1st instant.

RIOTS IN CHINA.

In consequence of a supposition that the spread of cholera was due to Christian propaganda by foreigners, rioters arose in Sinchow, Hunan, a church was wrecked, and a Chinese subject was killed on the ground that he resembled a foreigner.

CHOLERA IN KOREA.

Fusan, Sept. 10.

All the cholera patients at Chinghai in Kyongsando, with one exception, have recovered, and the disease seems to be stamped out.

QUARANTINE AT CHEFOO.

Chefoo, Sept. 10.

The Chefoo Authorities have abolished medical inspection in the case of ships coming from any port in the north or south of China except Hongkong.

RUSSIAN STEAMSHIP COMMUNICATION.

The Japanese Consul at Vladivostock says that the projected line of steamers from Vladivostock to Shanghai via Nagasaki has been temporarily abandoned, and that a service will be undertaken from Vladivostock to Port Arthur via Nagasaki by the steamer *Harbin*.

(RECEIVED AT THE NAVAL DEPARTMENT.)

THE "ASASHIWO."

The torpedo destroyer *Asashiwo* was en route for Malta on the 4th instant.

(RECEIVED IN TOKYO.)

HANKOW-CANTON RAILWAY.

Work on the Hankow-Canton Railway is soon to be commenced. The necessary notifications have been issued by Viceroy Tao Mo and Governor Sheng Iwhai.

(FROM THE "JAPAN HERALD.")

AMERICAN POLITICS.

London, Sept. 4.

The American Democratic Campaign Text-book accuses the Republicans of thwarting the Anti-Trust legislation, and strongly advocates a revision, with a reduction of duties, of the Tariff, and effectual conclusion of reciprocity treaties.

JAPAN AND SOUTH AFRICA.

London, Sept. 6.

The Japanese Minister of Commerce has arrived at Pretoria. It is understood the Mission refers to the immigration of Japanese agriculturists and also to the import of Japan's products and the possibilities of a direct steamship service from Japan to South Africa.

RUSSIA'S FAR EASTERN SQUADRON.

The *Sviet*, in discussing the world's naval arrangement, urges that in face of the Anglo-Japanese combination in the Pacific, Russia must concentrate her energies on quintupling the strength of her present squadron in Chinese waters.

RUSSIAN GUNBOATS FOR THE FAR EAST.

London, Sept. 9.

It has transpired that the majority of the torpedo boats building at the Nevsky yard at St. Petersburg are to be sent to the Far East this year.

AN AMERICAN-ASIATIC STEAMSHIP CO.

London, Sept. 10.

The American-Asiatic Steamship Company is about to start a service between New York and Asiatic ports, using chartered vessels until specially built liners are ready.

The promoters of the Company include the following firms: Messrs. Yountze, Vermilye, Brown, Belmont, Cornelius Vanderbilt, and Shewan Tomes, the Oriental agents.

(FROM THE "JIJI SHIMPO.")

VOLCANIC ERUPTION.

London, Sept. 3.

The eruption of Mont Pelee at Martinique on August 30th was most violent, causing the death of 1,060 and injury to 1,500 persons. Morne Rouge has been totally destroyed with all its inhabitants. La Souffriere has again become active.

DEATH OF A BRITISH PEER.

Earl Connemara is dead.

SHIP WRECKS IN SOUTH AFRICA.

Four steamers and eighteen sailing-ships have been wrecked in Port Elizabeth during a recent typhoon. Other steamers narrowly escaped with slight damage. The steamers *Scot* and *Briton* of the mail line have arrived safely despite the rough weather.

STEEL FOUNDERS' CONFERENCE.

London, Sept. 4.

At a conference of the Steel Founders' Association at Dusseldorf, Mr. Andrew Carnegie was appointed President for the next term.

DR. GOTO IN GERMANY.

Dr. S. Goto, Chief of the Formosan Civil Administrative Bureau, has visited the Industrial Exhibition at Dusseldorf.

RUSSIAN EMIGRANTS.

One-fifth of the Russian emigrants in the Amoor and Ussuri districts are dissatisfied and are making preparations to return to Europe.

ACCIDENT TO PRESIDENT ROOSEVELT.

President Roosevelt, while driving in a brake, came into collision with an electric car near Pittsfield, and received slight injury. The President, however continued his journey southward.

DEATH OF A GERMAN DOCTOR.

London, Sept. 5.

Dr. Virchow of Germany, died this afternoon.

EMPEROR AND PRESIDENT.

The Kaiser sent a telegram of sympathy to President Roosevelt inquiring about his health in connection with the carriage accident.

The chauffeur of the electric car is being prosecuted on a charge of having caused the death of the driver and one of the attendants of President Roosevelt's party.

VENEZUELA.

The state of things in Venezuela is extremely critical. The rebel army is now within a very short distance of Caracas.

FUNERAL OF MR. PANMURE GORDON.

The funeral of Mr. Henry Panmure Gordon took place yesterday at Mannheim.

JAPAN AND SOUTH AFRICA.

London, Sept. 6.

The Japanese Commercial Commission to South Africa has arrived in Pretoria.

HOPS IN ENGLAND.

The crop of hops in England has shown a diminution and prices are steadily rising in consequence.

THE GERMAN MANOEUVRES.

Lord Roberts and Mr. Brodrick, Secretary of State for War, have left England for Germany to attend the military manoeuvres.

DEATH OF SIR F. ABEL.

London, Sept. 8.

Sir Frederick Augustus Abel is dead.

ENGLAND AND FRANCE IN CHINA.

The *Times* welcomes the conclusion of the Mackay treaty. The *Debats* thinks that France ought to follow the example.

GERMANY AND HAYTI.

The German cruiser *Panther* sank the Haytian gunboat *Crête à Pierrot* which recently confiscated the cargo of arms and munitions of war on board the German steamer *Mariomannia* (?) at Cap Haytien.

The United States Government is abstaining from interference in the affair.

THE "ASAMA" AND "TAKASAGO."

The King of Portugal has received in audience Admiral Ijuin and the officers of the Japanese Coronation Squadron.

(FROM THE "DEUTSCHE JAPANPOST.")

NEWS FROM BERLIN.

Berlin, September 9.

The involuntary resignation of the Marquis de Montello, French Ambassador at St. Petersburg, will not cause any diplomatic complications.

The press of Paris sides with the Congresses against the Government of the Republic.

Berlin, September 10.

The action of the German gun-boat *Panther* in the Haitian waters meets with general approval in Germany.

The funeral of Professor Virchow took place in a most solemn manner, representatives of the Government, of the City of Berlin, of Art and Science and large numbers from among the peoples participating.

On the 25th inst. an international committee will meet at Paris for the purpose of establishing direct communication between Western Europe and Eastern Asia, which has been rendered feasible by the opening of the Siberian and Chinese Eastern railways.

The British Minister of War, Mr. St. John Brodrick, the English Generals Kelly-Kenny, French, Hamilton and Slater, invited by the German Emperor to attend the Prussian manoeuvres were decorated by him with high orders. Field-Marshal Earl Roberts received a valuable present from the Kaiser.

A NEW SHIPPING COMPANY.

Berlin, Sept. 11.

A new German shipping company has been started in New York under the firm of the Amerikanisch-Asiatische Dampfschiffahrts Gesellschaft. It is said that the company will run one steamer monthly from New York to Eastern Asia.

(FROM THE "N.-C. DAILY NEWS.")

MR. CHAMBERLAIN AT BIRMINGHAM.

London via Bombay, August 31.

Mr. Chamberlain, speaking at Birmingham, on the occasion of the presentation of some war medals, said that the country would never submit to expenditure necessary if we are to be always prepared for war. An appeal to voluntary patriotism, whereto our success in the late war was mainly due, would always be necessary.

September 1.

The *Morning Post* expresses consternation and indignation at Mr. Chamberlain's speech. If his maxim is accepted, it means the doom of the empire.

The *Times* assumes that Mr. Chamberlain meant that it was impossible to keep 250,000 men always ready, but fears that he will be misconstrued as arguing that it is safe to trust the patriotism of the people to make good the deficiencies, however glaring, of the War Office. The *Times* considers this a pleasant but very pernicious doctrine.

AN INTERNATIONAL FUNCTION.

September 2.

The Earl of Minto, Governor-General of Canada, has reviewed the Hongkong Coronation Contingent at Ottawa, with a United States regiment of the National Guard.

SERIOUS DROUGHT AT SINGAPORE

Hongkong, September 2.

It is telegraphed from Singapore that a severe drought continues there, and the situation is serious, there being only one week's supply of water left. The supply from the Waterworks is now limited to two hours a day. The firing of big guns in the air to bring rain has been suggested.

THE LAST ERUPTION OF MONT PELEE.

London, Sept. 4.

Steamers from Martinique report that the village of Morne Rouge was overwhelmed in an instant with scalding water and mud, and there was not a single survivor. The village of Ajoupabouillon was struck by a river of mud and showers of stones.

Over a mile of the east side of the island of Martinique has sunk into the sea.

The Government had notified the refugees from the previous eruption that they must return to their homes before that 15th of August, otherwise they would get no assistance towards restarting in life.

An official telegram to Paris says that five villages were destroyed on Saturday night.

ENERGETIC WORK AT THE CAPE.

London, September 5.

Sir Gordon Sprigg, the Premier, has introduced four new Bills:—

The first provides for a loan of £2,795,400 for improving the harbours at Table Bay, Port Elizabeth, East London, and Mossel Bay.

The second provides for the construction of Irrigation works.

The third for the construction, equipment, and maintenance of certain railways.

The fourth provides for a loan of £1,616,277 for additional railway works.

(FROM THE "SHANGHAI TIMES.")

THE ACCIDENT TO THE PRESIDENT.

New York, Sept. 4.

President Roosevelt's carriage was wrecked in a collision with an electric car at Lenox, Mass. The President received cuts and bruises, and one of the escorting party, the coachman and the horses were killed. When the wires first gave out the news of the collision the excitement almost equalled that which attended the announcement of the shooting of President McKinley. Later wires that the President had escaped serious injury quieted excitement but every scrap regarding his condition, and details of the accident, have been eagerly read. The President had finished his New England speech-making tour and had gone into the Berkshire Hills, a favourite resort of New York society, before resuming official work. He says he expects to take up his duties within a few days.

THE ASSOUAN DAM.

After years of indefatigable toil, Sir John Aird and the army of workpeople in his employ can say of the Assouan Dam "Finis coronat opus." In the last week of July the finishing touch was put to the undertaking, and there will be plenty of time, therefore, to test the great barrier before the formal opening by the Duke of Connaught in the late autumn. But such persistent care has been taken during construction to secure complete watertightness in every part that there is little likelihood of any flaw being discovered. The benefits to Egypt from this monumental enterprise can hardly be exaggerated. A great

area of fertile soil, which has remained unproductive through lack of water, will come under cultivation, thus adding largely to the industrial resources of Lower Egypt, and also augmenting the revenue to a considerable extent. Now that the clearing away of sudd on the Upper Nile allows freer passage to the imprisoned river, a larger volume of water should reach Assouan at all seasons of the year, and there is little danger, therefore, of any such deficiency at the dam as would render it ineffectual for its intended purpose. The cost has been, it is true, very large, but it has been the constant experience of the British Raj in India that capital judiciously spent on irrigation works invariably yields good interest, either directly in net profits or indirectly in enhancement of land revenue.

KEROSENE.

No change to report.

American	\$2.56
Russian	2.35
Langkat	2.35

SUGAR.

The market is unchanged.

Brown Takao	Y. 4.90 to 5.50
Brown Manila	5.25 to 6.45
Brown Daitong	4.30 to 6.50
Brown Canton	6.00 to 6.60
White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

Our market booms along with plenty of business at full rates. For Europe fine sized Filatures and Kakedas of all descriptions are in most demand. Exchange rates are also well sustained, and there seems no prospect of any cheaper silk for some time to come.

QUOTATIONS.

Filatures—Extra Best, Coarse	Y. 1,050 to 1,060
Filatures—Extra, Fine	1,030 to 1,040

BOVRIL ISN'T DEAR

in fact, value for value, it is one of the cheapest drinks, and one of the most economical foods that can be obtained. A cup of hot Bovril costs less than a drink of whisky, and while giving a more genuine and lasting warmth than the latter, contains, in addition, the nutritive principles of beef worth many times its cost.

Old fashioned beef teas and meat extracts, whether known as such, or disguised under more pretentious modern names contain none of the NUTRITIVE properties of beef. Baron Liebig himself admitted this fact; there is not a doctor to-day disputes it. Used as a nourishment Meat Extract is probably the most expensive article one can buy. Bovril one of the cheapest.

Falling Hair

Prevented by Warm Shampoos of CUTICURA SOAP, followed by light dressings of CUTICURA, purest of emollient Skin Cures. This treatment at once stops falling hair, clears the scalp of crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates the hair follicles, supplies the roots with energy and nourishment, and makes the hair grow on a clean, wholesome scalp, when all else fails.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle. CUTICURA, to constantly allay itching, irritation, and inflammation, and soothe and heal and CUTICURA, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the severest humours, when all other remedies fail. Sold throughout the world by J. R. TOWN & CO., Sydney, N. S. W. So. African Depot: L. N. S. & Co., Cape Town, South Africa. "All about the Skin, Scalp, and Hair," post free. 100 South Street, Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 20TH, 1902.

DEATH.

At No. 18, Tsukiji, Tokyo, Mr. A. W. THOMPSON, in his 78th year.

SUMMARY OF NEWS.

THE Japanese Coronation Squadron arrived at Naples on September 15th.

MR. BURE, Belgian Consul at Yokohama, has been promoted to the rank of Consul-General.

THE Mitsui family has made a donation of yen 500 toward the relief of sufferers by the recent Torishima catastrophe.

MONDAY, September 16th, being the anniversary of the independence of Mexico the occasion was duly celebrated at the Mexican Consulate in

Yokohama. The usual official formalities were exchanged locally.

THE torpedo-boat destroyer *Asashio*, built in England for the Japanese Navy, left Port Said on the 13th for Aden via Suez.

THE *Ryojun Maru* having undergone temporary repairs at Port Arthur, was able to continue her journey to Kobe on the 10th instant.

THE dates for the Interport Matches at Kobe this year are October 13th, 14th and 15th for Cricket; October 17th and 18th for Baseball.

Two French railway employees were robbed and nearly killed by Chinese between Peking and Paotingfu, on the 12th September.

DURING the month of August the Osaka Mint turned out ten yen gold coins amounting to yen 960,000 and fifty sen silver coins representing yen 425,000.

TRAFFIC on the Yoneyama-Fukushima section of the Nippon Railway Company, which has been suspended since September 9th, was re-opened on the 12th.

BARON IWASAKI, who has been in London for some time, will leave there on September 17th for New York, returning to Japan towards the end of October.

THE Dojin-kai, an association in Tokyo, has been asked by the Siamese Government to engage a Japanese doctor for the Household Department of that country.

BARON KANEKO KENTARO is laid up in his villa at Hayama, suffering from abdominal typhus. By the advice of his doctor, the patient is denying himself to visitors.

BARON IKEDA KENSAI, Lord-in-Waiting of the Kinkei Hall in the Imperial Palace, was appointed Court Councillor on September 15th in succession to the late Dr. S. Nagayo, who died on the 8th.

THE Japanese cruiser *Hashidate*, having had her boilers replaced by the Miyabara boiler, so-called because it was invented a few years ago by Captain Miyabara of the Japanese Navy, a trial will be made off Yokosuka shortly. The vessel will thereafter serve as a training-ship for cadets.

THERE is a scheme in Yokosuka for repairing the tomb of the late Will Adams, the English pilot. On September 14th a meeting of Yokosuka citizens was held at the house of Mr. Suzuki Chubei to discuss the matter and it was arranged that an office be opened for the purpose of collecting funds.

A TELEGRAM dated Cavite, August 24, says:—A cablegram has been received by Admiral Wildes, commanding the Asiatic station, to the effect that Ensign F. R. Holman, U.S.N., of the United States supply ship *Celtic*, committed suicide by jumping overboard shortly before the *Celtic* reached Sydney. No cause is ascribed for the rash deed. Deceased was a native of Iowa, and was appointed from that State to the Naval

Academy in May, 1893, graduating with the class of '97. Mr. Holman was twenty-third on the list of ensigns, and was a great favourite in Cavite.

THE Military Authorities have been requested by a Korean merchant to select and purchase 200 horses in Japan. The request having been complied with the animals will be shipped at an early date. It is stated that these horses will be employed by the Korean Authorities on the occasion of the coming Jubilee.

THE inauguration of the Russo-Japanese Association will take place in the building of the Doki Club, Tsukiji, Tokyo, on September 27th. On the 10th the organizing committee of the new body held a meeting in the Club to make arrangements for the ceremony, the meeting being attended by Viscount T. Enomoto, Messrs. K. Okura, K. Nakada and several others.

AN Osaka report says that Nakamura Fusakichi, dealer in hardware, in Higashi-ku, Osaka, was arrested on September 13th on a charge of having counterfeited Korean coins. Takimoto Fusataro, a resident of Tokyo, was also arrested the same day for a similar offence in that city. In the former's house, 5,000 pieces of false money were discovered by the police.

MESSRS. POLLAK BROTHERS having taken over the silk stock of Messrs. Cornes & Co., gave an entertainment last week at the Chitose-ro, to which the leading Japanese silk dealers of Yokohama and the neighbourhood were invited. Mr. Tsukui, President of the Silk Merchants Guild, made the speech of the evening, highly complimenting the firm on its enterprise.

THE autumn manoeuvres will take place in the northern parts of Kyushu some time in November. The troops of the 6th and the 12th Army Divisions will take the field. In reference to the above, the Premier issued instructions a few days ago to the Commanders of the Divisions stating that as Imperial sepulchres and tombs of renowned persons are scattered in these places attention must be paid by officers and men so as not to injure those places during the engagements.

THE Waseda Semmon Gakko, of which Count Okuma is the founder, having attained the twentieth anniversary of its foundation will carry out a celebration on a large scale on October 15th at 1 p.m. in honour of the event. The spacious compound of the institution is selected for the occasion. The function will be attended by thousands of persons eminent both in official and non-official circles. In the evening a torch-light procession will be formed by students who will march through the leading streets of the capital. The following day a friendly meeting will take place in the Maple Club, Shiba, and it is stated that pictorial post cards will probably be issued in commemoration of the fete.

THE British battleship *Ocean*, which left for Nagasaki a few days ago, experienced the full strength of the typhoon said the *Kobe Herald* of Sept. 13th. A letter has been received in Kobe saying that the "smartest ship on the China station" arrived at Nagasaki 48 hours late and very much the worse for her experience. Nine hours out from Kobe the typhoon was encountered and it proved to be a very severe one. Waves sixty feet high washed at times clean over the funnels. Two boats were lost and the stern walk was reduced to a wreck of twisted iron. The torpedo nets were rent into shreds in many places. One poor sailor had his thigh and leg broken and his kneecap smashed to bits. Every bit of furniture in the wardroom took charge, from the piano downward,

THE CABINET QUESTION.

Tuesday, Sept. 16.

From paragraphs published by Tokyo journals, we gather that the threatened ministerial crisis is likely to conclude with a threat. There never has been any difference of sentiment among the members of the Cabinet. The sole question has been whether financial ends could be made to meet without continuing the land tax on its increased basis. Were that possible, all the Ministers would naturally approve such a policy. But, as Marquis Ito is credited with having justly remarked, the idea that the land tax must be reduced merely because the 5 years originally fixed by law will terminate in 1903, is not reasonable. What financiers have to ask themselves is whether the state of the Treasury admits of such reduction. That is what they are now considering. There can be little doubt as to the issue of their reflections; but the problem still remaining will be the attitude of political parties. If the latter can not be brought to consent to continuing the tax on its present basis, a difficult situation will arise, for upon the objectors will then devolve the responsibility of suggesting some scheme of finance from which the increased land tax can be excluded. That would be almost impossible, we imagine.

The *Nichi Nichi Shimbun* argues that the real question for the Japanese to consider is development of agriculture not a paltry lightening of the fiscal burden now imposed on agriculturists. When the area of cultivated land in the various countries of the world is compared with the total areas of those countries, startling figures result:—

RATIO OF AREA OF CULTIVATED LAND TO TOTAL AREA OF COUNTRY.

Belgium.....	53.9
Prussia	50.3
France	50.2
Germany ...	43.4
Denmark	42.5
Italy	39.9
Hungary	37.7
Austria	36.7
Spain	35.7
Holland.....	27.3
England	27.9
Portugal.....	24.9
European Russia	16.4
Japan	13.8

Japanese habitually plead that their extraordinarily low place on this list is the result, not of want of industry, but of natural obstacles, much of the surface of these islands consisting of mountains and hills which can not be made arable. The *Nichi Nichi* alleges that such an excuse is merely partial, and that a little energy and resolution would soon change the situation. At any rate, the opposition offered by politicians to the present land tax is not in the genuine interests of agriculture, but in the interests of political popularity.

The *Niroku* alleges that the question of ambassadors has again come upon the tapis, the view of the Foreign Office being that in London and St. Petersburg, at any rate, embassies should be created, leaving other capitals to be dealt with later on. But our contemporary does not say anything about reciprocity. Are England and Russia prepared to establish embassies in Tokyo? If not, the matter must wait, must it not?

Wednesday, Sept. 17.

The Cabinet held a special meeting on the 15th instant. Of course the result is not definitely known, but rumour says that the general lines of financial policy were agreed upon, and that, subsequently, Count

Katsura and Viscount Terauchi, Minister of State for War, proceeded to the Palace to make a report. The *Fiji Shimpo* throws all the weight of its great influence into the scale of continuing the present rate of land tax. We imagine that the statesmen in power share its views. But Mr. Ozaki Yukio, who occupies a very high position in the *Seiyu-kai*, is assuming an attitude of strong opposition. He does not deny, as we understand his argument, that a reduction of the rate is absolutely necessary; his point is that the long-talked-of administrative reform and financial reform must first be effected, and that if it then be found necessary to continue the present rate of land tax, then indeed the question will assume a new complexion. But he is persuaded that so long as the Cabinet is relieved from the actual pressure of dire necessity, no drastic measure of reform will be seriously undertaken, and the familiar spectacle will be perpetuated of, on the one hand, all the Departments scrambling for appropriations, and on the other, the Government limiting itself to expedients for temporarily tiding over the embarrassments of the moment. It must be confessed that the nation's patience should be pretty well exhausted waiting for the practical advent of the gospel of reform.

Mr. Matsuda Masahisa also has made a statement which seems to imply opposition to continuing the land tax on its present lines. He quotes a rumour as to Marquis Ito's saying that the proposal to continue the tax had better be postponed, and he opines that the rumour is not incredible.

The *Kokumin Shimbun* justly comments on the rashness of these utterances. If Messrs. Ozaki and Masuda speak in their capacity of *Seiyu-kai* committee men, they are pledging their party to a policy which it has not yet espoused. If they speak in the capacity of private individuals, they are pledging themselves to a policy which the party they lead may subsequently regret. In either case they are creating for themselves a dilemma.

As to that we would remind the *Kokumin*—though it scarcely needs to be reminded—that the idea of party discipline is still undeveloped in Japan. Japanese party leaders do not yet appear to have learned by obedience how to command.

Thursday, Sept. 18.

The Tokyo newspapers publish many paragraphs about the movements of political personages, since the alleged crisis lends mysterious interest to the goings and comings of the Meiji Statesmen and the lesser lights of the ministerial firmament. Marquis Ito is the centre of all these movements, as may well be supposed. Meanwhile the rumoured difference of opinion among the members of the Cabinet seems to be a figment of the newsmonger's imagination. The usual Cabinet meetings are taking place; due progress is being made with the discussion of the Budget, the basic principles of which appear to have been decided, and everything may be said to be in a normal condition.

We reported in a recent issue the formation of a club of journalists having for object uncompromising opposition to the continuance of the increased rate of land tax. It is now stated that representatives of this club visited the committee of the *Seiyu-kai* at the latter's request, and were informed that the *Seiyu-kai* could not join their movement. Asked whether that meant disapproval, the reply was that the *Seiyu-kai* had not adopted

any definite decision one way or the other: due examination was necessary. Representatives of the journalists waited upon Marquis Ito also, and were informed by him that until he had seen the Cabinet's draft Budget, he could not speak definitely.

What surprises many people is that the Progressists also have declined to make any definite pronouncement. It was expected that they would hasten to declare themselves in opposition to continuance of the tax, as their general attitude suggested such a policy, but they are sufficiently wise and patriotic, it would seem, to see that party politics must not always over-ride national interests.

CHINESE NEWS.

Saturday, Sept. 13.

The *Fiji Shimpo's* correspondent in Shanghai telegraphs that the Japanese commissioners for treaty revision have asked for the opening of no less than nineteen new ports. There is no better way to secure China against territorial aggressions than to throw open her ports as largely as possible. The opening of the whole country would not have the same effect, but where it is a question of ports opened by treaty, no exclusive influence over the territory in which they are situated can be established by a foreign power except at the point of the bayonet. The open ports in Formosa did not save that island from being annexed by Japan in the sequel of a war with China, but territorial changes resulting from war are a different affair.

It is stated that a general meeting of the members of the Shanghai Club will be held on the 23rd instant and that one of the questions to be debated will be the admission of Japanese to membership. A proposal in that sense is said to have received a large number of signatures. We trust that Shanghai has at length resolved to show a spirit of liberality in this matter. Were there question of throwing open the Club to Chinese membership the case would be quite different, since the Club's accommodation could not possibly suffice for such a purpose. But no such objection has any force with regard to the Japanese, of whom there are only a small number in Shanghai. Probably removal of the restriction would not involve an addition of more than 20 members, and, on the other hand, that England's allies should be excluded from a club where British subjects constitute a large majority of the members is not as it ought to be.

Monday, Sept. 15.

News from Peking says that the Emperor and Empress-Dowager have retired to the Iho Park, where Her Majesty proposes soon to give a reception to the ladies of the foreign corps diplomatique. It must be admitted that the Empress Dowager is making many efforts to placate the hydra-headed monster from the West. A great many pieces of the Chinese empire have passed into its various maws, but they are not full yet—very far from being full. When the poor misguided young Sovereign was engaged in the wonderfully courageous task of trying to beat suddenly into new shape with his own weak hands a polity which, during three thousand years of consolidation by the hands of four hundred millions of people, had acquired adamant hardness, a part of his programme was to imprison his formidable old aunt in the Iho Park and interpose the

soldiers of Yuan Shih-kai between her and the seat of administrative power. But Yuan, appreciating the madness of the scheme, gave it away incontinently. And now, Her Majesty invites the ladies of the legations to visit her in this same Iho Park, where she will receive them in company with the giddy youth whose prisoner she was to have been. There have been many dramatic episodes connected with the events of the past four years in China.

The relations between Japan and China are certainly growing very much closer. Not only are students from the latter country arriving in an almost constant stream but also China is engaging Japanese assistance very liberally. We spoke recently of Professor Hattori having proceeded to Peking to assume an important position in the University there; of Mr. Watanabe Ryosei being engaged by Viceroy Yuan for educational purposes in Chili, and of Mr. Tono being summoned to Wuhu to serve as Viceroy Chang Chih-tung's adviser. We now learn from Tokyo journals that Mr. Morimoto, of the High Normal School, is to go to Szechuan to act as adviser to the Governor of that province, and that the Peking Authorities are negotiating for the despatch of two or three more Japanese educators. Mr. Wu Ju-lung appears to be promoting this movement most zealously. He has shown extraordinary diligence since his arrival in Japan. He has visited school after school and conducted most thorough investigations, and it would seem that the issue has been satisfactory, for he is more anxious than ever that his country should avail itself of Japanese assistance.

Meanwhile the arrival of another batch of Chinese students has to be noted. A few days ago twenty-three reached Moji, and it is now reported that 40 more have come. Among the last arrivals is the daughter of a Chinese Admiral, who is to be under the care of Miss Shimoda Uta.

Thursday, Sept. 18.

The *Hochi Shimbun* declares that in addition to the sixty missionaries who lately arrived at Port Arthur from Russia for the purpose of Christian propagandism in Manchuria, another band of a hundred and forty have now reached Shan-hai-kwan. Of these, twenty are to proceed to Peking, and the remainder will be scattered through Manchuria, where they are to start schools and give secular as well as religious education. Already five hundred text books in Russian and Chinese have been compiled and printed in Peking for use in this large work of proselytising. The same journal alleges that the Russian Shan-hai-kwan garrison is virtually in military control of Manchuria, and that upon it devolves the duty of dealing with all disturbances.

Of course it is nothing new to be told that Russia exercises military control in Manchuria. That will be the case until she evacuates the region—a region of 700,000 square miles!—, if “circumstances” ever permit her to do so. But this big movement of propagandism is very interesting. It signifies the creation of a large “protected” population which will, by and by, be one of the salient “circumstances” of the situation. The people of Manchuria have a habit of doing things in a wholesale way. Their anti-Christian riots have always been on a very large scale, amounting sometimes to the dimensions of wide-spread rebellion, and when they undertake the destruction of railways, they work with thoroughness and vim. Will the introduction of a large

missionary element contribute to their pacification? Has it contributed to the pacification of any part of China? Does Russia sincerely desire that it should contribute to the pacification of Manchuria? He that can answer these questions with confidence is a wise man.

The *Asahi Shimbun* publishes a telegram to the effect that the Boxers have entered Cheng-tu, the capital of Szechuan, have killed some people, presumably native Christians, and have caused a panic, all the shops being closed. There have been rumours of disturbance in Szechuan for some time, but the province was not a scene of Boxer activity during the outbreak of 1900, and there did not appear to be any apprehension of its assuming that character after so long an interval. Possibly newspaper reporters and telegraphists have fallen into the habit of calling all insurgents “Boxers.”

The return of the extra-mural railway is said to be definitely fixed for the 8th of October. There appears to be an idea that a close connexion exists between the restoration of the railway and the evacuation of Manchuria by Russia. Of course the latter Power may contrive that the two events shall synchronise, more or less accurately, but there is no admitted reason for their doing so.

The following Imperial Decree dated Sept. 8th is translated by the *N.-C. Daily News*:—Decree in response to a memorial from the Censor Wang Pei-yu, prohibiting Viceroys and Governors of provinces in the future to create new taxes to take the place of *likin* after the abolition of that tax and the increase of import and export duties, etc. The people are informed that the Tariff Treaty with the British Government has been signed and will go into operation some time during the Winter of 1903. In fact the moment the new surtax is charged on that day will *likin* be abolished. After this, if any excuse be made to create a new tax on merchandise thereby harassing the people the Viceroy or Governor implicated will be held responsible to the Throne for the act, for be it known to all the revenue to be received from the surtax will eminently suffice to make up what will be lost to the provinces by the abolition of *likin*.

The following curious paragraph appears in the *N.-C. Daily News* under the heading “Notes on Native Affairs”:—

It is reported from Tientsin that Viceroy Yuan Shih-kai is much concerned with the receipt of news, first from Germany, that a steamer laden with 10,000 Mausers and sixty pompons, with the necessary ammunition, had left Hamburg in June last, presumably for China. But the moment the steamer left Hamburg all trace of it was lost until it was learnt that she had arrived in some Philippine port in July, where the munitions had been transhipped into another vessel. Then came news that the cargo had arrived in August at Macao, where a steamer flying the Chinese flag took over the arms and ammunition. From this spot all trace has been lost. Secret enquiries made at all the treaty ports at the instance of the Peiyang authorities have failed, so far, in giving the needed enlightenment, and it is thought that the cargo was meant either for the Kuangsi rebels or to arm the rapidly multiplying Boxers in the Yangtze Valley.

Tsai Li, Prince of Chun, the younger brother of his Majesty Kuang Hsü, is to marry the second surviving daughter of Yung Lu, Senior Grand Secretary of the Empire—Yung Lu succeeded to the Grand Secretaryship of the late Marquis Li Hung-chang.

Our readers (says the Shanghai journal from which we take the above) may also perhaps recall that the betrothal of the Prince to Miss Yung Lu took place in Paoting last November by command of the Empress Dowager, who rarely lost any opportunity during the past ten years or so to push forward the fortunes of her own kinsmen who, of course, are not of the Blood Imperial, the chief amongst whom, it is needless to say, is her nephew, the prospective father-in-law of the Prince of Chun. A dispatch from Peking, emanating from a reliable source, now states that the marriage of the young couple is to be con-

summated on the 30th of this month, the nuptial rites and ceremonies, according to Manchu custom, taking place on the evening of the auspicious day. On the 29th inst., or the day before the marriage, the bride's trousseau, which includes two golden and two silver dinner services of one hundred and twenty-six pieces each, eight complete sets of blackwood furniture and two sets of European furniture, not to speak of heavy silk and satin draperies and curtains, damasked and embroidered, ad infinitum, is to be brought to the “Wang Fu” or Princely Residence of the Prince of Chun, for the furnishing of the Princess's own apartments. In addition to the above, which it is stated costs over Tls. 120,000, only one-third, if not less, coming from Yung Lu's own pocket, the balance having been presented by his protégés and flatterers, with an eye to future benefits, which will repay the donors ten and twenty-fold; what is called the “private purse” of the bride amounts to the value of another Tls. 120,000 and over, consisting of “shoes” of gold and of silver, gold leaf and silver dollars from the Hupeh mint—some say that the last is the Wuchang Viceroy's gift—and Tls. 10,000 each of H. & S. and Russo-Chinese Bank notes. Finally, the gold, jade-stone and bronze pieces for embellishing the bride's boudoir or retiring room, are unsurpassed both in antiquity and value.

Friday, Sept. 19.

The difficulties that created so much commotion among the Chinese students have been settled. We need not enter into particulars. It is sufficient to say that arrangements have now been made which will remove all obstacles to the matriculation of students at schools having official status. With regard to the question of an overseer, it appears that application has been made to the Chinese Government to permit the appointment of such an official from among the faculty now in Japan, but we are not fully informed on this point.

The *Nichi Nichi Shimbun* says that in the columns of a Chinese newspaper there is reported a villainous slander alleged to have been addressed to the Throne by some of the conservative Ministers. Wu Ju-lung, the educational magnate now visiting Japan, is the object of the libel. He is accused of having ventilated republican views during his sojourn in Japan, and his detractors urge that unless he be executed, serious troubles may ensue. Mr. Wu, so far as the public knows, has never uttered a word that could be so construed. But the beds of Chinese reformers are not strewn with roses.

The Sinchou trouble in Hunan is reported to have been settled. A telegram to the *Asahi* says that the members of the investigating committee have returned to Changsha, reporting that the bodies of the murdered missionaries were buried with public marks of respect, that the wrecked church is being restored, that eight of the rioters have been executed, that five local officials have been removed, and that the Governor of the province has sent the Taotai to Hankow to consult with, or make a report to, the British Consul. This settlement is described as “amicable,” but whether such an adjective is apposite must be a matter of opinion. The unfortunate missionaries were the victims of one of those wild imaginings to which Chinese mobs seem particularly accessible. Is there, or has there ever been, any other nation whose units are so ready to be thrown into a mood of murderous excitement by the most extravagant fancies?

Viceroy Yuan is said to have projected a large scheme of public works for the relief of distressed Chinese subjects. His Excellency has appointed Mr. Fujii, a Japanese professor of civil engineering, to direct the works, and has applied to Japan for the assistance of other experts. The telegram (*Asahi Shimbun*) does not say what nature of work is contemplated. We presume that the imme-

diated object is to relieve the unfortunate people deprived of all means of sustenance by the devastations of Boxers, Imperialists and Christian soldiers. How the blame should be apportioned between the three, we are happily not obliged to estimate, but if any one desire to read about the facts, let him consult Sir Robert Hart's account of Chili after the allies had completed their 120-mile march from Taku to Peking, and their twelve-months' occupation of the province.

THE OSAKA GAS COMPANY.

Saturday, Sept. 13.

There is growing agitation in Osaka about the question of the Gas Works. The text of the original charter has now been published, and, after examining it closely, we can not find anything that textually warrants the Osaka Municipality in preferring the demand it is making, namely, that the Company should pay a certain fraction of its profits into the coffers of the Municipality. The charter does provide, it is true, that the Company should consult with the Municipality with respect to contingencies relating to details of construction, but the obvious purpose of that provision is to protect the city's roads and other properties against injurious incursions on account of the Company's works. It has no reference whatsoever to the question of levying a royalty on the enterprise. Therefore the Municipality's legal right to prefer this demand can not possibly be established by reference to the charter. But the moral right is another matter. There the Municipality's claim is unchallengeable. A company can not reasonably expect to obtain a valuable monopoly from a city without contributing something to the civic treasury. Electric-railway companies, horse-tram companies and such enterprises are not allowed any such one-sided privilege. Therefore we are much perplexed to appreciate the mood of the Osaka Gas Company. Do the directors imagine that they are consulting the true interests of their shareholders when they start business in defiant neglect of a plain moral obligation towards the people who are to be their customers? Do they think it tactful or wise to oppose the letter of a charter, granted under very different conditions, to the unwritten law of morality and justice? It appears to us that they take a position injurious to themselves and that they will certainly suffer if they persist in maintaining it.

Wednesday, Sept. 17.

It would appear that pretty nearly the whole of the citizens of Osaka, with the exception of those directly interested in the prosperity of the Gas Company, are ranging themselves on the side of the municipality in the dispute between the latter and the Gas Company. The directors of the Company are endeavouring to placate their opponents, but they do not seem to be meeting with much success. Perhaps the chance of a compromise offers in the action of the Progressists Branch, by which a committee has been appointed to hear the views of each side.

We observe that the *Japan Herald* strongly condemns our contention as to the unwisdom shown by the Gas Company's directors in antagonizing the people who are to be their customers, and as to the moral obligation devolving on such a company to contribute something towards the municipal expenditure of a city where it uses the roads and enjoys the privileges of a valuable monopoly. We quite agree

with our contemporary that, if degrees of moral obligation are to be considered, the greater obligation devolves on the municipality which, having granted a charter, is legally and morally bound to implement its conditions, although the dimensions to which the Gas Company now proposes to extend its works are very much greater than the dimensions of its programme at the time when the charter was obtained. But we can not agree that the Company is entirely without moral obligation in the matter; neither can we agree that its directors are consulting its true business interests when they defy the city; and, above all, we can not endorse the injurious suspicion confidently advanced by our local contemporary among others, that the motive of the Municipality's demand is hostility to the introduction of foreign capital. Such suspicions are most mischievous. They merely tend to generate ill-feeling.

Friday, Sept. 19.

It is to us a matter of profound astonishment that some of our local English contemporaries should show themselves so resolute in denying that any moral responsibility devolves on the Osaka Gas Company *vis-à-vis* the Municipality of that city. For our own part, while freely conceding that the charter must be implemented, we hold most emphatically that when it was granted in its present form the legitimate interests of the municipality were sacrificed in an unpardonable manner, and that if the Company now persists in exacting its pound of flesh despite the virtually unanimous remonstrances of the citizens who are to be its customers and supporters, it will display an absence of business acumen that argues ill for the success of its enterprise.

EDUCATION IN CHINA.

The Minister of Education in Peking, Mr. Chang Peh-ki, is said to have presented to the Throne a scheme of education which seems to be taken accurately from a Japanese model. There is an university, a set of high schools, a set of middle schools and a set of elementary schools. At present the University must remain without students, but for the purpose of supplying it a preparatory college is projected. So also is a normal school for preparing teachers. The only important difference between this system and that of Japan is that China is to have a college for preparing officials. A minor difference is that the normal school is to be attached to the university.

In the memorial accompanying this scheme, it is said to be stated that, in view of international competition, China must move with the times, and that one of her prime necessities is to adopt the best features of Occidental and Japanese education. At the same time, the memorialist insists that so far as the mechanism of the proposed system is concerned, China herself may be said to supply the model, precisely such a system having existed in the days of Confucius and Mencius, though it was greatly changed subsequently under the Sung dynasty. Evidently if it can be proved to the satisfaction of Chinese literati that they are not asked to adopt any complete novelty imported from the West, they will become reconciled with comparative ease to the new project. That is the line taken by Chang Chih-tung in his celebrated work, and it was also the line taken by Kang Yu-wei in his remarkable digest of the Confucian philosophy.

The rules of the university show that the education of a spirit of patriotism and loyalty is placed at the head of all the objects to be attained. There is to be a section for the "rapid teaching" of foreign languages—English, French, German, Russian and Japanese,—and foreign teachers will be employed there.

The *Fiji Shimpō* points out that the declared principles of the new system contain a rule to the effect that every country of the West has its own foundations for its polity. The Middle Kingdom has hers, and should it be found that any one runs counter to the philosophy of Confucius and Mencius or to the doctrines of right laid down by them, he shall be expelled from the University in case of extenuating circumstances, and severely punished if the case be aggravated. Our contemporary ridicules this rule as a plain evidence that China has not awakened from her dream of supreme self-sufficiency, and that, even a liberal thinker like Chang Peh-ki still labours under the old conviction that nothing morally good can come out of "barbarian" lands. It is not an encouraging outlook.

THE SAGHALIEN FISHERIES.

The question of the Saghalien fishery is again becoming acute. Russia is said to have now enforced the restrictive regulations enacted by her some time ago. It will be remembered that there was much excitement about this matter in Japan in the year 1899, and that the House of Representatives, in its session of 1899-1900, passed a project of law providing for the imposition of heavy taxes upon Russian products imported from Saghalien, the object being to retaliate against the exclusion of Japanese subjects from their old fishing grounds. It is now strongly urged that the provisions of this law—which was never ratified, the Russian Government having shown a conciliatory and liberal spirit—should be enforced, in view of the fact that the period of grace granted by Russia having expired, she has begun to drive away Japanese fishermen. We have to note that it is the *Yomiuri Shimbun* which writes about these things, and that the *Yomiuri* is proverbially hostile to Russia.

THE HONGWAN-JI TROUBLE.

The long-expected disclosures in connexion with the Hongwan-ji trouble seem likely to be at length made. An action at law has been brought by the followers of Mr. Atsumi, the present Vicar, against Mr. Ishikawa, the former Vicar, the charge being that the latter, while he had control of the Temple's finances, made away with a sum of 550,000 *yen* and has never clearly accounted for the money. This is the amount supposed to have been expended in blocking the passage of the Religions Bill through the Upper House. There seems to have been a tacit agreement that the matter should be hushed up, but the Ishikawa adherents overtaxed the patience of their opponents by their recent assault upon the person of the latter's leader, Mr. Atsumi, and since that event the spirit of resentment has grown until even the washing of the Temple's dirty linen in public is not considered too costly a process of revenge. At first the action was for 550,000 *yen*, but the amount has been amended to 420,000 *yen*.

KOREA.

Cherchez la femme seems to be applicable to the present trouble in Korea as it is to most of the affairs of life. The old question of Lady Won's elevation to the rank of Empress is said to have come again upon the tapis, and to be causing a good deal of friction in official circles. The proximate cause of the various changes of office-holders, just announced, was a difficulty about the removal of top-knots in the army, but as all the dismissed officials are identified with the opponents of Lady Won, there can be no doubt about the true inwardness of the affair. We take these facts from news telegraphed by the *Tokyo Asahi's* Sōul correspondent.

The cutting of topknots becomes more intelligible if considered in connexion with the changes that Korea is said to be inaugurating in her military service. She has decided, according to latest accounts, to increase the guards in Sōul by 500 men; to increase the Pyōngyang garrison by 1,500 men, entrusting to them the duty of protecting the northern region of the empire and the line of boundary; to place a corps at Masampo for the purpose of guarding the southern gates; to make the army self-supplying in the matter of munitions of war, by establishing arsenals in Sōul and Pyōngyang; and finally to send 50 students abroad every year for the purpose of studying military matters; 20 of them to go to Japan, 10 to Germany, and the remainder to countries not yet announced.

Meanwhile very extraordinary preparations seem to be in progress for celebrating the fortieth anniversary of the coronation. Everybody knows the story of the method adopted for horsing the cavalry that was to have annihilated the Anglo-French army after it had crossed the causeway at Peh-tang. A similar device appears to be contemplated in Korea. Horses and men are to be hired to form a new company of cavalry and two new companies of infantry expressly for the purposes of the coronation commemoration. Probably the uniforms made for the occasion will be passed on to the troops which are to be newly raised for Pyōngyang, Sōul and Masampo. There is also to be a grand evening party, wholly in foreign style. The guests are expected to number five thousand. New houses are to be built or old ones repaired for the accommodation of the envoys or representatives of foreign countries. Extensive repairs of offices, roads, gates and so on are also to be undertaken. Finally, a new order is to be instituted, and His Majesty is to have a new carriage, a new flag and other paraphernalia. It is stated that the total cost of the celebration will be 3½ million *yen*, or nearly one half of the total revenue for a year. A committee of 170 officials have been appointed. Everybody is wondering whence the money is to come.

The question of publicly elevating Lady Won to the position of Empress of Korea is said to be strongly agitated at present in Sōul. It appears to be thought that the approaching fortieth anniversary of the Emperor's accession is an unique opportunity. Lady Won has many friends but she has also many enemies, and like Dame Margery she seems to find that her claims to be taken out of the still-room are not universally supported. Even the Sovereign himself is said to be lukewarm in the matter, which is an unexpected complication.

"TREATY RIGHTS."

Monday, Sept. 15.

In reproducing our reply to "Treaty Rights" the *Japan Gazette* says:—"We shall leave our correspondent to meet the remaining points of difference which, we are pleased to see, are becoming sensibly narrowed down as regards the purely taxation side of foreign Treaty Rights. We observe, however, an effort on the part of the *Mail* to assume that taxation is the sole issue as to 'Treaty Rights,' which of course, is absurd. It will be a great mistake if foreigners allow the question of the inviolability of all their Treaty Rights to be lost sight of in joining issue as to one Treaty Right, but that is the apparent object of advocates of the Japanese view." Now, so far as we are concerned, the opening paragraph of our article, as reproduced by the *Japan Gazette* itself, contains these words:—"Truly it is difficult to understand why, when a tax on houses is the only subject under immediate discussion, the Treaty's stipulations should not be considered with regard to taxes alone." Is there in these words any "effort to assume that taxation is the sole issue as to Treaty Rights?" On the contrary, is not any such assumption explicitly avoided by the use of the term "immediate?" Evidently, if a question is to be discussed, there must be some plain issue whereon the disputants may fix their arguments; otherwise they would be merely talking in the air. The house-tax problem is simply a form of treaty right. Its opponents contend that to levy the tax would be to violate the treaties; its advocates deny that the treaties confer any such exemption. That is the only matter under immediate consideration. If there be others, if it be alleged that other treaty rights have been violated, what are they? Perhaps some one will take the trouble to formulate them, and then we shall no longer be hopelessly bewildered by vague assertions.

Our contemporary goes on to say:—

To-day the Japanese Government may be seeking to levy an unjust house tax, to-morrow it might seek to impose some other tax, or otherwise encroach upon Treaty privileges, and each encroachment would become labelled with its special name, such as "the House Tax Question," and become belittled in the eyes of people at home, as this House Tax Question was belittled and regarded as a purely nominal squabble.

Probably the *Japan Gazette* does not intend to imply that the action of the Japanese Government in the past suggests a suspicion of readiness to ignore or violate the treaty rights of foreign subjects and citizens, but certainly our contemporary's language conveys that impression. It is a pity that such an element of distrust should be introduced into the discussion. There is no ground for suspecting that the Japanese Government has the least desire to evade or ignore its treaty obligations. It has never shown any such desire. This very question of the house tax is now awaiting arbitration, and should the decision of the arbitral tribunal go against her, Japan will accept the issue with the loyalty she has always shown in fulfilling her international engagements. We suggest that, having regard to the relations between Japanese and foreigners, relations which were not always as pleasant as they are now, it is in the best interests of both parties to avoid vague and unjust charges and to deal fairly and squarely with any issues that may arise.

Friday, Sept. 19.

It appears to us that the controversy on this subject threatens to drift into a dispute

about terminology, which is always wearisome and seldom profitable. Our statement of position in our last article seemed too clear to admit of any perplexity.

The property held under the leases is, necessarily, the property leased, that is land. As to why the drafters of the treaty used the word "property" when they might have used "land," we reply, why, if they intended to include houses, did they speak of property held under a deed by which, most assuredly, houses are not leased?

"Treaty Rights" will pardon us if we do not follow him into his discussion about the possible significance of "landed property" and the possible meaning of the word "convey." A tangible result is more likely to be reached by narrowing the issue as much as possible.

A point made by "Treaty Rights" is that if the treaty be construed as guaranteeing the land against increased payment on account of tax, then the inference is that the lease-holders are owners of the land, not merely lessees, since owners of land are alone liable for land tax. We have nowhere said that the lessees are directly liable for land tax. When the land rent was originally fixed there was included in it a sum equivalent to the land tax then leviable. The lessee is guaranteed that there shall be no change in his land rent whatever change may take place in the tax leviable upon land generally throughout Japan.

As to the fact that the foreign lessees are not owners of the land leased to them, we are entirely at one with "Treaty Rights." But they are owners, absolute owners, of the buildings standing on the land. That is a distinction which "Treaty Rights" refuses to recognise. Yet it is a cardinal distinction. For, the fact of not owning the land exempts the foreign lessee from direct liability as to land tax, and the fact of owning the houses renders him directly liable for house tax.

He also says:—"The question as to whether the Treaty as regards the foreign Settlements is to be interpreted by Foreign or Japanese or International law, must be left to higher authorities than us to decide, but it is quite certain, notwithstanding the *Mail's* assertion to the contrary that it can not be by Japanese law—it must be either by Foreign or International law." That appears to us a singular statement. In the first place "Treaty Rights" affirms that the question between foreign, Japanese and international law must be left to higher authorities, and then, in the same sentence, he declares that quite certainly Japanese law must be excluded. In other words, any law except the law of the country where the land is situated and by whose law courts all ordinary questions relating to it have to be decided. Why, we venture to ask, should Japanese law above all other laws be disqualified? Is not Japan also a party to the treaty? Has "Treaty Rights" considered by what law the land lessee is now actually guided in his procedure. The land-lessee, if he plants trees on the land, can remove them when the lease changes hands. Could he do so under English law, for example? The land-lessee can at any moment pull down or remove, and does often pull down or remove, buildings standing on the land. Could he do so under English law, for example? Thus the actual procedure of the lessees is controlled to-day by Japanese law, yet we are told that the one law that "quite certainly" can not be referred to in interpreting the treaties is Japanese law! What "Treaty Rights"

means by "foreign law" or international law" in such a context, we do not understand.

Finally, there is this point:—

The third condition of our Title Deeds which has been nullified by the law relating to Perpetual Leases which the Japanese Government passed and promulgated last year and to which I referred in my last week's letter—and which I quote here for the benefit of the *Mut*—runs as follows:—

"That no portion of said lot or any building thereon shall be sold or leased to any Japanese subject, unless both the Japanese and consular authorities grant an official act of authorization under the seals of office legalizing such transfer or lease; which said act may be granted or refused in the exercise of their discretion.

A most strenuous effort—thank goodness a fruitless one—was made by the Japanese Government for over two years to force upon foreigners a superficies in lieu of a perpetual lease; an attempt is now being made to ignore the fact of our perpetual leases having been confirmed by Treaty and the third condition of our Title Deeds has been nullified.

We stand in breathless trepidation wondering what is the next provision of Treaty or condition of Treaty-confirmed-perpetual lease doomed to violation!! What a strong inducement these facts present for foreign capital to come into the country!!!

"Treaty Rights" does not appear to have studied the treaties carefully. If he refers to the Austro-Hungarian Treaty, Art. XX., he will find this clause:—

Les droits de possession sur lesdits biens fonciers pourront être librement aliénés à l'avenir par leurs possesseurs à des indigènes ou étrangers, sans qu'ils soient tenus de demander, comme à présent, pour certains cas, l'approbation des autorités consulaires ou japonaises.

Thus "Treaty Rights" will perceive that the very thing against which he inveighs so vehemently, the very thing which reduces him to a state of "breathless trepidation," is explicitly sanctioned by treaty!

AUSTRALIAN VIEWS OF JAPAN.

Mr. T. Knox, who was recently in Japan inquiring into the political situation on behalf of the *Melbourne Age*, writes to his paper that the prospects of extending the export trade between Australia and Japan are by no means promising. The Japanese are thoroughly determined to protect themselves as far as possible, and produce everything in the country they think they want, especially raw products, and they hope to become an industrial nation. "Mr. Knox contradicts the impression that the Japanese are intending to adopt wholesale Western habits and Western costumes. The more thinking of the Japanese have come to the conclusion that it is far better to carefully conserve those points of Western civilisation which may be suitable to Japan, and absorb them as far as may be with benefit, rather than indiscriminately imitate Western habits. The use of the English language is spreading in Japan. The Russian language has absolutely no hope. The people are intensely patriotic, and are prepared to make any sacrifice the Mikado may demand. This means that in a conflict with a foreign Power they would fight to the last man."

Sir Malcolm M'Eacharn, another Australian magnate lately touring this empire, as the result of his observations, declares that "the only trade prospects he could see in the near future were in sheep and butter." We fear Sir Malcolm has been misreported, for Japanese mutton-eaters are still in the lap of the future. Certainly foreign residents who have deeply studied the tastes of Japan for years will fail to support his theory. Referring to the Australian restrictions on Asiatic Emigration, Sir Malcolm has this to say:—

"The members of the Japanese Ministry whom he met expressed great dissatisfaction at the passing of the Federal Immigration Restriction Act by the Commonwealth Parliament. Both they and the majority of members of the House look upon it as directly aimed at Japan, and consider it a direct insult to their nation. Baron Komura explained that they had laws which they were prepared to put into force which would restrict the emigration of Japanese labourers without such an Act as the Commonwealth has passed. Japan desired to develop trade with Australia, and to that end had subsidised a line of steamers, but the action of the Commonwealth, he anticipated, would result in the Government being forced by Parliament to withdraw the subsidy. Under the circumstances Sir Malcolm M'Eacharn was given to understand the Nippon Yusen Kaisha, would not be able to continue running their steamers. Baron Komura said he felt that if the position of the Japanese Government in regard to Japanese emigration was better understood to Australia the Alien Restriction Act would be amended as far as Japan was concerned, thus removing from the Commonwealth statute books a measure regarded by the Japanese as a distinct insult to a friendly and progressive people. There was a certain amount of embitterment in consequence of this Commonwealth legislation, but Sir Malcolm M'Eacharn thought that the visits of Australians and interviews with Ministers would help to dispel the idea that the majority of the people of Australia are in any way unfriendly to Japan. His feeling was that if we could give our labour members the opportunity of visiting and seeing Japan, and coming into contact with the men who are at the head of affairs, they would be satisfied of the bona fides of the Government, and see that such legislation as we have passed was unnecessary to the object they had in view. There was not the slightest disposition on the part of the Japanese to emigrate to Australia. The current opinion was that the Immigration Restriction Bill was a matter which was certain to be discussed when the new Lower House meets, and the hands of the Government may be forced. The feeling of the Ministry is, if possible, to avoid any friction with Australia, in the hope that better counsels may prevail in the Commonwealth."

Commenting on this interview the *Sydney Morning Herald* says:—

Australia is, of course, under a cloud in Japan. By the Aliens Restriction Act, to which the King lately gave his assent, Japanese are affected just as much as, but no more than, other foreigners. We gather from the statements made by Sir Malcolm M'Eacharn and from other sources that this piece of legislation is regarded in high quarters in Japan as expressly aimed against intending Japanese immigrants into Australia. Nothing could well be further from the truth. The Act which the Commonwealth Parliament passed was founded on an Act passed by the Natal Legislature. This was commended to us by the Imperial authorities as a model. Now when Natal passed this Act there was plainly no intention of excluding Japanese, who were in no case likely to emigrate to that part of South Africa. The educational test imposed by the Act had reference to European languages. There might be some ground for complaint if languages other than European had been specially scheduled, and if an intending immigrant from Japan had found that particular favour were given to his fellow-passenger, an intending immigrant from China. As a matter of fact, Indian subjects may be prohibited from immigration except under conditions as stringent as those which attend Japanese immigration. It is a palpable mistake, therefore, to assume, as some of the Japanese Ministers would seem to have assumed, that the Act in question was especially directed against Japan. From their own showing, moreover, the Japanese authorities deprecate emigration from the Empire, and they should warmly welcome any movement in Australia or elsewhere which helps their policy in this regard. But these considerations do not occur to the mind of the person who considers himself aggrieved in any matter, and we make no doubt that in some influential quarters Australia is looked upon as a country hostile to Japan. This makes the work of our commercial agent all the more difficult, and it may tend to the partial disappointment of the hopes which he may have reasonably formed with regard to the Australian-Japanese trade. But whatever feeling has been excited will doubtless be lived down in course of time. Sentiment as a factor is less powerful than business, and the imaginary disparagement of Japanese which the Alien Restriction Act is held to contain will be forgotten in the face of the advantages which our commercial agent (Mr. Whiteley) can hold forth to the merchants of Japan.

A PERSONAL INCIDENT OF THE LATE CAMPAIGN.

A correspondent of the *Spectator* has discovered at Achill Sound, County Mayo, a car-driver whose brother took a more prominent part in the Boer War than the outside world wots of. The pity is that Pat Scanlon was not discovered before, for he could have thrown many an interesting side-light upon things that were dark, or commonplace, and so added to the gaiety of the nation in its dark hours, now happily passed away. We quote Mr. Scanlon's account of the part his brother took on the occasion of the delivery of the keys of Pretoria to Lord Roberts:—

Me brother wint through the whole of the Boer War, Colinso an' all, and was wid General Hart whin he was at the takin' of Pretoria by Lord Roberts. Whin the Army was near the town Lord Roberts called out to General Hart, "Hart," says he, "take five or six of yer boys on ahead and ax Mrs. Krüger for the keys of the town, and whither she knows where her husband is." So Hart kem back to the Rangers, and says he, "Boys, I want a few of yez to go on in front wid me. You come for one, Scanlon," says he to me brother, "and bring four or five of yer comrades wid ye," says he. So Hart and me brother and his comrades wint on in front till they kem to Mrs. Krüger's house, and thin Hart says, "Scanlon," says he, "go knock at the dure an' ax her for the keys of the town and ax her whither she knows where her husband is." So me brother wint to the dure, and through the windy near the dure he could see Mrs. Krüger lyin' on a sofa forenint the foire tarin' and cryin'. Whin he knocked at the dure a young woman opened it, and says me brother, "Can ye spake English?" "Why not?" says she "becase I cum from Oireland," says she. "From what parts?" says me brother. "From Waxford," says she, "from the Barny of Forth," says she. "Thin Mary, me dear," says me brother, "will ye go in to herself an' ax her for the keys of the town for Lord Roberts, an' tell her we want to know if she can tell Lord Roberts where her husband is." So Mary wint in, and me brother cud see Mrs. Krüger tarin' and cryin' worse than ivir while Mary was spakin' to her. Well, whin Mary kem out me brother says, "Well, Mary alannah, what does she say?" "She says," says she, "that she nivir had the keys of the town, and that," says she, "she knows no more than Lord Roberts or General Hart where her husband is, but that he was a mane scut to lave her the way he did without manes or money, but dependant on the ginerosity of his inimies." "Well, Mary, me dear," says me brother, "let naythur you nor yer misthress be afear'd that ye will want for anything as long as the Connaught Rangers is to the fore." An' while they were in Pretoria he saw Mary ivry day, an' they got very thick. Whin they got marchin' others he thried if Mary wud be for goin' back to Oireland, but she said she would hould on to her misthress as long as she wanted her. Well, whin me brother heard tell of the death of the ould lady he thried to find out about Mary, but the divil a bit could he hear of where she wint or where she was.

NOTES ON CURRENT EVENTS.

The *Hochi Shimbun* publishes a telegram from its Peking correspondent who says that the present Representative of China in Tokyo is likely to be replaced by Mr. Yu Kwan, who formerly represented his country at the Court of Japan. But the correspondent of the *Nippon* alleges that so long as Yung Lu retains his great power in the Chinese Government, Mr. Tsai is not likely to be disturbed. We really think it very questionable whether the correspondent of either of these journals is in a position to make any definite statement on such a subject.

The floating dock recently imported from England for use at Takeshiki in the island of Tsushima, was put together at Saseho, and the ceremony of launching it was fixed for the 6th instant. We read in the *Nippon* that some accident occurred at the launching, a portion of the dock giving way, and that one of the workmen was killed and 37

wounded. The dock was subsequently floated out by two men-of-war.

The market price of rice continues to rise. Deliveries for October are now quoted at 14.20 *yen* against 13.96 on the 10th instant, and deliveries for November at 13.80 against 13.51. These figures indicate the public's estimate of the damage caused by the recent storm. In Toyama prefecture the crop is said to have been terribly damaged, complete destruction having overtaken it in some districts. Until the Department of Agriculture and Commerce speaks definitely, however, it will be well not to take a too desponding view.

The *Fiji Shimpō* reports the killing of an Indian in Nagoya by a fellow countryman. The men form part of a circus troop now performing in that city. Some kind of quarrel arose over cups, and one of the Indians struck the other with a hammer, causing death at once.

There is still much atmospheric disturbance. Areas of depression exist in the Pacific on the south of Japan and in the Sea of Japan on the north, so that these islands are now scissored between two stormy threats. Apparently there is not to be any permanent "take up" before autumn.

Viscount Torio and Vice-Admiral Baron Arichi have combined to start an institution called the *Toitsu Gaku-sha*, having for its object the improvement of the manner of living of students residing in Tokyo. At present numerous youths come from the provinces to the capital for purposes of study. They take lodgings in low-class inns and many of them are gradually drawn into the vortex of metropolitan vices, losing themselves and causing life-long sorrow to their parents. It is the aim of Viscount Torio and Baron Arichi to provide suitable accommodation for these young men, and to ensure to them a manner of living such as shall induce them to stand aloof from ruinous temptations. The two noblemen have given liberally of their fortunes for the good work, and they have obtained the support of many notable men, as Professor Hozumi, Mr. Tanaka Ginosuke, Viscount Miura, Baron Shibusawa, Count Higashi-kuze and others. The site of the new institution is in the Koishikawa suburb of Tokyo.

The Chief of Metropolitan Police, Mr. Oura, is steadily pursuing his most laudable crusade against vice in every form. Tokyo newspapers state that he has just held a meeting of the police inspectors in the capital, for the purpose of inviting their views as to the best means of restraining the presentation of immoral plays in the *yose* of the capital, and of checking the disorderly conduct of men who go about with concealed weapons, provoking fights and cutting and wounding their adversaries. Mr. Oura is further bent upon abolishing the vice of professional gambling with all its evil accompaniments. Another abuse is the unsanctioned use of such devices as "under Imperial Patronage," "under the Patronage of the Imperial Household," &c., which are displayed on sign-boards. Mr. Oura finally warned the police inspectors that greater care must be exercised in regulating traffic and in destroying ownerless dogs.

There is to be a grand celebration at Waseda on the 15th of October. It will be for a dual purpose; first, to commemorate the twentieth anniversary of the establish-

ment of the Waseda Technical School, and secondly to celebrate the opening of the new university. The project for the latter was completed some years ago and it has received warm and munificent support in many quarters, so that a substantial endowment has been provided, and the university will start under happy auspices. After the ceremony of celebration and inauguration there will be a garden party at Count Okuma's residence, and the students of the school have planned a torch-light procession for the evening.

It is stated that Messrs. Tata and Company's iron foundry project is progressing favourably and that the result will be incomparably the biggest thing of the kind in the Principality.

From Shanghai comes news, *via* the *Asahi*, that a terrible railway accident has occurred in India. A train on the Madras line, passing over a bridge, was precipitated into the river below and some 300 persons are said to have been killed. There are no particulars.

The Secretary of the Kanda Police Station has been apprehended for an unusual offence. He is said to have appropriated many articles which had been picked up in the streets and handed into the office. We do not understand clearly how such a crime can have been committed without a complete departure from the procedure adopted at Japanese police stations with regard to lost articles. The Secretary must have had several accomplices.

The Russian Government has sent 63 Orders to officers of the Japanese Navy, from Vice-Admiral Togo downwards.

Y. C. AND A. C.

LAWN TENNIS TOURNAMENT.

The Lawn Tennis Doubles in the Y. C. and A. C. tournament have now arrived at the final stage and we give below the result of the preliminary rounds:—

FIRST ROUND.

F. E. White and H. Y. Irwine beat H. E. Hayward and J. C. H. Goodban.
F. Pollard and M. F. Stephens beat A. Scott and J. S. Tanner.
K. Van Smith and A. J. McClure beat J. Waddilove and H. G. Oxley.
M. Marshall and S. Wheeler beat G. Pettitt and H. Bohlke.
J. Berrick and J. F. Drummond beat C. H. Thorn and O. Fehling.
F. O. Stuart and H. W. Kilby beat E. B. Clarke and W. J. White.
Rev. W. P. G. Field and G. L. Read beat E. W. Frazar and A. Mason.
C. E. Libeaud and H. Bethell beat A. W. Austen and A. Kingdon.
H. R. Barnard and J. S. Happer beat A. W. Read and W. S. Moss.
G. G. Brady and N. G. Maitland beat P. B. Clarke and G. Allcock.
F. E. Wilkinson and E. B. Forman beat H. Goddard and J. de Cuers.

SECOND ROUND.

F. Pollard and M. F. Stephens beat F. E. White and H. Y. Irwine.
A. J. McClure and K. Van Smith beat M. Marshall and S. Wheeler.
F. O. Stuart and H. W. Kilby beat J. F. Drummond and J. Berrick.
Rev. W. P. G. Field and G. L. Read beat C. E. Libeaud and H. Bethell.
H. R. Barnard and J. S. Happer beat P. Scott and P. de C. Morris.

THIRD ROUND.

F. O. Stuart and H. W. Kilby beat F. Pollard and M. F. Stephens.
H. R. Barnard and J. S. Happer beat Rev. W. P. G. Field and G. L. Read.
F. E. Wilkinson and E. B. Forman beat G. G. Brady and N. G. Maitland.

SEMI-FINAL.

H. R. Barnard and J. S. Happer beat F. E. Wilkinson and E. B. Forman.

FINAL.

The final was played on Tuesday, the contestants being H. W. Kilby and F. O. Stuart against H. R. Barnard and J. S. Happer. Kilby and Stuart won the first sett, 6—2; Barnard and Happer the second, 6—8; Barnard and Happer the third, 3—6; and Kilby and Stuart the fourth, 6—3; two setts all. Kilby and Stuart played a fine up-hill game. Nearly all were deuce games.

The game was replayed on Wednesday afternoon. It was an excellent set-to and there was a large attendance, including many ladies. The play was not of so high an order as on Tuesday because of the high wind, but every game was closely contested. Stuart and Kilby won, the score being: 6—2; 6—4; 3—6; 6—4. Now that these tournaments are finished it is not too much to say that the revived interest in the game and the organizing of the tournaments are due solely to the active member of the committee who undertook at the beginning of the year to take lawn tennis as his care.

The handicap was as follows:—

Class.	Handicap.
—18—40.....	{ F. E. Wilkinson & E. B. Forman. H. R. Barnard & J. S. Happer. K. van R. Smith & A. J. McClure.
—12—30.....	{ P. R. Scott & P. de C. Morris. M. Marshall & S. Wheeler.
—11—15 & 5'6	{ G. G. Brady & N. G. Maitland. F. O. Stuart & H. W. Kilby.
—10—15 & 4'6	{ A. W. Read & W. S. Moss. F. E. White & H. Irwine.
—6—15	{ F. Pollard & M. F. Stephens. E. B. Clarke & W. J. White.
—2—2/6	{ G. C. Allcock & P. B. Clarke, J. Waddilove & H. G. Oxley. H. Goddard & J. de Cuers.
—1—2—1/2/6	{ C. E. Libeaud & H. Bethell. J. Berrick & J. F. Drummond.
—1—6—1/2/6	{ A. Kingdon & A. W. Austen. O. Fehling & C. H. Thorn.
—1—6—1/2/6	{ Rev. W. P. G. Field & G. L. Read. A. Scott & J. S. Tanner.
—1—6—1/2/6	{ E. W. Frazar & A. Mason. H. E. Hayward & J. H. C. Goodban.
—1—6—1/2/6	{ F. W. Pettitt & H. Bohlke.

The following table shows the relative positions of the English counties in the cricket championship at 20th August:—

	Played.	Won.	Lost.	Drawn.	Points.	Percentage.
Yorkshire	24	11	1	12	10	83.33
Lancashire	22	7	4	11	3	27.27
Notts	19	5	3	11	2	25.00
Sussex	21	5	3	13	2	25.00
Surrey	22	6	4	12	2	20.00
Kent.....	19	8	7	4	1	6.66
Warwickshire.....	14	4	4	6	—	—
Somersetshire.....	17	6	7	4	—1	—7.69
Worcestershire	20	5	6	9	—1	—9.09
Essex	16	2	3	11	—1	—20.00
Middlesex	15	3	5	7	—2	—25.00
Derbyshire	15	3	5	7	—2	—25.00
Leicestershire	17	2	4	11	—2	—33.33
Gloucestershire	17	3	8	6	—5	—45.45
Hampshire	14	2	8	4	—6	—60.00

YACHTING.

The 39-raters, that is to say, *Maid Marion*, *Spray* and *Mary*, started on Saturday, on a 16 mile race but owing to the lightness of the wind were unable to finish.

The cruising class also raced with the following result, the times given being corrected:—

	Club Time.	Arbitrary.
<i>Dainyo</i>	6.23.05	6.23.05
<i>Molly</i>	6.17.31	6.13.30
<i>Mosquito</i>	6.34.51	6.23.50
<i>Surprise</i>	6.34.21	6.20.20
<i>Asagao</i>	6.21.15	6.12.40
<i>Virginia</i>	6.18.41	6.14.20

Asagao therefore wins the first prize and *Molly* the second, the latter taking two record points, and *Virginia* one.

For each race the first prize was given by the MosquitoYacht Club.

THE JOURNALISTIC ATMOSPHERE.

IT has been interesting to observe the comments evoked in this settlement by a recent journalistic controversy, if indeed, the term controversy can properly be used in such a context. The one wholesome general rule laid down for themselves by editors of newspapers is, we think, to deal solely with questions and facts, leaving persons and motives entirely apart. That has been the rule we ourselves have endeavoured to obey throughout a journalistic career of some length. We say "endeavoured," only "endeavoured," for we are very conscious that we can not claim complete success, humanity being weak, and patience finding itself sometimes over-taxed by perpetual applications of the goad. It would probably be impossible to indicate any other part of the world where such a clash of opinions existed during a quarter of a century as existed in Yokohama from the late seventies, when treaty revision first came upon the tapis in the form of an imminent issue. That the question should create a keen conflict of views was inevitable, and equally inevitable was it that any one advocating sympathetic consideration of Japan's claims should find himself in a small minority, and must be content to suffer all the inconvenience and unpopularity attaching to that situation. Our own ruling conviction was that the conditions existing under the old system could not be prolonged without producing evils incomparably more serious than anything to be apprehended from passing under Japanese jurisdiction. Our further conviction was that, looking over the head of local, of parochial, affairs, Great Britain's high interests would be best consulted by extending to Japan some measure of the recognition due to the latter's earnest efforts and not small achievements. Therefore we made that conviction the basis of our journalistic policy. On the other side, however, were many conservatives; men of fine judgment, tried shrewdness and generous impulses. To these it seemed that the time had not come for any such radical change. It is of course certain—no one will admit it more readily than these men themselves—that the great and altogether exceptional advantages they enjoyed under the old system swayed their judgment more or less. The extraterritorial regime was ideal. Complete freedom from taxation, with the exception of such imposts as were included in annual payments for the use of land acquired on easy terms; access to well equipped and well organized tribunals of justice supported entirely by the taxpayer in the home countries; entire seclusion from all the cares of public business, and an existence brightened by many elements not found in less favoured lands. It was hard to think of exchanging all these privileges for the life of ordinary citizens, weighted with a burden of taxation—not, in truth, a heavy burden as such things go, but still enormously heavy compared with the lightness

of total immunity—; a life into which Japanese police surveillance might be intruded, and from whose injustices recourse must be had to Japanese laws and Japanese tribunals, alike unfamiliar and distrusted. The selfish objections to such a change were so obvious, so imperative, that they could not fail to greatly, though perhaps insensibly, re-inforce the promptings of wholesome prudence. Therefore our advocacy of change was thoroughly unpopular. We did not undervalue the arguments and considerations on the other side. We paid the fullest respect to them, knowing and frequently acknowledging that the greater the efforts any nation has made to equip itself with good laws and an efficient judiciary, the more reluctant must its people be to abandon the benefits accruing from such equipment. Indeed we venture to affirm to-day, after a calm retrospect, that by no newspaper were the weighty and eminently respectable reasons animating the conservatives more plainly recognised and stated than by the *Japan Mail*. But the same retrospect shows us that from the very outset a stream of the grossest slander was poured upon our heads by the self-appointed champions of the other side—from the very outset. Editors came and editors went; death removed some; openings elsewhere called others. But the method never varied. Each new-comer judged that the quickest way to win the support of a certain section of the community was to vilipend the *Japan Mail*, which advocated a policy distasteful to the majority. There never has been in any other part of the world a more inveterate and unflagging endeavour to subject freedom of thought to the tyranny of a multitude of thinkers. Argument against argument, logic against logic, fact against fact—all that is fair and warrantable. But the one weapon used by our newspaper opponents from first to last was attribution of the meanest and most despicable motives that ever swayed a human being to sacrifice the interests of his own nationals at the altar of an Oriental people's ambition. Even now, after nearly 21 years of this unceasing flow of calumny, even now when the policy advocated by us has been splendidly vindicated by the Anglo-Japanese alliance, which never could have taken place under the old system—even now the same weapon is employed. The thing would have been doubly hard to endure had we not recognised that such had been the habit of open-port journalism from the very outset of its career. Not for the sake of mere persiflage did GORDON say that no man could venture to live in the East unless he shaped his opinions according to the mould of the majority. GORDON suffered. He, a man who would have stripped the coat from his back to cover another's nakedness, who spent the whole of his pay on deeds of charity, and who left China poorer than when he went there—even he was pilloried by the

open-port journal and pelted month after month with filthy accusations of the most mercenary meanness. The thing is inevitable. Nothing need be said of it except that the atmosphere through which men view their neighbours' acts emanates from their own hearts, and that those who see villainy everywhere, are unconsciously looking at a subjectively projected image. Throughout this long campaign of misrepresentation, we have tried with what strength is given us to avoid personalities and to deal solely with facts and arguments. Sometimes ridicule has seemed the only suitable weapon, as was the case in the latest discussion. For what were the conditions? A paltry mistake of quotation had been made. Three letters of a word had been inadvertently changed. It is true that an incidental argument had been founded on the misquoted word. But what then? Could any one, considering such an incident with the least desire to be just and to avoid needless offence, could any one have seen in it anything save the purest accident? Not so the Kobe editor in whose article the word had originally occurred. He saw in the incident a deliberate act of fraud, and he hastened to send to all the English newspapers of Japan a letter uniquely devoted to proving that the editor of the *Japan Mail* had been guilty of "absolute falsification," had "changed the meaning of a sentence by substituting one word for another," and had thus exhibited a "method of controversy" to which public attention must be drawn. The letter containing this extraordinary accusation, an accusation which could not have presented itself to the mind of any man were he not blinded by passion and prejudice, this letter reached two Yokohama journals and was at once published by them with words of endorsement. They found nothing improper or intolerable in the notion that an editor should be openly charged with the most abandoned rascality because he had committed a mistake of transcription, which very mistake one of the endorsing journals had itself committed some days previously. Assuredly these were high journalistic ethics. For our own part, did such a letter reach us, similarly vilipending either of these endorsing journals or even the man at whose hands we have suffered this gross insult, we should consign it contemptuously to the waste-paper basket. We declined to publish the letter, whereupon its writer claimed his legal right to have it published, and at the same time sent another letter for which, by an inadvertence on his own part, he had found a like text and in which he again applied himself, with renewed diligence, to convict us of abandoned dishonesty. Then it seemed to us that only ridicule could meet the case, and we ridiculed it freely. It also seemed to us that in the face of such injurious and slanderous accusations we were justified in asking by what manner of man they were preferred. For this, our accuser, had once been our friend.

Before himself becoming an editor he had been, in appearance at all events, an approver of the *Japan Mail's* policy, and during some years of his editorial career he had maintained the friendship, we, on our side, admiring his ability and recognising his power of analysis, though recognising also, not without amusement, that the *odium theologicum* against which he girded so strongly, found a worthy replica in the intolerance of his own convictions. But there came a day when our views diverged, and from that day our sometime friend—though we had never met—devoted his columns with remarkable perseverance, month in and month out, to render us an object of public obloquy. He evolved the theory that because we ventured to traverse views hostile to the Japanese, we played the part of an *agent provocateur*, as though the only way to establish good relations between Japanese and foreigners was to leave to the latter an unchallenged monopoly of harsh criticism. No man could possibly have laboured harder to bring upon another's head public contempt and hatred than this Kobe editor laboured to effect that result in our case. So then his final and openly preferred charge of deliberate fraud, if, on the one hand, it deserved ridicule, seemed to deserve, on the other, a reference to the character he brought into court. Thereat the anonymous correspondent appeared upon the scene. There are three classes of men who occasionally address the newspapers of Yokohama. There is the resident who, when he has something to say of public interest and importance, writes over his own name. There is the resident who, like "Unconvinced," "Truth," "Treaty Rights" and so on, undertakes the discussion of a subject which has no connexion, directly or indirectly, with the personality of the disputant, and who naturally shrinks from needless publicity. This correspondent's letters are interesting and useful, and if he is not always more placable than his opponent editor, he at least obeys the canons of politeness. But there is finally the man of many aliases; the man who hovers on the verge of decent society; the man who thinks it no shame to write on the same subject over different signatures on consecutive days or even on the same day; the man who takes cowardly advantage of anonymity to pen the grossest insults; the man who nevertheless finds editors ready to publish his letters. These gentry never address themselves to the *Japan Mail*. They pay it the only compliment of which they are capable, avoidance, and they do its editor the only honour within their power, the honour of hating him. Witness the representative of this genus who recently undertook to expound journalistic "dignity" in the columns of a local paper, who signed himself "Admirer of Dignity," who compared the editor of the *Japan Mail* to a "snarling and evil-smelling skunk," and who for the explicit sake of this very simile

received the warm endorsement of the journal to which he addressed himself! It is not possible to be angry with such men. They are only farcical. But it is at times interesting to review the journalistic atmosphere of this settlement. It is an atmosphere hateful to the majority of the leading residents. There can be no doubt of that. But what can they do? Treat these incidents as mere bubbles produced upon the broad stream of Far-Eastern life by noxious gases that will inevitably generate, whatever process of purification be employed. Very soon no trace remains of the offensive disturbance, and then no one is much the worse—until its next recurrence!

NAVAL INCREMENT AND THE LAND TAX.

THERE appears to be a growing impression that a close connexion exists between the continuance of the Land Tax in its present form and the much talked-of third programme of naval increment. It is alleged by the *Fiji Shimpō*, generally well informed in such matters, that although a difference of opinion existed originally in the Cabinet with regard to the Land Tax, the Ministers are now understood to have come into line. Of course this is a problem of the very highest financial importance. The amount of revenue at stake is some 20 million *yen*, and to onlookers in general it will doubtless seem strange that at a time when the Treasury is embarrassed on account of its attempt to carry out extraordinary works without recourse to the device originally contemplated for procuring funds, namely, domestic loans, there should still be serious talk of abandoning a prolific source of ordinary revenue. For our own part, we should regard such a step as in the highest degree unwise, for even though the difficulty of carrying out the essential parts of the *post-bellum* programme should be overcome by some process not now discernible, there would remain the fact that the country must have money if its armaments are to be maintained at the strength unfortunately indicated by Occidental civilization. Japan is just now surmounting the troublesome point in her finance. We have often insisted and have adduced figures plainly establishing our contention, that could this country emerge from the perplexity of having to put its hand to certain extraordinary and terminal undertakings, the means of prosecuting which had been found illusory, its ordinary and interminable revenue would not only amply suffice for all its wants but would also leave a handsome surplus. But what shall be said of Japanese financiers if, at the very moment when the haven is looming in sight, they suddenly and deliberately cut themselves off from the only anchor that can save them from drifting again into deep waters? That would be playing with finance instead of treating it seriously. But probably it is wrong to suspect that responsible financiers entertain any such idea. The true

source of danger, in our opinion, is the politicians. It is understood that many members of the *Seiyu-kai* virtually pledged themselves to their constituencies at the recent elections that they would vote for restoring the Land Tax to its original figure of $2\frac{1}{2}$ per cent., and that many members of the Progressist Party not only gave that pledge, but also supplemented it with a promise that they would work for a reduction even beyond the $2\frac{1}{2}$ rate. Already, indeed, there are symptoms of what may be expected, for a meeting of journalists has been held in the office of the Progressists, and the promoters, having organized a club calling itself the *Doshi Kisha-kai*, decided that a strong circular should be sent to all newspapers throughout the realm, urging them to agitate in favour of restoring the tax to its original figure. Now if the tax itself were objectionable, if strong theoretical arguments could be advanced against it—as can be advanced against the business tax and the income tax, for example—then we should understand this agitation. But the land tax is eminently a sound impost. If all other kinds of fiscal burdens could be abolished and if the land tax alone could be made responsible for the public revenue, that would be an ideal state of affairs. Yet it is against this very tax that a number of journalists are said to have arrayed themselves. It looks very like sacrificing high interests of state on the altar of party politics. If, now, the land tax be continued at its present rate, and if, further, some resolute measure of administrative reform be carried out—such a measure as that drafted by the Legislative Bureau, which is reported to involve a saving of some ten million *yen* annually—, then Japan will emerge triumphant from all the financial troubles, which not really of a radical nature, are impairing her credit abroad and thus checking her material progress. But if she deliberately turns her back upon this happy exit, and, out of deference to the clamour of party politicians, deprives herself of the only factor that can restore equilibrium, then she will be caught once more in the vicious circle of a policy which automatically perpetuates the troubles it represents.

THE BLUFF GARDENS.

A CORRESPONDENT has sent us a timely letter regarding the public status of the Bluff Gardens. The foreign communities of the Far East are accused, and perhaps not without reason, of possessing very short memories. They are always in a state of flux: new face succeeds to new face; old hands die out and with them the remembrance of the early social history of the place wherein they sported their little day. The newcomers find a settled state of things, an orderly provision for their comfort, their ease, or their athletic proclivities, and are content to take things as they stand, without troubling why it is that things

happen to be just as they are at the moment of their arrival. Under such conditions of *laissez faire* it is not surprising that the existence of such beautiful pleasure grounds as the Bluff Gardens is practically unknown to a large proportion of the foreign residents of Yokohama; while another large section has come to regard them as exclusively the property of the Ladies' Lawn Tennis and Croquet Club. We feel sure that the members of this Club would be the last to hamper the public in free access to, and enjoyment of, the Bluff Gardens, and doubtless they will be surprised to learn of the existence of a considerable feeling upon the matter among the outside public. When first established, the up-keep of the Gardens was maintained by voluntary subscriptions, and under the energetic auspices of PUBLIC-SPIRITED SMITH, and later Mr. MONTAGUE KIRKWOOD, they were the scene of many an enjoyable out-door fête, and few large warships visiting these waters but were asked to contribute to the public enjoyment by allowing their bands to supplement the efforts of local entertainers. Then the Gardens fell on evil days: the first pioneers of the foreign settlement died out, and press of business cares and worries happily unknown in the early days prevented their successors from taking up the public burdens the old men relinquished. At last, just in time to save them from lapsing to the Japanese Government and thereafter being sold as building sites, the Ladies Lawn Tennis Club obtained the perpetual lease of the gardens on certain terms, and among other conditions it was provided that they were always to be thrown open to the public, except for three days, or so, in the year; while a definite number of *tsubo* of the area could be appropriated by the Club for tennis courts. The upkeep of the Gardens was entrusted to the Club on these conditions, and on the whole the various committees have given good account of their stewardship. The gardens are kept in admirable trim; the public are, comparatively speaking, free to use them whenever they like; while there is no gainsaying the fact that they are a veritable Paradise to the little children of foreign parentage who now bulk so largely in the census returns of this community. Perhaps no happier sight—for those who love the little ones, and what right thinking man or woman does not?—can be seen in Yokohama than between the hours of ten and noon and from 3.30 to 5 o'clock on sunny afternoons when the wee lads and lassies gather in the *hana yashiki*, as they call the place. There the glad sound of children's care-free laughter rings loud and clear; the shrill notes of happy little voices peal forth on every breeze, and many of the games first evolved in Merrie England are pursued with the keenest zest imaginable. A happy thing it is for the children that the Bluff Gardens exist. Few foreign communities in the Far East can boast of having tennis courts set amid such charming surroundings as those

in these gardens and lucky indeed is the Ladies Lawn Tennis and Croquet Club in their possession. So long as they fulfil their duties towards the public they will continue to enjoy them to the full, but we think our Correspondent's idea that a board should be attached to the gate, or some other prominent position, drawing attention to the fact that the Gardens have been set aside for the use of the general public, is a suggestion that the Committee of the Ladies Lawn Tennis and Croquet Club can entertain and adopt.

ANOTHER LETTER.

WE have received another letter from the editor of the *Kobe Chronicle*. He appears to think that he has discovered a valuable method of controversy by taking advantage of the Japanese Press Law to procure the publication of his missives. The Japan Press Law confers no such right, but to invoke its aid is quite superfluous, for we are always prepared to give space to the communications of correspondents who desire to controvert views expressed in these columns. If we refused to publish the first letter addressed to us by the editor of the *Kobe* journal, our reason was that, as the case seemed to be fully met by the words we used in acknowledging receipt of the letter, the injurious and ridiculous charges it contained might well be consigned to the waste-paper basket. THE VERACITY OF THE EDITOR OF THE "JAPAN MAIL."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—No one knows better than yourself the inadequacy of the excuses you make for a misquotation which only obtained its value in the argument by the omission of the last two clauses of the sentence quoted; and for utilising a misprint in "Truth's" letter to the *Gazette* which made against your opponent while it made for your contention. Readers who are interested can examine the passages in question for themselves, and note how the first passage at the very best proves you to be utterly indifferent to giving the real meaning of a sentence you are criticising, while the second convicts you of a carelessness that quite unfits you from engaging in useful controversy. Moreover, they are merely the culminating incidents of a course of systematic perversion, examples of which I may perhaps take another opportunity of setting forth in your columns.

But even from the point of view of tactics, in which you show as a rule much dexterity, it is difficult to see what you expect to gain in attempting to rebut charges of manipulation and perversion by a series of untruths that so far as they have definite form are so very easily exposed. That is not the way to rehabilitate a damaged reputation. It would take too long, and I scarcely think it is worth while, to go seriatim through the three columns of vulgar scurrility by which in last Tuesday's *Mail* you endeavour to divert attention from the charges made against you, incidentally showing how superficial is the "culture" you assume. I will therefore take one of your statements as an example of the whole. You say of the editor of the *Kobe Chronicle* :—

"Before the exigencies of a subscription list intruded upon his licence, we have seen him anonymously running fierce and uncompromising tilts in the columns of another journal at Christianity and all its professors, and when the troublesome words 'business interests' began to have significance for him, we have seen him promptly take the 'd—d sharp turn' of the Yankee editor and leave missionaries severely alone."

Now the bulk of the letters to which you refer—all except three, if I remember aright, out of some twenty or more were contributed in the years 1889, 1890, and 1891 to the columns of the *Japan Mail*—not to "another journal," as you pretend—over the nom-de-plume "Secularian," and their authorship was an open secret, my only reason for using a pen-name being that I did not wish my

heresy to prejudice the *Hogo News*, with which I was then connected, though I owned no shares and was not the Editor. But what is specially interesting in connection with this particular charge is that you, the Editor of the *Japan Mail*, in sending a book to "Secularian" which had been given to you by a Christian to transmit, complimented the author upon these letters contributed to the *Japan Mail* and stated that they had excited "great interest" in Tokyo!

Perhaps you will now assert that I admit to running "fierce and uncompromising tilts" at Christianity and all its professors, and therefore it may be well to deprive you of this argument by saying that I do not admit the accuracy of your characterisation of the letters which I contributed to your columns.

As to taking a "d—d sharp turn," to use your courteous phrase, on becoming the Editor of the *Chronicle*, and leaving the 'missionaries severely alone,' I think that your missionary constituents, on reading this particular statement, will rub their eyes. Is it not extraordinary that the editor of the *Chronicle* having, according to your present version, taken this "d—d sharp turn," you should a few months ago have been denouncing him in the columns of your paper as "an Agnostic if not an Atheist," his offence at that time being some severe comments on the missionary looting in Peking? I quote from memory, only learning of the article through a protest made by one of your contemporaries against your habit of "calling names." But the article in question does not stand alone.

As to my views on the truth or the value of Christianity having been concealed since I established the *Chronicle* you must be perfectly well aware that the allegation is as untrue as your charge that I am anti-Japanese in sentiment or exhibit any racial animus in the columns of the journal I edit. No secret has ever been made of my views. I have always protested against the reticence which many men of the same opinions as myself show in these matters, and as late as the autumn of last year I took part as Editor of the *Kobe Chronicle* in a lengthy discussion on "Genesis and Science" which went on in the columns of the journal of which I am proprietor, and in which there was certainly no concealment of my opinions.

You appear to be an attentive reader of the *Chronicle*, and must therefore be perfectly well aware of the facts above set forth for the information of your readers. Therefore you have now added to your original offences of manipulation and perversion—(1) positive untruthfulness; (2) treachery, to both sides, believer and non-believer; and (3) a scurrility that would disgrace any journal with a reputation to maintain.

At this rate I am afraid that if you go on with your explanations, you will soon have no shred of character left.

The mention of Article XIII. of the Press Law appears to irritate you so much that I regret having to direct your attention once more to its provisions. You will understand, however, having doubtless investigated the subject of late, that I am entitled to the insertion of this letter of correction and refutation in your columns in the same-sized type as that used in making the original untruthful charges.

I am, yours truly, ROBERT YOUNG,
Editor, *Kobe Chronicle*.

Kobe, September 12th, 1902.

Not many words are needed in dealing with the position now assumed by our correspondent. But first, since he describes our article of the 9th instant as "vulgar scurrility," it becomes necessary to make a very brief retrospect. On receipt of his original letter, we inserted the following note at the head of our editorial columns :—

We have received from the editor of the *Kobe Chronicle* a letter calling our attention to the fact that in our issue of August 28th a paragraph from an article in that journal was wrongly quoted, the word "household" being substituted for "leasehold." The correction is just. We made the mistake, and we express regret for the fact, while, of course, withdrawing any criticism based on the erroneously quoted phrase.

The editor of the *Kobe Chronicle* sends a covering letter, the insertion of which he demands, as a matter of right. Had he confined his remarks to a simple statement of our misquotation, we should of course publish his letter as readily as we make this acknowledgment. But since he appends certain injurious charges, we decline to give to his communication the hospitality of our columns.

Nothing could have been franker or fuller than this acknowledgement of error, with-

drawal of the original criticism and expression of regret. But the editor of the Kobe journal was not satisfied. He must have his letter published. Nothing less would do him. Now what was the letter? Was it a simple correction of a palpably accidental misquotation? It was nothing of the sort. It was a deliberate and carefully conceived attempt to convince the public that there had been no accident at all in the matter, but that there had been "absolute falsification;" that the editor of the *Japan Mail* had "changed the meaning of a sentence by substituting one word for another" and that such procedure was among his "methods of controversy." It is not our business to speculate what measure of importance the editor of the *Kobe Chronicle* attaches to common honesty. Neither is it our business to speculate whether any intelligence can be sufficiently shallow to credit a publicist with deliberately committing crimes which carry their exposure on their own face. But it is within our right to say that a man who, after preferring such an accusation against the editor of a newspaper, then ventures to talk of the "vulgar scurrility" of the retort he provokes and of the "culture" of the person he has thus slandered, does not deserve to be treated seriously. It is also within our right to say that a man who, after receiving the candid *amende* made by the editor of the *Japan Mail*, nevertheless persisted in publicly charging him with "absolute falsification" and deliberate chicanery, must expect to be ridiculed. It is also within our right to add that a man who, although he has been shown that his second charge of "perfectly reckless" dishonesty rests primarily, not on any act of the person charged, but on a mistake made by another, nevertheless lacks the manliness to offer one word of apology or to make the slightest admission of inadvertence, can not, under any circumstances, be regarded as a judge of the constituents of fair fame.

And now let us see what the Kobe editor has to say for himself in his last communication. His declared object in writing is to dispose of one of "a series of untruths" which he alleges to have been contained in our article of the 9th instant. "It is difficult," he says, "to see what you expect to gain in attempting to rebut charges of manipulation and perversion by a series of untruths." Thus, while openly declaring that on the basis of a misquotation of three letters in a word of nine, he himself founded charges of "manipulation and perversion," he now adds an accusation of "a series of untruths," and has yet the exquisite assurance to reprove us for "vulgar scurrility." However, what is the one untruth which he selects from the so-called "series?" The choice being his own, we must conclude that he selects the strongest ground available for his demonstration. He has selected this question:—Is it or is it not the case that having anonymously attacked Christianity in the correspondence columns of another

journal, and having carried on the attack vehemently and persistently, he carefully eschewed all such assaults in the editorial columns of the journal whose proprietor and editor he subsequently became? That is the question. He insists on its public discussion and we have no choice but to accept the challenge or submit to be charged with "untruth."

In the first place, it will be observed that the Kobe editor proceeds, as is his wont, to entrench his position behind outworks of subterfuge. He seizes upon the word "another." It was not, he says, in "another journal—as you pretend"—that the anonymous letters were published; it was in the columns of the *Japan Mail* itself. If this subterfuge be deliberate it is laughable. The word "another," in such a context, obviously means, and can only mean, a journal other than the one with which the anonymous correspondent was then, or subsequently became, connected. If a householder, into whose compound a neighbour is found shovelling dirt, remonstrates by saying "what right have you to shoot rubbish into another man's compound?" and if the neighbour answers, "it isn't another man's compound; it is your own," the householder naturally concludes that an asylum not a police court is a suitable place for his unhappy neighbour. Of such nature is the Kobe editor's subterfuge No. 1.

His second subterfuge is that the editor of the *Japan Mail* spoke of the anonymous anti-Christian letters as having excited "great interest" in Tokyo. Very probably we did. The letters were emphatically clever and interesting, even to persons like ourselves who wholly dissented from the writer's views. But what on earth has that to do with the question whether, after becoming editor and proprietor of the *Kobe Chronicle*, our correspondent carefully eschewed any ventilation of his anti-Christian views in the columns of his own journal? If a man attempted to defend himself against a charge of cutting and wounding by advancing the plea that some one had once praised the quality of the weapon he used, a court of law would have no course but to order that he be medically examined. Of such nature is subterfuge No. 2.

The third subterfuge is that, some months ago, in dealing with accusations of looting preferred against the missionaries in Peking by the editor of the *Kobe Chronicle*, we queried the impartiality of an accuser who was known to be an agnostic if not an atheist. Possibly we did. The incident is not fresh in our memory, but at any rate the point would have been perfectly just, especially in the case of a man like the editor of the *Kobe Chronicle* who had shown himself so strongly antipathetic towards all professing Christians. We have known many men of the very highest character who call themselves agnostics, but we have never known an agnostic tolerant of religious convictions. What conceivable

connexion, however, is there between all that and the question at issue? Is it possible to pretend that reference to the anti-Christian views known to have been entertained by a man before he became an editor, conflicts with the charge that he repressed any public avowal of those views after becoming an editor? That is subterfuge No. 3.

And now, having cleared away these frail outworks of subterfuge, we come to the citadel of the defence. Enshrined therein we find this statement:—"My only reason for using a pen-name being that I did not wish my heresy to prejudice the *Hiogo News* with which I was then connected, though I owned no shares and was not the editor." That is not a subterfuge. That is one of the naivest confessions we have ever had the pleasure of receiving. "I did not wish my heresy to prejudice the *Hiogo News* with which I was then connected though I owned no shares and was not the editor." Therefore I wrote anonymously to the *Japan Mail*. Now if consideration for the business interests of the *Hiogo News*, though he was only an employee of that journal at the time, confessedly restrained him from ventilating his anti-Christian views in its columns and sent him anonymously to another journal, what measure of restraint are we to suppose that he underwent when he had to consider the business interests of a journal which belonged to himself and of which he was the editor? It is in truth a refreshingly naïve confession.

And it is only confession No. 1. Ranged by its side stands another almost equally quaint admission. "As late as the autumn of last year I took part as editor of the *Kobe Chronicle* in a lengthy discussion on 'Genesis and Science' which went on in the columns of the journal of which I am proprietor and in which there was certainly no concealment of my opinions." Let us see what that amounts to:—I have been editor and proprietor of the *Kobe Chronicle* for nearly 12 years. During the three years before I became editor and proprietor, I wrote and published twenty or more anonymous letters for the purpose of assailing the dogmas of Christianity. During the first 11 years of my editorship and proprietorship, I refrained from any renewal of such assaults in the columns of my own journal. But in the autumn of the 11th year I engaged editorially in a discussion on "Genesis and Science." Eleven years of silence and then participation in a discussion on Genesis and Science. That is Confession No. 2. Nothing could be fuller, but we can not conscientiously add, "nothing could be franker."

So then, this wonderful defence which was to convict the *Japan Mail* of "positive untruthfulness" and of "treachery to both sides," consists of three subterfuges and two confessions.

We wish to add a word. The editor of the *Kobe Chronicle* must not imagine that we intend to suggest the slightest reproach

of his philosophical views. On the contrary, although we do not agree with his tenets, we respect their professors and are prepared to do the fullest honour to the open advocates of doctrines unpopular in most communities. The whole question is one of consistency of courage. It is one thing to be brave in anonymity; another to be publicly courageous.

Yet another point has to be noticed. Our correspondent denies that he is anti-Japanese in sentiment, and he recently quoted a eulogy of his methods penned by us in 1897, up to which time, he says, ten years of close observation had convinced him that the editor of the *Japan Mail* was "an honest and honourable controversialist." Well, during the first seven years of his editorship we undoubtedly admired and frankly acknowledged the fairness of the *Kobe Chronicle*. But from that time he began to display an anti-Japanese bias which, whatever he may say to the contrary—and we have no doubt that his faith in his own impartiality is sincere—must be palpable to everybody. From that time also, from that very year, he, in co-operation with "Scotus," inaugurated a persistent and malicious campaign, having for object to prove that the editor of the *Japan Mail* was an *agent provocateur*, and that, by rebutting some of the needlessly severe and often entirely erroneous accusations preferred against the Japanese, we stirred up strife between the people of this country and the foreign residents. After two years of that campaign, which was always treated by us with ridicule, our contemporary discovered that the game was not pleasant and, like a huffed child, he cried out that he wouldn't play any more and that we must take away our nasty paper. Perhaps he has heard of the Chinese philosopher CHUANGTSU who, falling asleep and dreaming that he was a butterfly, said, on awaking:—"Was I then a man dreaming myself a butterfly or am I now a butterfly dreaming myself a man." We suggest to the editor of the *Kobe Chronicle* that he should endeavour to decide whether his present exasperated distrust and obvious bias are delusive imaginings, the airy fabric of a vision, or whether his impartial and friendly mood throughout the 10 years ended in 1897, did not represent his genuine and waking convictions.

LOCAL QUESTIONS IN YOKOHAMA.

THE normal state of public opinion in Yokohama regarding such purely local matters as the General Hospital, the Bluff Gardens, the Cemetery, Christ Church, etc., is one of general apathy, varied with very occasional ebullitions of spasmodic short-lived energy. This man is too busy to interest himself in any one of these affairs; that too apathetic to stretch out a hand beyond the narrow range of his own personal concerns: then a crisis arises and for a moment there is an energetic desire to do something, with the result that, temporarily, interest in a

particular object revives—only to die out again almost as quickly as it arose. The matter is deplorable, but there is no gainsaying the fact that the predominating feeling in this community at present when it comes to the conduct or management of public affairs is "let-it-slide." A striking instance is to be found in the General Hospital. The Committee can never get the subscribers to attend the annual general meeting and have practically to re-elect themselves year in year out. On the whole they have done all that can be done with the funds at their disposal, but matters have come to such a pass that recently a "whip" was sent out by the ladies of the Bluff and Settlement to raise a fund to supplement the nursing equipment of the Hospital. Some *yen* 2,000 has been raised and a meeting was called for half-past ten on Thursday morning in the Vestibule of the Public Hall "to organize and discuss plans for carrying out the work." We sincerely trust that a practicable scheme will be evolved and that the movement points to the inauguration of a healthier tone in the public life of the foreign community of Yokohama. We gather that the meeting is open to ladies only, otherwise the hour of meeting would have been fixed differently, but we hope that the outcome of their deliberation will be that "more light" will be vouchsafed as to the working of the Hospital, its real position in the community, and the prospects of its being able to be carried on to the satisfaction of subscribers generally. We believe that were these things brought out in the full light of day a large increase of subscriptions would result.

Another question which has been brought to our attention lately is the state of Christ Church and its building fund. The sacred edifice has been open for public worship for over a year and still it lacks the fence between the road and the building which would lend a finish to the whole fabric. It is a matter of small moment, perhaps, still people are asking why this delay in carrying the scheme to completion? Is it for lack of funds? And this leads us to the consideration that the public, and we speak only for subscribers to the building fund, would be very grateful if the committee would publish, as soon as possible, a statement of accounts. The last subscription list which appeared in the public press must be dated over sixteen months ago, if we remember rightly. Surely by this time some statement might be drawn up showing what the aggregate amount of public subscriptions and donations to the building fund was and how and when the money was spent, and what amount is still required to set the Church free of all encumbrances. If these questions could be answered quickly, the path would be cleared for many persons who would only be too glad to devise schemes whereby the necessary wherewithal could be raised and the best interests of the public promoted.

EXTRATERRITORIALITY IN CHINA.

WHAT may be called the thin end of the wedge has been inserted into the structure of extraterritorial jurisdiction in China by the new Anglo-Chinese Commercial Treaty, and it will henceforth depend upon China herself whether the wedge is driven home. The Treaty says:—

China having expressed a strong desire to reform her judicial system and to bring it into accord with that of Western nations, Great Britain agrees to give every assistance to such reform, and she will also be prepared to relinquish her extraterritorial rights when she is satisfied that the state of the Chinese laws, the arrangement for their administration and other considerations warrant her in doing so.

There are two imperative reasons for the abolition of extraterritorial jurisdiction in China. One of them is the missionary question; the other, the question of inland-waters navigation. This very Treaty provides that British steamers shall be allowed to land or ship cargo and passengers at any one of three new ports on the Yangtze and nine new ports on the West River. In not one of these ports, so far as we are aware, does a British consulate exist, and in not one of them is there any adequate substitute, or indeed any substitute at all, for the territorial jurisdiction from which British subjects are exempted by treaty. Many reasons can be adduced in support of the proposition that if a Western State considers it necessary to claim for its nationals conventional exemption from the jurisdiction of a country visited by them for trade purposes, such State is morally bound to provide an efficient substitute for that jurisdiction. We ourselves have often urged that view, and we think that its cogency can not be denied. But on the other side has to be set the fact that to establish consulates at all the ports of call or special inland ports now opened in China by treaty or convention, would entail a very heavy outlay; an outlay which might never find any warrant in events. The answer to that is to be found, we think, in British consular reports compiled prior to the year 1860. It is there shown that outrages of the most shocking character were perpetrated by foreigners at various places in the Yangtse Valley with absolute impunity, no foreign authority being at hand to check their authors, and the Chinese Authorities having been taught by bitter experience never to lay hands on a foreigner. That was in a troublous time, when the rebellion raging throughout the districts westward of Shanghai offered opportunities for lawbreaking of every description. Who is bold enough to predict that similar opportunities may not at any moment present themselves, and that similar immunity may not be enjoyed by men who will certainly be forthcoming to profit by them? The anomaly of the present situation is that the tax-payer in the home land has to bear the whole cost of supporting consulates in China. It is right that he should bear some part of the cost, for into his pocket goes part of the profit derived from the China trade. But

surely no one can deny that ships making use of these ports of call, as well as the owners of such ships and their consignees, should be taxed to provide means for supporting consular establishments at the places in question. It is in that direction, we think, that a partial remedy should be sought for one of the present abuses of Extraterritoriality.

As to the connexion between extraterritorial jurisdiction and missionaries, it is a problem of immense difficulty. There can be no doubt that although missionaries are not for a moment to be classed with ships' crews, they also should not be allowed to wander to places beyond the practical reach of efficient jurisdiction. But it is quite useless to discuss that phase of the question to-day. Ever since 1860 the missionaries have been permitted to travel where they please and to settle where they please throughout the Chinese empire, without the smallest regard to the juridical problem. Forty-two years amply suffice to establish prescription, not indeed as against a country's, sovereign rights, but certainly as against any sudden disturbance of privileges enjoyed throughout such a long interval. Besides, it has never been pretended, nor could it possibly be pretended even by the greatest enemy of the missionaries, that their own conduct has illustrated the abuses incidental to such a system. The lives led by the missionaries in the interior of China have been a splendid example to the people of the country, and have probably done more than preaching could ever effect to win respect and admiration for Christianity. Their deaths, too, have been a still more glorious testimony to the nobility of their faith. There is nothing in the records of the world more suggestive of the sublime heights to which human nature can be raised by religious conviction, than the story of the martyrs of 1900 as told in their own writings when death stared them in the face or when the most horrible sufferings had been endured by them day after day and week after week. Certainly not for the control of such men are any legal tribunals needed. But these considerations do not touch the kernel of the matter, namely, that so long as Christian institutions in China— orphanages, schools and hospitals—are segregated from Chinese official supervision and kept apart from the free scrutiny to which similar institutions in Chinese hands would be subjected, just so long will there be danger of popular misconception and popular animosity. Nor does it touch the fact that while the missionaries—this, of course, refers chiefly to the Roman Catholics under French protection—attempt to shelter their converts as well as themselves under the extraterritorial ægis, just so long will such discrimination foster popular discontent and provoke popular outrage. It is idle to talk of submitting the missionaries to Chinese jurisdiction under existing circumstances. We have not the least doubt that the missionaries themselves

would gladly consent to such an arrangement if they supposed that it would in any degree further the cause of propagandism. But Europe and America would never agree to anything of the kind. All that can be done, it seems to us, is to put an end to the intrusion of politics into the field of religion; to put an end to the French protectorate, which is the root of the whole evil, and to provide for some measure of Chinese official supervision in the case of Christian institutions and establishments of every kind throughout the empire.

The new clause in the Treaty is couched, it will be observed, in the most guarded language. Great Britain does not undertake to relinquish her extraterritorial rights when she is satisfied that China possesses laws and a judiciary warranting such a step. She reserves discretionary power to take "other considerations" into account. There is one "consideration" which will probably render the new concession virtually if not altogether illusory. It is that the treatment experienced by China at foreign hands during the 17th, 18th and 19th centuries, must of necessity have educated a spirit of animosity which will render it a terribly rash experiment to place the lives and properties of Western subjects and citizens under her care. There is only too much reason to apprehend that before objections of that nature can be dispelled, the seeds of new resentments will have been sown, and thus the whole problem will be found revolving in a vicious circle. Other difficulties, hosts of difficulties, present themselves to any one considering this problem by the light of experiences garnered in Japan's case, but we can not at the moment invite our readers to follow us into that labyrinth.

THE POINT OF FRICTION.

IT Russia's international morality is to be judged by the utterances of the *Echo de Chine*, the verdict would not be very complimentary. The programme assigned by that journal to the great Northern Power is deduced from suggestions furnished by the class of persons—unhappily they are only too common—who think that the safest rule in estimating the probable action of others under any given circumstances is to assume the operation of the lowest conceivable motives. Perhaps that basis of forecast is more likely than any other to be justified by events, human nature being what it is. The *Echo de Chine*, however, represents a nationality *amie et alliée* with Russia, and we should therefore have expected that a more favourable appraisal of the latter's purposes might be sought in the Shanghai journal's columns. In effect, the French paper says that Russia will always be able to find excuses for not implementing her engagements as to the evacuation of Manchuria; that in the interval of procrastination she will build new railways, consolidate existing lines, establish places of business everywhere, and, in short,

create such a situation that evacuation will be virtually impossible. Then, with an army of from three hundred thousand to four hundred thousand men, she will laugh at the world; while if Japan attempts to interfere, the insular Power will find itself deserted by England; will see its armies frozen up in Manchuria, and will find Hokkaido in Russian hands to remain there until Manchuria is restored to China. We allude to this article partly because it appears in a French journal, but chiefly because the *North-China Daily News* treats it seriously. There is no possibility of denying that the intentions attributed to Russia by the *Echo de Chine* represent the belief of a great many people in the East, with the exception, perhaps, of the items relating to the freezing up of Japan's armies in Manchuria and the occupation of Hokkaido by Russia. Japan's army was not frozen up in the campaign of 1894-5. On the contrary, it showed endurance and resourcefulness that surprised everyone. And as to the permanent occupation of any part of Japan's territory by a foreign Power, those that know Japan best are least likely to be disturbed by such a chimera. But without dwelling upon topics whose discussion appeals to the elementary passions, it may be pointed out that had Russia entertained the purpose attributed to her by the *Echo de Chine*, she would never have committed herself to the explicit promises by which she is now bound. At certain fixed periods certain operations of evacuation have to be consummated by her, and unless she consummates them at these periods, or so directs events that sufficient excuses for non-consummation shall be forthcoming exactly at the seasonable moment, she will stand convicted of a breach of faith such as she has not the least intention of perpetrating. From first to last, as it seems to us, the TSAR has shown himself resolutely opposed to territorial aggression in Manchuria, nor can we imagine that Russian statesmen will range themselves in opposition to their SOVEREIGN'S will. Faith will be rigidly kept. But what then? Will Manchuria revert permanently to the Chinese empire? That is a question every publicist must shrink from answering openly, whatever his secret convictions may be. There are some things that had better be thrust beyond the range of public discussion in the interests of peace. We need not read our histories aloud, nor, if we find written on every page the same lesson, namely, that the march of empire has never yet been stayed except by collision with *force majeure*, need we proclaim at the market cross every probable application of the lesson that suggests itself to our intelligence.

Police Sergeant Sato Kisaburo, belonging to the Kagacho Police Station, has been appointed Chief of the Bluff Police Station. Police Inspector Ikariyama, in charge of the Kagacho Police who held the additional post of Chief of the Bluff Station, has been released from the additional duty, hereafter confining himself to the Kagacho Station.

THE ARBITRAL TRIBUNAL.

In view of the possibility that the Permanent Arbitral Court of The Hague may be invited to appoint from among its members a tribunal to arbitrate the House Tax Question, it is interesting to know the names of the distinguished jurists forming the Court. They are as follow:—

LISTE DES MEMBRES DE LA COUR PERMANENTE D'ARBITRAGE.

L'ALLEMAGNE:—Son Excellence M. Bingner, Docteur en droit, Conseiller intime actuel, Président de Sénat à la Haute Cour de l'Empire à Leipzig;

M. de Frantzius, Conseiller intime actuel, Conseiller-rapporteur au Département des Affaires Etrangères à Berlin;

M. de Martitz, Docteur en droit, Conseiller au Tribunal supérieur de Justice administrative en Prusse, professeur de droit à l'Université de Berlin;

M. de Bar, Docteur en droit, Conseiller intime de Justice, professeur de droit à l'Université de Göttingen.

L'AUTRICHE-HONGRIE:—Son Excellence le Comte Frédéric Schönborn, Docteur en droit, Président de la Cour Impériale Royale de Justice administrative, ancien Ministre autrichien de la Justice, Membre de la Chambre des Seigneurs du Parlement autrichien, etc.;

M. le Comte Albert Apponyi, Membre de la Chambre des Magnats et Président de la Chambre des Députés du Parlement hongrois, etc.;

M. Henri Lammasch, Docteur en droit, Membre de la Chambre des Seigneurs du Parlement autrichien, etc.

La BELGIQUE:—Son Excellence M. Beernaert, Ministre d'Etat, Membre de la Chambre des Représentants, etc., etc.;

Son Excellence M. le Baron Lambermont, Ministre d'Etat, Envoyé Extraordinaire et Ministre Plénipotentiaire, Secrétaire-Général du Ministère des Affaires Etrangères;

M. le Chevalier Descamps, Sénateur, Secrétaire-Général de l'Institut de Droit International.

LE DANEMARK:—M. le Professeur H. Matzen, Docteur en droit, Professeur à l'Université de Copenhague, Conseiller extraordinaire à la Cour Suprême, Président du "Landsting".

L'ESPAGNE:—Son Excellence le Duc de Tetuan, ancien Ministre des Affaires Etrangères, Sénateur du Royaume, Grand d'Espagne;

Son Excellence Don Raimundo F. Villaverde, Marquis de Pozo Rubio, ancien Président de la Chambre des Députés et ancien Ministre des Finances;

Don Bienvenido Oliver, Directeur-Général au Ministère de la Justice;

le Docteur Don Manuel Torres Campos, Professeur de Droit international à l'Université de Grenade.

LES ETATS-UNIS D'AMERIQUE:—M. Melville W. Fuller, Président (Chief Justice) de la Cour Suprême;

M. John W. Griggs, ancien Chief du Département de la Justice (ex Attorney-General);

M. George Gray, Juge de Cercle (Circuit Court), ancien Sénateur;

M. Oscar S. Straus, Ancien Ministre des Etats-Unis d'Amérique à Constantinople.

LES ETATS-UNIS MEXICAINS:—Don Manuel de Aspiroz, Docteur en Droit, Ambassadeur du Mexique à Washington;

Don José M. Gamboa, Docteur en droit, Envoyé Extraordinaire et Ministre plénipotentiaire auprès du Gouvernement des Républiques Sud-Américaines à Buenos-Ayres;

Don Genaro Raigosa, Docteur en Droit, Sénateur;

Don Alfredo Chavero, Docteur en Droit, Député.

LA FRANCE:—M. Léon Bourgeois, Président de la Chambre des députés, ancien Président du Conseil des Ministres, ancien Ministre des Affaires Etrangères;

M. De Laboulaye, ancien Ambassadeur;

M. le Baron D'Estournelles de Constant, Ministre Plénipotentiaire, Député;

M. Louis Renault, Ministre Plénipotentiaire, Professeur à la Faculté de Droit de Paris, Jurisconsulte du Département des Affaires Etrangères.

LA GRANDE-BRETAGNE:—Le Très Honorable Sir Edward Baldwin Malet, membre du Conseil Privé du Roi, ancien Ambassadeur;

Le Très Honorable Sir Edward Fry, Docteur en droit, autrefois siégeant à la Cour d'Appel, Membre du Conseil Privé du Roi;

M. le Professeur John Westlake, Docteur en Droit, Conseil du Roi.

LA GRECE:—M. Denys Stephanos, député, ancien Ministre des Affaires Etrangères;

M. George Streit, Professeur de droit international à l'Université d'Athènes;

M. Michel Kebedgy, Professeur de droit international à l'Université de Berne.

L'ITALIE:—Son Excellence le Comte Constantin Nigra, Docteur en droit, Sénateur du Royaume, Ambassadeur à Vienne;

Son Excellence le Commandeur Jean Baptiste Pagano Guarnaschelli, Docteur en droit, Sénateur du Royaume. Premier Président de la Cour de Cassation à Rome;

Son Excellence le Comte Tornielli-Brusati Di Vergano, Docteur en droit, Sénateur du Royaume, Ambassadeur à Paris;

Son Excellence le Chevalier Joseph Zanardelli, Docteur en droit, Président du Conseil des Ministres, ancien Ministre de la Justice, ancien Président de la Chambre des Députés.

LE JAPON:—M. I. Motono, Envoyé Extraordinaire et Ministre Plénipotentiaire à Paris;

M. Henry Willard Denison, Jurisconsulte du Ministère des Affaires Etrangères à Tokio.

LES PAYS-BAS:—M. T. M. C. Asser, Docteur en droit, Membre du Conseil d'Etat, ancien Professeur à l'Université d'Amsterdam;

M. F. B. Coninck Liefsting, Docteur en droit, Président de la Cour de Cassation;

M. le Jonkheer A. F. de Savornin Lohman, Docteur en droit, ancien Ministre de l'Intérieur, ancien Professeur à l'Université libre d'Amsterdam, Membre de la Seconde Chambre des Etats-Généraux;

M. le Jonkheer G. L. M. H. Ruys de Beerenbrouck, Docteur en droit, ancien Ministre de la Justice, Commissaire de la Reine dans la province du Limbourg.

LE PORTUGAL:—M. le Comte de Macedo, Pair du Royaume, ancien Ministre de la Marine et des Colonies, Envoyé Extraordinaire et Ministre Plénipotentiaire à Madrid;

M. Antonio Emilio Correia de sa Brandaô, Président de la Haute Cour de Justice, Conseiller d'Etat, Pair du Royaume et ancien Ministre de la Justice;

M. Luiz Frederico de Bivar Gomes da Costa, Pair du Royaume, Juge Conseiller à la Haute Cour de Justice.

LA ROUMANIE:—M. Théodore Rosetti, Sénateur, ancien Président du Conseil des Ministres, ancien Président à la Haute Cour de Cassation et de Justice;

M. Jean Kalindéro, Docteur en droit, ancien Conseiller à la Haute Cour de Cassation et de Justice, Membre de l'Académie Roumaine, Administrateur du Domaine de la Couronne;

M. Eugène Stasco, Président du Sénat, ancien Ministre de la Justice et des Affaires Etrangères;

M. Jean N. Lahovari, ancien Député, ancien Envoyé Extraordinaire et Ministre Plénipotentiaire, ancien Ministre des Affaires Etrangères.

LA RUSSIE:—M. N. V. Mouraviev, Ministre de la Justice, Conseiller Privé, Secrétaire d'Etat de Sa Majesté l'Empereur;

M. C. P. Pobedonostzew, Procureur-Général du Très Saint Synode, Conseiller Privé Actuel, Secrétaire d'Etat de Sa Majesté l'Empereur;

M. E. V. Frisch, Président du Département de Législation du Conseil de l'Empire, Conseiller Privé Actuel, Secrétaire d'Etat de Sa Majesté l'Empereur;

M. de Martens, Conseiller Privé, Membre Permanent du Conseil du Ministère des Affaires Etrangères.

LA SERBIE:—M. George Pavlovitch, ancien Ministre et Professeur;

M. Glich Gerchitch, ancien Ministre et Professeur;

M. le Dr. Milovan Milovanovitch, Ministre de l'Agriculture, de l'Industrie et du Commerce et ancien Professeur;

M. le Dr. Milenko Vesnitch, ancien Ministre et ancien Professeur, Envoyé Extraordinaire et Ministre Plénipotentiaire à Rome.

LE SIAM:—M. Frederick W. Holis, Docteur en Droit, ancien Délégué et Secrétaire de la Délégation des Etats-Unis d'Amérique à la Conférence de la Paix. Avocat à New York.

LA SUEDE ET LA NORVEGE:—M. S. R. D. K. d'Olivecrona, Docteur en droit et ès-lettres; ancien Conseiller de la Cour Suprême du Royaume de Suède;

M. G. Gram, ancien Ministre d'Etat de Norvège, Gouverneur de province.

LA SUISSE:—M. Charles Lardy, Docteur en droit, Ministre de Suisse à Paris, Président de l'Institut de Droit International;

M. Charles Hilty, Docteur en droit, Membre du Conseil national, Professeur de l'Université de Berne;

M. Emile Rott, Docteur en droit, Membre du Tribunal fédéral à Lausanne, Président de ce Tribunal pendant les années 1899 et 1900.

LA BULGARIE:—M. Stoyan Daneff, Docteur en droit, Ministre des Affaires Etrangères et des Cultes, ancien Professeur à l'Ecole Supérieure à Sofia;

M. Dimitri Stancioff, Docteur en droit, Représentant diplomatique de Bulgarie à St. Pétersbourg.

MR. MAX SCHLÜTER.

Mr. Max Schlüter continues his triumphant career in Australia. He is now in Sydney, where he has given several *matinee* and other concerts, which attracted large audiences. Already, remarks a Sydney paper, "Mr. Schlüter has a large following in this city." The Danish Club of Sydney have dined and wine the young *virtuoso*.

THE GENERAL HOSPITAL.

FIRST MEETING OF THE LADIES FUND SUBSCRIBERS.

A meeting was held on Thursday, in the Vestibule of the Public Hall, of the subscribers to the Ladies' Fund for the General Hospital, for the purpose of organising and discussing plans for carrying out the work.

There were about fifty ladies present, and in opening the meeting Mrs. Bellows said that all the community had been shocked some time ago by an occurrence at the hospital, and all had felt that arrangements might be made by which matters at the hospital could be improved, so that any stranger could go there and be assured of proper care. No doubt all those present had felt that something should be done, but, perhaps, each felt that it was not particularly her business. However eventually a movement was started to raise a subscription among the ladies, and a most generous response had resulted. After the success of the movement had been assured, Dr. Mècre was approached and asked whether he would receive a nurse into the hospital to take charge and to generally superintend the work of the Japanese nurses, etc. Dr. Mècre expressed his willingness to lodge and board a foreign nurse, so long as she was placed under his orders. It was, of course, understood that any nurse installed in the hospital would be subject to the orders of the doctor. For further funds the bachelors of Yokohama had been appealed to, and had responded very willingly and liberally. The bachelors were not asked for annual subscriptions—as were the ladies—as it was recognised that they in some instances might be going away. On the list of subscribers there were the names of 107 ladies and 102 bachelors. An annual subscription was assured of yen 1,028, the full subscription at present standing at yen 1,960.70. There was an idea in some quarters that the present movement was in opposition to the Colonial Nursing Association. This was quite an erroneous idea. The Colonial Nursing Association, the speaker understood, was formed for the purpose of bringing out nurses from England, the living expenses of the same being guaranteed, so that proper nursing might be provided for those that required it. Any one taking advantage of the services of such nurses had to pay them, so that this was more of a social movement than a charitable one. The object of the new organisation was chiefly a charitable one, as it was intended that those who could afford to pay should pay as before; but that proper attention should be provided both for those who could pay and for those who could not. A certain difficulty had, however, arisen. As the speaker had previously said, Dr. Mècre had agreed to receive a foreign nurse into the hospital, but later the doctor wrote that he objected to have a nurse either from England or from America—he would only have a nurse who was already here. Mrs. Bellows had since spoken to Dr. Mècre and he had repeated that he was willing to receive a foreign nurse into the hospital. When asked if he would give the nurse full authority, however, he said that the nurse should not be put over the steward. At a later date a further letter was received from Dr. Mècre reiterating that he would not receive a nurse procured outside of Japan. On being again interviewed the doctor said his reason for taking up this attitude was that the experiment of having a foreign nurse in the hospital had been tried several times before and had always failed. There had been constant unpleasantness and no nurse had stayed more than seven months. The doctor therefore declined to sign any contract for a nurse if she were procured outside of Japan; even from Shanghai or Hong-kong. Mrs. Bellows, in conclusion, asked those present to elect officers and to discuss further action.

After some little consultation the following officers were unanimously elected:—President, Mrs. E. C. Bellows; Vice-President, Mrs. J. P. Mollison; Secretary, Mrs. C. K. Marshall Martin; Treasurer, Mrs. Kirkland Wilson.

The following ladies were also elected as directors:—Mrs. E. J. Moss, Mrs. Knapp, Mrs. Manley, Mrs. Bure and Mrs. Dearing.

After the election it was decided to defer all further discussion until a later meeting, the proposition being that the Secretary be empowered to invite the hospital committee, Dr. Mécree, subscribers and all those of the community interested in the welfare of the General Hospital to meet for consultation as to further action.

BASEBALL.

U.S.F.S. "KENTUCKY" VERSUS Y.C. AND A.C.

The baseball game on Saturday afternoon was between a team from the U.S.F.S. *Kentucky* and a local nine, and in the sequel of a very interesting game the visitors won by one run and an innings to spare. The aquatic sports at the Boat Club had naturally an influence upon the attendance, still the match was watched by a very considerable crowd, all things considered. The afternoon was perfect for such a game, the sun never at any time being inconveniently hot, while a breeze played, ever and anon across the ground. Yokohama opened proceedings by making one run in the first innings, to which the *Kentucky* replied with three. The home nine got two men over the plate in the second innings, but the visitors secured four runs, thus sending them considerably ahead. The next two innings were short and sharp, both teams putting in some smart field play and preventing the score from mounting. At the end of the fifth innings, the *Kentucky* were five runs to the good and it looked as though the Y.C. and A.C. were in for another whipping at baseball. But a change came with the sixth innings, the home side piling up four runs, and dismissing their opponents very cleverly for nothing. The score now stood, *Kentucky* 8, Y.C. and A.C. 7, and prospects looked bright again. The seventh innings, however, saw the Yokohama players all sent back for nothing, while the naval men, getting the field "rattled," romped five men home, making them 13 runs to 7. In the eighth innings both sides made a run each, the fielding being smart on either side. The ninth and last innings was dramatic in its developments. Yokohama were six runs to the bad and it looked all over but the shouting when two men were dismissed in short order. Some hard hitting, combined with wild play in the field, changed the complexion of things, however, and when the innings closed the home side were within one of their opponent's total, five men getting home. Runs by innings:—

LITERARY GOSSIP.

It is stated that Jules Verne, who has eighty-two books to his credit, has seventeen more written and nearly ready for publication, which will take place at the rate of two a-year.

It has been finally decided (says *The Bookman*) that Mr. Gladstone's life will occupy three volumes. The task of writing it has proved extremely onerous, but Mr. John Morley is working

very hard, and hopes to have the whole passed for press in December. If this can be accomplished, it is probable that Messrs. Macmillan & Co. will issue the work at the beginning of 1903.

Li Hung-chang's biography in Chinese will occupy about thirty volumes. It is now being officially prepared in the London Legation. There is talk of an abridged edition in English.

Another new volume of Unwin's Colonial Library will contain three stories by Maxim Gorky, viz., "The Outcasts," "Waiting for the Ferry," and "The Affair of the Clasp." "The Outcasts" gives its title to the volume.

Mrs. Elizabeth Wells Gallup seems to have exhausted the patience of *The Times*, *Nineteenth Century*, and the chief magazines, for in a pamphlet published by Messrs. Gay & Bird she gives "Replies to Criticisms" of her Shakespeare Bacon theory replies, she says, which these publication have refused to print. One is consoled by Mrs. Gallup's own admission that the cipher which leads to her "discovery," that Bacon wrote all the works heretofore attributed to Shakespeare, is exceedingly difficult to make out, for the samples she gives are quite unintelligible to the uninitiated eye, despite the presence of the so-called key.

Mr. J. Douglas Hoare prints the following verses in the current *Westminster*:—

I dreamt that Miss Marie Corelli
No more made reviewers irate,
That Caine had stopped pounding to jelly
The creed that he happened to hate.
That Crockett had altered his diction,
That Russell had quitted the sea,
And I woke with the happy conviction
That such things might be.

I dreamt that "R.K." had diminished
The tax that he puts on our brains,
That Austin his index had finished
To all that his garden contains;
That Phillips and other young poets
Were learning to bank or to brew;
And I woke with a sigh, for I know it's
Too good to be true.

During the celebration of the centenary of the birth of Alexandre Dumas the elder, much has been said of his wonderful imagination, but not all that could be. Even the most enthusiastic of his admirers would scarcely go to the length of expressing admiration for that prodigious flight of fancy which pictured the wolves of the forests of Canada, when pressed by hunger, coming down as far as the streets of Portland and Boston! Yet even that was almost exceeded by the description of one his heroes beholding from the summit of a mountain "Philadelphia, rising like a queen, between the green waters of the Delaware and the blue waves of the ocean." Victor Hugo was apt to be be dazzling when he essayed an excursion upon foreign, and notably British soil; but Dumas, in these illustrations, shows himself easily first as a romanticist of the French school and it would be interesting to know whether any of his critical fellow-countrymen have analysed him from this point of view.

At the age of ninety-three, Sir Edward Blount, K.C.B., has published his Memoirs of a very busy life. The book has been well received in England. Beginning life as a bank clerk he entered the Home Office in time to copy the despatches of the battle of Navarino, and subsequently being appointed *attaché* to the British Legation in Paris, was introduced at Rome to Queen Hortense and her son, the future Emperor Napoleon III. It was on this occasion that the Queen, asking him if he could dance, young Blount answered, "Madame, je sais danser un petit," a specimen of the French of Stratford-atte-le-Bowe never forgotten by his Royal friend. Straightened means induced the young *attaché* to leave the diplomatic service and embark in business and it became his fate to be the real pioneer of railway development in France and Austria. Needless to say such a man has many good stories to tell, and he tells them well. Sir Edward Blount, by the way, is a lineal descendant of the Le Blounts, Counts of Guisnes, who lorded it in Picardy in the days of the now, alas! out-of-date operatic hero, Robert le Diable,

whose son, William the Conqueror, was accompanied by some of the younger Blounts when he invaded England. One of the brothers commanded the Conqueror's fleet, and another was general of infantry at the battle of Hastings, services rewarded by the Normans with large gifts of land. With the family name art student of Domesday Book, Shakespeare, and Pope is well acquainted.

Mr. T. Fisher Unwin is issuing in his Colonial Library a new novel entitled "High Policy" by Mr. C. F. Keary, author of "The Journalist," a "Marriage de Convenience" etc. The story is that of a young and beautiful girl who, getting introduced to a political set in Society to which she had been before quite a stranger, is fascinated by the high possibilities a political career seems to offer, as these are embodied in a young and brilliant politician Austin Ffollett by name. Ffollett is married, but between him and Cynthia Beresford there grows up a very close friendship, which on her side is purely ideal and platonic, and it might have remained so for him likewise, but that along with the brilliancy and the many intellectual interests of his set there goes at the same time a certain amount of corruption. The girl comes out of it all unscathed, not however, without being a subject for scandal, so that even her own relations (all except her father) are at one time in doubt about her. A number of minor characters play parts in the drama.

Mrs. Alexander's death lends a pathetic interest to her new novel "Stronger than Love" which Mr. T. Fisher Unwin has published in his Colonial Library. The volume was in the printers' hands, and all proofs were passed for press when the news of its author's death reached the publisher. Monica, who may be regarded as the heroine of the book, though another woman plays an important part, is the grand-daughter of an Earl. Her father, a hopeless gambler, leaves her totally unprovided for and at his death she is taken charge of by her mother's brother, a steady-going business man of the lower middle class. Then after she has spent some time in an unhappy home, a rich cousin adopts her. While living with her Monica meets a man who wins her love, but whom she believes to be beloved by her cousin. Gratitude, the "Stronger than Love" of the title, makes her refuse him when he proposes to marry her, and she offers herself to her poor but worthy cousin Lawrence Garth, who had been her chief comfort in the unhappy days after her father's death. To Monica as to others in the story, a sincere effort to act with loyalty and self-sacrifice brings peace and self-respect though not the special happiness of their dreams.

LAW CASE.

TABEI v. SALE & CO.

In the Yokohama Chiho Saibansho on Friday morning, before Judge Kano, was heard an action brought by Mr. Tabei Yoshiebei, No. 13, Ichome, Otamachi, Yokohama, against Messrs. Sale & Co., No. 94, Yokohama, claiming yen 388.03 damages and interest at five per cent. from April 23rd this year until the execution of judgment, costs of the case to be borne by defendants. Mr. Kuwata appeared for plaintiff and Mr. Sato for defendants.

Mr. Kuwata stated that his client had long been engaged in business transactions with defendants. In November 24th, 1899, a contract was signed between the parties, whereby defendants agreed to import on behalf of plaintiff eight boxes of flannel of British make, each box containing 30 *tan* (one *tan*=25 to 28 feet). The goods arrived in Yokohama in October, 1900. Four out of the eight boxes were taken delivery of on October 18th the same year by plaintiff, who paid yen 2,273.26. As to the remaining four boxes it was agreed that the articles should be kept in the defendants' godown pending delivery because of the depression in business at that time. In making this arrangement plaintiff paid defendants a sum of yen 2,100 as part of the whole cost of the four boxes. This was on

October 23rd. Subsequently plaintiff received a notice from defendants requesting him to take delivery of the goods not later than July 10th, 1901. In compliance with this request plaintiff sent a representative to defendants' office and asked for delivery, presenting *yen* 100 in cash. Owing to the fact that one box out of the four had been sold to a third party by Mr. Ono Senkichi, then a *banto* in the defendants' office, without receiving instructions from his employer to that effect, plaintiff could not obtain delivery of the four boxes, and in consequence he filed a suit against defendants in the Yokohama Chiho Saibansho, where judgment was given on February 22nd this year in favour of plaintiff, defendants being ordered to give up three boxes to plaintiff. Continuing, Counsel said that as the box above referred to was sold by a *banto* of defendants the latter were responsible in the matter and ought to have delivered the box to plaintiff, who therefore demands *yen* 388.03 damages.

Mr. Sato urged that plaintiff's case should be dismissed with costs.

Mr. Kuwata applied to the Court to postpone the proceedings on account of the fact that an appeal brought by defendants against the decision of the Yokohama Chiho Saibansho as above stated was now in progress in the Tokyo Court of Appeal and therefore he could not present the necessary documents as evidence in the present action. The application was granted and the case was postponed, to be resumed some time in November.

We understand that judgment was given on Monday in the Tokyo Appeal Court in the charge of libel against Mr. C. Pereira. The Court acquitted the accused and the two Chinamen of the charge.

MARTIN v. ITOGAWA.

The action brought by Mr. J. Martin, No. 55, Yokohama, against Mr. Itogawa Mankichi, of Ishikawa, Yokohama, asking that the latter be ordered to re-paint the sign-board of the plaintiff's store and to pay damages at the rate of ten *yen* per day from Nov. 4th, 1901 to Jan. 9th this year was resumed in the Yokohama Ku Saibansho, before Judge Iriye, on Tuesday morning. The defendant was represented by Mr. Tamura.

Owing to the non-appearance of the plaintiff judgment was given by default against him.

"JAPAN GAZETTE" v. RANGER.

An appeal brought by the *Japan Gazette*, No. 10, Yokohama against a judgment given by the Yokohama Ku Saibansho in an action against Mr. Ranger, of the former Maples Sanitarium, Yokohama, claiming *yen* 88.47, was heard in the Yokohama Chiho Saibansho, before Judge Kano, on Tuesday morning. Mr. R. Ideura appeared for plaintiff but neither defendant nor his Counsel was present.

Mr. Ideura said that in the above sum were included charges for advertising of the Sanitarium—the advertisement appeared in the *Japan Gazette* from December 8th, 1899, to April 30th, 1900—and for the printing of various documents, etc., and also for a subscription to the *Gazette* from February 1st, 1899, to April 30th the same year. Owing to the non-appearance of defendant judgment was given in default against him. The Court further announced that the previous decision given by the Yokohama Ku Saibansho some time last year in favour of defendant was quashed.

JOVANSSEN v. HOPKINS.

The above case will come up for hearing in the Yokohama Chiho Saibansho on September 22nd and not on the 24th, as previously mentioned by us, that day being a national holiday.

FISCHER v. WESTON.

An action brought by A. E. Fischer against A. Weston, which was expected to come up for hearing in the Yokohama Chiho Saibansho on the morning of September 18th, has been postponed indefinitely.

JOVANSSEN v. CLUB HOTEL.

In the Yokohama Chiho Saibansho on Thursday afternoon, before Judge Kato, the hearing was resumed of the case brought by Mr. Adolphe Jovanssen, formerly manager of the Club Hotel, Ltd., Yokohama, against the Club Hotel, claiming *yen* 18,775 damages in consequence of sudden dismissal from the post of manager. Mr. Ideura appeared for plaintiff and Mr. Sawada for defendants.

Mr. Ideura:—I should like to recommend three witnesses on behalf of my client, namely Mr. George Lewis, Kirigaya Tetsu, a maid servant of Mrs. Clyde, and Tadokoro Hide, a waiter in the employment of the Club Hotel. In summoning the first witness, subject to the discretion of the Court, I should like to prove that the evidence given by Mrs. Clyde at the previous hearing was utterly without foundation while her utterances highly injured the good name of the plaintiff from a legal point of view. Mrs. Clyde, said Counsel, was not a respectable person but a woman of very low character. By examining the second witness at the next hearing, I should like to counteract the effect of evidence given by Miss Ruth Allen Amor, who, replying to the Court at the previous sitting, said that plaintiff acted in a most shameful manner towards her while she was staying at the Club Hotel. As to the third witness, he was thoroughly acquainted with the affairs of the Club Hotel and so might be able to give all particulars relative to the present case. In exhibit No. 1-B, presented to the Court by the defendants, it was stated that the plaintiff had behaved rudely against Miss Byron while the latter was staying in the Hotel. Continuing, the Counsel said that some time ago Miss Byron told the third witness Tadokoro Hide, that she was once put to very much shame by the plaintiff. It was a question whether she was a respectable lady or not. Frankly speaking, Miss Byron too belonged to a low grade of society.

Mr. Sawada contended that the summoning of the three witnesses was unnecessary, more especially the second witness, Kirigaya Kin, whose utterances were sure to prove prejudicial to the interests of defendants. He should like to settle the present case as soon as possible. That is the reason why I raise an objection to the calling of these witnesses, he said. I am desirous, however, of summoning as witnesses Mrs. Jovanssen and Mr. John W. Hall. It is a question whether Mrs. Jovanssen was legally married to Mr. Jovanssen or not. Mr. and Mrs. Jovanssen were employed in a certain hotel in Europe before they came to Yokohama and it is believed that while working together in that hotel they fell in love and became united, the result being that they both were dismissed from their employment. Prior to their coming to Yokohama, plaintiff was disengaged for about one year or so. Seeing an advertisement in a certain newspaper—mostly circulated among hotels in England and the Continent—that the post of manager to the Club Hotel was vacant, the plaintiff applied for and obtained the post through the medium of Mr. John W. Hall. In consequence, I beg the Court to examine Mr. John W. Hall as a witness. It is a most important matter to find out whether the plaintiff was occupying a position or not when he came to Yokohama to take up his new duties at the Club Hotel.

Mr. Ideura—I object to the summoning of the witnesses proposed by Mr. Sawada.

The Court, after a short consultation, announced that Mr. George Lewis and Kirigaya proposed by the plaintiff, and Mrs. Jovanssen proposed by the defendants should be examined as witnesses at the next hearing, the other witnesses being rejected. The Court then rose.

The next hearing will take place on Oct. 9th.

Mr. A. Le Prevost, late manager of Messrs. Cornes & Co.'s Silk Department in Yokohama, and five Japanese employees of the firm have been, says the *Asahi Shinbun*, prosecuted in the Yokohama Chiho Saibansho on a charge of misappropriating money to the amount of about *yen* 300,000. The five Japanese are Sawada Tokutaro, of Horaicho, Shirai Tatsujiro, of Tobe-

machi, Nishida Yoshikata, of Hanabusacho, and Ogura Kinta, of Tobe-machi, Yokohama.

Judgment was given in the Yokohama Chiho Saibansho on September 16th in the case of a Chinaman at No. 137, Yokohama, who was recently prosecuted on a charge of having stolen articles from neighbouring houses during the fire that occurred in China-town in May this year. The accused was sentenced to six months' major imprisonment and six months' police surveillance.

THE BLUFF BURGLAR ARRESTED.

The burglar, who has been visiting various residences on the Bluff within the past few weeks and keeping timid folks awake o' nights, was arrested in Tokyo and sent to the Yokohama Court on Saturday morning for trial. He is named Sugiyama Rintaro, aged 24, living at No. 119, Ishikawa Nakamachi Shichome. He stole a gold watch, chain, a silver pencil, and *yen* 82.85 from Mr. Nabholz's; 5 *yen* from Mr. T. Kern's; *yen* 10 from Mr. L. Kennard Davis and Mr. G. Philip at No. 46; and a gold chain and a silver watch from Mr. S. Strauss at No. 37. Some of the property was sold to a man named Ito Teizo at Onamura, Tachibana district, Kanagawa prefecture, who has also been arrested. The other stolen articles were disposed of in Tokyo.

THE LATE MR. A. W. THOMPSON.

We announce with regret the death of Mr. A. W. Thompson, who passed away on Thursday at his residence in Tokyo. The deceased gentleman, who was in his seventy-eighth year was, we believe, a native of Cornwall, and came out to Japan many years ago. He conducted the business of a chemist and druggist, and was well-known to Tokyo and Yokohama residents. A kindly man, of cultured tastes and fine disposition, who never had an ill word to say about his neighbour, and who did many a good deed by stealth, Mr. Thompson's many friends will lament his loss.

He spent part of the summer at Karuizawa and returned to Tokyo only a few days ago in apparently the best of health. We are unable to state the cause of his sudden demise.

AQUATIC SPORTS.

The aquatic sports of the Yokohama Amateur Rowing Club were held on Saturday under conditions the most favourable that could have been obtained. The weather was quite delightful, the afternoon being cool with just a sting of heat in the westerling sun which, we should imagine, did not incommode anybody; the water was as smooth as the much-spoken-of mill-pond; and the fine band of the *Kentucky* played popular airs, which doubtless much enhanced the enjoyment of the members and visitors present. Thanks to the enticing weather many ladies made their appearance at the Boathouse (where tea and other refreshments were served in the course of the afternoon), the verandah being all the time fully occupied.

Probably interest chiefly centred in the exhibition given by Mr. Seabury of high diving and diving from a trapeze. Capt. Carst had kindly lent his derrick for the use of this gentleman, and the lofty shear-legs supported the ladder from which the performer made his high dives. The first part of Mr. Seabury's entertainment consisted of dives taken and somersaults thrown from a trapeze some fourteen to sixteen feet above the water. These were all neatly done, one or two being specially praiseworthy because of the grace with which the evolutions were described and the clean entrance with which they concluded. Something like a dozen feats of this kind were performed, all being warmly applauded. At a later stage, that is to say after the Greasy Pole competition, Mr. Seabury gave some lofty feats, from the ladder fixed on top of the shear-legs, a height of about 70 feet, but as his foothold was extremely unstable this part of the programme had to be curtailed.

The sports were, generally speaking, successful, the tournament perhaps being productive of most amusement so far as the spectators were concerned. As usual considerable crowds watched them from the Bund, additional interest in them for the public being caused by the provision of a "free show" in respect of the professional's exhibition.

Committee:—Mr. H. C. Litchfield, President; Mr. F. J. Hall, Captain: Dr. E. Wheeler, Mr. M. Schellenberg, Mr. W. Goddard, Mr. F. Lammert, Mr. H. A. Poole, Mr. C. Thwaites, Mr. O. Strome, Hon. Treasurer, and Mr. H. E. Hayward, Hon. Secretary.

The events were as follows:—

BLINDFOLD RACE.

W. M. Carst	o
H. Goddard	o
J. H. C. Goodban	o
H. Y. Irwine	o
A. Kingdon	o
S. H. Kuhn	o
F. Luther	o
F. J. Nutter	o
J. F. Marques	o
F. Pollard	o
L. Thompson	o

Probably the only swimmer who could not see through or over the bandage designed to veil his eyes was Irwine, though the only reason for supposing that is that he left the main body and swam half round till he reached the hatoba. The others kept more or less straight and one or two touched the finishing line, but as many of the bandages came off in the starting dive no winner was given. The event was by no means a success.

TOURNAMENT.

FIRST ROUND.

S. H. Kuhn.	v.	A. Kingdon.
W. B. Mason.	v.	W. McMillan.

SECOND ROUND.

W. M. Carst.	v.	H. Y. Irwine.
J. H. C. Goodban.	v.	J. F. Marques.
W. B. Mason.	v.	L. Thompson.
S. H. Kuhn.	v.	F. Pollard.

A short struggle ended in Kingdon disappearing in the water, McMillan being defeated by Mason. After a stiff bout Kuhn sent Irwine off his platform and as he fell the boat was swamped so that Kuhn won easily. Marques was easily beaten by Carst as was Thompson by Goodban. Mason and Pollard furnished much cause for mirth each pushing the other into the hold of his craft. Finally Pollard lost his footing and took a plunge, whereupon Mason all but followed him, saving himself only by a wild though successful clutch at his opponent's boat.

TEAM RACE.

O. M. Poole.		L. Thompson.
S. H. Kuhn.	v.	W. M. Carst.
W. B. Mason.		F. Luther.
H. Y. Irwine.		H. Goddard.

Kuhn and Luther started for their respective sides, the latter finishing first; Thompson and Poole then went, the former increasing the lead that he had taken over. Carst and Mason went next, the latter by a dashing spurt cutting down the lead a bit but Goddard had a long spell ahead of Irwine and won easily.

TOURNAMENT.

M. Carst.	v.	S. H. Kuhn.
W. B. Mason.	v.	J. H. C. Goodban.

Carst and Kuhn went out and buffeted each other very heartily for a few minutes, but Carst eventually succeeded in "downing" his rival. Goodban beat Mason, and Carst put Goodban twice overboard and thus won the event.

GREASY POLE.

W. M. Carst	o
H. Y. Irwine	o
A. Kingdon	o
J. F. Marques	o
W. McMillan	o
F. Pollard	o

Carst seemed to get nearer the basket than any body else but the proceedings were rather summarily cut short by the escape of the duck which, after much vocal protesting, poked her head out of the basket to see what it was all about. On realising that she was the centre of attraction she fled, diving with a freedom and frequency which Mr. Seabury would probably find hard to emulate. As usual in these events she was pursued by the competitors while sampans drew

near to join in the hunt. The fugitive, however, contrived to elude all enemies and when last seen was going strong. It was very amusing, but as we remarked last year with reference to the same event we think the duck might quite humanely be dispensed with.

WATER POLO.

Red.		White.	
W. M. Carst.	} Forwards.	O. M. Poole.	} {
W. B. Mason		H. Y. Irwine.	
S. H. Kuhn.		L. Thompson.	
Half-Backs.			
H. E. Hayward,	Capt.	H. Goddard, Capt.	
A. Kingdon.	} Backs.	{ W. McMillan.	
F. J. Nutter.		{ F. Luther.	
Goal-keeper.			

The Reds scored soon after the start, upon which the Whites attacked and also scored. Owing to a fumble on the part of the goal-keeper the Whites again scored. The Reds' goal was then attacked strongly, but nothing more was done till half time. In the second half the Reds had slightly the best of the game, but no further goals were made. The Whites won by two goals to one.

OBSTACLE RACE.

W. M. Carst.	H. Y. Irwine, 2.
H. Goddard, 1.	F. Luther.
A. Kingdon.	W. B. Mason.
S. H. Kuhn.	F. J. Nutter.

Only two started, H. Goddard and H. Y. Irwine. Goddard got home while Irwine was still endeavouring to clear the obstruction, a pole lashed between two sampans.

THE IMPERIAL MINT.

We have to hand a copy of the Report for 1902 describing the working of the Imperial Mint, which in respect at any rate of the promptitude with which it places its statistics before the public sets a striking example to other Government departments. The year to which this statement refers only terminated on March 31st last, so that no time has been lost in issuing it. We extract the following:—

Gold, silver, nickel and bronze coins in six denominations struck during this financial year amounted to yen 15,900,726 and consisted of 21,354,919 pieces, showing an increase of yen 2,100,059 in value and 8,100,525 in number of pieces as compared with the coinages of the preceding year. Owing to incessant demand, gold coins were struck throughout the year, with occasional insertions of subsidiary coinage.

Besides these coinages 1,256,252 pieces of silver yen were struck during the year for the reserve fund of the Taiwan Ginko (Bank of Formosa) according to the order of the Minister of Finance of February 20th, 1902.

Compared with the last year, there was a decrease in the receipt of gold and nickel for coinage and an increase in the receipt of silver and bronze. The deposits for certification of fineness show an increase in gold and a decrease in silver.

The Assay Laboratory was busily engaged in the assays of bullion and bars for coinage and of minerals, in all of which there was a considerable increase. The Refinery was also kept fully employed, the work of premelting and parting gradually expanding year after year.

The number of medals manufactured considerably decreased in this year, yet on account of new medals which were required to be finished within a limited period of time, an unusual pressure was thrown upon the engravers.

The Machine Shop was also busily occupied with the repairing of steam engines, grinding mill, punching machines, edge compressing machines, &c.

The total amounts of bullion deposited or purchased for coinage during this financial year were; Gold, 3,208,135.26 *monme* (.900 fine); Silver, 7,563,513.55 *monme* (.800 fine); Nickel, 6,928,336.56 *monme* (.250 nickel); and Bronze, 31,534,139.00 *monme* (.950 copper).

The total amounts of bullion deposited in or purchased by the Mint from its commencement (December, 1870) up to the end of this financial year were:—Gold, 66,377,258.11 *monme* (.900 fine); Silver, 1,675,439,630.81 *monme* (.900 and .800 fine); Nickels, 223,479,484.24 *monme* (.250 nickel); Copper, 2,716,287,809.81 *monme*; and Bronze, 65,300,033.75 *monme* (.950 copper).

The coinage of this year compared with that of the last year shows an increase of 2,000,000 yen in gold, of 43 yen in silver and of 100,016 yen in bronze, making a net increase of 2,100,059 yen.

The total amount of coins paid out against

bullion deposited during the financial year was 15,949,645.55 yen.

The total amounts of refined gold and silver with certified fineness paid out against bullion deposited during this financial year were; Gold, 599.56 *monme*, Silver, 7,496,056.26 *monme*.

By order of the Minister of Finance, 1,256,252 pieces of silver yen, of the same type as the one yen silver of the old coinage system, were coined in this year, to serve as the reserve fund for bank notes issued by the Taiwan Ginko (Bank of Formosa).

The number of different medals made at the Mint during this financial year was as follows:—

Silver	30,584
Nickel	60
Copper	3,118
Brass	600

Total 34,362

Besides the above, the Mint made 420 puncheons for stamping of weights and measures for the Provincial Government of Formosa, one matrix and 8 dies for a medal, and 1,500 pieces of die hubs for the Korean Government, as well as 120 sealing stamps for the Income Tax Bureau.

The total receipts and expenditures of the Mint for this financial year, and those from its commencement up to the end of the last financial year, were as follows:—

RECEIPTS,

	Yen.
For this financial year	1,266,120.405
From the commencement of the Mint up to the end of the last financial year	72,596,627.152

Total 73,862,747.557

EXPENDITURES.

	Yen.
For this financial year	979,513.823
From the commencement of the Mint up to the end of the last financial year	53,602,667.678

Total 54,582,181.501

The following table shows the account of yearly receipts and expenditures of the Mint from its commencement up to this financial year:—

Year.	Receipts.	Expenditure.	Profits.
From commencement (December, 1870) to	Yen.	Yen.	Yen.
March, 1897	36,773,105.676	24,701,599.874	12,152,444.494

Total 73,862,747.557 54,582,181.501 19,369,075.706

The balance of receipts and expenditures does not agree with the sum of net profits since 1891-92, owing to certain alteration in financial system.

COMMERCIAL NEWS.

The money market in Osaka is reported to be exceedingly dull at present. During recent months no strong demand for funds had occurred and banking establishments are considering means for employing the money now lying idle. Bankers are said to be busy receiving deposits only. The loans advanced by the Osaka branch of the Bank of Japan up to September 13th stood at yen 1,055,000, showing a diminution of over yen 500,000 as compared with the figures of the previous Saturday. In Kobe, complaints are likewise raised by bankers owing to the accumulation of money. It is generally believed that bankers will take steps to lower the rate of interest at no distant date.

The organization meeting of the Hunan S.S. Company took place on September 13th in the building of the Bankers' Club, Nihonbashi, Tokyo. It was attended by 45 persons, including Messrs. R. Kondo, Z. Yasuda, K. Okura, S. Hayakawa and others. Mr. R. Kondo, who occupied the chair, declared the meeting open and read the report of the Company's organization, announcing that the scheme was first started on February 1st this year, that on March 15th the Government promised to grant a subsidy, and that yen 2,994.52 were spent in connection with organization. Subsequently a resolution was passed to the effect that so long as the company enjoys a State subsidy shares representing 4/5ths of the capital must be held by Japanese and that 1/5 may be owned by Chinese, no other nationals being allowed to become shareholders. The chairman then nominated the following persons to be the Board of Directors and Board

of Auditors:—Board of Directors: Messrs. Kato Seigi, Nakahashi Tokugoro, Arichi Shinanosuke, Shiroiwa Ryuhei and Tosa Kotaro. Board of Auditors: Messrs. Tanabe Tamesaburo and Otani Kahei.

The property of the proposed Yokohama Street Electric Railway has been purchased by Mr. Mori Seiyemon, on behalf of the Arima-gumi, a business corporation. The new owners contemplate starting work as soon as possible. Several days ago a sum of *yen* 15,000 was paid by Mr. Mori to the promoters of the Company as part of the whole cost of the property and the remainder is expected to be paid on September 22nd when the property will be formally transferred. The total shares of the concern are 20,000 of which 12,000 are owned by Mr. Hiranuma Nobujiro.

The *Yokohama Shimpō* says that the export from Japan of European style paper is gradually developing. The paper is largely manufactured in Kochi and Gifu Prefectures. Complaints, however, have been raised of late by exporters at Yokohama and elsewhere that the paper now put on the market is often roughly manufactured, and such practices will, in due course of time, destroy the business. The following table will show the quantity and value of paper exported during the past several years:—

	lbs.	yen.
1897	319,868	274,924
1898	401,310	394,244
1899	314,298	281,187
1901	414,883	379,652
1901	428,270	351,297

The Kei-hin (Tokyo-Yokohama) Electric Railway Company will undertake the work of extending its line from Omori Station to Shinagawa early next year, thus connecting it with the Shinagawa section of the Tokyo Electric Railway Company.

The *Fiji* reports that the Department of Agriculture and Commerce will submit to the forthcoming session of the Diet a supplementary budget of about *yen* 6,000,000, which sum the Authorities intend to spend on the Iron Foundry in Kyushu. About *yen* 500,000 will be used in opening up the Akatani iron mine in Niigata Prefecture.

Tenders were invited by the Tokyo Street Railway Company on September 15th for the supply of a quantity of rails, electric posts and accessories. The Okura Company, of Tokyo, were successful in obtaining the order. Their bid, for rails, was *yen* 79,299, and for electric posts, etc. *yen* 109,786. The goods are to be delivered by March 15th next year.

Mr. Fujishima Seiken, formerly Vice-Chief of the Industrial Bank of Japan, will leave Yokohama on October 4th by the T.K.K. steamer *America Maru* for North and South America for the purpose of investigating trade relations between those countries and Japan. He takes with him a large number of samples consisting of *habutaye*, earthen ware, Japanese paper, and other national products, all of which are entrusted to him by the Osaka Chamber of Commerce and other principal establishments.

The organization meeting of the Dai-ichi Seimi-i Hoken Sogo Kaisha (First Mutual Life Assurance Company), took place on September 15th in the building of the Bankers' Club, Tokyo. On the motion of Mr. K. Yano, Mr. Ikeda Kenzo was chosen chairman. The chairman read the report of the company's organization. Subsequently the draft of the regulations was presented and passed with slight amendments. The following persons were nominated by the chairman as the Board of Directors:—Count Yanagisawa, Messrs. Ohashi Shintaro, Yano Kota and Hamaguchi Shigenosuke. Count Yanagisawa is to be President. Among the chief officials are well-known figures in business circles.

The *Nichi Nichi* says that the number of depositors in post office saving banks throughout the country this year broke the record for the past thirty years. The deposits in 1896, however,

were the highest ever known in the past, but since then depositors diminished year by year. Below is a comparative table showing the number of depositors and the amount of deposits in September, 1896, and the corresponding month of 1902:—

	Depositors.	Amount. Yen.
1899	1,261,339	29,215,607
1902	2,561,995	28,546,867

AMERICAN TOPICS.

Advices from Washington indicate that the authorities after a careful review of the subject have come to the conclusion that the United States government has not the right to make any formal protest against the proposed Cuban loan of \$35,000,000.

In a recently published letter Thomas A. Edison declares that within thirty years nearly all railways will discard steam locomotives and adopt electric motors, and that the electric automobile will displace the horse almost entirely. In the present state of science there are no known facts by which one could predict any commercial future for aerial navigation.

In the *Spirit of Missions* for August we find Bishop McKim of Tokyo makes an appeal to the American Episcopalians for six women "as soon as we can get them. There is work waiting for that number now. Please help me in this matter. Trained women are a *sine qua non*." In the same number is an article, "Faithful unto Death," by the Rev. J. C. Ambler; and a very readable description of "A First Year in Takasaki," by Miss A. T. Wall, who arrived in Japan in October, 1899, and after serving at Aomori for a time was transferred to Takasaki.

An application was granted in August by the New York Stock Exchange to place upon its list 2,310,000,000 roubles of Russian government 4 per cent. rentes, the National City Bank of New York and the banking houses of J. P. Morgan & Co., August Belmont & Co., and Baring, Magoun & Co. presenting the matter to the exchange's authorities. This circumstance has attracted considerable attention, and naturally leads to the conclusion that the position of New York as a world market in financial affairs is becoming more widely recognized.

The United States Geological Survey has issued its annual statistical summary of the mineral products of the United States for the calendar year 1901. It shows for the entire country a grand total of \$1,092,224,380 as the value of minerals produced in 1901, as against \$1,064,408,321 in 1900. This comprises \$566,351,096 worth of non-metallic mineral products, \$524,873,284 metallic products and \$1,000,000 (estimated) of mineral products unspecified, including building sand, glass sand, iron ore used as flux in lead smelting, tin ore, nitrate of soda, carbonate of soda, sulphate of soda and alum clays used by paper manufacturers.

The Great Lakes and St. Lawrence Transportation Company have closed a contract with the American Shipbuilding Company, of Chicago, for the construction of 10 steel steamships to navigate between the upper lakes and Quebec in connection with the Company's docks and general plant at Quebec. The 10 ships are to be built and ready for operation in May, 1903, and are to cost £400,000 when completed. They are to be of uniform size, and as large as can be locked through the Welland and other Canadian canals. Their dimensions will be 257 feet length, 43 feet beam and 46 feet depth. They are to be of steel throughout, and will be equipped with triple expansion engines, Scotch boilers, and all modern appliances. They will be used chiefly for carrying cargoes to Quebec to transfer to Atlantic steamships, and are to be the nucleus of a greater fleet.

Basing his deductions on the figures issued by the U.S. Bureau of Navigation for the year ended June 30th last, a writer in the *Iron Age* holds

that the outlook for American shipbuilding during the current fiscal year is less promising than it was twelve months ago. Very few contracts for large ocean steamers have been reported, and as large steamers now on the ways are launched there is little indication of new work to take their places. A year ago 255,000 tons of ocean steel steamers were under construction or contract. Of this about 100,000 tons have been finished, so that there remains only about 160,000 tons of work on hand for the new year.

A statement just issued by the Bureau of Insular Affairs of the War Department shows a most encouraging increase in the Customs revenues at Manila for part of the year 1902. For the four months ending April 30th, the Customs revenues were \$2,894,975.03; for the same period in 1899, \$1,215,657.33; for 1900, \$1,889,234.82; and for 1901, \$2,771,303.90. It will be noted that there has been a steady increase in the collections during these periods, and that the revenues for the current year more than double those for 1899. The figures represent the Custom-House receipts expressed in U. S. currency values; the ratio for the first three years being \$2 Mexican for \$1 American; and for 1902 being \$2.10 Mexican for \$1 American for the first three months, and \$2.27 Mexican for \$1 American for the month of April.

It is a striking story of success in administration under novel conditions that is presented in the statement issued by the Bureau of Insular Affairs of the War Department regarding the stewardship in Cuba. In all a period of three years and ten months is covered by the statement. During that time the officials collected \$57,192,208.40, and they disbursed \$55,371,370.44, leaving a net surplus at the end of the occupation of about \$1,800,000. Sixteen custom houses were established and more than 300 post offices were opened. A free-delivery system was put in operation in the larger cities, and railway post lines and star routes in the interior gave the people throughout the island the advantages of a regular mail service. Schools and hospitals were established, and public works of various sorts were inaugurated with most beneficial results for the immediate future of the country. The making of roads and telegraph lines, the improvement of sanitary conditions in the cities, the betterment of harbours, the establishment of buoys and beacons, the repair and construction of warehouses and docks, and the establishment of a marine quarantine are incidents in a record than which history may be challenged to show one more commendable.

The extent of the new capacity now being provided in the United States for the production of iron and steel is probably not well appreciated. The *Iron Trade Review* shows that a very large additional capacity in blast furnace and steel plants and in various lines of finished material will be active by the middle of 1903, while some of it will help to swell production in the late months of 1902 and the early months of next year. As is well known, the programme of the United States Steel Corporation for the enlargement of its capacity in important lines is not yet made public, but it is known to involve an expenditure of tens of millions, and will furnish a volume of work that will be a distinct stimulus to iron-working and engineering trades while it is in progress. Blast furnaces now under construction in the United States, number thirty-four, with estimated annual capacity of 4,300,000 tons; blast furnaces now being remodelled and enlarged, or soon to be reconstructed, twelve; additional capacity thus provided, about 1,650 tons a day, or 600,000 tons a year; total estimated addition to blast-furnace capacity, all expected to be available before the end of 1903, 4,900,000 tons a year. Open-hearth furnaces under construction, 103, with a daily capacity of 8,900 tons and an annual capacity of about 2,700,000 tons; open-hearth furnaces planned, fifteen, with daily capacity of 1,380 tons, or about 400,000 tons annually; open-hearth furnaces building for steel foundries, twenty-one, with a daily capacity of 650 tons, or about 200,000 tons a year; total

additional open-hearth capacity available by the close of 1903, 3,300,000 tons a year. New sheet mills under erection, sixty-seven, with an annual capacity of 200,000 tons. New tinplate mills under construction by independent interests, fifty-nine, with an annual capacity of 120,000 tons. The list of miscellaneous finishing mills under construction includes five modern plate mills, with annual capacity of 500,000 tons; new tube, bar, hoop, wire and structural mills of a capacity difficult to estimate, but, judging from the capacity of connected open-hearth furnaces, probably equivalent to 1,250,000 tons of finished material a year.

EUROPEAN NEWS.

Messrs. N. M. Rothschild and Sons have given £1,000 and the Leathersellers' Company £250 towards the £100,000 required for cancer research in England. The treasurers of the Middlesex Hospital have received from an anonymous donor, per Mr. A. Pearce Gould, M.S., the sum of £100 to the fund for developing the work of the cancer research department of that hospital.

It is announced from Berne that the Buchberg, which rises from the plains of Pinth, and commands an important line of access between Lakes Zurich and Wallenstadt, is to be fortified. The *Berner Tagblatt* which gives details of the project, says there is to be a triple line of entrenchments along a front of 2,000 yards, with the necessary approaches.

The executors of the late Count Cahem d'Anvers were sued on Aug. 4th, says a Paris correspondent, to recover damages for personal injuries sustained by a cyclist who was scorching behind the count's automobile, and ran into it through the driver suddenly stopping. The count's death occurred subsequent to the accident, so the cyclist brought his action against the executors. The court decided for the defendants.

A Toulon telegram of Aug. 5th said:—During the sham fight off Hyeres the sub-marines *Gustave Zédé* and *Gymnote* were employed with much success by the blockaded fleet. They were sent out of the harbour, and, travelling at a depth of ten feet, they torpedoed three battleships, the crews of which were unaware of their presence until the torpedoes struck the vessels. The missiles were discharged at a range of 300 yards.

An interesting historic reminiscence of Westminster Abbey in the olden time is recalled by the *Jewish World*. The following extract from the Close Roll, 29, Hen. III., 1245, indicates how much in the past the Abbey has been indebted to Jews:—"The King requires money for the repairs of Westminster. He commands the justices assigned to the custody of the Jews to sell the books of the Old Testament which they happen to have in their custody, and deliver the money so accruing to the King."

Sir George White, writing on Aug. 5th to the *Aberdeen Journal*, explaining why he declined the sword of honour preferred by the Aberdeen Town Council, said:—"The last incident in my career has been closed for two and a half years. It is now rapidly merging into a matter of history, and it is better to leave it to the fuller elucidation of that calmer and wiser aftertime, when Imperial interests may be duly weighed without confusing influences of personal considerations."

Reuter states that the Emperor William has sent the following telegram from Emden to Capt. A. D. Rosenstock von Rhöneck:—"The survivors of the crew of torpedo boat S. 42 have just stood before me. I could not look upon them without thinking of the heroic devotion of your son, Lieut. Rosenstock von Rhöneck. His forethought and noble zeal for duty did not desert him in the moment of peril. To the last he stood by his ship, and thought only of saving the lives of others. May the gallant conduct of your son help you to bear your heavy loss of him, whom I, like my navy, deeply mourn. This grief is

shared, too, by the King of England and the British Navy, as you will have seen from His Majesty's telegram at the time.—(Signed) Wilhelm, I.R."

The once well-known wire-haired fox-terrier Jack St. Leger, has been run over and killed by a cart close to its owner's residence at Maldon. The dog (says the *Field*) was first shown by Mr. Harry Jones, and when twelve months old was purchased by its recent owner, Mr. A. E. Clear, for whom he won a great many prizes, and was without doubt the best dog of his breed at that time. Jack bore his years bravely, and was fresh and vigorous to the end, although well over 13 years of age when he met his untimely end.

Dr. Ernst Sellin, Professor of Evangelical Theology at Vienna, has arrived in Berlin from Palestine, where he recently unearthed a fort of King Solomon, erroneously mentioned at the time as a "temple." Perhaps his most interesting find, says the *Standard* correspondent, was a Jewish incense altar of hard clay, with engravings of the Tree of Life and a conflict between men and the serpent. Close at hand were found many images of false gods, leading Dr. Sellin to the conclusion that the altar was built by the Jews at the time of the religious decadence.

To those whom it may concern, there may be some facts of interest in the result achieved by Dr. Klein, analyst to the Local Government Board, who has been inspecting meat pies. On two occasions from an ordinary ham and beef shop he secured 8d. and 2d. pies, and he tells us that while none contained bacillus coli, coli-like microbes, or the spores of any pathogenic anaerobe, all harboured the spores of microbes which are, we trust, somewhat less formidable than their appalling names. There was isolated, however, from one of the 2d. pies a bacillus which appears, from the description given, to be definitely poisonous.

Medical science has just one note of sad interest to add to what we already know of how death came to St. Pierre de Martinique. The Paris correspondent of the *Newcastle Chronicle* states that after a careful study made on the spot, Dr. Kermorgant has convinced himself that nobody perished by fire. Death came as instantaneously as it came unawares. It is possible that the entire population of the city may have perished under a titanic electric shock—a kind of collective electrocution. He rather inclines to the view, however, that the lethal gases emerged from the crater in volumes defying human imagination, and at a temperature so high that the blood became instantly coagulated or literally scorched up in the veins.

A story comes from Breslau that two well-known German investigators of Celebes in the East Indies, have discovered real wild men and women in the district of Lamontjong. They had an interview with the Rajah, who, after some hesitation, ordered two women and a child to be shown to the travellers. They are said to belong to the oldest race of Celebes, where they live in the wooded mountains. They "plant a little maize, are monogamous, cannot count beyond one, and never lie." They are exceedingly shy. The two ethnographical authorities—Dr. Paul and Dr. Sarasin—are shortly returning to see the Rajah and obtain his permission to take a pair of these wild people to Europe.

All military authorities on the Continent are of one mind, says the *United Service Gazette*, as to the immense advantage which will accrue to the Power which, at the outset of a war, can most quickly place in the field a superior force of efficient mounted troops. One result of this belief is the extreme care with which each of the great military Powers of the Continent watches the strength and distribution of the cavalry of its neighbours. At the present moment some disquietude exists in the Triple Alliance, because the cavalry of the Double Alliance has become superior, numerically, to their own. In the event of war France could place in the field 327 squadrons and Russia 711; or the two allies together

1,038 squadrons; while the Triple Alliance could only muster 746 squadrons, or 292 squadrons less than the Double Alliance.

M. Wolgraf, of the French Archæological School of Alexandria, who has been conducting excavations on the site of ancient Argos, has presented a highly interesting report of his discoveries. These, says the *Bourse Egyptienne* of Cairo, include the foundations of three different citadels or acropolises, of three successive periods, the pre-Mycenean, the Mycenean, and the Greek, the whole forming three concentric circles. Many details of deep interest are given. Besides remains of primitive palaces and tombs, what are believed to have been the "immortal Springs of Agamemnon," mentioned by Strabo, have been brought to light.

It is a rather singular fact, says *Health*, that the most precious gems are composed of the most common substances. The diamond is the purest form of carbon, and is identical in composition with ordinary charcoal without the impurities of the latter. The ruby, on the other hand, is nearly pure alumina, a substance found in profusion in every clay bank. The scientific name for crystallised alumina is corundum, and the gems comprehended under this designation are sometimes more valuable than diamonds of the same weight. The ruby, the sapphire, the Oriental emerald, topaz, amethyst, aquamarina, chrysolite, and other precious stones are all alumina, the varieties of colour being caused by inappreciable quantities of metallic oxides.

The *Berliner Tageblatt* of July 24th said it learned from Vienna an important detail concerning the recently renewed Triple Alliance. It is said that a very important clause was omitted from the Treaty of Alliance at the request of Italy. In the Treaty which has just expired Italy pledged itself not only to send an Italian contingent of troops over the Tyrol and to the Rhine for the purpose of strengthening the German Army, but also to send an Army Corps across Hungary to the Lower Danube, with the object of uniting its forces with the Roumanian Army and with the Austrian troops in Transylvania, when the King of Roumania would command the operations against Russia. This stipulation does not figure in the latest treaty drawn up for the Triple Alliance.

Some interesting gunnery experiments were carried out off Portsmouth on July 24th, in the presence of the Lords of the Admiralty and the naval authorities, by a party from the *Excellent* on board the gunboats *Kite* and *Pincher*. The *Belleisle* was used as a target. In the conning tower were placed ammunition hoists, &c., the object being to ascertain what effect shell fire would have upon these fittings under certain conditions. On the port side of the ship torpedo nets were placed to ascertain what effect lyddite shell would have when striking the nets. Four rounds from a 9.2 and four from a 6 in. gun were fired. At the conclusion of the firing the parts of the *Belleisle* hit were covered with canvas in order to prevent unofficial eyes seeing the effect of the experiments. The *Belleisle* was then towed back to the Dockyard. More gunnery experiments are to be made, and then the *Belleisle* will be torpedoed.

The German Government, says a London paper, has approached the British Government with the view of getting co-operation in the observation of earthquakes, records to be obtained from stations situated in different parts of the globe. Mr. Davison, of Birmingham, and Professor Milne, of the Isle of Wight, have already done a good deal in making such seismological investigations. The British Government referred the matter to the committee of the Royal Society, whose advice is withheld until the matter has been laid before the International Academy of Sciences, pointing out that since 1897, with the assistance of the British Government, Professor Milne already enjoys co-operation from 36 colonies and foreign countries. It would appear, therefore, that what the German Government now, perhaps unwittingly, is asking for is already

almost an accomplished fact, and only requires further co-operation by various Governments to make complete.

Mr. Joseph Hatton, in his "Cigarette Papers," in *The People*, tells an amusing story of an American lady's visit to the Kaiser, whom she pronounces "the brightest, and, I think, the smartest and most accomplished man I ever met, and, to use what you English call an Americanism, 'just sweet!'" He talked in English, and I wish I could speak my own tongue half as correctly; it's one thing to speak a language, and another to jest in it, and the Emperor was as ready in that way as my husband himself." "What little jest of His Majesty's do you remember best, may I ask?" "The one that took my husband's fancy most—and made Mr. Morgan smile—had reference to our ocean trip. His Majesty asked me how I liked the German Ocean. I said I didn't like any ocean particularly, and the German Ocean had been very rough. 'Sorry,' said the Emperor; 'the next time you come I will pour oil on the waters—Standard Oil.'"

The *London Daily Chronicle* wrote last month:—We can hardly envy or pity very much the lady who appeared at a recent reception in a gorgeous gown looted from the Imperial Palace at Peking, and later in the evening found herself face to face with the Chinese Ambassador. He, for the moment, apparently thought some lady of the Royal Family of China had suddenly appeared in a London drawing-room, for the material of the gown had never before been worn by any but Chinese Royalty. Not even official reserve, added to the natural inscrutability of his race, could conceal his agitation in meeting an English lady thus arrayed. She fortunately had the tact to leave the reception immediately, and thus relieve the embarrassment somewhat; but the incident will not soon be forgotten by those who witnessed it.

One of the probable results of the experiments which were carried out against the old armoured *Belleisle* off Bembidge the other day is that the system of crinoline protection by means of heavy steel nets which has been adopted against torpedo attack will be discontinued. Except when lying at anchor, no ship could possibly use these nets, as they would either considerably hamper the speed of the vessel under way or carry away and become entangled with her propellers, and thus absolutely cripple the ship. Much about the same kind of thing is likely to happen if ships go into action with their nets and outrigger booms stowed in their places. The nets are certain to be struck by an enemy's shell and knocked into ribbons, and so rendered useless. But if this were all it would not matter so much. It would also probably be found that their fastenings would be shot away, and the nets themselves would then be cast loose and foul the propellers.

A Kiel telegram of Aug. 3rd said:—Striking results have just been obtained by the German battleships in the firing competition held in the Strand Bay, near Kiel. The German Emperor watched the firing from the bridge of the *Kaiser Friedrich III.*, in a fresh breeze from the north-west. The *Kaiser Friedrich III.* opened the firing with her 15 cent. quick-firing guns on a floating target, towed by the cruiser *Hela*. Hitherto five to six shots a minute, with four to five hits, have been held to be a good record for each gun. But the *Kaiser Friedrich III.* fired eight shots a minute, and all were hits. Then the two ships steamed away from each other at full speed, while the battleship opened fire with her 24 cent. guns, her 8.8 cent. quick-firing guns, and with her machine-guns. The results were almost equally satisfactory, as there were only isolated misses, and the target was very soon knocked to pieces; a second target was then brought up, and also at once destroyed. The *Kaiser Wilhelm II.* will fire on August 19, and the winner of the Kaiser's Prinz will not be settled until the fleet manoeuvres are at an end.

Mr. Rudyard Kipling on August 2nd opened at Lower Sydenham a covered rifle range constructed by Dr. Jaeger's Sanitary Woollen System (Limited) for the use of their employees.

At the opening ceremony Mr. Kipling assured his listeners that a man can go from the Morris tube to an outdoor range and make a three-fourths or three-fifths score at once. The man who begins with the Morris tube does much better at the butts than the man who begins at the open range. "We are standing," said Mr. Kipling, "at the beginning of a very large movement, the end of which no man can foresee, the force of which no man can limit. It is your game so to use the privileges granted to you in the shape of small ranges that when, in response to public opinion, larger facilities are granted, you will be able to play the game and shoot on a larger scale more often and better year by year. We will hope that the next time the nations of the earth see fit to love us with that love which found such perfect expression during the last thirty months, we, on our side, may not be found wholly ignorant of one or two of those less spiritual accomplishments which, if they don't secure affection, at least command respect."

NEWS OF THE WEEK.

Owing to the excessive rainfall in England, potato disease is spreading in the home-land.

A case of cholera is reported at Gochome, Kaigan-dori, Yokohama, where a male inmate of the house of Mr. Kondo Wasuke was attacked by the epidemic on September 15th.

A Chinese living at No. 136, Yamashitacho, Yokohama, was arrested on September 16th by the Kagacho Police on a charge of having smoked opium in his house. He was sent to the Yokohama Chiho Saibansho for trial.

The Belgian Consulate at Yokohama has been raised to the rank of a Consulate-General and Mr. Pierre Bure has been promoted Consul-General. He received his exequatur from the Emperor on Friday. We extend our hearty congratulations.

The *Jiji* states that the negotiations for a loan between the Tokyo Gas Company and an American capitalist, which were suspended for some reason or other, will be re-opened when Baron Shibusawa returns home. A representative of the American capitalist, who lately returned to America, is expected to return to Tokyo shortly.

The Empress visited the 17th competitive carving exhibition, now open in Uyeno Park, on the morning of September 16th. Her Majesty purchased exhibits amounting to over yen 1,000. At noon, she took tiffin in the exhibition building. In the afternoon she visited the Zoological Garden and returned to the Palace shortly after 4 o'clock.

While travelling by train from Karuizawa to Uyeno on September 14th, Mr. Thomas Lord, instructor in the Tokyo Higher Technical School, was robbed of a gold watch and other articles, valued at about yen 650. The matter was at once reported to the Shitaya Police Station. On the 16th a parcel containing the articles was received by the Police and the property was at once returned to the owner.

The rate on beans between Newchwang and Yokohama was lately raised from 11 to 17 sen per ton by the shipping companies, whose steamers ply between those ports. This was due, says a Japanese paper, to the anticipation that as a result of the conclusion of the new treaties with China the number of vessels in the trade will be greatly reduced in the future.

Two of the three *sendo* who assaulted and injured two French blue-jackets in Yokohama harbour several days ago, were sentenced by the Yokohama Chiho Saibansho on September 13th to nine months' major imprisonment each and six months' police surveillance. The other was acquitted. The prisoners are Takagi Fukumatsu and Tsuruki Raikichi.

An official message from Nagasaki Prefecture dated September 16th and received by the Home Office says that on the morning of that day about

500 villages in Nishikizuki district rose and attacked the police station, injuring policemen and tearing off officers' uniforms and sabres. Many arrests were subsequently made. The affair was due to the fact that the people became dissatisfied at the conduct of members of the village council in connection with the work of repairing the port at Nobo.

There is a story current at Kuliang (says the *Foochow Echo*) about a tiger in some other part of the province giving trouble. It is said that a couple of missionaries, a man and his wife, had been worried by a tiger prowling nightly around their home, and they were determined to get rid of it. To this end they, one night, tied a cow up in the backyard and a dog in the front of the house, then they armed themselves with guns and kept watch. The tiger appeared, the missionary fired and killed the cow. The wife rushed to see what had happened and in her absence the tiger ate the dog.

The Customs Authorities announce, says the vernacular press, that the usual bills of lading to be presented to the Customs by exporters, both foreign and Japanese, whenever goods are to be shipped must be written in such a manner as to clearly distinguish the quality of goods and not to involve different kinds of articles under one designation as is the case at present. The new measure came into force on September 15th. This step is considered necessary by the Authorities to facilitate the compilation of statistics. It is further stated that in case of the order not being acquiesced in the goods will be unpacked and examined by tide-waiters.

With the advent of the shooting season, which commences a few weeks hence, it may be interesting to mention the prospects for the coming autumn. From information received by a Japanese paper from various districts we gather that pheasants, with their broods, have been seen feeding in large numbers on farms and in the woods of Koshu and Shinshu. The forests round about the foot of Mount Fuji have already been visited by quail and snipe. Pheasants and other game birds have also been found abundantly near Hachioji, Inba-mura in Chiba Prefecture and Abiko in Ibaraki Prefecture. It may not be amiss to state in this connection that the united shooting meeting of sportsmen of Tokyo, Yokohama and other places will be held at the Tsurumi Range, near Tsurumi Station, on September 21st. Availing themselves of this opportunity a special meeting of sportsmen is expected to take place on the occasion with a view to putting an end to the pending dispute between the sportsmen of Yokohama and Tokyo.

The Superintendent of Telegraphs at Sandakan (British North Borneo) is said to have recently received the following service message from an operator at Lamag:—

From Operator Lall to Superintendent.—13th. A missing man in a fishing hook 2 days ago a native of Thedok put a rawi or a string across the river with many hooks weighing the string with heavy stones under water. The same evening the said native came to see fishing hooks taking the heavy rawi or string on a small boat however one of the hooks pierced through his right hand and the heavy string gave out from the boat bringing the native under water. Next morning another native went out to find out his missing relation and the hooks as well, whilst looking at the string found it so heavy that he hardly rejoiced of having such a big fish in the hooks and when he drawn up the string with mighty pull found his missing relation in one of the hooks, sadly disappointed and ensued weeping, now the body is packed in an airtight coffin in a dwelling where a dozen natives staying in anitating premises with abominable stench.

Telegraphing on Aug. 22nd an Ottawa correspondent said:—The anti-Japanese legislation of the British Columbia legislature of last session will be disallowed in the near future. The Japanese Government is quite indignant at the uncompromising attitude of the legislators of the Pacific province. Mr. Nosse, Japanese Consul-general for Canada, has been instructed by Baron Komura, Minister of Foreign Affairs, to protest most vigorously against the action of British

Columbia, and appeal to the Canadian Government to have these laws disallowed at an early date. It is pointed out that the Japanese are practically debarred from the enjoyment of rights and privileges granted to all other aliens in the province. It is argued also that the Immigration Law recently enacted is not only disadvantageous to Japanese subjects, but is contrary to the Canadian constitution. The Japanese Government say they are extremely surprised at such action being taken in view of the severe restrictions imposed by them since 1900 upon emigration of their people to Canada.

A report of the Military Supply Office, specially opened on the occasion of the Boxer trouble in 1900 has just been published. From it we learn that the money subscribed by private persons throughout the country in connection with the Peking expedition totalled *yen* 73,413 and the articles presented amounted in value to *yen* 35,995. Of the above sum, *yen* 56,487 were spent in purchasing articles necessary to soldiers at the front, and the remainder were sent to the front in two installments. They consisted mainly of *sake*, cigarettes, handkerchiefs, etc. Tokyo stands at the head of the list in cash subscriptions, *yen* 17,000, and is followed by Kyoto with over *yen* 7,000, by Yamaguchi Prefecture with over *yen* 4,000 and then by Hokkaido, Osaka, Kanagawa, Hyogo, Tochigi and Shiga Prefectures with over *yen* 3,000 each. Aomori and Miyazaki Prefectures totalled 79 and 93 *yen* respectively. Among foreign subscribers were Germans, French, Americans, and Austrians, and over *yen* 1,000 were donated by Germans.

THE CURRENCY IN KOREA.

An interesting report has just been issued by the British Foreign Office on the trade of Korea for the year 1901, by Mr. H. Coffe, Acting British Vice-Consul at Chemulpo. It states that the chief difficulty with which foreign trade has to contend is the disastrous condition of the currency throughout the Empire. The Korean Government, in defiance of the first principles of sound finance, is flooding the country with a nickel coinage whose intrinsic value is only one-eighteenth of its face value, without any gold or silver reserve with which to redeem it. As a natural consequence these coins, which under proper conditions should be merely tokens, are at a continually increasing rate of discount as against Japanese gold yen, the recognised basis for calculation of prices where foreign articles are concerned.

Hitherto the circulation of nickel pieces has been confined to the capital and the neighbourhood of two or three of the Treaty ports, the old cash being current elsewhere in the country; but recently, with a view to making their use general, the magistrates throughout the Empire have been ordered to accept payment of the land tax in this currency only. The face value of these coins is 5 sen, and they now stand at a discount of 90 per cent., as against Japanese gold yen. The wages of Korean labourers and employes generally are paid in this currency, and this class, which comprise the bulk of the nation, are no better paid now than they formerly were; consequently the purchasing power of their earnings, as far as foreign goods is concerned, is little more than half what it was a few years ago. And, unfortunately, there does not seem any prospect of these conditions being improved in the near future. The Government caring only for the profit which they are making out of this transaction, and ignoring the permanent harm they are doing to the country, are bent upon continuing their present reckless course and 40,000,000 more of these coins, contracted for with an American firm, are now almost due for delivery. The issue of these will bring the total face value of this coinage in circulation up to 14,000,000 *yen*, or more than £1,400,000.

But even this is not the worst feature. The number of counterfeit nickels is rapidly increasing; permits to coin are freely issued by the Government to private individuals; nickel is openly imported through the Customs, and spurious coins in large quantities are brought by

almost every steamer from Japan and smuggled into the country. The Commissioner of Customs at Chemulpo in his annual report writes as follows:—"The \$95,000 worth of nickel against \$42,000 in 1900 have, it is feared, been entirely employed in manufacturing counterfeit nickel coins." The fact that in Chemulpo quotations are current for (1) Government nickels; (2) first-class counterfeits; (3) medium counterfeits; and (4) those passable only after dark—will show what a condition affairs have reached.

This currency question is of vital importance to foreign merchants, and is engaging the earnest attention of the foreign representatives. Japanese silver yen, the supply of which seemed to be exhausted in 1900, have again appeared in large quantities, most of them having come from the interior where they were hoarded by the natives. They are now at a discount of 13 per cent. as against gold yen. The largest of the copper cash continue to be exported to Japan, where they are melted down for the value of the copper they contain. No progress has been made by the Korean Government with their projected subsidiary silver coinage, although silver to the value of some £85,000 has been imported by the Imperial Mint for this purpose.

BRITISH COMMERCIAL TREATY WITH CHINA.

The following is the correct version of the above treaty, with Annexes, which was signed at Shanghai on Friday, the 5th September:—

His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India, and His Majesty the Emperor of China, having resolved to enter into negotiations with a view to carrying out the provision contained in Article XI. of the Final Protocol signed at Peking on the 7th of September, 1901, under which the Chinese Government agreed to negotiate the amendments deemed useful by the Foreign Governments to the Treaties of Commerce and Navigation and other subjects concerning commercial relations with the object of facilitating them, have for that purpose named as their Plenipotentiaries, that is to say:—

His Majesty the King of Great Britain and Ireland, His Majesty's Special Commissioner, Sir James Lyle Mackay, Knight Commander of the Most Eminent Order of the Indian Empire, a member of the Council of the Secretary of State for India, etc.

And His Majesty the Emperor of China, the Imperial Commissioners Lü Hai-huan, President of the Board of Public Works, etc., and Shêng Hsüan-huai, Junior Guardian of the Heir Apparent, Senior Vice President of the Board of Public Works, etc.

Who having communicated to each other their respective Full Powers, and found them to be in good and due form have agreed upon and concluded the following Articles:—

Art. I.—Delay having occurred in the past in the issue of Drawback Certificates owing to the fact that those documents have to be dealt with by the Superintendent of Customs at a distance from the Customs Office, it is now agreed that Drawback Certificates shall hereafter in all cases be issued by the Imperial Maritime Customs within three weeks of the presentation to the Customs of the papers entitling the applicant to receive such Drawback Certificates.

These Certificates shall be valid tender to the Customs Authorities in payment of any duty upon goods imported or exported (transit dues excepted), or shall, in the case of Drawbacks on foreign goods re-exported abroad within three years from the date of importation, be payable in cash without deduction by the Customs Bank at the place where the import duty was paid.

But if, in connexion with any application for a Drawback Certificate, the Customs Authorities discover an attempt to defraud the revenue, the applicant shall be liable to a fine not exceeding five times the amount of the duty whereof he attempted to defraud the Customs, or to a confiscation of the goods.

Art. II.—China agrees to take the necessary steps to provide for a uniform national coinage which shall be legal tender in payment of all duties, taxes and other obligations throughout the Empire by British as well as Chinese subjects.

Art. III.—China agrees that the duties and *likin* combined levied on goods carried by junks from Hongkong to the Treaty Ports in the Canton Province and *vice versa*, shall together not be less than the duties charged by the Imperial Maritime Customs on similar goods carried by steamer.

Art. IV.—Whereas questions have arisen in the

past concerning the right of Chinese subjects to invest money in non-Chinese enterprises and companies, and whereas it is a matter of common knowledge that large sums of Chinese capital are so invested, China hereby agrees to recognise the legality of all such investments past, present and future.

It being, moreover, of the utmost importance that all shareholders in a Joint Stock Company should stand on a footing of perfect equality as far as mutual obligations are concerned, China further agrees that Chinese subjects who have or may become shareholders in any British Joint Stock Company shall be held to have accepted, by the very act of becoming shareholders, the Charter of Incorporation or Memorandum and Articles of Association of such Company and regulations framed thereunder as interpreted by British Courts, and that Chinese Courts shall enforce compliance therewith by such Chinese shareholders, if a suit to that effect be entered, provided always that their liability shall not be other or greater than that of British shareholders in the same Company.

Similarly the British Government agree that British subjects investing in Chinese Companies shall be under the same obligations as the Chinese shareholders in such companies.

The foregoing shall not apply to cases which have already been before the Courts and been dismissed.

Art. V.—The Chinese Government undertake to remove within the next two years the artificial obstructions to navigation in the Canton River. The Chinese Government also agree to improve the accommodation for shipping in the harbour of Canton and to take the necessary steps to maintain that improvement, such work to be carried out by the Imperial Maritime Customs and the cost thereof to be defrayed by a tax on goods landed and shipped by British and Chinese alike according to a scale to be arranged between the merchants and Customs.

The Chinese Government are aware of the desirability of improving the navigability by steamer of the waterway between Ichang and Chungking, but are also fully aware that such improvement might involve heavy expense and would affect the interests of the population of the provinces of Szechuen, Hunan, and Hupeh. It is, therefore, mutually agreed that until improvements can be carried out steamship owners shall be allowed, subject to approval by the Imperial Maritime Customs, to erect, at their own expense, appliances for hauling through the rapids. Such appliances shall be at the disposal of all vessels, both steamers and junks, subject to regulations to be drawn up by the Imperial Maritime Customs. These appliances shall not obstruct the waterway or interfere with the free passage of junks. Signal stations and channel marks where and when necessary shall be erected by the Imperial Maritime Customs. Should any practical scheme be presented for improving the waterway and assisting navigation without injury to the local population or cost to the Chinese Government, it shall be considered by the latter in a friendly spirit.

Art. VI.—The Chinese Government agree to make arrangements to give increased facilities at the open ports for bonding and for repacking merchandise in bond, and, on official representation being made by the British Authorities, to grant the privileges of a bonded warehouse to any warehouse which it is established to the satisfaction of the Customs Authorities affords the necessary security to the revenue.

Such warehouses will be subject to regulations, including a scale of fees according to commodities, distance from Custom House and hours of working, to be drawn up by the Customs Authorities who will meet the convenience of merchants so far as is compatible with the protection of the revenue.

Art. VII.—Inasmuch as the British Government afford protection to Chinese trademarks against infringement, imitation, or colourable imitation by British subjects, the Chinese Government undertake to afford protection to British trademarks against infringement, imitation, or colourable imitation by Chinese subjects.

The Chinese Government further undertake that the Superintendents of Northern and of Southern trade shall establish offices within their respective jurisdictions under control of the Imperial Maritime Customs where foreign trademarks may be registered on payment of a reasonable fee.

Art. VIII.—Preamble.—The Chinese Government, recognising that the system of levying *likin* and other dues on goods at the place of production, in transit, and at destination, impedes the free circulation of commodities and injures the interests of trade, hereby undertake to discard completely those means of raising revenue with the limitation mentioned in Section 8.

The British Government, in return, consent to allow a surtax in excess of the Tariff rates for the time being in force to be imposed on foreign goods imported by British subjects and a surtax in addition to the export duty on Chinese produce destined for export abroad or coastwise.

It is clearly understood that, after *likin* barriers and other stations for taxing goods in transit have

been removed, no attempt shall be made to revive them in any form or under any pretext whatsoever; that in no case shall the surtax on foreign imports exceed the equivalent of one and a half times the import duty leviable in terms of the Final Protocol signed by China and the Powers on the 7th day of September, 1901; that payment of the import duty and surtax shall secure for foreign imports, whether in the hands of Chinese or non-Chinese subjects, in original packages or otherwise, complete immunity from all other taxation, examination or delay; that the total amount of taxation leviable on native produce for export abroad shall, under no circumstances, exceed $7\frac{1}{2}$ per cent. *ad valorem*.

Keeping these fundamental principles steadily in view, the High Contracting Parties have agreed upon the following methods of procedure.

Section 1.—The Chinese Government undertake that all barriers of whatsoever kinds, collecting *likin* or such like dues or duties, shall be permanently abolished on all roads, railways, and waterways in the Eighteen Provinces of China and the Three Eastern Provinces. This provision does not apply to the Native Custom Houses at present in existence on the seaboard or waterways, at Open Ports, on land routes, and on land frontiers of China.

Section 2.—The British Government agree that foreign goods on importation, in addition to the effective 5% import duty as provided for in the Protocol of 1901, shall pay a special surtax equivalent to one and a half times the said duty to compensate for the abolition of *likin*, of transit dues in lieu of *likin*, and of all other taxation on foreign goods, and in consideration of the other reforms provided for in this Article; but this provision shall not impair the right of China to tax salt, native opium, and native produce as provided for in Sections 3, 5, 6 and 8.

The same amount of surtax shall be levied on goods imported into the Eighteen Provinces of China and the Three Eastern Provinces across the land frontiers as on goods entering China by sea.

Section 3.—All Native Custom Houses now existing, whether at the Open Ports, on the seaboard, or rivers, inland waterways, land routes or land frontiers, as enumerated in the *Hu Pu and King Pu Tse Li* (Regulations of the Boards of Revenue and Works) and *Ta Ching Hui Tien* (Dynastic Institutes), may remain; a list of the same, with their location, shall be furnished to the British Government for purposes of record.

Wherever there are Imperial Maritime Custom Houses, or wherever such may be hereafter placed, Native Custom Houses may be also established; as well as at any points either on the seaboard or land frontiers.

The location of Native Custom Houses in the Interior may be changed as the circumstances of trade seem to require, but any change must be communicated to the British Government, so that the list may be corrected; the originally stated number of them shall not, however, be exceeded.

Goods carried by junks or sailing-vessels trading to or from Open Ports shall not pay lower duties than the combined duties and surtax on similar cargo carried by steamers.

Native produce, when transported from one place to another in the Interior, shall, on arrival at the first Native Custom House after leaving the place of production, pay duty equivalent to the export surtax mentioned in Section 7.

When this duty has been paid, a certificate shall be given which shall describe the nature of the goods, weight, number of packages, etc., amount of duty paid, and intended destination. This certificate, which shall be valid for a fixed period of not less than one year from date of payment of duty, shall free the goods from all taxation, examination, delay, or stoppage at any other Native Custom Houses passed *en route*.

If the goods are taken to a place not in the foreign settlements or concessions of an Open Port, for local use, they become there liable to the Consumption Tax described in Section 8.

If the goods are shipped from an Open Port, the certificate is to be accepted by the Custom House concerned, in lieu of the Export Surtax mentioned in Section 7.

Junks, boats, or carts shall not be subjected to any taxation beyond a small and reasonable charge, paid periodically at a fixed annual rate. This does not exclude the right to levy, as at present tonnage (Chuan Chao) and port dues (Chuan Liao) on junks.

Section 4.—Foreign opium duty and present *likin*—which latter will now become a surtax in lieu of *likin*—shall remain as provided for the existing treaties.

Section 5.—The British Government have no intention whatever of interfering with China's right to tax native opium, but it is essential to declare, that in her arrangements for levying such taxation, China will not subject other goods to taxation, delay, or stoppage.

China is free to retain at important points on the borders of each province—either on land or water—offices for collecting duty on native opium, where

duties or contributions leviable shall be paid in one lump sum; which payment shall cover taxation of all kinds within that province. Each take of opium will have a stamp affixed as evidence of duty payment. Excise officers and police may be employed in connection with these offices; but no barriers or other obstructions are to be erected, and the excise officers or police of these offices shall not stop or molest any other kinds of goods, or collect taxes thereon.

A list of these offices shall be drawn up and communicated to the British Government for record.

Section 6.—*Likin* on salt is hereby abolished and the amount of said *likin* and of other taxes and contributions shall be added to the salt duty, which shall be collected at place of production or at first station after entering the province where it is to be consumed.

The Chinese Government shall be at liberty to establish salt reporting offices at which boats conveying salt which is being moved under salt passes or certificates may be required to stop for purposes of examination and to have their certificates *revised*, but at such offices no *likin* or transit taxation shall be levied and no barriers or obstructions of any kind shall be erected.

Section 7.—The Chinese Government may recast the Export Tariff with specific duties as far as practicable, on a scale not exceeding five per cent. *ad valorem*; but existing export duties shall not be raised until at least six months' notice has been given.

In cases where existing export duties are above five per cent. they shall be reduced to not more than that rate.

An additional special surtax of one half the export duty payable for the time being, in lieu of internal taxation and *likin*, may be levied at time of export either to foreign countries or coastwise.

In the case of silk, whether hand or filature reeled, the total export duty shall not exceed a specific rate equivalent to not more than five per cent. *ad valorem*. Half of this specific duty may be levied at the first Native Custom House in the interior which the silk may pass; in any such case a certificate shall be given as provided for in section 3 and will be accepted by the Custom House concerned at place of export in lieu of half the export duty. Cocoons passing Native Custom Houses shall be liable to no taxation whatever. Silk not exported but consumed in China is liable to the consumption tax mentioned and under conditions mentioned in section 8.

Section 8.—The abolition of the *likin* system in China and the abandonment of all other kinds of internal taxation on foreign imports and on exports will diminish the revenue materially. The surtax on foreign imports and exports and on coastwise exports is intended to compensate in a measure for this loss of revenue, but there remains the loss of *likin* revenue on internal trade to be met, and it is therefore agreed that the Chinese Government are at liberty to impose a Consumption Tax on articles of Chinese origin not intended for export.

This tax shall be levied only at places of consumption and not on goods while in transit, and the Chinese Government solemnly undertake that the arrangements which they may make for its collection shall in no way interfere with foreign goods or with native goods for export. The fact of goods being of foreign origin shall of itself free them from all taxation, delay, or stoppage, after having passed the Custom House.

Foreign goods which bear a similarity to native goods shall be furnished by the Custom House, if required by the owner, with a protective certificate for each package, on payment of import duty and surtax, to prevent the risk of any dispute in the Interior.

Native goods brought by junks to Open Ports, if intended for local consumption—irrespective of the nationality of the owner of the goods—shall be reported at the Native Custom House only, where the consumption tax may be levied.

China is at liberty to fix the amount of this (consumption) tax, which may vary according to the nature of the merchandise concerned, that is to say, according as the articles are necessities of life or luxuries; but it shall be levied at a uniform rate on goods of the same description, no matter whether carried by junk, sailing-vessel, or steamer. As mentioned in Section 3, the Consumption Tax is not to be levied within foreign settlements or concessions.

Section 9.—An excise equivalent to double the import duty as laid down in the Protocol of 1901 is to be charged on all machine-made yarn and cloth manufactured in China, whether by foreigners at the Open Ports or by Chinese anywhere in China.

A rebate of the import duty and two-thirds of the Import Surtax is to be given on raw cotton imported from foreign countries, and of all duties, including Consumption Tax, paid on Chinese raw cotton used in mills in China.

Chinese machine-made yarn or cloth having paid excise is to be free of Export Duty, Export Surtax, Coast Trade Duty, and Consumption Tax. This

Excise is to be collected through the Imperial Maritime Customs.

The same principle and procedure are to be applied to all other products of foreign type turned out by machinery, whether by foreigners at the Open Ports or by Chinese anywhere in China.

This stipulation is not to apply to the outturn of the Hanyang and Ta Yeh Iron Works in Hupeh and other similar existing Government works at present, exempt from taxation; or to that of Armaments, Government Dockyards, or establishments of that nature for Government purposes which may hereafter be erected.

Section 10.—A member or members of the Imperial Maritime Customs Foreign Staff shall be selected by each of the Governors-General and Governors, and appointed, in consultation with the Inspector-General of Imperial Maritime Customs to each province for duty in connection with Native Customs affairs, Consumption Tax, Salt and Native Opium Taxes. These officers shall exercise an efficient supervision of the working of these departments and in the event of their reporting any case of abuse, illegal exaction, obstruction to the movement of goods, or other cause of complaint, the Governor-General or Governor concerned will take immediate steps to put an end to same.

Section 11.—Cases where illegal action as described in this Article is complained of shall be promptly investigated by an officer of the Chinese Government of sufficiently high rank, in conjunction with a British officer and an officer of the Imperial Maritime Customs, each of sufficient standing; and in the event of its being found by a majority of the investigating officers that the complaint is well founded and loss has been incurred, due compensation is to be at once paid from the Surtax funds, through the Imperial Maritime Customs at nearest open port. The High Provincial Officials are to be held responsible that the officer guilty of the illegal action shall be severely punished and removed from his post.

If the complaint turns out to be without foundation, complainant shall be held responsible for the expenses of the investigation.

His Britannic Majesty's Minister will have the right to demand investigation where from the evidence before him he is satisfied that illegal exactions or obstructions have occurred.

Section 12.—The Chinese Government agree to open to foreign trade, on the same footing as the places opened to foreign trade by the Treaties of Nanking and Tientsin, the following places, namely:—

Ch'angsha in Hunan;
Wanhien in Szechuen;
Nanking in Anhui;
Waichow (Hui-chow) in Kuangtung; and
Kongmoon (Chiang-men) in Kuangtung.

Foreigners residing in these Open Ports are to observe the Municipal and Police Regulations on the same footing as Chinese residents, and they are not to be entitled to establish Municipalities and Police of their own within the limits of these Treaty Ports except with the consent of the Chinese authorities.

If this Article does not come into operation the right to demand under it the opening of these ports, with the exception of Kongmoon, which is provided for in Article 10, shall lapse.

Section 13.—Subject to the provisions of Section 14, the arrangements provided for in this Article are to come into force on 1st January, 1904.

By that date all *likin* barriers shall be removed and officials employed in the collection of taxes and dues prohibited by this Article shall be removed from their posts.

Section 14.—The condition on which the Chinese Government enter into the present engagement is that all Powers entitled to most favoured nation treatment in China enter into the same engagements as Great Britain with regard to the payment of surtaxes and other obligations imposed by this Article on His Britannic Majesty's Government and subjects.

The conditions on which His Britannic Majesty's Government enter into the present engagement are:—

1. That all Powers who are now or who may hereafter become entitled to most favoured nation treatment in China enter into the same engagements;

2. And that their assent is neither directly nor indirectly made dependent on the granting by China of any political concession, or of any exclusive commercial concession.

Section 15.—Should the Powers entitled to most favoured nation treatment by China have failed to agree to enter into the engagements undertaken by Great Britain under this Article by the 1st January, 1904, then the provisions of the Article shall only come into force when all the Powers have signified their acceptance of these engagements.

Section 16.—When the abolition of *likin* and other forms of internal taxation on goods as provided for in this Article has been decided upon and sanctioned, an Imperial Edict shall be published in due form on

yellow paper and circulated, setting forth the abolition of all *likin* taxation, *likin* barriers and all descriptions of internal taxation on goods, except as provided for in this Article.

The Edict shall state that the Provincial High Officials are responsible that any official disregarding the letter or spirit of its injunction shall be severely punished and removed from his post.

Article IX.—The Chinese Government, recognising that it is advantageous for the country to develop its mineral resources, and that it is desirable to attract foreign as well as Chinese capital to embark in mining enterprises, agree within one year from the signing of this Treaty to initiate and conclude the revision of the existing Mining Regulations. China will, with all expedition and earnestness, go into the whole question of Mining Rules and, selecting from the rules of Great Britain, India, and other countries, regulations which seem applicable to the condition of China, she will recast her present Mining Rules in such a way as, while promoting the interests of Chinese subjects and not injuring in any way the sovereign rights of China, shall offer no impediment to the attraction of foreign capital or place foreign capitalists at a greater disadvantage than they would be under generally accepted foreign regulations.

Any mining concession granted after the publication of these new Rules shall be subject to their provisions.

Art. X.—Whereas in the year 1898 the Inland Waters of China were opened to all such steam vessels, native or foreign, as might be especially registered for that trade at the Treaty Ports, and whereas the Regulations dated 28th July, 1898, and Supplementary Rules dated September, 1898, have been found in some respects inconvenient in working, it is now mutually agreed to amend them and to annex such new Rules to this Treaty. These Rules shall remain in force until altered by mutual consent.

It is further agreed that Kongmoon shall be opened as a Treaty Port, and that, in addition to the places named in the special article of the Burnah Convention of 4th February, 1897, British steamers shall be allowed to land or ship cargo and passengers, under the same regulations as apply to the "Ports of Call" on the Yangtze River, at the following "Ports of Call": Pak Tau Hau (Pai-t'u k'ou), Lo Ting Hau (Lo-ting k'ou), and Do Sing (Tou-ch'eng); and to land or discharge passengers at the following ten passenger landing stages on the West River:—Yung Ki (Jung-chi), Mah Ning (Ma-ning), Kau Kong (Chiu-chiang), Kulow (Ku-lao), Wing On (Yung-an), How Lik (Hou-li), Luk Pu (Lu-pu), Yuet Sing (Yueh-ch'eng), Luk To (Lu-tu) and Fung Chuen (F'eng-ch'uan).

Art. XI.—His Britannic Majesty's Government agree to the prohibition of the general importation of morphia into China, on condition, however, that the Chinese Government will allow of its importation, on payment of the Tariff import duty and under special permit, by duly qualified British medical practitioners and for the use of hospitals, or by British chemists and druggists who shall only be permitted to sell it in small quantities and on receipt of a requisition signed by a duly qualified foreign medical practitioner.

The special permits above referred to will be granted to an intending importer on his signing a bond before a British Consul guaranteeing the fulfilment of these conditions. Should an importer be found guilty before a British Consul of a breach of his bond, he will not be entitled to take out another permit. Any British subject importing morphia without a permit shall be liable to have such morphia confiscated.

This Article will come into operation on all other Treaty Powers agreeing to its conditions, but any morphia actually shipped before that date will not be affected by this prohibition.

The Chinese Government on their side undertake to adopt measures at once, to prevent the manufacture of morphia in China.

Art. XII.—China having expressed a strong desire to reform her judicial system and to bring it into accord with that of Western nations, Great Britain agrees to give every assistance to such reform, and she will also be prepared to relinquish her extra-territorial rights when she is satisfied that the state of the Chinese laws, the arrangement for their administration, and other considerations warrant her in so doing.

Art. XIII.—The missionary question in China being, in the opinion of the Chinese Government, one requiring careful consideration, so that, if possible troubles such as have occurred in the past may be averted in the future, Great Britain agrees to join in a Commission to investigate this question, and, if possible, to devise means for securing permanent peace between converts and non-converts, should such a Commission be formed by China and the Treaty Powers interested.

Art. XIV.—Whereas under Rule V. appended to the Treaty of Tientsin of 1858, British merchants are permitted to export rice and all other grain from one port of China to another under the same conditions in respect of security as copper

"cash," it is now agreed that in cases of expected scarcity or famine from whatsoever cause in any district, the Chinese Government shall, on giving twenty-one days' notice, be at liberty to prohibit the shipment of rice and other grain from such district.

Should any vessel specially chartered to load rice or grain previously contracted for, have arrived at her loading port prior to or on the day when a notice of prohibition to export comes into force she shall be allowed an extra week in which to ship her cargo.

If, during the existence of this prohibition, any shipment of rice or grain is allowed by the authorities, the prohibition shall, ipso facto, be considered cancelled and shall not be re-imposed until six weeks notice has been given.

When a prohibition is notified, it will be stated whether the Government have any Tribute or Army Rice which they intend to ship during the time of prohibition, and if so, the quantity shall be named.

Such rice shall not be included in the prohibition, and the Customs shall keep a record of any Tribute or Army Rice so shipped or landed.

The Chinese Government undertake that no rice, other than Tribute or Army Rice belonging to the Government, shall be shipped during the period of prohibition.

Notifications of prohibitions and of the quantities of Army or Tribute Rice for shipment shall be made by the Governors of the Provinces concerned.

Similarly, notifications of the removals of prohibitions shall be made by the same authorities.

The export of rice and other grain to foreign countries remains prohibited.

Art. XV.—It is agreed that either of the High Contracting Parties to this Treaty may demand a revision of the Tariff at the end of 10 years; but if no demand be made on either side within 6 months after the end of the first 10 years, then the Tariff shall remain in force for 10 years more, reckoned from the end of the preceding 10 years; and so it shall be at the end of each successive 10 years.

Any Tariff concession which China may hereafter accord to articles of the produce or manufacture of any other State shall immediately be extended to similar articles of the produce or manufacture of His Britannic Majesty's Dominions by whomsoever imported.

Treaties already existing between the United Kingdom and China shall continue in force in so far as they are not abrogated or modified by stipulations of the present Treaty.

Art. XVI.—The English and Chinese Texts of the present Treaty have been carefully compared, but in the event of there being any difference of meaning between them, the sense as expressed in the English text shall be held to be the correct sense.

The ratifications of this Treaty, under the hand of His Majesty the King of Great Britain and Ireland, and of His Majesty the Emperor of China respectively, shall be exchanged at Peking within a year from this day of signature.

In token whereof the respective Plenipotentiaries have signed and sealed this Treaty, two copies in English and two in Chinese.

Done at Shanghai this fifth day of September in the year of Our Lord, 1902; corresponding with the Chinese date, the fourth day of the eighth moon of the twenty-eighth year of Kwang Hsu.

ANNEX A—(1.)

(TRANSLATION.)

LU, President of the Board of Works;

SHENG, Junior Guardian of the Heir Apparent, Vice-President of the Board of Works;

Imperial Chinese Commissioners, for dealing with questions connected with the Commercial Treaties, to

Sir JAMES MACKAY, His Britannic Majesty's Special Commissioner for the discussion of Treaty matters.

Shanghai: K. H. XXVIII., 7th moon, 11th day, (Received August 15, 1902.)

We have the honour to inform you that we have received the following telegram from His Excellency Liu, Governor-General of the Liang Chiang, on the subject of Clause II. mutually agreed upon by us:

"As regards this clause, it is necessary to insert therein a clear stipulation, to the effect that, no matter what changes may take place in the future, all Customs' duties must continue to be calculated on the basis of the existing higher rate of the Haikwan Tael over the Treasury Tael, and that 'the touch' and weight of the former must be made good."

As we have already arranged with you that a declaration of this kind should be embodied in an official note, and form an Annex to the present treaty, for purposes of record, we hereby do ourselves the honour to make this communication.

Seal of the Imperial Commissioners for dealing with questions connected with Treaty Revision.

ANNEX A—(2.)

Shanghai, August 18th, 1902.

GENTLEMEN,—I have the honour to acknowledge the receipt of your despatch of the 14th instant forwarding copy of a telegram from His Excellency Liu Governor-General of the Liang Chiang, on the subject of Article II. of the new Treaty, and in reply I have the honour to state that His Excellency's understanding of the Article is perfectly correct.

I presume the Chinese Government will make arrangements for the coinage of a national silver coin of such weight and touch as may be decided upon by them. These coins will be made available to the public in return for a quantity of silver bullion of equivalent weight of fineness plus the usual mintage charge.

The coins which will become the national coinage of China will be declared by the Chinese Government to be legal tender in payment of Customs duty and in discharge of obligations contracted in Haikwan taels, but only at their proportionate value to the Haikwan tael, whatever that may be.

I have the honour to be, gentlemen, your obedient servant,

(Signed) JAS. L. MACKAY.

Their Excellencies

LU HAI-HUAN and SHENG HSUAN-HUAI, &c., &c., &c.

ANNEX B—(1.)

(TRANSLATION.)

LU, President of the Board of Works; SHENG, Junior Guardian of the Heir Apparent, Vice-President of the Board of Works;

Imperial Chinese Commissioners for dealing with questions connected with the Commercial Treaties, to

SIR JAMES L. MACKAY, His Britannic Majesty's Special Commissioner.

Shanghai, September 2nd, 1902.

We have the honour to inform you that on the 22nd of August, we, in conjunction with the Governors-General of the Liang Chiang and the Hu-kwang Provinces, Their Excellencies Liu and Chang, addressed the following telegraphic Memorial to the Throne:—

"Of the revenue of the different Provinces derived from *likin* of all kinds, a portion is appropriated for the service of the foreign loans, a portion for the Peking Government, and the balance is reserved for the local expenditure of the Provinces concerned.

"In the negotiations now being conducted with Great Britain for the amendment of Commercial Treaties, a mutual arrangement has been come to providing for the imposition of additional taxes, in compensation for the abolition of all kinds of *likin* and other imposts on goods, prohibited by Article VIII. After payment of interest and sinking fund on the existing foreign loan, to the extent to which *likin* is thereto pledged, these additional taxes shall be allocated to the various Provinces to make up deficiencies and replace revenue, in order that no hardships may be entailed on them. With a view to preserving the original intention underlying the proposal to increase the duties in compensation for the loss of revenue derived from *likin* and other imports on goods, it is further stipulated that the surtaxes shall not be appropriated for other purposes, shall not form part of the Imperial Maritime Customs revenue proper, and shall in no case be pledged as security for any new foreign loan.

"It is therefore necessary to memorialize for the issue of an Edict, giving effect to the above stipulations and directing the Board of Revenue to find out what proportion of the provincial revenues derived from *likin* of all kinds, now about to be abolished, each Province has hitherto had to remit, and what proportion it has been entitled to retain, so that, when the Article comes into operation, due apportionment may be made accordingly, thus providing the Provinces with funds available for local expenditure, and displaying equitable and just treatment towards all."

On the 1st instant an Imperial Decree "I et action, as requested, be taken" was issued, and we now do ourselves the honour reverently to transcribe the same for your information.

(Seal of the Imperial Commissioners for dealing with questions connected with Treaty Revision.)

ANNEX B—(2.)

Shanghai, September 5th, 1902.

GENTLEMEN,—I have the honour to acknowledge the receipt of your despatch of the 2nd instant forwarding the text of the Memorial and Decree dealing with the disposal of the surtaxes.

I understand that the surtaxes in addition to not being pledged for any new foreign loan are not to be pledged to, or held to be security for, liabilities already contracted by China except in so far as *likin* revenue has already been pledged to an existing loan.

I also understand from the Memorial that the whole of the surtaxes provided by Article VIII. of the New Treaty goes to the Provinces in proportions to

be agreed upon between them and the Board of Revenue, but that out of these surtaxes each Province is obliged to remit to Peking the same contribution as that which it has hitherto remitted out of its *likin* collections, and that the Provinces also provide as hitherto out of these surtax funds whatever may be necessary for the service of the foreign loan to which *likin* is partly pledged.

I hope Your Excellencies will send me a reply to this despatch and that you will agree to this correspondence forming part of the Treaty as an Annex.

I have the honour, to be, Gentlemen, Your obedient servant,

(Signed) JAS. L. MACKAY.

Their Excellencies, LU HAI-HUAN and SHENG HSUAN-HUAL, etc.

ANNEX B.—(3).

(Translation.)

LU, President of the Board of Works;
SHENG, Junior Guardian of the Heir Apparent,
Vice-President of the Board of Works;

Imperial Chinese Commissioners for dealing with questions connected with the Commercial Treaties, to

SIR JAMES L. MACKAY, His Britannic Majesty's Special Commissioner.

Shanghai, September 5th, 1902.

We have the honour to acknowledge the receipt of your communication of to-day's date with regard to the allocation of the surtax funds allotted to the Provinces, and to inform you that the views therein expressed are the same as our own.

We would, however, wish to point out that, were the whole amount of the allocation due paid over to the Provinces, unnecessary expense would be incurred in the retransmission by them of such portions thereof as would have to be remitted to Peking in place of the contributions hitherto payable out of *likin* revenue. The amount, therefore, of the allocation due to the Provinces, arranged between them and the Board of Revenue, will be retained in the hands of the Maritime Customs, who await the instructions of the Provinces in regard to the remittance of such portion thereof as may be necessary to fulfil their obligations, and (on receipt of these instructions) will send forward the amount direct. The balance will be held to the order of the Provinces.

In so far as *likin* is pledged to the service of the 1898 loan, a similar method of procedure will be adopted.

As you request that this correspondence be annexed to the Treaty, we have the honour to state that we see no objection to this being done.

(Seal of the Imperial Commissioners for dealing with questions connected with Treaty Revision.)

ANNEX C.

INLAND WATERS STEAM NAVIGATION.

ADDITIONAL RULES.

1. British steamship owners are at liberty to lease warehouses and jetties on the banks of waterways from Chinese subjects for a term not exceeding 25 years, with option of renewal on terms to be mutually arranged. In cases where British merchants are unable to secure warehouses and jetties from Chinese subjects on satisfactory terms, the local officials, after consultation with the Minister of Commerce, shall arrange to provide these on renewable lease as above mentioned at current equitable rates.

2. Jetties shall only be erected in such positions that they will not obstruct the inland waterway or interfere with navigation, and with the sanction of the nearest Commissioner of Customs; such sanction, however, shall not be arbitrarily withheld.

3. British merchants shall pay taxes and contributions on these warehouses and jetties on the same footing as Chinese proprietors of similar properties in the neighbourhood. British merchants may only employ Chinese agents and staff to reside in warehouses so leased at places touched at by steamers engaged in inland traffic to carry on their business; but British merchants may visit these places from time to time to look after their affairs. The existing rights of Chinese jurisdiction over Chinese subjects shall not by reason of this clause be diminished or interfered with in any way.

4. Steam vessels navigating the inland waterways of China shall be responsible for loss caused to riparian proprietors by damage which they may do to the banks or works on them and for the loss which may be caused by such damage. In the event of China desiring to prohibit the use of some particular shallow waterway by launches, because there is reason to fear that the use of it by them would be likely to injure the banks and cause damage to the adjoining country, the British authorities, when appealed to, shall, if satisfied of the validity of the objection, prohibit the use of that waterway by British launches, provided that Chinese launches are also prohibited from using it.

Both Foreign and Chinese launches are prohibited from crossing dams and weirs at present in existence

on inland waterways where they are likely to cause injury to such works, which would be detrimental to the water service of the local people.

5. The main object of the British Government in desiring to see the inland waterways of China opened to steam navigation being to afford facilities for the rapid transport of both foreign and native merchandise, they undertake to offer no impediment to the transfer to a Chinese company and the Chinese flag of any British Steamer which may now or hereafter be employed on the inland waters of China, should the owner be willing to make the transfer.

In event of a Chinese company registered under Chinese law being formed to run steamers on the inland waters of China the fact of British subjects holding shares in such a company shall not entitle the steamers to fly the British flag.

6. Registered steamers and their tows are forbidden, just as junks have always been forbidden, to carry contraband goods. Infraction of this rule will entail the penalties prescribed in the treaties for such an offence, and cancellation of the Inland Waters Navigation Certificate carried by the vessels, which will be prohibited from thereafter plying on inland waters.

7. As it is desirable that the people living inland should be disturbed as little as possible by the advent of steam vessels to which they are not accustomed, inland waters not hitherto frequented by steamers shall be opened as gradually as may be convenient to merchants and only as the owners of steamers may see prospect of remunerative trade.

In cases where it is intended to run steam vessels on waterways on which such vessels have not hitherto run, intimation shall be made to the Commissioner of Customs at the nearest open port who shall report the matter to the Ministers of Commerce. The latter in conjunction with the Governor-General or Governor of the Province, after careful consideration of all the circumstances of the case, shall at once give their approval.

8. A registered steamer may ply within the waters of a port, or from one open port or ports to another open port or ports, or from one open port or ports to places inland, and thence back to such port or ports. She may, on making due report to the Customs, land or ship passengers or cargo at any recognised places of trade passed in the course of the voyage; but may not ply between inland places exclusively except with the consent of the Chinese Government.

9. Any cargo and passenger boats may be towed by steamers. The helmsman and crew of any boat towed shall be Chinese. All boats, irrespective of ownership, must be registered before they can proceed inland.

10. These Rules are supplementary to the Inland Steam Navigation Regulations of July and September, 1898. The latter, where untouched by the present Rules, remain in full force and effect; but the present Rules hold in the case of such of the former Regulations as the present Rules affect. The present Rules, and the Regulations of July and September, 1898, to which they are supplementary, are provisional, and may be modified, as circumstances require, by mutual consent.

Done at Shanghai this fifth day of September in the year of Our Lord, 1902; corresponding with the Chinese date, the fourth day of the eighth moon of the twenty-eighth year of Kwang Hsü.

[L.S.] JAS. L. MACKAY.

CORRESPONDENCE.

"LIKIN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We beg to call your attention to an error in your statements in the issue of the 8th inst. regarding our opinion on the *likin* question. You say: "They think that the rate upon imports should not exceed 12½ per cent." Such, however, is not our opinion. Our opinion is the rate should not exceed 10 per cent.

We are, Sir, yours very truly,

The Yokohama Boyeki-kenkiu-kwai,

R. KODAMA.

Secretary.

Yokohama, Sept. 12th, 1902.

MY FIRST RIDE IN AN AUTOMOBILE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Four of us, the agent for Tokyo, a friend, myself and the driver started the other afternoon from the Metropole Hotel, Tsukiji, for a two hours' jaunt in a steam locomobile. I sat in the front seat alongside of the driver and noticed that in front of

us were two gauges, one to indicate the pressure of steam in the boiler, which kept steady at about 200, and the other indicates the air pressures. The steam is automatically kept below 210 lb. pressure. The air is used for turning the liquid fuel for the boiler into spray. Manipulated by the driver's foot were the gong and powerful brake. At his right hand were the starting and reversing levers and the pump starter, and by looking round to the right he could see the water gauge. If there is anything to find fault with in the design of the machine it is the position of this gauge, but I suppose it could not be put anywhere else to be of real value. The way the driver handled the vehicle was a surprise to me, travelling as he did through the crowded streets of Tokyo at a speed which at first alarmed me, an old bicyclist in the city, but soon I was quite at ease when I found how easily he steered, slowed down, got up speed, and if necessary backed. We ran out to Mukojima into the pretty gardens of the Kwagetsudo when, after having filled the human boiler with Tansan and been snap-shotted by the driver, we returned home via the Ueno Park, after the most enjoyable ride I have ever had in Tokyo.

With an automobile there are many pretty suburbs within 15 miles radius of the centre of the city which could be easily taken in an afternoon's jaunt, but which for a horse-driven carriage are too far and thus remain closed books to most of the residents of Tokyo.

The only grievance I have against the locomobile is that my finances will not allow me to purchase one.

Yours faithfully,

TOKYO.

EFFECT OF LIGHTNING ON THE HUMAN BODY AND ON TREES.

As the effects of lightning on the human body, almost any case is spoken of as curious. Sometimes no sign of injury can be seen; in others marks are left on the body, clothes are scorched or torn to shreds, metallic objects volatilised, the nails driven out of boots, and the soles rent. The sad case which happened on a field near Guildford, on August 25, 1897, displayed all these positive characteristics. The clothes were dispersed in a circle of several yards around the dead body, and in the ground a hole 3 in. deep, 4 in. in diameter was noticed; the skin was torn off the chest, and the legs were blackened. In another case the peculiar fern-leaf pattern, the *pleris aquilina*, was observed on three spots on the body of a woman, under the clothing which was absolutely intact; the woman recovered, and the marks disappeared in three days. Again, Dr. Chenet saw himself and his companion, both on horseback, enveloped in fire, and felt a violent shock; they saw no flash, and heard no thunder, which is the usual experience, but their Arabian guides did. Lying down on the ground, Chenet was again struck; this time he heard the thunder, and he noticed sparks from his fingers, &c. He was a long time ill, and remained very sensitive to thunderstorms. The damage done by lightning, apart from the ravages of hail and rain is, on the whole, moderate. The United Kingdom has about one fatal case per million inhabitants annually. In Germany between 50 and 1,000 are said to be killed, and from 200 to 300 struck; taking the population at 50 millions, we have annually one or two fatal cases per million. In France, up to 1872 there were from 30 to 100 fatal cases per year; since then from 100 to 180; the population has not varied much. Italy (population in 1871 27 millions, in 1892 30,535,000) had in the decade 1882 to 1891, 1625 persons killed by lightning. Lightning killed in the United States, in the four years 1890 to 1893, 120, 204, 251, 209 persons, and caused in 1891 and 1892 457 and 839 fires.

Whether forests and trees act preventively, like a multitude of lightning conductors, is no more settled than the part played by lightning-rods in general. There is no doubt that certain kinds of trees are often struck, and that it is inadvisable to take shelter under a tree. Some feet away from the longest branch is considered the safest place; there one is, of course, fully exposed to the rain, but the danger is probably not so great as in the open field. Oaks are universally regarded with suspicion. The poplars appear to attract lightning. When the branches come down pretty near the ground, and when the ground is damp, and no metallic mass near, they protect a building; poplars with few scraggy branches, or such whose branches come too close to the roof, are dangerous. But in the latter case the roof may be protected after wire-cage fashion by wires with earth connections.—*Engineering*.

THE CHRISTIAN DAIMYO.

CHAPTER VII.

Hideyoshi establishes himself at Osaka.—Conversion of Konishi Yukinaga and his family.—Jane Onogi, lady of the Palace.—Conversion of Kuroda Yoshitaka, of Makimura Masaharu, of Gamo Ujisato and of Imaoji Dosan.—Hideyoshi makes war on Shibata, Takikawa, and then on Nobuo and Ieyasu.—He subdues the Negoro and Chosokabe, *daimyo* of Kochi.—Hachisuka is named *daimyo* of Tokushima.—Displacement of Takayama and Ikeda.—Hideyoshi is named Kwampaku.

While the adversaries of Hideyoshi prepared for combat, the latter fixed his residence at Osaka (1583). To be ready for all eventualities, he constructed there the celebrated citadel, which was then the greatest in Japan, and which still partially exists. What Azuchi had been under Nobunaga, Osaka became under the rule of Hideyoshi. All the *daimyo* of his party established themselves there and helped their master to build the citadel which would, in case of necessity, serve as a common refuge.

Among the number of these *daimyo* was one quite young and a favourite of Hideyoshi, called Konishi Yukinaga. His origin is not very clear. Japanese history says that he was the son of an ex-apothecary of Sakai, called Yakuro, who was at this time Governor of that town. The annals of the Jesuits declare on the contrary that Konishi was a son of Shirai Sangadono (48), who on the fall of his family entered probably that of Yakuro, either as an adopted son, or as husband of Yakuro's daughter. In view of the facility with which the Japanese change their names and pass from one family to another, the two opinions, although contradictory in appearance, may be actually true. Whatever may have been the origin of Konishi, he entered at an early age the service of Ukita Naioe, *daimyo* of Okayama (Bizen), who made him a *samurai* of elevated rank. When in 1577 Ukita found himself obliged to submit to Hideyoshi, his conqueror, he sent Konishi to him to negotiate peace. Astonished at the great cleverness with which the young *samurai* acquitted himself of so difficult a mission, Hideyoshi wished to keep him in his own service and asked for him as hostage with Hidee, the *daimyo's* son. From this moment Konishi's fortune increased from day to day. Ukita, in order to reward his fidelity, granted him as fief the numerous isles situated on the littoral of the provinces of Bizen and Bitchu.

And when in 1582 Hideyoshi, on learning of the death of Nobunaga, wished to conclude an advantageous peace with Mori, he put Konishi among the envoys charged with this mission. This affair terminated, he entrusted him with the command of his fleet. This was an important trust, for not only was it a question of giving chase to the pirates by whom the seas of Japan were then infested and who levied tribute upon junks and barks and even on the inhabitants of the isles and of the coasts (49), but the fleet also played even then a certain role in time of war, either in transporting troops, or in directly attacking the enemy. It was on account of his holding this position that the Jesuits often referred to Konishi under the title of the Great Admiral.

During his stay at Osaka, Konishi made the acquaintance of Takayama Ukon, thanks to whose exhortations he became converted to Christianity (1583). His father Yakuro, also called Ryusa, Governor of Sakai, followed his example with his wife and another son called Josei Tonomono-suke, Governor of Murotsu (Harima), a port then very flourishing. Konishi took the name of Augustin at his baptism, and it is under this name especially that he is known in the letters of the Jesuits. All Konishi's family succeeded in insinuating themselves into the good graces of Hideyoshi: even to Konishi's mother, generally referred to under the name of Magdalen, who became intimate with Hideyoshi and acted as secretary to his wife (50).

Besides Magdalen another Christian lady, Jane Onogi, was also employed in Hideyoshi's court (51). She was the wife of Onogi Kintomo, *daimyo* of Fukuchiyama (Tamba), and passed for the cleverest poetess of the epoch. It is probable that she had learned this art from her infancy, for she was the daughter of a *kuge*; and *kuge*, as the reader already knows, regarded poetry as of paramount importance.

At the time of Konishi's conversion, several other *daimyo* applied themselves to the study of the Christian religion, and those most convinced demanded baptism. Among them was Kuroda Yoshitaka, general of Hideyoshi's cavalry (52). Born in the village of Kuroda (Omi), he was descended from the family of Sasaki, ruined by Nobunaga. He had entered as son-in-law the family of Kōdera Mototaka, *daimyo* of Himeji, but when this *daimyo* was defeated by Hideyoshi, who kept this place for himself, Yoshitaka resumed his former name of Kuroda and attached himself to Hideyoshi. At his baptism he received the name of Simon and he is the Simon Kondera (53) of the Jesuits, generally confounded by foreign authors with his son Kuroda Nagamasa.

Makimura Masaharu, *daimyo* of Ise, notorious for his misconduct, was also converted in 1584. He invited his friends and subordinates, who had imitated him in evil, to follow him in virtue (54).

Gamo Ujisato, *daimyo* of Matsuzaki (Ise), also received baptism, and took the name of Leo. He was the son of Gamo Katahide, *herai* of Nobunaga, who on the death of the latter had saved his family and he espoused a daughter of Nobunaga (55). Finally Imaoji Dosan, Hideyoshi's doctor, and then the most celebrated physician in Japan, also became Christian. He used all his influence with Hideyoshi to render him favourable to the new religion (56). Several other *daimyo* and personages of mark also wished to have their names inscribed among the neophytes, but the civil war prevented them for the moment.

Already in the preceding year hostilities had commenced between Hideyoshi and Shibata Katsue, the defender of Ota Nobutaka's rights. After a sanguinary battle at Shizugatake (Omi), in May 1583, Shibata was routed and compelled to retire into the fortress of Kitanosho. Takayama, still probably inebriated with his military success, at the time of the defeat of Akechi, wished to cut off the retreat of Shibata, and to cover himself a second time with glory. It was unfortunate for him that he did so, for he was literally crushed. His son-in-law and two other near relatives perished in the combat. Hideyoshi however pursued Shibata to Kitanosho and besieged this fortress. Seeing that he was lost, Shibata gave himself up together with his *samurai* to an unbridled orgie. When, on the approach of night, the gaiety had reached its highest pitch, they set fire to the houses, slaughtered the women and children and committed *harakiri*. When Hideyoshi entered Kitanosho next day he found only smoking ruins.

In Shibata the party of Ota Nobutaka lost its most solid support, and it was not long before it fell completely. Beaten everywhere Nobutaka put an end to his life. There still remained Takikawa, the *daimyo* of Kuwana. Blockaded in the fortress of Nagashima (Ise), the latter had sworn that he would never surrender. But Hideyoshi turned aside the Kisogawa (57) and inundated the fortress in such a manner that Takikawa was near being drowned. Moreover the soldiers of Konishi, invaded the fortress in barks from all sides. Seeing that he had no means of resisting such an adversary, Takikawa asked pardon, which was granted him.

After having thus triumphed over Nobutaka's party, Hideyoshi turned his arms against Nobuo and his ally Tokugawa Ieyasu. They came to blows at Komakiyama (Owari), at the end of the spring of 1584. Hideyoshi sustained a con-

siderable reverse. Simon Ikeda, *daimyo* of Yao and a partisan of Hideyoshi, distinguished himself during this battle. Posted with only 300 soldiers on a little eminence, he became the centre of the enemy's attack. More than 3,000 *samurai* scaled the hill and prepared to carry it by assault. Seeing themselves irrevocably lost, Ikeda's men wished to commit *harakiri*, so as to escape falling alive into the hands of the enemy. But Ikeda reproached them for wishing to be guilty of such an act of cowardice and gave them to understand that it was more glorious for *samurai* to die fighting. They listened to his exhortations and succeeded in forcing for themselves a way through the ranks of the enemy. John Juichi, the new lord that Hideyoshi had placed at Sangajima, fell with his *samurai* during this combat, and his death was the ruin of the church on this isle.

Hideyoshi was not only an able warrior but also a clever politician who knew how to use all means in order to attain his ends. Where arms were not favourable to him, he had recourse either to money or to specious promises. It was of this last means that he made use in order to detach Nobuo from his ally Ieyasu. After his disaster at Komakiyama, Hideyoshi understood that it would only be with difficulty that he could finish with his enemies if the latter were united, and he resolved to enter into negotiations with the unsuspecting Nobuo. He succeeded without difficulty in convincing him of the duplicity of Ieyasu and of attaching him to himself. To consolidate this new friendship Hideyoshi increased Nobuo's revenues. Nobuo established himself at Kiyosu (Owari), where his father Nobunaga had begun his career as a simple *daimyo*. As to Ieyasu nothing remained for him but to submit to Hideyoshi. In recompense for his submission he received Hideyoshi's sister in marriage: an unenviable honour, for Ieyasu had already several wives and Hideyoshi's sister, a very plain woman of over forty years of age, merely quitted her husband in order to enter the house of Ieyasu. In spite of his repugnance to such an union Ieyasu did not dare to refuse it, and it was thus that he became an ally and a relative of Hideyoshi.

All central Japan recognized the authority of Hideyoshi; the *Negoro* (58) of the province of Kii, and Chosokabe Motochika, *daimyo* of Kochi (Tosa), only refusing to submit. The *Negoro* full of religious fanaticism had, on the death of Nobunaga, again taken up arms and struggled for their independence. They had equipped 15,000 men, bonzes as well as errant or masterless *samurai*, and now marched on Osaka. The vanguard, composed of 8,000 combatants, was already approaching the gates of this city, while the main body still found itself in the environs of Kishiwada (Izumi). Saiga Magoichi, vassal of Hideyoshi, issued suddenly from this castle, and throwing himself on the *Negoro* made such carnage among them that nearly 4,000 were left dead on the field of battle. Warned by the disaster of Kishiwada, the vanguard wished to return, but found the passage barred. Konishi had in the meantime requisitioned all the junks, the Government junks and the junks belonging to individuals, and after having equipped 70 of them, he went up the Yamatogawa and cut off the retreat of the *Negoro*. The cannons which Nobunaga had formerly received from Otomo Yoshishige, and which Konishi fired from his junks, caused such a panic among the ranks of the fugitives that they believed hell had been let loose against them. The proud army, which the evening before thought it could annihilate the wood-cutter's son, dissolved in a lamentable rout (1585). It was under these circumstances that the Japanese fleet made use for the first time of fire-arms and so rendered a real service (59).

Chosokabe was also defeated and from being the unchallenged *daimyo* in Shikoku, he had to contend himself with the single province of Tosa. Hachisuka Iemasa obtained the province of Awa with a residence at Tokushima. It was thus that

(57) A river which flows past Nagashima.

(58) *Negoro* is the name of the place where the monastery of these bonzes is situated.(59) *Avvisi del Giappone*.(48) *Avvisi del Giappone* p. 161 and 162.

(49) The most famous of these pirates was named Noshima. He was a veritable King of the Inland Seas, but was routed by Konishi. (Hay, p. 100 and 101).

(50) *Avvisi del Giappone*.

Hideyoshi, rewarded the son of his former master under whom he had served as a bandit, and whom he had taken into his service when he himself had become a *daimyo*.

When Hideyoshi saw that his power was firmly established, he distributed the most important *daimyates* to his relatives and to his own creatures. The first became an inexhaustible source of vexation to the conqueror and the others pillars, more or less solid, of his cause. There were equally several *daimyo* who, for one reason or another, were changed from one place to another. Among the latter was Takayama Ukon and Ikeda Tango-no-kami. The first was sent to Akashi (Harima) with an augmentation of revenue. Hideyoshi kept for himself the castle of Takatsuki, situated on the road between Kyoto and Osaka, and too important to be left to another. With the departure of Takayama the church of Takatsuki lost its protector and its support. The *samurai* and their families followed Takayama to Akashi according to the received usage. As to the peasants and the other Christians, several finished by practically abandoning their religion. This event obliged the Jesuits to transport to Osaka their college which, since the destruction of Azuchi, they had temporarily established at Takatsuki. Hideyoshi showed them on this occasion much friendship, for he not only counselled them to erect this establishment at Osaka, but when it was finished he visited it in person.

Scarcely was he installed at Akashi, however, when Takayama commenced to work with all his energy to make his new subordinates become Christians. He began by announcing to the bonzes, still very powerful in that place, that they would have to rid the country as quickly as possible of all their idols. The bonzes at first tried to resist, but when they perceived that Takayama became more and more aggressive, they placed all their divinities on board junks and went to Osaka to show their distress to Hideyoshi's mother, a very devout woman. She undertook to plead the cause of the idols with her son, but Hideyoshi declared that Takayama was free to do whatever he pleased in his own domains and that he, Hideyoshi, would never interfere in the affair (60). The bonzes had to conform to the will of Takayama and to destroy the idols, but in their hearts they swore to take revenge for this injury. It will be seen in the sequel how they triumphed over their adversary.

Ikeda Tango no-Kami was transferred to Mino, probably to Ogaki, near his relative Ikeda Terumasu, who was then *daimyo* of this place. Although neither the history of Japan nor the annals of the religious mention the new post which Tango-no-kami obtained, it is to be presumed that he was placed near the young and inexperienced *daimyo* of Ogaki, whose life he had already saved at the battle of Komakiyama. The father and the elder brother of Terumasa had been killed in the combat and Terumasa was about to undergo the same fate, when Tango-no-kami carried him out of danger by cutting a passage for himself through the ranks of the enemy. It appears that Tango-no-kami was a veritable providence for the Christians, rather numerous in this district and exposed, since the loss of their Christian lord (61), to difficulties without number.

After so much success, Hideyoshi wanted the Shogunate. As custom had reserved this dignity solely for the Minamoto family, Hideyoshi addressed himself to the ex-Shogun Yoshiaki, who had retired to the house of Mori of Yamaguchi, and begged the latter to adopt him. Yoshiaki contemptuously refused and Hideyoshi was about to get angry, when the *kuge* Kikutei Harusue advised him to get himself appointed Kwampaku, or in other words prime minister of the Imperial Palace. It is true that to obtain this dignity it was necessary to be of the Fujiwara family. Hideyoshi overcome this difficulty by getting himself adopted by this family. The Emperor forthwith bestowed on him the title of Kwampaku (1585).

Hideyoshi, however, while henceforth himself

a descendant of the Fujiwara, never took this name; he founded a new branch of the family, that of the Toyotomi, and it is under the name of Toyotomi Hideyoshi that he is best known in the history of Japan.

THE CHINA SQUADRON.

A few days ago Mr. Arnold Forster (said the naval correspondent of the *Globe*, writing on August 8th), when questioned on the subject in the House of Commons, affirmed that the short period of 18 days spent at sea by the *Terrible* during the course of 12 months was not due to any shortage of coal on the China Station. Now the Parliamentary Secretary to the Admiralty knows perfectly well—supposing that he has taken the trouble to make himself acquainted with the facts—that in the first place the actual yearly allowance of coal on the China Station has been reduced from 180,000 tons to 150,000 tons; secondly, that the most direct and explicit instructions have been issued to the commanding officers of ships on that station that as little coal as possible is to be burnt; and, thirdly, that the extraordinarily lengthy time spent by the *Terrible* in harbour was almost entirely due to considerations of coal consumption. This coal question is becoming a very serious one for the Navy. The more the Admiralty stint the supply the fewer the opportunities for the officers of the fleet to make themselves efficient in the work of handling their vessels; the less the crew become accustomed to work at sea. It is the old question of money once more, or in other words, a case of Treasury versus Admiralty. Let any member of Parliament who takes an interest in the question ask the responsible officers of the China Squadron whether, financial considerations apart, their ships are exercised sufficiently at sea. The usual answer which he will get will be "Certainly not." Under our extraordinary system of Government the man who practically decides how much coal is to be burnt in exercising our ships is the Chancellor of the Exchequer, who knows nothing whatever about the real requirements of the service, and not the First Lord or his technical advisers, the Sea Lords. It is notorious that the supply of coal on the China Station is inadequate for the proper training of the fleet in peace time. How much longer is such a state of things to last?

HOW TO WRITE A DIME NOVEL.

Mr. Gelett Burgess has been interviewing a dime novelist, with interesting results, in the *American Bookman*. Mr. Eugene T. Sawyer, author of the "Nick Carter" series, is a very harmless person, whose greatest care is for his geraniums when he leaves the office of the San José newspaper of which he is city editor. Mr. Sawyer talked much to the purpose. He has a record, not only for quantity, but for speed:—

"The fastest work I ever did," Mr. Sawyer said, "was once when I got an order by wire from Street and Smith, saying that one of their regular writers had failed them, and asking if I could send them a story of 60,000 words in four days. Of course I accepted. And that, too, was in the days of long-hand, before typewriters were common. As usual, I procrastinated, and two days had elapsed before I thought about the story. Then I locked myself into my room and began, writing in lead pencil, while my wife copied my work in ink. I didn't eat nor sleep, living on coffee alone, till the novel was completed, in about sixty hours. In order to have the manuscript reach the publishers on time, I had to have it in the post office at noon, and I caught that mail with something less than a minute to spare. When I saw *Captain Crash* in print, it was just like reading a new book. I had forgotten absolutely about the plot and characters, having written almost automatically."

Asked about his methods of work, Mr. Sawyer developed, in an amusing way, his theory of an opening. This he maintains should be at once striking and illuminative.

The old method used to be something like this: "Help! Help! Help!" These words rang out into the air on a cold November night, in a little town not twenty miles distant from New York.

Some one was in dire need, but the whole country seemed utterly deserted."

And then immediately there was a row of stars, after which the paragraph went on:

"Twenty years ago, Ephraim Gobson was the most respected citizen in New Potsdam, and Huldah, his sunny-haired daughter, was called the prettiest girl in the village, &c., &c."

But I fancy I revolutionised the opening of the dime novel. Writers for the magazines learned how necessary it is to begin the plot with the first word, and do it perhaps more artistically, but it's the same principle. Here are some of my beginnings. For instance, in *Ram-n Aranda, the Californian Detective*, I start:

"We will have the money, or she shall die!"

Or, in another one I thought rather striking:

"Swear the defendant!"

And in *The Dead Man's Hand* the opening line was this:

"It is a case of mysterious disappearance, Mr. Carter!"

Sometimes it is harder to get a good opener than a good title, though the title and the "cover situation" are what usually sell the book. That last quotation is from *The Dead Man's Hand* or, *Nick Carter's Matchless Method*. The main title was suggested to me by the publishers, who thought it would sell well, and from that phrase I built up the whole book.

In conclusion, Mr. Sawyer, who is under no delusion about the quality of his work, remarked: "It is not only the 'submerged tenth' who read cheap stories. I have been into bookshops and seen bankers and capitalists gravely paying their nickels for the same tales their elevator boys read. I have known literary men to confess that they had read tales as bad as mine with interest and excitement. Such yarns are about as good a remedy for brain fog as you could find. They're easy, and require little effort of the mind. You can read *The Pirate of the Caribbees* when your nerves forbid ethical discussions."

BANK OF JAPAN.

(60) Hay, p. 99.

(61) It is impossible to identify the name of this personage. He was converted in 1582 along with his teacher, a celebrated bonze (*Arusi del Giappone*, page 73).

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

RUSSIA IN MANCHURIA.

London, Sept. 12.

Numbers of Russian troops are arriving as emigrants in Manchuria.

M. Lessar, the Russian Minister in Peking, has advised the Russian Commander in Manchuria to expel the British employes of the Chinese Imperial Maritime Customs who have been sent to resume charge of the postal service.

CHOLERA IN EGYPT.

The cholera is increasing in Egypt.

SERIOUS ACCIDENT TO A P. AND O. STEAMER.

The main steam-pipe of the P. and O. steamer *Bornco* burst at Woolwich during an examination. The Company's Surveyor, the Assistant Manager of the Works, the Manager and eight others are in hospital.

THE ENGLISH HARVEST.

Shanghai, September 13.

Heavy rains have blighted the harvest in England. On Wednesday a hailstorm caused enormous havoc among the fruit and hops in Kent. The damage to hops in one parish alone in Mid-Kent has been estimated at one hundred thousand pounds sterling.

SETTLING SOUTH AFRICA.

London, Sept. 14.

It is officially announced at Johannesburg that in addition to the three million pounds already granted to the burghers two millions will be assigned to assist distressed Britishers and neutral foreigners to re-start. The money will be chargeable on the Imperial Government.

A BAD HARVEST.

The harvest in England is the worst since 1860.

TEA IN FRANCE.

Trade returns show that the use of tea is steadily growing in France.

ROOSEVELT AND RE-NOMINATION.

London, Sept. 15.

American opinion is enormously increasing in favour of Mr. Roosevelt's re-nomination. The latest Republican state convention has enthusiastically adopted him.

INTERNATIONAL RIFLE COMPETITION.

The British team has won the Palmer Trophy in the international rifle contest at Ottawa with a score of 1459, against America's 1447, and Canada's 1372.

THE FRENCH AMBASSADOR AT ST. PETERSBURG.

The French ambassador at St. Petersburg, Marquis de Montello, has returned to Paris. Being interviewed, he has affirmed the statement that he re-cabled (? was recalled) against (his own) will.

IRISH AFFAIRS.

A meeting of 20,000 people at Phoenix Park, Dublin, presided over by the Lord Mayor, has denounced the proclamation of the Crimes Act in Dublin.

CZAR AND PEASANT.

A deputation of peasants assembled by command of the Czar, was addressed by His Majesty, who referred to the spring disturbances and exhorted the peasants to practise honest labour and thrift, advising them to listen to the local nobility and not to believe nonsensical rumours.

THE "AMERICA" CUP.

London, Sept. 17.

Sir Thomas Lipton has decided to challenge again for the *America* Cup. Shamrock III. will resemble her predecessors but will be less costly.

FRANCE IN THE MEDITERRANEAN.

The French Minister of Marine, M. Pelletan, recently visited Ajaccio, where he emphasised the necessity of fortifying Corsica as aiming full at Italy's heart. In another speech he said it was France's duty to prepare for the future against any enemies.

It is reported that M. Delcassé is much annoyed.

M. PELLETAN'S SPEECH.

London, Sept. 18.

M. Pelletan has made another speech endeavouring to justify his previous speech. He has denied any hostile motives.

THE MAURITIUS COMMAND.

Colonel Metcalfe, who was distinguished at Ladysmith, has been appointed to command in the Mauritius.

KITCHENER AND THE KING.

Lord Kitchener is on a visit to the King at Balmoral until the 19th.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, Sept. 15.

General Dodds has arrived at Marseilles. The cholera epidemic is raging in Egypt. Cholera is making ravages in Manchuria.

THE OCCUPATION OF KELANTAN.

Saigon, Sept. 17.

It is telegraphed from London that the occupation of Kelantan by the English is not officially confirmed.

(RECEIVED AT THE FOREIGN OFFICE.)

CHOLERA IN KOREA.

The Consul at Fusan reports under date of the 13th instant that 20 cases of cholera have occurred among Japanese fishermen at Koje Island (Deer Island), and that 9 of the cases ended fatally.

The authorities at Masampo have announced that, until further orders, the medical inspection of ships coming from Fusan will be discontinued.

BANDITS IN MANCHURIA.

The Japanese Consul at Newchwang, reporting under date of the 4th instant, says that during August the bandits in the neighbourhood of Haicheng became so daring, robbing and maltreating wayfarers, that the Governor of Haicheng finally moved against them with 800 men. He found them so strong, however, and such skilful marksmen, that after having had a staff officer and thirty men killed, he was obliged to retire, in spite of the assistance of a party of Russians who were encamped in the neighbourhood. Subsequently a force of 170 Russians with six field-pieces embarked from Niukafun near the Inkow railway station, and proceeding up the Liao, were joined by the Wankiafun force. The combined column, assisted by the troops from Liaotang, finally put the bandits to flight.

(FROM THE "JAPAN HERALD.")

SENSATIONAL SUIT AT KOBE.

Kobe, Sept. 12.

The hearing began to-day of a suit for damages for defamation of character, the plaintiffs being Messrs. Popp & Co. and the defendants Messrs. W. H. Gill & Co.

Messrs. Popp & Co. claim that Messrs. Gill & Co. sent information to New York

that they (Messrs. Popp & Co.) were shipping Korean for Japanese rice.

The damages claimed is yen 10,000.

Mr. Masujima, who appeared for the defendants, moved for a demurrer, on the ground that the claim was too vague.

The case was adjourned.

THE FUTURE OF WEI-HAI-WEI.

London, September 12.

The Acting Commissioner at Wei-hai-wei, in his Annual Report, states that it is not the present intention of the Government to re-fortify the station, but that it will be retained as a flying naval base and depôt, and also as a drill ground and sanatorium for the China Squadron.

RUSSIA AND JAPAN.

London, Sept. 14.

It is reported that the Russian War Ministry is elaborating a scheme for the defence of the Amur with a view to possible dispute with Japan. It is proposed to create a squadron of small, swift torpedo boats for the lower reaches of the river, plant electrical mines in the river-bed and patrol the upper reaches with gun-boats.

MANCHURIA.

The *New York Times* describes Russia's expulsion of foreigners from Manchuria as a piece of high effrontery and a cynical notification that Russia does not intend to evacuate the country.

M. PAVLOFF HONOURED.

M. Delcassé has given a luncheon in honour of M. Pavloff.

H.M.S. "TERRIBLE."

London, Sept. 16.

H.M.S. *Terrible* arrived at Plymouth to-day from the China Station, and after having disembarked the invalids, proceeded to Portsmouth, where a public reception had been organised in her honour.

RUSSIAN RAILWAY ENTERPRISE.

The Russian Ministry of Communications is considering the question of resuming a survey of the route for the extension of the Central Asian Railway from Tashkend to Peking.

It is stated that the surveys begun three years ago were abandoned owing to the state of the money market.

(FROM THE "JIJI SHIMPO.")

SOUTH AMERICAN TROUBLES.

London, Sept. 10.

General Parch (?) has surrendered at Agna Dalls (?) owing to the exhaustion of his provisions.

GERMANY AND HAYTI.

The captain, a surgeon and two of the crew of the Haytian gunboat *Crête à Pierrot* were killed when she was sunk by the German war-ship *Panther*.

ENGLAND AND SIAM.

The Siamese Minister in Paris has arrived in London to hold a conference with Lord Lansdowne, Secretary of State for Foreign Affairs.

SOUTH AMERICAN TROUBLES.

London, Sept. 11.

The rebel army of Colombia has won a great victory at Santa Marta. Two thousand Government troops have surrendered. The rebels are marching on Panama. The German cruiser *Panther* is protecting the interests of Americans.

WIRELESS TELEGRAPHY.

Experiments with Marconi's system of wireless telegraphy between Cornwall and Gibraltar have shown satisfactory results.

RUSSIA IN MANCHURIA.

London, Sept. 13.

The *New York Times* states that the anti-foreign policy adopted by Russia in Manchuria was maliciously contemplated, but that the United State Government has no intention whatever of meddling with the affair if Russia does not refuse to evacuate Newchwang.

The Odessa correspondent of the *Standard* reports that the Russian Government is planning defensive works on the Amoor. The principal design consists of the laying of torpedoes and the distribution of torpedo-boats.

ENGLAND AND SIAM.

London, Sept. 15.

There is a rumour that three hundred British soldiers have taken possession of Kelantan, a State dependant on Siam.

TRANS-SIBERIAN RAILWAY.

A report regarding the Trans-Siberian Railway announces a loss of 3,000,000 roubles.

THE INDIAN COTTON CROP.

In consequence of the recent rainfall the cotton crop in India is expected to prove plentiful.

ENGLAND AND SIAM.

London, Sept. 16.

The Colonial Office denies the report that three hundred British soldiers have taken possession of Kelantan and states that the report of such action probably originated in Saigon.

SOUTH AMERICAN TROUBLE.

General Carleazo(?) of the rebel army has surrendered in the neighbourhood of Bagota.

The rebels of Colombia, by occupying the Panama district, hope to sell the district to the Washington Government for £40,000,000(?) after the expiration of the terms of lease now granted to a French company.

FRANCE AND ITALY.

M. Pelletan, Minister of the French Navy, has delivered a strong speech at Bizerta. M. Delcassé, Minister of Foreign Affairs, shares his views. The Italian Government, however, is endeavouring to show that such utterances were not expressed by its neighbour.

(FROM THE "DEUTSCHE JAPANOSE.")

THE ANGLO-CHINESE TREATY.

Berlin, September 12.

The Anglo-Chinese treaty of commerce meets also in London with suspicion, and it is further denied that the United States agreed with the terms.

GERMANY AND HAYTI.

Part of the English press writes in an unfriendly tone about the German action in Hayti.

CRITICAL SITUATION IN MOROCCO.

The reports of a critical situation in the Morocco question having been created by Spanish and French co-operation are described as exaggerated.

THE KING OF SAXONY.

Berlin, Sept. 14.

King George of Saxony has arrived at Potsdam on a visit to Emperor Wilhelm.

THE GERMAN MANŒUVRES.

The German Emperor has bestowed the Order of the Black Eagle upon General von Lignitz on the occasion of the manœuvres of the 3rd and the 5th army corps.

THE BOER GENERALS IN GERMANY.

Berlin, Sept. 9.

The visit of the Boer Generals to Germany will be permitted only on condition that they will entirely abstain from any political actions and anti-British utterances.

THE KAISER AND THE ENGLISH ARMY.

Berlin, Sept. 16.

The *Norddeutsche Allgemeine Zeitung* denies the reports given by the *Daily Express* about the Kaiser's utterances concerning the reforms which the English army should be submitted to. The paper further announces that the Government intends to create a special body of colonial officials, beginning on a limited scale, by way of experiment.

RUNNING AMOK IN SPAIN.

In Malaga a gendarme, having suddenly gone mad, shot and killed nine persons.

BRITISH GENERALS AND THE GERMAN ARMY.

Generals Roberts and French are very indignant at the *New York Herald* having falsely imputed to them disapproving words concerning the German infantry which they had occasion to see during the Prussian manœuvres.

FRANCE AND MOROCCO.

France is making efforts to come to an understanding with England on the Morocco question.

BRUSSELS SUGAR CONVENTION.

The report that the German Emperor has protested against the Brussels Sugar Convention is untrue.

THE GERMAN NAVAL MANŒUVRES.

The Kaiser has gone to Cuxhaven to attend the naval manœuvres and then will leave for his hunting seat, Hubertus-stock.

(FROM THE "N.-C. DAILY NEWS.")

A BRUSH WITH A SLAVER IN THE PERSIAN GULF.

London via Bombay, Sept. 9.

A boat party from H.M.S. *Lapwing* has had a serious fight with a slave dhow in the Persian Gulf. One bluejacket was killed and others wounded.

COMMENDATION OF THE "PANTHER'S" ACTION.

London via Bombay, September 10.

The general opinion is that S.M.S. *Panther's* action will have a salutary effect on irresponsible fighting politicians of the Haitian stamp.

THE CRIMES ACT IN DUBLIN.

Summonses under the Crimes Act have been served on the Editor and Publishers of the *Irish People* at Dublin, the charges being intimidation and criminal conspiracy.

THE DEATH OF THE CAPTAIN OF THE "CRETE-A-PIERROT."

London via Bombay, Sept. 11.

Captain Killick, commanding the Haitian gunboat *Crête-à-Pierrot*, remained on board to fire the magazine and perished with his ship.

THE CONFERENCE WITH THE BOER DELEGATES.

The papers generally are of the opinion that the conference in London with the Boer generals has been valuable in showing that the grievances of the Boers are comparatively slight, and the hopelessness of the attempt to reopen a closed chapter. The *Morning Post* and the *Telegraph* condemn the astounding demands of the generals, which they attribute to the influence of Continental councillors.

THE TROUBLE IN SZECHUAN.

Chungking, September 11.

The insurgents are gaining ground in Szechuan, and the road from Chungking to the capital, Chêngtu, is unsafe for travellers.

AN ENGLISH VIEW OF THE UNITED STATES.

In an editorial ancient the recently issued report of the commission of the British Iron Trade Association, the *British Trade Review* points out that "the importance of the United States of America as a factor in the industrial world is recognized by all who have any knowledge of present-day conditions. Some of the most recent developments have caused something like a panic in the industrial nations of Europe, and their results are being watched with the keenest interests in the countries of the Far East and the British Colonies. In these parts of the world the problems of the future as regards trade and industry will be chiefly of an economic nature, and questions of tariff will be more important than the details of technical operations. The resources of the United States of America are so enormous, the influence of tariff conditions so great, and the magnitude of financial and industrial combinations so immense, that they present an altogether new set of problems to the economists and the statesmen. The former must not only reconsider their conclusions, they must recast the whole of their procedure and found their reasoning on assumptions which are more in harmony with actual conditions than the ordinary postulates of political economy. The latter must improve upon the empirical methods of the past and take seriously to the study of industrial dynamics, and not only ascertain the forces at work, but also as far as possible estimate their probable results. In a recent article the *London Times* observed: 'The shipping combination illustrates a truth taught by all history as usually taught. The truth is that the larger destinies of nations are mainly worked out by economic forces, which politicians rarely understand and still more rarely have any capacity to control. The shipping combination indicates a shift in the economic centre of gravity. It is not a freak of Mr. Morgan's. It is not a whim of American men of business. It is not an expression of any sort or kind of hostility to this country. It is the expression and the consequence of pre-existing conditions and of economic movements that have been going on under our noses. As a nation we do not look at such things. Our politicians are too busy with the trumpery affairs of party squabbles and the infinite verbosity of the House of Commons. The public at large are, in plain English, not educated enough to consider such things. Any one who dwells upon them is pooh-poohed as a crank or an alarmist. But movements do not stop because people refuse to see them; all that happens is that the people are tremendously startled when the door which has been steadily and gradually closing finally shuts with a bang.' Unless individuals and nations take a wide view of the industrial problems in which they are interested they will find themselves swamped by the

great economic movements which are everywhere revolutionizing economic conditions.

"For some time past all who study industrial evolution have been struck with the rapid changes which are taking place in the United States and have warned the people of Europe to be prepared for the results of these changes. It cannot be said that much attention has been paid to their words, but now the force of circumstances is compelling attention to the development.

"In some respects the Americans are ahead of other people in having improved machinery and methods of working. Their labour-saving appliances are developed to an extraordinary extent, they have greater facilities for the conveyance of traffic both by land and water, they have lower railway rates and greater elasticity in their application to suit the exigencies of the trade and greater freedom of contract between masters and men. Moreover, they have an educational system which is more complete and thorough than that of Britain, and, added to all, there is an amount of native energy and a determination to get on and to make the best of their opportunities, which is apparent in all classes, combined with a system (which is increasing in America) by which men are paid by results. These things have placed America far ahead of the other steel-producing centres of the world."

Our contemporary concludes with this paragraph: "At the same time we must not omit to mention that there is another side to the picture. Local and municipal conditions in America are very far from being as they ought to be—bad water supply, dirty and badly-paved streets, imperfect drainage and railway tyranny. Municipal administration is neglected by the most capable and distinguished men. Learned leisure is almost unknown. The man who is not actively engaged in business is apt to be regarded as a loafer. For many the pace is too hard. Allegheny city, which is practically Pittsburgh, is notorious for the large number of cases of self-destruction, and is known as 'the suicide city.' All this has to be offset against the higher wages and more comfortable conditions of living which American workmen generally enjoy. We must take care that we do not purchase mechanical progress at too high a price, and we should never forget that that progress is all in vain unless at the same time it leads to an improvement in human welfare and happiness."

LATEST SHIPPING.

Nos. 2/100, Plain	Nominal
Nos. 2/60, Gassed	228.00 to 255.00
Nos. 2/80, Gassed	278.00 to 305.00
Nos. 2/100, Gassed	400.00 to 420.00

RAW COTTONS.

American Middling	29.00 to 30.00
Indian Broach	24.00 to 25.00
Chinese	24.50

METALS.

There has been some business in bar steel but otherwise there is little doing.

Round and square ½ inch and upward	4.30 to 4.60
Iron Plates, assorted	4.60 to 4.80
Sheet Iron	4.80 to 7.10
Galvanised Iron sheets	10.25 to 11.00
Wire Nails, assorted	6.00 to 6.60
Tin Plates, per box	7.80 to 8.30
Pig Iron, No. 3	2.00 to 2.50
Hoop Iron (5/8 to 1½ inch)	5.10 to 5.60

KEROSENE.

There has been a distinct improvement in the market, and prices show an advance.

American	\$2.62
Russian	2.37½
Langkat	2.35

SUGAR.

The market is steady with prices unchanged.

Brown Takao	4.90 to 5.50
Brown Manila	5.25 to 6.45
Brown Daitong	4.30 to 6.50
Brown Canton	6.00 to 6.60
White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

Since our last issue business has continued on a large scale at previous quotations. During the last three days sellers have advanced their prices about *yen* 20 per picul, which has somewhat checked demand. At closing the market is strong, sellers and buyers alike professing small inclination to do business.

QUOTATIONS.

Filatures—Extra Best, Coarse	Y. 1,070 to 1,080

BOVRIL AT THE FRONT.

Bovril has played such a conspicuous part in South Africa that it forms no inconsiderable feature of the story. The *Lancet* has had frequent references to Bovril in the reports of the officers of the Royal Army Medical Corps. Nearly every newspaper correspondent has had to refer to Bovril to make his story complete. Rudyard Kipling and Biden-Powell have written their Bovril stories. Over 500 British hospitals and similar public institutions use and prescribe Bovril, not beef tea, but Bovril.

The reason is not far to seek. Bovril is a nourisher as well as a stimulant. It contains the albumen and fibrine, the sustaining properties of the beef. It is this fact, together with its absolute purity, that commends Bovril to physicians and scientists, and proves in practice what it demonstrates in analysis.

BEAUTIFULSKIN

Soft White Hands

Luxuriant Hair

Produced by

CUTICURA SOAP.

MILLIONS OF WOMEN USE CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many antiseptic purposes which readily suggest themselves to women and especially mothers; and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients, and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines, in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the severest humours, with loss of hair, when all else fails. Sold throughout the world. "All about the Skin, Scalp, and Hair," post free, of Aust. Depot, R. TOWNS & Co., Sydney, N.S.W. So. African Depot: LENNON LTD., Cape Town. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 27TH, 1902.

BIRTHS.

On August 5th, at The Round Tower, Burnham, Somerset, England, to the wife of GEORGE BRAITHWAITE of Tokyo, a Son.

On September 21st, at 9, Tsukiji, Tokyo, to the wife of JOHN TRUMBULL SWIFT, M.A., a Son.

MARRIAGE.

On the 25th September, 1902, at the Church of St. Michael-le-Belfrey, York, England, by the Vicar, JOHN ARCHIBALD TEMPLE, only son of Mr. J. I. Plummer, M.A., F.R.A.S., etc., Hongkong and Durham, to MARIAN ALMA, daughter of Mr. F. G. Hendley, H.M. Inspector of Army Schools, York.

DEATH.

Mr. YOSHINOBU UMEDA, Mayor of Yokohama City, on Saturday, the 20th September.

SUMMARY OF NEWS.

Snow fell on Mount Fuji on the morning of September 14th.

DR. BAEZ left Shimonoseki on September 18th for Chemulpo.

MR. IIZUKA, a police inspector in Fukuoka, died of cholera on September 23rd.

THE Emperor and Empress have granted a sum of yen 1,500 toward the relief of sufferers in northern Formosa by the recent storm.

A TELEGRAM published in Kobe on the 19th, dated London the 17th, said:—The speech delivered by M. Pelletan, Minister of Marine,

is severely criticised by the Paris newspapers. The leading journals sharply censure the Minister for his chauvinistic utterances.

THE Chinese Minister in Tokyo, owing to the death of his elder brother, will observe mourning for two weeks commencing on September 23rd.

A CREW from the Japanese cruiser *Takasago* competed at Ryde Royal Regatta among the man-of-war cutters but only secured third place.

THE launch of the third class cruiser *Niitaka*, which is now in course of construction at the Yokosuka Shipbuilding Yard, will take place some time in October.

PUBLIC Procurator Kosaka Komataro, of the Osaka Appeal Court, has been engaged by the Siamese Government as a legal adviser at the yearly salary of yen 6,000.

PRINCESSES TSUNE AND KANE, who have been staying in Nikko for some time, returned to the Takanawa Detached Palace on September 18th, arriving at Ueno Station in the forenoon.

THE Hongkong Contingent to the Coronation passed through Yokohama on Monday by the C.P.R. steamer. Volunteers and Regulars alike seem to have had a right royal time in the Old Country.

LATEST intelligence from Hachijo island, one of the seven islands of Izu, says that a peculiar epidemic, not known before, has recently broken out in the island and many inhabitants have fallen victims to it.

TELEGRAMS from Tientsin report the safe arrival of Prince Tsai on September 22nd and of Major-General Yamane, *attaché* of the Japanese Legation in Peking, and various Japanese advisers to the Peking Government and to Viceroy Yuan.

THE Hongkong papers announce the death of Mr. D. R. Crawford, one of the original founders of the firm of Lane, Crawford & Co. The sad event occurred in Glasgow, Mr. Crawford left the Far East about two years ago.

THE Dublin Corporation has adopted a resolution protesting against the outrage and insult done to the citizens by the proclamation of the Crimes Act in Dublin, which is described as the most crimeless city in the world.

THE residence of Viscount Mori, in Chofu-mura, Yamaguchi Prefecture, has been selected as the Emperor's temporary residence during the coming military manoeuvres to take place in Kyushu some time in November.

THE launch of the yacht which has been built at the Mitsu Bishi Shipbuilding Yard, Nagasaki, for the Crown Prince will take place on October 4th. She will be named *Hatsu-kaze* (a poetical term which, translated literally, means "first wind.")

PROFESSOR IWAYA MAGOZO, of the College of Law in the Kyoto University, has been engaged by the Chinese Government as a legal adviser at the yearly salary of yen 6,000. He will start for Peking shortly to take up his new duties.

PRINCE TSAI, of China, during his stay in Japan, made a donation of yen 1,500 to municipal and provincial authorities, namely yen 300 to Tokyo City, yen 200 each to Yokohama, Kobe, Kyoto and Hiroshima, and yen 100 each to Nikko, Hamamatsu, Bakan and Osaka.

MR. ARAI KICHIRO, a wealthy man of Sengen-machi, Yokohama, has presented a fine rowing boat to Captain Gunji (retired), Chief of the

Hoko Gikai, an association organized about ten years ago for the purpose of developing the fisheries of the Kurile Islands.

AT a sitting of the Yokohama Municipal Council held on September 23rd it was resolved to present a sum of yen 2,200 to the family of the late Mr. Y. Umeda, Mayor of Yokohama, in recognition of the faithful services rendered by him in the transaction of public affairs. The sum was handed to Mr. Umeda Katsutaro, son and heir of the deceased, on the 24th.

AT the Yokosuka Shipbuilding Yard four torpedo-boat destroyers are now under construction and one of them is near completion. They are the *Harusame*, *Murakumo*, *Hayabusa*, and *Asagiri*. Their armaments will all be supplied from the Kure Arsenal. The above craft, with the torpedo-boat destroyer *Asashivo*, now on her way home, complete the second naval expansion programme.

THE launch of the steamer *Aki Maru*, built at the Mitsu Bishi Shipbuilding Yard, Nagasaki, for the Nippon Yusen Kaisha, will take place on October 6th. Her dimensions are: length 445 feet, breadth 49 feet 2 inches, beam 33 feet 6 inches, gross tonnage 6,400 tons and draught 25 feet. She will have a speed of 12 knots and is capable of carrying 16 cabin, 20 ordinary and 168 steerage passengers. The vessel will be placed on the trans-Pacific line.

WE learn from San Francisco papers that Captain J. T. Smith, late of the *City of Peking*, was to leave San Francisco on Sept. 1st for Newport News, Va., to take command of the Pacific Mail liner *Siberia*, sister ship to the *Korea*. The *Siberia* is about ready for her trial trip, or will be as soon as her coal can be taken aboard. She is expected to leave the latter part of September for San Francisco being scheduled to sail for the Orient in December, in place of the *Peru*, which is to be returned to the Panama route.

ACCORDING to latest statistics relating to forests in Japan the total area of the State forests is put at 7,580,208 *cho* (one *cho* is equal to 360 feet). The yearly income accruing therefrom amounts to yen 2,060,416 and the annual expense to yen 965,325, leaving a balance of yen 1,095,191. In other words, the profit per *cho* is only 14 *sen*. The figures show a great diminution as compared with the forestry returns in Germany, where a profit of over yen 23 is obtainable per *cho* annually.

CHO MIN-CHEE, the principal Chinese employé of the National Bank of China, Ltd., No. 75, Yokohama, who had been sent to Negishi prison pending trial on a charge of fraud, committed suicide in his cell by hanging about 5 p.m. on September 17th. He used his girdle for the purpose. The accused with another Chinaman was recently prosecuted in the Yokohama Chiho Saibansho by the National Bank on a charge of having defrauded the bank to the extent of yen 60,000.

IN connection with the Fifth Domestic Exhibition to be opened in Osaka next year, Mr. Horne, an American resident of Yokohama, is reported to have obtained permission on September 23rd from the Japanese Authorities to erect a stand for the exhibition of machinery in the compound of the Exhibition. Sanction was also given the same day to a number of Japanese applicants, including Count Sano, President of the Japan Red Cross Society, Mr. Yamamoto Kametaro, of Kobe, Mr. Sumitomo Kichiyemon, of Osaka, and others, who are desirous of making displays in the Exhibition.

CHINESE NEWS.

Saturday, Sept. 20.

Writing about the killing of Messrs. Bruce and Lowis in Hunan, the *North-China Daily News* says:—

It is sad that the Chinese masses should still be liable to be roused to murderous frenzy by such malignant rumours. The only remedy is that which the missionaries themselves are constantly applying: the dissipation of the ignorance and credulity that make these outbreaks possible.

Is that the only remedy? Does it not suggest itself that if all missionary institutions in China were placed on precisely the same basis as Chinese public institutions so far as local official inspection is concerned, the air of mystery that now envelops Christian propagandism in the eyes of the ignorant masses would be dissipated? The lives, conduct and influence of the missionaries themselves ought, one would think, to exercise a softening influence, and yet, after some sixty years of the operation of that influence, we are only two years removed from the time of a wholesale massacre of missionaries, men, women and children. Something must be wrong. The world can not afford to lose such philanthropists as are yearly sacrificed to the fury of Chinese mobs.

The amount spent by Japan during last fiscal year—ended March 31st 1902—on account of operations in North China, was 13,887,920 yen. The *Official Gazette* announces that the Emperor's assent to this outlay has now been obtained. The sum is divided thus:—

	YEN.
Foreign Office.....	568,735
Home Department.....	3,690
Finance Department	3,697,256
War Department	8,111,556
Naval Department.....	1,283,353
Department of Communications.	223,328

In the same *Gazette* we find that the cost of sending a squadron to England for the Coronation is put down at 397,841 yen; the cost of overseeing the affairs of the general election, 119,690 yen; and the cost of floating and repairing stranded men-of-war—namely, the *Yayeyama*, the *Musashi* and a torpedo-destroyer—, at 288,618 yen.

A telegram to the *Asahi* from London says that the project of a railway from Takshend to Peking has been again brought forward. Three years ago the route was surveyed and it was expected that the work of construction would soon commence, but the state of the money market being unfavourable, a postponement became necessary. The financial outlook being now more favourable, the scheme is to be taken up once more.

We read in Tokyo papers that Professor Iwaya Magozo, Doctor of Law in the Kyoto University, has been engaged by the Chinese Government for the purpose of compiling a new code of laws. The Professor left Japan on the 16th instant, and it is expected that after his arrival in China a number of assistants will be summoned from Japan to join him. China seems to be really in earnest about the reform of her laws and her judiciary. It is a stupendous task. Will the Powers leave her leisure to complete it? Will the prejudices of her own people leave her leisure? It is related of the celebrated Wen Hsiang, whom all agree in regarding as one of the greatest, if not the greatest, among China's modern statesmen, that he observed:—"You are very anxious to wake us up, and you will succeed eventually. But whether the consequences will be agreeable to you is another question," or

words to that effect. He spoke at some time in the sixties. If, in all this new movement of reform, China were making free use of the men who have been educated under Christian auspices and who have learned to look on the Occident with friendly eyes, Wen Hsiang's warning would not have any ominous sound now. There is, however, one most reassuring feature in the situation. It is that the Chinese are apparently to be led along their new path by Japanese. Every Japanese subject employed in China in whatever capacity will be a centre for diffusing the light of liberalism. The resources immediately available to China for this reform movement would not suffice for the employment of a large number of Europeans and Americans, and, besides, Europeans and Americans would have to begin by overcoming in their own case the prejudices which the Chinese have learned to entertain towards all "over-sea men." But the Japanese are not thus handicapped. They have some degree of distant kinship with the Chinese, and it may be assumed that the latter will listen to them from the outset, and will readily imbibe the friendship Japan feels and shows towards the Occident. If there be any truth in this forecast, the event will be another illustration of the old saying that the unexpected always happens. For what is felt by sufferers from the "Yellow-Peril" apprehension is that Japan may rouse China's latent energies and then place herself on the crest of an immense wave of Oriental inundation. But it will probably be because of Japan's teaching that the yellow waters, instead of gathering into an angry flood, will spread peacefully over a tranquil, happy and enlightened Asia.

Monday, Sept. 22.

An extraordinary rumour is telegraphed from Paris, on the strength of an alleged official statement, that the French have "landed" artillery at Chengtu in Szechuan, but that public opinion in Paris regards the stories of Boxer troubles in Szechuan as exaggerated. How on earth could the French manage to "land" artillery at Chengtu? They might get a gunboat as far as Chungking on the Yangtse, but to push far up beyond that point, and then to make the ascent of the Chung-kiang would be feats not yet contemplated, to say nothing of the miraculous celerity of the performance.

Ten Japanese railway engineers have been engaged for construction purposes on the Hankow-Canton Railway. They left Tokyo on the 20th instant. If Japan has to supply to China teachers for schools and experts for industrial enterprises, the resources of this country will be strained.

Tuesday, Sept. 23.

It is said that China's request for permission to pay the Indemnity in silver has definitely fallen through. America was willing enough. With such a plethora of money in her Treasury that she can afford to treat China's payments as a mere bagatelle, she said in a *nonchalant* manner that she would do whatever the rest were prepared to do. Great Britain, on her side, had no objection to a compromise by which China would have obtained the relief she desires up to the year 1910, whereafter she must revert to the strict terms of the Protocol. But apparently the other Powers are unwilling to make any such concession. How could they agree, seeing that some of them have already financed their shares of the Indemnity?

What China should have done, we think, would have been to insist on the payment of the customs duties in gold. If she has to discharge her debts in gold, she may set up a just claim to have her debtors pay in gold. Of course her radically soundest plan would be to adopt the gold standard. The Second Article of her new Treaty with England provides that she shall make arrangements for a uniform national coinage which shall be legal tender in payment of all duties, taxes and other obligations throughout the Empire by British as well as Chinese subjects. That would be a fine opportunity to struggle out of the silver morass, for a morass the unwisdom of the world has made it.

We have refrained from wearying our readers by presenting to them the various items of intelligence telegraphed from Peking and Tientsin about the restoration of the railways within the Great Wall and without it. But we may mention that, according to the latest rumour, Russia asks, as an essential condition, that special facilities shall be given for the carriage of Russian mails and Russian troops over the Shanhaikwan-Newchwang road. That sounds little credible. Why should special facilities be secured to Russia—above all in the matter of troops—if her evacuation of Manchuria is to be genuine? And do her diplomats usually show so little tact as to ask for collateral concessions such as would obviously conflict with the integrity of her public engagements?

The charter of the Hunan S.S. Company is published. We observe from the provisions that the Company is required to carry Japanese mail matter gratis, but that it may not carry foreign mails without the permission of the Minister of State for Communications. If foreigners are employed as members of a crew, the sanction of the same Minister must be sought, except in cases of emergency, due to death or other causes, when engagements may be made with the approval of the nearest consul, subject to the subsequent sanction of the Minister. It is also laid down that the Government shall have the right to employ the Company's ships for public purposes.

Wednesday, Sept. 24.

News from Szchuan is to the effect that the Boxers have destroyed a native church, and have raided three other districts. No lives appear to have been lost, or, at any rate, there is no report of any loss of life, but details of that nature may come later, for it has always been remarkable that the killing or maiming of native Christian converts is not deemed a matter of paramount importance by distributors of Chinese news.

Thursday, Sept. 25.

Major-General Yamane has arrived in Peking to take command of the Japanese troops there.

Prince Ching has arrived at Taku on his return voyage from Europe *via* Japan.

The hospital established in Tientsin by Messrs Inouye and Sano was opened on the 21st instant, the occasion being celebrated by an entertainment when over a hundred persons were present.

It is now reported that Russia is making preparations for the withdrawal of her troops from the first evacuation section of Manchuria, and that the operation will be concluded in due time, namely, by the 10th of October.

Rumour says that the Empress-Dowager is much debilitated and that she will retire to the Summer Palace next month. It is to be hoped that her absence will not become the occasion for another access of reforming mania such as rendered 1898 a catastrophic year. Reform is absolutely necessary, but reform without judgment or caution must always be suicidal.

Friday, Sept. 26.

Various items of intelligence are telegraphed from China with regard to the evacuation of Manchuria and the rendition of the railways. But it is impossible to rely on the accounts given by correspondents. The salient fact alone is interesting, namely, that evacuation and rendition seem to be getting nearer, and that they will soon, in all probability, be accomplished facts.

A Shanghai telegram alleges that the Boxer disturbances in the upper part of the Yangtse Valley are not so serious as they were originally represented to be. We presume that the reference is to Szchuan.

The discussion about the Tientsin-Paoing Railway continues, but what particular stage it has reached we can not decipher. Sir Ernest Satow has declared, it is said, that England does not regard France's protests as at all serious, which is the gist of the news.

THE ANGLO-CHINESE TREATY.

Shanghai telegraphs that the Washington Government has directed Mr. John Barrett to return to Shanghai for the purpose of preparing a report on the influence that the new Anglo-Chinese Treaty is likely to exercise upon the trade of the United States. It is easy to conjecture the form that his report will take. America can not be expected to agree that goods which now find their way to the consumer at an outlay of 2½ per cent. on account of inland taxation, shall hereafter pay 7½ per cent. to be freed from that same taxation. Rumour further alleges that Germany will not agree to any part of the surtax scheme, and will insist on maintaining the present system; while as for Japan, we showed in a recent issue that the new Treaty must be intolerable to her in some respects. Events have confirmed the apprehension we ventured to suggest when the commissioners met in Shanghai, namely, that the method of independent negotiation would prove suicidal, and that by the time each Power had whittled down the Treaty so as to suit its own individual convenience, the solid residuum left to China would be insignificant. Our impression now is that the Treaty will fall through completely.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

The local Agent (Mr. J. Williamson Jones) of the Chartered Bank of India, Australia and China informs us that he is in receipt of a telegram from his London Office, intimating that the Directors of the Bank have declared an interim dividend at the rate of 10 per cent. annum, free of Income Tax, for the half year ended the 30th June last, payable on and after 22nd proximo.

"UNCONVINCED" AND "TREATY RIGHTS."

Monday, Sept. 22.

We observe that "Unconvinced" still adheres to the argument that if the drafters of the revised English treaties had intended to limit the operation of the celebrated Article XVIII. to "land" only, they would never have used the word "property." "Land," says "Unconvinced" "did not express the meaning they wished to convey and property" did," and he goes on to observe:—

A definite reply to the *Japan Mail's* question, "Why did the drafters not use the word houses" is equally simple. Because they knew that "houses" would be understood by the interpreters of the Treaty as included in "property." Had they used the word "land," in order to make their meaning absolutely clear they would have had to add the words "and houses," but, as I pointed out before, they could not have used the expression "property and houses" without making themselves ridiculous. It's a pity Mr. Bertie and Mr. Gubbins are not at home to set the point at rest, but in any case I presume their evidence will be sought and their intentions made known to the arbitrators. As regards the laws by which the questions will be decided, I take it that it is not a question of law at all, but rather a question of the English interpretation of the English word *property* as used in Clause 18 of the Treaty and upon this the evidence of the intention of Mr. Bertie and Mr. Gubbins must have a most important bearing.

Now it has often been pointed out, though "Unconvinced," like many of his fellow-thinkers, takes no notice of the argument,—it has often been pointed out that while the word "property," if not qualified by any limitation, would undoubtedly include "houses" and a great many other things also, it can not possibly be interpreted as including "houses" when it is accompanied by the limitation "held under the leases in perpetuity." For the "houses" standing on settlement lands are not held under the leases. They are not leased property. They are actually owned by the holders of the land, whereas the land itself is only leased. Not the smallest exception is taken, or can be taken, to the proposition that the significance of the generic word, "property" is much wider than the significance of the specific word "land." But where there is question of interpreting the words "property held under a certain lease," we naturally go to the lease to discover the nature of the property in question, and we then find in the clearest possible manner that the property is land. Why does "Unconvinced" insist on separating the word "property" from its qualifying context? Why does he rest his case on the unlimited meaning of a word when it is accompanied by the clearest limitations? And why does he, in common with all his fellow-thinkers, persistently ignore the plain fact that if "property" is to be interpreted without regard to the textual limitation set forth in the Treaty, then some wholly arbitrary limitation must be imposed, since otherwise the word would have to be read as including everything owned by the foreign resident, not merely his dwelling and warehouses alone, but also everything in them, the furniture, the goods, the horses, the carriages, the *jinrikisha*, the bicycles and so on. If, as we are bound to assume and do assume, if "Unconvinced" really cares to discuss the question exhaustively, will he not tell us what limitations are to be set to the significance of the term "property" if the treaty limitation is ignored. He may reply as another controversialist has constructively implied, that the framers of the Treaty had in mind the limitation "immovables": that they intended the term "property" to cover all "immovables." If

so, we come to the question, "immovables according to what law?" But "Unconvinced" rejects the idea of law altogether and pleads for the English interpretation of the English word "property." Then we ask him "what is the English interpretation of the English word property?" Is it "land and houses." We have never heard of such an interpretation, nor can it be found in any dictionary. To limit "the English interpretation of the English word property" to land and houses is assuredly one of the most arbitrary proceedings that stand on record. As to what Mr. Gubbins and Mr. Bertie had in view when they assisted in drafting the Treaty, it will of course be very interesting to learn from their own mouths, but, in the meanwhile, the Blue Book makes the matter quite clear. For we there learn that Mr. Bertie pointed out the importance of distinguishing the general *land* ownership question from the ownership of real property in the settlements, and asked for "some effectual guarantee against the disturbance of existing rights;" and that, in a memorandum by Viscount Aoki, the latter pointed out that "the rights of the lease holders are carefully defined by the title-deeds, and too well guarded by the principles of civil law that any apprehensions on this score should be entertained." Can it be supposed for an instant that either Mr. Bertie or Viscount Aoki intended to refer to houses when they made the above statements? How could Mr. Bertie have intended to ask for a distinction between house-ownership in the foreign settlements and the general question of land ownership in Japan, and how could Viscount Aoki have intended to refer to houses when he said that the rights of lease holders are carefully defined by the title-deeds? If "Unconvinced," "Truth" or "Treaty Rights" will be so good as to give frank answers to the various questions we have here propounded, perhaps a step of progress towards agreement may be made.

Wednesday, Sept. 24.

"Treaty Rights" says that "a perpetual lease granted by the Japanese Government to a British subject could not possibly be affected in any way by a Treaty between Japan and Austria." Let us recall the facts. In a letter dated Sept. 15th "Treaty Rights" said:—

The third condition of our Title Deeds which has been nullified by the law relating to Perpetual Leases which the Japanese Government passed and promulgated last year and to which I referred in my last week's letter—and which I quote here for the benefit of the *Mail*—runs as follows:—

"That no portion of said lot or any building thereon shall be sold or leased to any Japanese subject, unless both the Japanese and consular authorities grant an official act of authorization under the seals of office legalizing such transfer or lease; which said act may be granted or refused in the exercise of their discretion."

A most strenuous effort—thank goodness a fruitless one—was made by the Japanese Government for over two years to force upon foreigners a superficies in lieu of a perpetual lease; an attempt is now being made to ignore the fact of our perpetual leases having been confirmed by Treaty and the third condition of our Title Deeds has been nullified.

We stand in breathless trepidation wondering what is the next provision of Treaty or condition of Treaty-confirmed-perpetual lease doomed to violation!! What a strong inducement these facts present for foreign capital to come into the country!!!

This is a perfectly clear issue. The title deed provides that no part of the leased land nor any building thereon erected shall be sold or leased to a Japanese subject without the official authorization of the Japanese and Consular Authorities. But the German and Austro-Hungarian Revised Treaties annul this restriction, and provide, in the clearest

language, that such sale may be made without any reference whatever to either the Japanese or the Consular Authorities. "Treaty Rights," apparently ignoring these provisions of the Revised Treaties, complained in the letter quoted above that "the third condition of the title deeds had been nullified," and in his last letter he describes our reference to the Austro-Hungarian Revised Treaty as "ridiculous" and "invalid." Hard words do not prove anything. The plain fact is that German and Austro-Hungarian subjects have acquired by the Revised Treaties the definite right to dispose of their land and houses to Japanese subjects without the consent of the Consular or the Japanese authorities. But "Treaty Rights" now says that "a perpetual lease granted by the Japanese Government to a British subject could not possibly be affected in any way by a Treaty between Japan and Austria." Has the British subject's perpetual lease been affected in any way, may we ask? We are not aware that it has. If the British subject does not want to avail himself of the privilege secured by the Austro-Hungarian and the German Revised Treaties, if he insists on seeking the preliminary consent of the Japanese and Consular Authorities before disposing of any part of his property to Japanese subjects he is still at liberty to do so. The consent of the Consular authorities, indeed, is quite worthless, since the Anglo-Japanese revised Treaty provides that "the Consular authorities mentioned in the perpetual lease are in all case to be replaced by the Japanese authorities." Nevertheless, if any one chooses to resort to the superfluous procedure of consulting the Consuls, we see no reason against his doing so. He is not under any sort of obligation to avail himself of the freedom of action acquired by Germany and Austria-Hungary for their subjects. Moreover, he is not under any sort of obligation to sell his property to a Japanese. That is a purely optional procedure on his part, and so long as he chooses to confine his transactions of sale or purchase to persons of non-Japanese origin, his lease with all its restrictions will remain absolutely intact and unaltered. Is it not somewhat unjust to accuse Japan of violating her treaty engagements towards England because, at the instance of the German and Austro-Hungarian Governments, she has conventionally removed a restriction formerly hampering freedom of transactions in real property, but, at the same time, has left British subjects absolutely free to adhere to the old restriction and to be bound by it, if such should be their will or fancy? Possibly the objection entertained by "Treaty Rights" to freedom of mixed residence may be based on some ground not apparent to us, but truly we fail to apprehend how Japan can be charged with any breach of faith towards the British Government because she has by treaty relieved Austro-Hungarian and German subjects from a restriction by which British subjects may continue to be bound if they please.

Thursday, Sept. 25.

The following letter appears in the columns of a local contemporary:—

Dear Sir,—In his article under date 22nd inst. the Editor of the *Japan Mail* repeats his oft-stated argument that *land* only is leased, but I would ask him how could anything but land be leased seeing that no buildings were in existence when the leases were granted? Obviously it must be conceded that land only was leased in the first instance. But the Japanese Government stipulated that buildings should be erected on the leased lands, and in anticipation of the

property thereby to be created, fixed the annual rent to be paid, on a scale far beyond ordinary land tax and sufficiently high not only to cover the land tax, but likewise whatever taxes might afterwards be considered leviable on the property, whether for Imperial or municipal purposes. When they approached the Treaty Revision question, Mr. Bertie and Mr. Gubbins knew all this, and they also knew that throughout the long years preceding Treaty Revision, the payment of what was usually called Ground Rent had given leaseholders absolute immunity from all further taxation. In order, therefore, to obtain "some effectual guarantee against the disturbance of existing rights," or, as someone else has put it, to maintain the "status quo," they made use of the word *property* in Clause 18 instead of land. That is indisputably, in my opinion, the real reason why the drafters of the Treaty used the word *property*, and, holding this belief implicitly, I have no hesitation in stating that I limit the application of the word *property* strictly to land and buildings in the context of Clause 18 as understood and clearly implied by Mr. Bertie and Mr. Gubbins. The suggestion that under my contention the meaning of the word *property* becomes illimitable, extending to jirikishas, bicycles, &c., &c., is untenable on the face of it, and no one knows this better than the Editor of the *Japan Mail*. For the foregoing reasons I claim that it is not a question of law, but a question of what was in the minds of the drafters of the Treaty and what they intended to convey when they used the word "property" instead of "land."

Yours faithfully,

UNCONVINCED.

Yokohama, September 23rd, 1902.

It is rather a curious experience to have our own questions propounded to ourselves as "Unconvinced" does in the above letter. He inquires:—"How could anything but land be leased seeing that no buildings were in existence when the leases were granted?" Precisely. That is the very question we have often asked. So, then, it is admitted that only land was leased. What, then, is the "property held under the lease"? Can it be anything but land? But "Unconvinced" apparently suggests that the leases had an anticipatory, as well as an actual, character. He does not indeed go so far as to say that a lease granting the perpetual tenure of land alone, was intended to grant also perpetual tenure of any buildings that might subsequently be erected on the land. He could not possibly advance any proposition so palpably untenable, for the buildings are not leased at all: they are owned, and never yet has such a thing been heard of as that the drafters of a lease intended it to have a scope of which no hint whatever is given in its text. But "Unconvinced" holds that inasmuch as the Land Regulations stipulated for the erection of buildings, therefore buildings must somehow be held to be included in the "property thereby to be created." We find some difficulty in dealing with an argument so nebulous. At the outset "Unconvinced" must be reminded that what the Revised Treaty confirms is the lease—nothing but the lease—and that the proviso with regard to house-building does not appear in the lease. In the next place we would remind him that the stipulation as to house-building was suggested by the Foreign Consuls solely in the interest of the foreign residents, the object being to limit the lessees to *bonâ-fide* residents and to exclude outside speculators. In the third place we would remind him that his analysis of the land rent is purely arbitrary, and that from the components of the rent, as analysed by him, the essential element of "rent" is omitted. Does he hold that there was no charge on account of rent and that the whole of the so-called "rent" consisted of taxes? In the next place we have to observe that if the British drafters of the Treaty intended it to carry the meaning now read into it by "Unconvinced," they certainly did their "level best" to obscure their own intention. And, finally, we would ask him

whether he thinks that in interpreting an agreement, the intentions of one side only are to be considered. What about the intentions of the Japanese negotiators? We do not, for our own part, believe for one moment that the idea of obtaining immunity from house tax ever crossed the mind of either Mr. Bertie or Mr. Gubbins, for, had they entertained any such purpose, they would have drafted the 18th Article very differently. On the other hand, we know, as a matter of fact, that the idea of the house tax was present with the Japanese negotiators.

THE LAND TAX QUESTION.

The journalists who recently formed the *Doshi Kisha Club* have compiled a vehement circular on the subject of the land tax. It is a surprising document. The impression produced upon the reader is that the signatories regard a tax on land as the worst kind of impost. They declare it to be, in the first place, a relic of feudal times when the law devoted two-fifths of the produce of the land to public purposes and three-fifths to the farmer; and in the second place, an outcome of the socialistic tendency in Europe to prevent the growth of a large landlord class, who grew fat on the people's toil without contributing anything to the support of the State. These arguments do not commend themselves to sober-minded persons. Every tax is objectionable when its burden becomes excessive, but of all taxes that on land is economically the soundest and theoretically the justest. Japan is fortunate in being able to derive a large part of her income from such a source, since to that extent she is saved from resorting to embarrassing and demoralizing imposts of a miscellaneous character. In our opinion, the members of the *Doshi Kisha Club* are doing a very bad service to their country, while, as for the quality of their arguments, they must themselves be sensible that in attempting to champion the landlord as well as the farmer they undertake a somewhat incongruous task. If the land tax be reduced to its old figure, some other source of revenue must be found, but, true to the habit of all anti-tax agitators, the *Doshi Kisha Club* do not appear to give any consideration to that side of the question. Happily for them they can occupy the position of irresponsible critics. Still, they ought to perceive the illogicality of alleging, as they do most vehemently, that it will be a gross breach of faith on the part of the Government to continue the impost at its present rate. The Government has no independent power in such a matter. All that it can do is to ask the people's representatives in the Diet to sanction the unchanged operation of the law of 1898. If the Diet refuses, there is an end of the matter. If the Diet agrees, how will it be possible to allege that the people have been treated tyrannically or that they have been the victims of a breach of covenant? It is not from a society of thoughtful journalists that we look for an agitation of this frothy and superficial nature. Some of the Tokyo journals allege that the matter will probably be postponed for a year. The increased tax will continue to be collectable during 1903, and its abandonment at the time provided by law or its continuance beyond that time can be determined by the Diet in its 1903-4 session just as well as in its 1902-3 session. Therefore the Cabinet will allow the problem to stand over. These are rumours. We do not pretend to say what credit attaches to them.

THE OSAKA GAS COMPANY.

Saturday, Sept. 20.

The *Nichi Nichi Shinbun* publishes a powerful article—the first of a series—on this now much-discussed question. From this article we learn at length what are the demands preferred by the Osaka Municipality. It appears that when the Gas Company was formed six years ago, its capital was fixed at 350,000 *yen*, out of which 140,000 *yen* was paid up. The 20-*yen* paid-up shares were then selling for only 5 *yen* and the Company's prospects were not brilliant. There appears to have been no restriction whatever as to increase of capital. The law does not permit a company to make additions to its capital until the sum originally fixed is paid up, and the charter usually determines what amount of ultimate increase is permitted, pending fresh sanction. But the Osaka charter did not, it would seem, contain any provision on that subject. For nearly six years things remained in this condition, and last fall the Company commenced works of construction at Matsushima. But the Municipality said not one word. It remained content with the charter which gave it nothing beyond a consultative right with regard to matters relating to works of construction. Then suddenly, when the Company, having obtained the cooperation of foreign capitalists, promised to become a flourishing concern, the Municipality stepped forward with these demands:—

1. That the consent of the Municipality must be obtained by the Company whenever the latter proposes to increase its charge for gas.
2. That although the period of the Company's charter is 99 years, the Company must agree that, at the end of 25 years the City shall have the option of buying up the concern at a price based on the average earnings for the previous three years.
3. That all gas supplied to the City for public purposes must be at a reduced rate.
4. That the Company must pay to the City a certain fraction of its gross earnings.
5. That the Company must pay to the City a certain fraction of its net earnings.
6. That all increases or diminutions of capital as well as issues of debentures must have the City's approval.

We entirely agree with the *Nichi Nichi Shinbun* that these conditions are quite monstrous. If the Municipality merely asked for a reasonable per-centage of the Company's net earnings, the public would endorse the proposal, though, in view of the charter's having been already granted and suffered to remain unchanged for six years, no demand of the kind could be advanced as a right. But the procedure of the Municipality amounts to total disregard of the existence of a charter. How can the people of Osaka, being, as they are said to be, clear-headed business men—how can they support the Mayor and his colleagues in such a course? Perhaps it is thought that the only hope of getting something is to ask for a great deal. But this is not a mere question of haggling and barter. The Municipality's demands will be interpreted by the public, and must be interpreted by the public, as an evidence of the value attaching to the sacredness of a compact in the eyes of the citizens of Japan's manufacturing centre. If the *Nichi Nichi* be rightly informed, this affair assumes a very grave aspect. Most assuredly the Company's public duty as well as its sense of business expediency dictate some concession to the City, but that its charter should now be radically and injuriously changed in deference to popular clamour is a preposterous proposition.

Wednesday, Sept. 24.

The *Asahi Shinbun* says that there has been a marked decline in the value of the Osaka Gas Company's shares, the 50 *yen* (paid-up) shares having fallen from 46 to 37 and the new 2½ *yen* (paid-up) shares finding no buyers whatever. That is not surprising, the Mayor and a considerable section of the citizens having adopted a course which amounts to cancellation of the old charter and its replacement by a document of a very different character. The Municipality should never have granted a ninety-nine years' charter, virtually unconditional and not calling for any contributions from the Company to the municipal funds. That was a palpable blunder, only explicable on the supposition that the enterprise was deemed so precarious as to require encouragement altogether exceptional. Such, indeed, seems to have been the actual condition at the outset, since for nearly six years the Company made no attempt to carry out its project or to increase its paltry capital of 350,000 *yen*. But the charter stands. Nothing can gainsay that fact, and though the Gas Company will be behaving in a very unwise manner if it refuses to recognise its moral obligation to the city as well as to obey the suggestions of expediency, the Municipality will be incomparably more blameworthy if it declines to implement its engagements, which, for the rest, the law will compel it to observe.

Thursday, Sept. 25.

The *Japan Times* says, with regard to the Osaka Gas Works:—

It is easily conceivable that a charter granted to a business concern may be a very bad one though forming a perfectly effective document. In other words it may be bad, not in the sense of lacking in legal validity, but bad in the sense of its interfering with or ignoring the public interests. That the charter now in the hands of the Osaka Gas Company belongs to this category we have already pointed out in recent issues, and it will have been seen that the reasonableness or otherwise of the contentions of Osaka people with regard to that company depends primarily and almost exclusively on the quality of this charter. Despite this plain fact it is curious, indeed instructive, to note that all the English journals published in this country, that have so far come out in support of the gas company, studiously remain silent on this crucial question of the quality of the charter. We cannot account for this unanimous avoidance on the part of these papers, of this important point of the discussion, unless we are to ascribe it, the avoidance, to their fear that once they take it up they will be compelled to admit the bad character of the charter and that this may only be regarded as a virtual recognition of the reasonableness of the Osaka people's attempt which is nothing other than an attempt to ameliorate as far as possible the defects of the charter. Whether intentionally or not this omission cannot but constitute a practical misrepresentation of the facts of the case and we are curious to know if our contemporaries would rest contented under that charge.

For our own part, we have from the outset recognised the vicious nature of the charter. In our last issue we said:—

The Municipality should never have granted a ninety-nine years' charter, virtually unconditional and not calling for any contributions from the Company to the municipal funds. That was a palpable blunder, only explicable on the supposition that the enterprise was deemed so precarious as to require encouragement altogether exceptional.

Our view has always been that the charter is a radically defective deed, and that its holders are under a moral obligation to agree to some amendment such as shall render their concession at least tolerably just from the city's point of view. But we can not for a moment ignore the fact that legal right is on the side of the company, and that if the directors choose to exact their pound of flesh, they are entitled to do so.

Friday, Sept. 26.

The *Fiji Shimpō* has at length spoken about the Osaka affair. It takes exactly the view we have always maintained. Both sides are wrong, in our contemporary's opinion. The Municipality should never have granted such a charter, and the Gas Company should not insist on carrying it out to the letter. Undoubtedly the law is on the side of the Company. It has a legal right, to the precise implementing of its contract. But to insist upon a legal right ignoring its moral obligation towards the citizens who are to be its customers, would be the height of business unwisdom. It is, therefore, essentially a case for compromise.

"Compromise"—that is the invariable word in Japan. An excellent thing is compromise in its way, and we entirely agree with the *Fiji* in this instance. But the conviction forced upon us by long observation is that the habit of compromise loosens the fibres of conscience. It produces another result also: it leads folks to ask for a great deal more than they are prepared to take. That is what the Mayor of Osaka has done, we think.

THE GENERAL HOSPITAL.

We gather from various letters which have appeared in the local press, as well as from several enquiries which have reached us, that some misconceptions exist regarding the present position of affairs in reference to the Yokohama General Hospital. To begin with, the interest aroused and the effort made in forming the Ladies Fund was not because of any one particular case of inefficiency shown in the hospital work, but rather because of the evident lack of sufficient nurses to meet the requirements of the regular work of the institution. From the first it has been certain that any work which the ladies might do could only serve as an aid—or rather as a beginning towards inaugurating a better state of things. It was not thought possible that the ladies alone could reach the real cause of the difficulty, the final removal of which would be possible only after considering and investigating the entire subject of the maintenance of the General Hospital.

We understand that Dr. Mère has written declining to meet the subscribers to the Ladies Fund in general meeting, and in consequence the officers and directors at a meeting held on Thursday decided to drop all negotiations with him and to call a meeting of all interested in the General Hospital for the middle of October, "to take steps for considering the utilization of the funds already subscribed and the carrying into effect of the objects sought." That a delay has arisen in applying the recently raised "Ladies Fund" to the work intended by its promoters is not a cause of surprise, nor need it be a source of discouragement to the subscribers. A matter of such vital interest to the community must receive full discussion, and can not be settled in a day. The ladies can indeed well afford to wait, and let the result of their philanthropic efforts come in where it will accomplish the greatest good. Surely, from the many suggestions and plans which may be made by an always generous community a working arrangement can be evolved which will put the General Hospital on a basis enabling it to pay its own expenses, and render to the community good and efficient service.

KOREA.

Telegrams from Söul say that the Imperial celebration is to last for 12 days, according to the present programme, but that the Foreign Representatives are inclined to urge a less protracted display. Moreover, the Representatives express unwillingness to attend that part of the ceremonial at which the Emperor himself is not present. There is very little time now to discuss the propriety of despatching special envoys. At present the only Power that has responded to Korea's request in that respect appears to be Russia, for it remains to be seen whether there is any truth in the rumour that Sir Claude MacDonald is to represent Great Britain. We really do not see why Japan should not send a special envoy. It would be a neighbourly act, and though Japan's policy in all international affairs is eminently self-contained, it appears to us that since without her action there never would have been a Korean Empire or a Korean Emperor, in all human probability she might fairly make some public response to Söul's request on this occasion. Perhaps, however, that is precisely the reason why she stands aloof.

The latest news from Söul is that the celebrations in commemoration of the fortieth anniversary of the coronation are to be postponed until next March or April. The reason assigned for this signal change of plan is that cholera prevails in the capital. According to the latest police returns, there have been 300 cases of the disease in Söul since the outbreak of the epidemic.

Much has been said about the expense of the ceremony. The *Nippon* has now a paragraph on the subject. It says that the estimated cost is two million *yen*, to meet which only 400,000 *yen* is immediately available, for though the Treasury vaults contain a sum of 600,000 *yen*, a third of that amount must be reserved. Li Yong-ik, Minister of Finance, expects to get 700,000 *yen* by adopting stringent measures with regard to defaulting tax-payers, and the final deficit is to be borrowed from the inevitable Russo-Chinese Bank. We do not attach much credit to all these figures, and our readers will probably think with us that the postponement of the ceremony means its ultimate abandonment.

A telegram from Söul says that there have been two cases of cholera in the Japanese settlement there, and that one of them ended fatally. The disease is spreading among the Korean citizens. Happily there is not much of the warm weather left, and it may be presumed that the advent of winter will check the epidemic.

TOKYO AFFAIRS.

Some time ago a committee of 15 men was appointed by the Tokyo City Assembly for the purpose of conducting a strict investigation into the whole of the municipal undertakings and the accounts. This Committee is said to be suspected of discharging its duties without due integrity, and there appears to be some commotion. What truth may be placed in such stories we do not know. Recently Baron Kaneko's desire to resign was attributed to dissatisfaction on his part or on the part of the city, but it now turns out that the Baron is really unwell.

DEATH OF MR. W. A. MANDERSON.

Many residents in Japan will hear with deep regret of the death of Mr. William A. Manderson, a well-known resident of Philadelphia. He was born in that city on September 21, 1842, and was a member of the well-known Manderson family, which has contributed so many prominent men to American national and State affairs. He was a cousin of Senator Manderson, of Nebraska. Quite early in life he evinced a decided taste for the law and at every opportunity devoted his leisure to the reading of books treating on legal matters. After he left school he entered the office of Thomas J. Clayton, the former President Judge of Delaware County. He was admitted to the bar in 1866. He made a special study of commercial law and was quickly recognized as an authority upon that subject and bankruptcy law. Years ago he had occasion to defend the interests of an insane client. In pointing out the flaws then existent he created the demand which eventually resulted in the establishment of the present Pennsylvania Board of State Charities. He was prominent as a member of the Lawyers' Club, of Philadelphia, and of several social organizations. Mr. Manderson's particular taste, outside of law, was centered in his devotion to art matters, and he was recognized as a connoisseur. He made a deep study of Japanese decorative art especially, and devoted a considerable amount of his time to correspondence with leading officials, merchants and others in Japan upon this subject. He always considered it a duty of every citizen of the United States to take an interest in politics, and he himself was an ardent Republican. Mr. Manderson was married and had three children. His wife was a member of the Worrell family, of Revolutionary fame.

THE HANOI EXPOSITION.

The Hanoi exposition opens on the 3rd of November and closes on the 25th of January next. The projectors have just issued a booklet in English and French describing the objects of the project and containing illustrations of the buildings and much other information. "From its geographical situation and unprecedented expansion," we read, "Hanoi was marked as the place where France and the Far-Eastern countries would fight a pacific and courteous battle for supremacy in art, industry, trade, &c. The object of the Exhibition is to bring together the French and Asiatic producers and consumers, and to show to every one the prosperity of Indo-China, its resources, its political economy, as well as some of the important works that have been accomplished in the country, such as the Doumer Bridge and part of the railway system now open to traffic." The picture shows, as might have been expected, a very picturesque and artistic building of ample dimensions. Much of the space will be devoted, of course, to the produce of France and her colonies, but there will also be sections for the Philippine Islands, Malaya, the Straits Settlements, India and the Dutch Indies, Siam, Burmah, China, Japan, Korea, Formosa, Manchuria and Siberia. In addition to these various attractions there is to be an International Congress of Orientalists, who will meet in Hanoi from the 1st to the 9th of December. It is a most courageous enterprise, deserving of ample success.

QUEEN ALEXANDRA'S CROWN.

Everybody admired Queen Alexandra's Crown which she wore after her Coronation. It was specially made for the occasion. The costly bauble is composed entirely of diamonds, each of which is mounted in a silver setting. This is the only precious metal which completely shows the brilliance of fine stones. Gold is only used on the inner and hidden portions of the mounting, for the sake of lightness and strength. The circle, unsurpassed in effect by that of any existing crown, is $1\frac{1}{2}$ in. in width, and is entirely encrusted with brilliants of the finest water. These diamonds, varying in size from one specially fine in colour, weighing nearly 17 carats, down to the smallest necessary to carry out the design, are of the most perfect cutting, and are placed as closely together as possible throughout. This method, technically called *pavé* setting, is adopted so that no metal is visible, and renders the circlet one blaze of light. This rich band supports four large crosses-patées and four large fleurs-de-lys of light and elegant design, which, placed alternately, enclose the purple silk velvet cap. The centre of the largest crosse-patée displays the Koh-i-Noor, the grand and unique feature of the Crown. Three very large diamonds of extraordinary lustre occupy the centres of the other crosses-patées. Eight graceful arches curving inwards spring from the crosses and fleurs-de-lys, three rows of diamonds in what is called illusion-setting composing each arch. The central row is composed of very large stones, while smaller ones are used in contrast. At the centre, the point to which they converge, the arches unite in supporting an orb encrusted with diamonds, set in the same manner as the circlet. This is surmounted in turn by a crosses-patée of large diamonds arranged to show equally well on both sides. The total number of stones used is 3,688. By her Majesty's special command the crown has been constructed as lightly as possible—an immense advantage when in use. Every effort experience and skill could dictate has resulted in keeping the entire weight down to only 22oz. 15dwt., a result never before attained. The Crown was designed and executed in England.

BASHO AND THE JAPANESE POETICAL EPIGRAM.

What the impressionist sketch is to the elaborated picture that the Japanese verselet is to a finished poem. So we have always thought. Moreover, the same rule guided the Japanese painter and the poetaster. The painter, that is to say the impressionist painter, carefully limited himself to depicting a glimpse of his subject. He never attempted to show a panorama but was content to transfer to his canvas only so much of a landscape or a sea-scape as could be comprised in a single glance. Similarly the poetaster constructed his verselet with the smallest possible number of ideas, salient ideas. His fragments of thought served to suggest a scene without any detailed description. Mr. Basil Hall Chamberlain, in a highly interesting essay contributed to the Asiatic Society of Japan, calls the verselet an "epigram," and justifies his apt epithet by a number of the daintiest little examples chiefly from the works of Basho, the greatest master of this kind of epitomized poem, the *hokku*, as it is called. The *hokku* is really the upper hemistich of a couplet—that is to say, it is a verselet which

may either stand alone or be completed by the addition of another hemistich. In that respect it differs from the thirty-one syllabled verse where we have both the basic thought and its compliment. An excellent example of the complete couplet is the following:—

*Fuyu nagara
Sora yori hana no
Chiri kuru wa
Kumo no anata wa
Haru ni ya aruran.*

This Mr. Chamberlain translates:—

"When from the skies that winter shrouds
The blossoms flutter round my head,
Surely the spring its light must shed
On lands that lie beyond the clouds."

Which is certainly a very deft paraphrase, though it always seems to us that these Japanese verselets lend themselves ill to rhyme. Thus, in this particular case we should prefer the literal, unadorned rendering:—

Winter, yet from the sky,
Fluttering, the flowers fall.
Surely beyond the clouds
There must be spring.

Be that as it may, the point is that in this complete couplet the first three lines, three in the original—can be regarded as the *hokku* to which Basho and his school gave such celebrity. Their idea was to make an impressionist sketch in the fewest possible words, and Mr. Chamberlain's examples and translations convey an excellent conception of this peculiarly Japanese fancy. Take, for example, such a word-sketch as this:—

*Naga-naga to
Kawa hito-suji ya
Yuki no hara.*

Which Mr. Chamberlain renders:

"A single river, stretching far
Across the moor land (swathed) in snow."

Is it possible to suggest greater loneliness and desolation in nine words? And the original is even crisper than Mr. Chamberlain's translation, for its literal rendering is:—

Long long one line
Of winding stream;
A snowy moor.

Or again:

*Magusa ou
Hito wo shiori no
Natsu-no kana*

"Over the summer moor,—our guide
One shouldering fodder for his horse."

To which Mr. Chamberlain adds this note:—"Here anyone familiar with Japanese scenery sees mirrored the lush-green landscape, the sloping moor with its giant grass man-high, that obliterates all trace of the winter pathway, while the bundle on some peasant's shoulder alone emerges far off on the skyline, and shows the wayfarers in which direction to turn their steps." The window thus opened into the true inwardness of Japanese verselets is framed by Mr. Chamberlain in a lucid and attractively written account of the growth, development and decay of the Japanese *ars poetica*, and altogether his essay forms one of the best contributions that have ever graced the Transactions of the Asiatic Society of Japan.

JAPAN AND SIAM.

A correspondent of the *Tokyo Asahi* writing from Bangkok, says that the rapid growth of Japanese political influence in Siam has excited French jealousy, and caused various rumours. So sensitive has public opinion

become that every incident, however trifling, is interpreted in a sinister sense. Probably when the six sericulturists who have been engaged from Japan for service in Siam reach the latter country, their advent will set fresh stories circulating. As an example of the strange theories that find sober exponents, it may be mentioned that a French journal of Bangkok discusses the contingency of an invasion of Indo-China from Siam by an army of fifty or sixty thousand Japanese troops. How amusing all this must seem to the levelheaded section of the French nation. And how crass is the ignorance of Japan that it displays, to say nothing of ignorance about military potentialities. However, the public must have sensations.

The *China Mail's* correspondent at Saigon translates the following fairy tale—we can call it nothing else—from *Le Courrier d'Haiphong*:—

The news from Siam is more and more contradictory of the protestations of peace and friendship of the Siamese mission in France.

A superior officer of the British army, named Willoughby, is now in Cambodia, near the Siam frontier, with a company of servants dressed like the natives of the country (*nha-qués*) but speaking pure English and, without doubt, having the appearance of Japanese.

This Willoughby has been signalled by our military agents at Pursat. He states that he is making a collection of rare birds.

Some Japanese have installed themselves at Battambang, and there has been a great influx of Japanese into Siam. They say, and I have the news from Paris, that the Crown Prince of Siam, who is returning from Europe by America and Japan, will be received with great pomp by the Mikado, with one of whose daughters a marriage is projected. This is in accordance with the great movement of *Asie aux jeunes*, at the head of which is Japan, who favours the anti-Continental interests of Great Britain. This marriage ought to put France on her guard for the future of Indo-China.

MAJOR-GENERAL FUKUSHIMA.

Monday, September 22.

Rumours have been circulated that Major-General Fukushima is lying dangerously ill in a hospital in India. This news came from the *Asahi's* Calcutta correspondent, but it has not been confirmed by any telegram either to the War Department or to the Major-General's family, and there is consequently little disposition to believe it. The latest intelligence by mail from Major-General Fukushima described a most enthusiastic reception given to him in Colombo, and spoke of his intention to proceed thence to Bombay. The writer then said that his health was excellent. Major-General Fukushima accompanied Prince Komatsu on the latter's return journey as far as Paris, and separated there from His Imperial Highness' party for the purpose of paying a visit to India.

Wednesday, September 24.

Surgeon-Major Tanaka and a nurse-tender are to leave Kobe on the 26th instant for Bombay, to attend Major-General Fukushima. It appears that the Major-General left Colombo for Bombay on the 28th of August. A letter has been received by him to that effect, and it is conjectured that he was struck down by the heat just about that time. The last telegram received by the Head Quarter Staff in Tokyo said that the patient was better, but that he was greatly prostrated; an account which naturally inspires some alarm.

An officer who was with Major-General Fukushima up to the time of his arrival in Ceylon says that the Major-General received extraordinary civility at the hands of the

military authorities in Colombo, a special train being provided for him, and every possible provision being made for his comfort and accommodation.

Thursday, September 25.

The latest news about Major-General Fukushima is that his illness was caused by a sudden change of weather—presumably an access of heat—and by failure to take proper precautions. The hospital authorities report that the attack was very severe, but that it yielded to treatment and that there is full hope of his recovery.

Friday, Sept. 26.

We are glad to learn that the latest telegrams represent Major-General Fukushima as completely out of danger. The military surgeon and nurse-tender who have left Japan for India, will doubtless find him quite convalescent.

VISCOUNT WATANABE.

Monday, Sept. 22.

Viscount Watanabe has returned from his European trip. He arrived by the steamer *Korea* and was welcomed by a large number of Japanese friends. The Viscount proceeded at once to his Azabu residence. He denies altogether that the Russian Minister of Finance said a word in the sense of advocating the expediency of a foreign loan by Japan, as reported some time ago in the columns of the *Nichi Nichi Shimbun*. Mr. de Wettes's conversation turned mainly on the condition of Russian finances. Viscount Watanabe not only denies this story, but adds that, in his opinion, such language could not properly be held by a Minister of State. That, we think, is going a little too far. Among various desultory statements made by the Viscount, one is that the industrial competition between America and Germany is very keen. In Germany one sees everywhere that strenuous efforts are being made in that sense, and in America one finds universally prevalent the spirit of rivalry with Germany. As to command of capital, it seemed to the Viscount that England takes the lead of all nations. Her investments all over the world are so enormous that even though she folded her hands now and did nothing more, the dominant power of capital would still remain with her.

Friday, Sept. 26.

Viscount Watanabe was entertained by the *Doki Club* on the 23rd instant. He is said to have disappointed his hearers greatly by the nature of his speech, for he avoided allusions to politics or finance, and confined himself to sociological problems. But that, probably, was in deference to the fact that the *Doki Club* is an institution having for sole object the improvement of manners and customs.

In the course of conversation Viscount Watanabe is reported to have expressed great admiration of Mr. de Witte, who afforded him every facility for investigating Russian finance. He carried away from St. Petersburg the conviction that Russia is by no means in such pecuniary straits as some of her critics would fain persuade the world. Concerning the countries of the West, the Viscount said that England and France seem to base their prosperity on the possession of capital; America and Russia on their natural resources, and Germany on her industry. Everywhere on the continent of Europe men spoke to him of the decline of England, but when he visited Manchester

and Birmingham he saw no evidences of decline, but, on the contrary, symptoms of most prosperous activity.

THE KELANIAN AFFAIR.

An outcome of the reported incident at Kelantan seems to be the departure, for the East Coast of the Malay Peninsula, of Sir Frank Swettenham, Governor of the Straits Settlements. The Government steamer *Sea Belle*, which conveys Sir Frank, is reported to have left at short notice under sealed orders. Says the *Straits Times* of September 8th:—We understand the Governor has gone to Kelantan, and will meet the Rajah of that State at his capital, Kota Bahru. It is understood Sir Frank Swettenham will also visit Tringganu. In this context it is interesting to observe that H.M.S. *Algerine* left Bangkok for the south on the 3rd inst. She was due to arrive at Singapore on the 8th, but has probably met the Governor at Kelantan. Many conjectures are abroad as to the nature of His Excellency's mission in Kelantan, more especially as his departure was quite unexpected. Another interesting item of news is that the Prime Minister of Tringganu has been staying in Singapore during the past few days.

Meantime, on Sept. 9th, the *Singapore Free Press* began the publication of a series of articles written by a special commissioner who had visited the more northerly Malay States, and who gave as the reason of his mission "the conviction that these States are now passing through a phase of political stress, which has introduced a new and more strenuous field of thought and experience to the Malays; a phase which is likely to have very momentous results all over this part of the Peninsula, and one which it behoves England to watch carefully in the interests of her commerce and prestige."

Dealing with Kelantan in regard to Siamese and British enterprise in that State, this commissioner who, however, lays stress on the difficulty of obtaining trustworthy information from the Malays, says:—

In dealing first with Kelantan it will perhaps be convenient to give a brief history of recent times and events there, and in doing so one finds it is a well-ascertained fact that Kelantan—in like manner to Tringganu—has never been attacked and conquered by Siam. True the Rajahs have sent the Bunga Mas to Bangkok, but that cannot be seriously claimed as an admission of submission, as will be shown later on. About twenty years ago there ruled in Kelantan the Rajah Mulut Merah, a man of strong character and ability and one who ruled his kingdom by himself. In the instance of the present Rajah the natural difficulties have been increased, as the Siamese have undoubtedly tried to foster dissension amongst His Highness' household, and to oppose and divide the members against each other. * * *

To begin the history of the Siamese in Kelantan one has to go no farther back than 1894, when a Siamese who came from Bangkok in company with a Kelantan Malay whose title was Dato Mentri hoisted the Siamese flag in Kota Bahru, the Rajah at that time having no idea of what was implied by the hoisting of another nation's flag in his country. No soldiers, however, were stationed there, and some time after Dato Mentri was shot. A year later there came the incident of the capture of the Pahang rebels, and the first real show of force by the Siamese in Kelantan. It is unnecessary to detail the various incidents of that expedition sent by the British, which under Messrs Clifford and Duff successfully hunted the rebels into the Palace at Tringganu, but it may be noted that before the expedition started the Government had communicated with Siam in accordance with Clause XII. of the Bangkok Treaty, and Siam had sent two commissioners, Luang Visudth and Luang Svasti, who accompanied the expedition. In the palace at Tringganu there were cornered the only seven rebels left, and although the British could have effected their capture with little trouble, it was deemed advisable to adhere closely to the Bangkok Treaty, so the Bri-

tish force was withdrawn. Soon after the Siamese adopted a course of action which will remain an everlasting blot upon their name.

The story of what happened to the rebels was told me as follows by a Malay who saw it all. In July of 1895 Luang Visudth came round by sea from Tringganu to Kelantan with the chief of the seven rebels, the Orang Kaya Semantan. Luang Svasti had previously arrived and gone on to Kuala Rek. The rebels, it is stated on good authority, had been invited to come to Kelantan, and go with the Siamese to Bangkok, a suggestion of a combination with the Siamese to drive the English out of the Peninsula being the inducement. The rebels consented, but requested to be allowed to proceed by way of Kelantan as they wished to pray at the grave of Hadji Ming at Kuala Rek. The Siamese Commissioners readily granted the request, and at Kuala Rek Luang Svasti met Mat Kilau, Mat Lela, Awang Nong, Teh Brahim, and Pah Alang Soh; the Orang Kaya was at Kuala Lebeh with Luang Visudth, and the seventh man, the Toh Gajah, did not come. The five remained some days at Kuala Rek and then Luang Svasti invited them to a dinner. They accepted the invitation and on their arrival were made to sit down between Siamese soldiers. At the close of the dinner the attendants handed to each of the rebels some hot liquid in cups. Whether this liquid was drugged or whether it was only intended as a signal will probably never be known, but hardly had they received the drink than they were struck on the head from behind by Siamese with heavy sticks, and pulled down. Luang Svasti had obtained possession of Mat Kilau's sword, and as the man lay on the ground he struck him with it cutting his skull open. The men were then bound, and wounded as they were, were taken out and thrown on the sand in the blazing sun, and as they lay there the Siamese soldiers under orders from Luang Svasti prodded them with their bayonets in the head. After that they were put in a boat under a guard and were sent down by a Siamese, Wan Ismail, to Kuala Lebeh. This man gave the news of the capture to Luang Visudth at Lebeh, and he by playing on the Orang Kaya's honour deprived him of his weapons and sent him in the boat down the river. They all got down alive save Mat Kilau. The story goes—and only those who were in the boat can verify it—that on the way down Mat Kilau groaned with the agony of his wound and asked the Siamese officer in charge of the guard to put him out of his misery. The latter, annoyed at the noise he was making, took the unfortunate man between his knees and broke his neck. This much is certain, when Mat Kilau was put into the boat at Kuala Rek he was unhurt save for the wounds on his head, and when taken out of the boat later he was dead with a broken neck, and one shoulder reduced to a pulp.

Eventually the men were sent to Bangkok by Siam, and then sent up-country out of the way. There is one very pertinent enquiry in connection with this incident that still remains unanswered, and that is why the British Government ever allowed Siam to deal with these men.

Thus in 1895 did the Siamese first come prominently to the front in Kelantan, but there were no soldiers stationed there, and no regular Commissioner for some time.

BRITISH THRIFT.

The report of the chief registrar of British Friendly Societies, which has just been issued, reveals the fact that the working classes of England are saving large sums—are, in fact, in proportion to their weekly resources, "bloated capitalists." They have amassed the colossal sum of £339,837,703 by means of various aids to thrift, the creation of which was among the most striking and beneficial social achievements of the last century. This wealth, which is half as great as the whole national debt, belongs to 25,363,290 persons, and represents only a portion of the savings of this great army of wage earners, for it must be remembered that in the case of the post-office savings bank no depositor may keep more than £200 in his account, and in other banks there is some such rule. The surplus is frequently invested in house property. As shown by an answer to a parliamentary question, over seven-eighths of the capital in the post-office savings bank belongs to those who have less than £50 to their credit. Another fact of some interest is the small share in this great thrift movement taken by trade

unions, which were founded primarily as friendly societies to encourage providence. The following are the figures given by the chief registrar, and they refer to the year 1899:

	No. of Members.	Funds.
Building societies.....	602,981	£60,776,508
Friendly societies.....	11,750,130	29,487,619
Co-operative societies.....	1,741,062	35,099,370
Trade unions.....	1,436,283	3,515,007
Workmen's compensation schemes.....	100,397	30,585
Friends of labour loan societies.....	31,542	250,909
Railway savings banks...	52,730	4,654,112
Trustee savings banks.....	1,601,485	57,196,458
Post-office savings banks..	8,046,680	138,818,175

Total..... 25,363,299 £339,837,703

These figures have greatly increased since 1899, but the above is the latest general summary. What an object lesson they set to Japan!

THE CROWN PRINCE AND PRINCESS.

The Crown Princess has been staying for some time at the Hayama detached palace with the latest addition to the Imperial family, a particularly healthy baby. On the 20th instant there was some talk of the little Prince having a slight attack of fever, but the physicians in waiting made light of the matter. The Princess goes daily for a walk on the sea-shore. She is preceded by a solemnly-pacing chamberlain and attended by two ladies in waiting and by other officials. Her Imperial Highness invariably wears court costume—a white garment with red silk trousers and her hair hanging down behind. She presents an appearance of blooming health, and among her personal charms may be mentioned the luxuriant beauty of her hair, which hangs far below her waist. Gathering shells seems to be the Imperial lady's pastime, but the Hayama beach is a poor place for such an amusement, especially when the range of search is daily limited to exactly the same beaten track. On the 20th the Prince Imperial went from Tokyo to join the Princess. His Imperial Highness proceeded to Zushi by train, and performed the remainder of the journey on a bicycle. Old Japan is in truth becoming a thing of the dim past. The Princess Imperial gathering shells on the sea-shore in public, and the Prince Imperial coming to join her on a bicycle!

NOTES ON CURRENT EVENTS.

The Imperial Education Society (*Teikoku Kyoiku-kai*) and the Education Investigation Society (*Gakusei Kenkyu-kai*) entertained Mr. Wu Ju-lung in the hall of the former Society on the 18th instant. Mr. Wu made a speech of a more or less conventional character, expressing congratulation on the progress Japan has made during the past forty years and regret that China has not moved throughout that period. He added that many points of the Japanese educational system were still obscure to him, and that he looked to his hearers to enlighten him. The translating from Chinese into Japanese and *vice versa* was all done by Mr. Chang, a Chinese student now studying in Tokyo.

A telegram from Niigata, dated the 19th instant says that while a well was being sunk there, it burst into flame, and as the surrounding buildings were threatened by the conflagration, great exertions were made to overcome the fire. Success had not crowned these efforts up to 3 p.m. when the telegram was despatched.

The section of the State Railways from Gogonome to Akita—17 miles 75 chains—has been finished and will be opened to traffic on the 15th of October. About 80 miles of this line remain to be completed in order to finish the west coast road. If our readers look at the railway map they will see that the railway system northward of Fukushima takes the form of a long loop, running along the eastern and western coasts, Awomori being at its northern apex and Fukushima its southern point of junction. The eastern branch of the loop was opened to traffic long ago, and work on the western branch has been proceeding for some time in two directions, from Awomori southward and from Fukushima northward. The Fukushima branch is completed as far as Tateoka, and the Awomori branch as far as Akita.

A club has been opened at Yokosuka for petty-officers and men of the Imperial Navy. There are already officers' clubs, but this is the first organized for the men, and it is said that the want of something of the kind has been severely felt. In the absence of any mechanism for legitimate amusement, the men are tempted to all kinds of dissipation—an old story which Japan might have read long ago in the experience of any foreign country.

A great many Japanese are laughing at the latest trouble in the religious world. It is a dispute about the site for a temple wherein to place the bones of Buddha presented by Ceylon to Japan three years ago. The question is between Kyoto and Nagoya. It is stated by the *Hochi* that when the committee for selecting a site recently visited Nagoya, they were entertained at an expense of twenty thousand *yen*, which the city had to pay. But they seem to have received no permanent impression from this feasting. Of course, whatever place is honoured by becoming the repository of the relics, will have a source of perpetual profit. But if Shakiya Muni could look down on this dispute about the possession of a fragment of his skeleton, would he think that the world had improved much since his time?

On the 21st instant a message of sympathy was addressed by the Japanese Court to the Belgian Court in connexion with the death of the Queen of Belgium, and the former Court went into mourning from the 25th instant.

The Bonin Islands were visited by a terrible storm from the 4th to the 8th inst. Hahajima seems to have suffered most. The crops are said to have been injured to the extent of 70 per cent., and there was much destruction of houses and trees, but no lives seem to have been lost.

An extraordinary suicide is announced. Mr. Tsuda Kyotaro, chief of the Examining Committee of the Section of Forests in the Department of Agriculture and Commerce, killed himself on the night of the 22nd instant. The cause is quite unknown. He was an official of noted diligence and high character. Graduating from the Imperial University in 1889, he entered the public service, and had always been successful in the discharge of his duties. On Monday he ate his evening meal as usual with his wife and five children, and at 10 o'clock he asked his wife to retire, leaving him to do some work that required attention. She obeyed, and did not see him until the morning, when it was found that he had fatally stabbed himself in the breast and throat. A

few days ago he mentioned to his wife that some one had accused him of taking bribes, and it is thought possible that the accusation rankled in his mind so as to drive him to the desperate deed.

The *Nippon* declares that the programme of administrative reform, having now been drafted, is found to produce a saving of only three million *yen* in all. It will be remembered that ten millions was the sum spoken of in some quarters, but as neither ten millions nor three millions rests on any authority except the purest rumour, we are not disposed to place reliance on the figures. Until the Cabinet's intentions are authoritatively announced varied stories must be expected to circulate.

The Shanghai Club, as already announced, held a meeting, apparently on the 23rd inst., to consider the question of admitting Japanese to membership, and the decision was unanimously favourable. That intelligence will prove very satisfactory to the Japanese, who have always regarded their exclusion from the Club as an unmerited slight.

Mount Shirane, in Gumma Prefecture, showed much activity on the 17th and the 19th. It emitted great columns of smoke, which was succeeded by steam and accompanied by rumbling sounds. The noise was notably violent on the 19th instant.

The Tokyo journals continue to speak in vague terms about dissensions in the Cabinet on financial questions. Even the *Fiji Shimpō* hints that the question has narrowed itself to one issue, namely, continuance of the increased land tax and carrying out of the programme of naval increment, or reduction of the tax to its original dimensions and abandonment of the naval programme. For our own part, we do not by any means think that matters are so critical as some of our Tokyo contemporaries suggest. The financial position is not difficult, and as it must be adjusted whatever Ministry takes office, there is no apparent reason why its adjustment should not be left to the present Ministry. The elder statesmen understand very well that another Ministerial crisis connected with finance would greatly injure Japan's credit, and they will take care to avert anything of the kind.

The medical expert from Manila—whose name is written Dr. "Joe Bring" by Japanese journals (perhaps Dr. Jobling)—has completed his investigations and returned to the Philippines. He visited Tokyo for the purpose of studying in Dr. Kitasato's laboratory, and during the six weeks of his sojourn he is said to have shown extraordinary diligence.

The Rev. A. A. Bennett, late of Yokohama, has accepted the Instructorship in Practical Missions, in the Theological Seminary of Colgate University, U.S.A.

The Emperor and Empress have sent a sum of 1,500 *yen* to Formosa for the relief of persons who suffered loss during the recent heavy gales by which the island was visited.

A report has been circulated that Dr. Goto, (Chief of the Formosa Administration), who is now in Europe, has become insane. Nobody believes the story implicitly, but it has naturally caused much anxiety to Dr. Goto's family. They are without any news.

Formosa has had a volcanic eruption. A mountain called Rigiyo—we confess never to

have heard the name before—broke into sudden activity at 6 p.m. on the 10th instant and was still smoking and emitting ashes on the 14th when the telegram (*Fiji Shimpō*) from which we quote was sent. The mountain is said to be in the neighbourhood of Taipeh. No lives have been lost, but considerable damage is said to have been done to arable land.

The *Official Gazette* of the 25th instant announced Court mourning from that day until the 15th of October—21 days in all—for the death of the Queen of Belgium.

THE "KOREA."

The fine new steamship *Korea*, the first of the two liners recently built for the Pacific Mail Steamship Company, has arrived at and departed from Yokohama, residents having in the interval had full opportunity of convincing themselves that the terms used in heralding her were not exaggerated. During her fifty-four days' trip round South America the bottom of the vessel became very dirty, and consequently no attempt has been made to run her at high speed. She was detained from the 26th of August to the 29th by difficulties in connection with the transference of her Chinese crew from the *Gaelic*, but got her men on board late on the night of the 29th and sailed next day at 3.10 p.m., being, however, detained 24 hours later by fog and compass adjusting. The *Korea* reached Honolulu at 2.40 p.m. on the 6th and sailed again at 2.41 p.m. on the 8th, having been meantime opened for exhibition to the public. Opportunity was thus offered to the Neill-Fawley Company to give one performance of "Secret Service" at Honolulu, which was well attended and went off very successfully. Leaving that port on the 8th at 4.21 p.m. Capt. Seabury brought her along under easy steam, reaching Yokohama in a heavy rain storm at 5.59 p.m. on the 19th.

A full account of the *Korea* appeared in these columns on Sept. 5th and the measurements and description need not be repeated. It may be said that the new ship is much like the *China*, though she is 132 feet longer and has 15 feet more beam. Her accommodation is the best that could be devised. All the saloon cabins are amidships, and all, in their upholstery and other fittings, are not merely comfortable but luxurious. The dining saloon is a splendid hall occupying the whole width of the ship, over 60 feet, elegantly furnished and lighted from a coloured glass dome on the upper deck. In all respects the *Korea* is emphatically a fine specimen of up-to-date marine architecture.

The *Korea* had 144 cabin passengers when she left San Francisco of whom over 60 were for Honolulu; 26 for Yokohama; 5 for Kobe; one for Nagasaki; four for Shanghai; and 45 for Hongkong. Five more passengers joined her at Honolulu.

She embarked 424 sacks of mail at San Francisco, of which 225 were landed at Honolulu; and 166 bags were landed at Yokohama. She brings 125 tons of cargo for Yokohama; 233 for Kobe; 960 for Nagasaki, (of which about 500 tons consist of iron for the dry-dock at Vladivostok); 1,000 tons for Shanghai and 3,200 tons for Hongkong.

The *Korea's* crew comprises 243 all told, viz, 13 Europeans and 37 Chinese in the deck department; 28 Europeans and 90 Chinese in the engine department, and 12 Europeans, 61 Chinese and 2 Japanese in the purser's department.

The new steamer was thrown open to the public on Saturday afternoon and a considerable number of people went off to view her, being hospitably received by Capt. Seabury and his officers. She left at 9 a.m. on Sunday for the south.

The launch of the steamer *Kyojo Maru* of the Osaka Shosen Kaisha was expected to take place on September 25th at the Kawasaki Shipbuilding Yard, Kobe. She has a speed of 12 knots and is of 1,860 tons.

CHINESE EDUCATION.

QUITE a number of Japanese scholars are said to have been appointed, or to be to be appointed, to educational positions about in China. The exact figures are not given: from 12 to 15 are to go from the High Normal School—some being teachers of that institution, some graduates,—and more than 10 will be chosen from the faculty or graduates of the Tokyo Normal School. All these are for the educational institutions in the metropolitan province under Viceroy YUAN SHIH-KAI. Evidently China has resolved to fashion her new educational system upon the Japanese model. We do not hear that she is utilizing her own material, however. There is much talk of *sokusei*, or rapid education. Some royal road to achievement is thought necessary in order to rapidly equip men for the posts of teachers and professors. It is much to be wished that such a route could be discovered, but it never has been, nor ever will be so far as human intelligence can perceive. Do not the Chinese authorities recognise, however, that for the past sixty years the Christian missionaries have been steadily and with unflagging diligence preparing China for this very crisis in her career? Several months ago the *North-China Daily News* had some admirable articles on this subject. It pointed out that among the Christian converts educated by the missionaries, hundreds upon hundreds of men can be found, thoroughly competent to undertake the task of teaching in the new schools and colleges. During more than a cycle these missionaries, whom the Chinese people have entreated so cruelly, assassinating them, beating them, wrecking their churches and pouring the vilest slanders upon their heads, have toiled on unflaggingly and uncomplainingly, creating material to regenerate China whenever the day of regeneration should dawn. But it would seem that China is about to turn her back deliberately upon the fruits of all this effort. If, in the memorial presented to the Throne by the Minister of Education when recommending the new system, it be true, as reported by the *Fiji Shimpō*, that expulsion from school or college and even severer penalties are recommended as the lot of any one apostatizing from the ancient philosophy of the empire, the evident intention is to require the performance of religious rites before the tablet of CONFUCIUS, which means that no Christian can find a place among students or teachers. Education is not to be secularized. Rather is it to be used as a weapon for injurious discrimination against Christianity. We fully appreciate the difficulties that confront Chinese statesmen. They have to consider the prejudices of the literati; in other words, the prejudices of the whole of the upper classes. To reconcile these at all to the new system must be arduous enough without the addition of pulling down the images of the Sages from their pedestals. But how terribly China is handi-

capped for the race! Unless she can be persuaded to secularize education, she will have to deprive herself of practically all the available native material, and will also create a new question between herself and the *Protectrice des Missions*.

THE NEW COMMERCIAL TREATY WITH CHINA.

WE do not imagine that the new Anglo-Chinese commercial treaty will meet the approval of all the Powers. Of course when all the Powers are spoken of in such a context, the qualification has to be introduced that, in point of fact, the Powers seriously interested are only three, Great Britain, the United States and Japan. It is, then, with regard to the attitude of America and Japan that we feel disposed to entertain doubts. There is, it is true, a general sentiment of dissatisfaction that articles for consumption by the foreign residents in China should have been taken from the free list and subjected to a tariff of 12½ per cent. The cost of living has already become inconveniently high at the open ports, and to the average foreigner this change, with its daily recurring irksomeness, will present itself in the light of a strange reflection that he himself and his family are permanently fined because China, in 1900, yielded herself captive to an access of anti-foreign mania. However, that, being an affair of individual suffering, will not have effective weight as against the argument that the free list had assumed altogether unreasonable dimensions, and that a large part of the articles borne on it were really for Chinese consumption, not for foreign. It is where American and Japanese trading interests are touched that the shoe will pinch unpleasantly. The trade of the United States in China is chiefly with the northern regions of the empire, and, according to all accounts, the *likin* trouble has never been seriously felt in those regions, the total levied being not more than 2½ per cent. of the value of an article. America, then, if she accepted the new arrangement, would see her commerce subjected to a new burden of 5 per cent.—the difference between 12½ per cent. and an effective 5 per cent. plus 2½ per cent. *likin*—without any *quid pro quo* whatever. Will she agree to such a change? Nothing is less likely, we imagine. She may consent to some increase over and above a general customs duty of 5 and a surtax of 2½, but when the total mounts to 12½, she is pretty sure to object.

Japan, on her side, will find two causes of emphatic objection. The first relates to silk. The new treaty makes a discrimination of 2½ per cent. in favour of Chinese silk. Articles of Chinese production are to pay a customs duty of 5 per cent. on exportation, together with a surtax of 2½ per cent. on account of *likin*, the total being 7½ per cent. In the case of silk alone an exception is made, it being provided, in the 8th section of Article VIII., that

the total export duty on silk, whether reeled by hand or by filature, shall not exceed 5 per cent. *ad valorem*. Japan could not raise any legitimate objection if China, following Japanese example, abolished export duties altogether. But when a discrimination is made in favour of one particular article, and when the avowed purpose of the discrimination—for it was avowed, somewhat indiscreetly, we think, by one of the commissioners—is to facilitate competition with the chief staple of Japan's exports, then this country may justly lodge a protest. Had the negotiators of the new tariff been actuated solely by solicitude for the interests of China's exports in general, they ought assuredly to have pleaded for a reduction of the duty on tea also. The preservation of her tea trade is of the greatest importance to China, but she seems likely to lose the trade altogether under pressure of Indian and Cingalese competition. Why, Japan will naturally ask, why was no attempt made to lighten the burden on tea? The answer is too obvious to escape the crudest attention.

Then there is the question of cotton. There Japan is greatly interested, and there the British commissioners, strange to say, have departed in the frankest manner from the principle of free trade. They have provided, in the first place, that cotton yarns and cotton cloth manufactured in China may pass into domestic consumption on making a total payment of 10 per cent. *ad valorem*, whereas cotton yarns and cotton cloth of foreign manufacture will have to pay 12½ per cent. In short, protection to the extent of 2½ per cent. is provided for Chinese-made yarns and cloth as against Japanese-made. Evidently this protection will tell against Indian and English mills also. But in India's case there is a compensatory provision: she will be able to pass raw cotton into China on payment of a total duty of 1⅔ per cent. *ad valorem* instead of the 12½ per cent. paid by imports in general. And there is a further point of much importance to Japan. The Treaty provides that no taxes of any kind shall be levied upon Chinese raw cotton for use at spinning or weaving factories in China. Now China is an important source of raw-cotton supply to Japan. It will be seen, therefore, that, under the provisions of this Treaty, Japanese mills will have to pay for their raw cotton, if they continue to obtain it from China, 7½ per cent. more than Chinese mills pay, plus the cost of carriage to Japan. If to this we add the discrimination in the matter of import duty, namely, 2½ per cent., the result is that in taxes alone the produce of Chinese mills will have an advantage of 10 per cent. over the produce of Japanese mills using Chinese cotton, and to this handicap must be added the cost of the carriage, first, of the raw cotton from China to Japan, and, secondly, of the manufactured article from Japan to China. Evidently the continued use of Chinese raw cotton in Japanese mills would be out of the question,

under such conditions and, apart from the disadvantage at which Japanese mills would thus be placed, there is the fact that by shutting off from the Chinese cotton-grower one of his principal markets, the price of his produce would necessarily be lowered, which would confer an additional advantage on Chinese mills. This principle of protection has been extended by the treaty-makers to all articles of foreign type produced by machinery in China, whether by foreigners at the open ports or by Chinese subjects in any part of the empire. The world will be astonished when it comes to study the document attentively. It will ask whether the British commissioners were weaned from the creed of free trade by Chinese blandishments, or whether the faith of the Englishman in COBDEN'S doctrine stands fast within the limits of the United Kingdom only. There is not the least chance, we take it, that Japan will consent to see her manufacturers thus handicapped. The situation created for her is, however, somewhat difficult. She can insist, easily enough, that all taxes and duties must be remitted in the case of Chinese raw cotton for export. That will assume the character of an added conventional privilege. But it will not be so easy for her to insist that the privilege already conceded by China in the matter of excise on articles of domestic manufacture shall be withdrawn. As to that, she will have to use the lever furnished by the general tariff. Whatever be the course of the negotiations, however, we can not think the British Commissioners did wisely when they introduced such discriminations.

GERMANY AND ENGLAND.

IF there is any paper to which we should go by preference for an accurate analysis of the sentiments animating a certain section of the English people, that paper is the *Spectator*. It is with some surprise, therefore, that we read the following in one of its recent articles:—

There was a time when this country would have been willing to prevent Germany being destroyed between the hammer and anvil of Russia and France. No such action would now be possible. The German world-policy is fully understood in this country, and it would be absolutely impossible to get the nation to do anything to help Germany. We may tolerate our Government making minor arrangements with Germany under which she obtains certain concessions and we get a large dose of public contumely as our share, but no German alliance, however apparently tempting the terms, would now be tolerated. What is more, if we were ever to be involved in war with Germany we should certainly now make France's quarrel our own, and not leave off till Alsace-Lorraine had been restored to France. We shall certainly not attack the Germans wantonly, but if war were to come now we should realise the momentous nature of the conflict. We understand that Germany looks upon us as Elizabethan England looked upon Spain, and thinks that if and when the fatal hour strikes she will be able to pick up the pieces of an exploded Empire.

It may be confidently asserted, we think, that the *Spectator's* language does not represent the feeling of British subjects in Japan. We are all very sore about the conduct of the German people during the South-African War. It is not easy to forget

or to forgive the strange bias shown at that time. One may plead, as many do plead, that the newspaper press of Germany does not mirror the sentiment of the nation. What then does it mirror? If the answer be, as it generally is, that the German press is subsidized, then the case becomes even worse, for we must then assume that the hostility shown by nearly every newspaper throughout the Empire was an echo of official convictions. But surely no one can pretend to think anything of that kind? Surely in the face of the KAISER'S uniformly friendly and prudent demeanour, it can not be imagined that German journals obeyed instructions when they treated England so cruelly? No, we must assume that they really represented the feeling of a large bulk of the German people, and that throughout the South-African War Germany hated us very cordially. For our own part, while we frankly admit that a great deal of resentment was provoked in our heart by such a display of animosity, our ruling sentiment was one of surprise. We had previously given Germany the credit of being peopled by men of remarkably clear judgment, exceptional level-headedness and fine analytical ability. But suddenly we found these very people allowing themselves to be led away by the wildest rumours and betraying a want of discrimination which would have been strange in any nation and was quite astonishing in the case of the German nation. Evidently the feelings, those "dangerous guides," had replaced the country's normal intelligence, and the Germans, for once in their career, had fallen into a fit of hysteria. Had they no reason? That is the question that every honest Englishman must ask himself before he yields to a sentiment such as that informing the *Spectator's* article. Had not the English shown a similar mood towards the Germans thirty years previously when the newly compacted empire was passing through a fire that must either fuse its rivets or anneal them to greater hardness? Germany had an old score chalked up against us, and she paid it back, with compound interest, it is true, but not without something of the self-sacrifice that all exaction involves. For the moment Englishmen feel sore. For the moment many a Briton in many a part of the world thinks with clenched teeth over the insults heaped upon his QUEEN, his KING, his country and his nationals, and would fain strike a blow in retaliation. But, by and by, the most exasperated among us will begin to remember that we only got what we gave, and that all debts being now discharged, a clean new record may be opened. It is all very well to talk from among the cushions of an editorial chair about Germany being destroyed between the hammer and anvil of Russia and France while England looks on with a smile. We are a German tribe and blood is thicker than water. Even under the influence of a transient passion, the spectacle depicted by our London contemporary is not to be calmly

contemplated by Englishmen, nor do we believe that it presents itself agreeably to either Frenchmen or Russians. Every one that has not subdued his humanity has his Berserker fits, but the *Spectator* is too old for that kind of thing, and unless it intended its article to shock the victims of the anger it portrays, we are at a loss to account for such writing.

THE JAPANESE LANGUAGE.

A LECTURE DELIVERED BY MR. WALTER DENING AT KARUIZAWA, AUGUST 23RD, 1902.

LADIES AND GENTLEMEN,—An apology is perhaps due to you for introducing in this holiday season such a very serious subject as the Japanese language. I fancy I hear some of you saying, "One of our chief objects in coming to Karuizawa was to get rid of the Japanese language for a few short weeks. It worries us year in and year out, and one of the greatest charms of our residence here is that from morning to night we hear our own tongue spoken." But you all have to go back to the study of the language in the autumn, and if you can carry back with you information that may prove valuable to you when you again tackle the gigantic task of mastering this difficult language, so much the better. My claim to be heard on this subject is based on long experience and perhaps I may say a fair amount of success. To some of you I am well known; to others a comparative stranger. It may be well for the sake of the latter to preface my remarks with a short account of my life in this country. I arrived in Japan in December, 1873, having prior to that date spent 3 years in studying the Malagasy language, a much easier tongue than the Japanese, in which I was able to speak fluently. In May, 1874, I settled in Hakodate, where I remained many years. Here it was that my hardest study was carried on. For a long time I devoted 8 hours a day to the language. My practice was to work with my teacher for about 4 hours in the forenoon, to spend the whole of the afternoon in intercourse with the natives—pottering around at shops and asking questions about things in general—and in the evening to go carefully over all the work of the day, what I had read with the teacher and the notes that I had made, looking up all doubtful words in the dictionary. It was during my stay in Hakodate that I studied some of the easier Chinese Classics and did a good deal of newspaper and magazine reading. After settling in Tôkyô I was no longer able to devote so much time to the language, but my work was all of a kind to increase my knowledge of it. For many years I was translating from morning to night. The six Readers I compiled for the Monbushô, my "Life of Hideyoshi" and "Japan In Days of Yore," together with the translation of scores of newspaper and magazine articles, supplemented by constant lecturing in Japanese, gave me a drilling in the art of rendering Japanese into English and English into Japanese that I have been thankful for ever since. It was during this part of my life that I was employed to translate and explain in Japanese Macaulay's Essays at the Nobles' School and to deliver lectures on "Ethics" in Japanese at the High Normal School. It was at this time too that in conjunction with the late Mr. Baba Tatsui, Mr. Suehiro, and other journalists and politicians I used to deliver long speeches on education, psychology, ethics and philosophy. During the past seven years my opportunities for lecturing in Japanese have been few, but I have given increased attention to the script and am as interested in it to-day as I was 20 years ago. It is, then, nearly 29 years since I first came to Japan. During that time I have been out of the country about 4 years, so that I can say that I have spent a quarter of a century in constant intercourse with the Japanese.

I am afraid the time at my disposal this evening will prove far too short to allow of my saying half of what I wish to say. But as this audience consists almost exclusively of missionaries, I think

it best to devote most of the time to the discussion of subjects that specially bear on their work. Success in life depends on adaptability. Men find themselves endowed with talents for one thing and with no talents for another. It is when a man mistakes his calling in life and attempts work for which he is not suited that failure ensues. The round man in the square hole, a saying by-the-bye which is used by the Chinese in a transposed form, is unfortunately a very familiar sight in this world of ours. For the purpose of the discussion on which I am now entering I will divide missionaries into two classes, namely: Those who have ears for sound and those who have none. It has always astonished me that in testing the qualifications of missionary candidates the Societies or Boards should have neglected to apply an ear test. I have known men sent into the mission field who were unable to distinguish between one air and another; in whose hearing you could begin with the "Old Hundred" and end the verse with "God Save the King" without their knowing that anything was wrong. Is it to be supposed that delicate variations in the sound of an unknown tongue could ever be perceived by such men? You will ask, what is to be done with these men, supposing that in other respects they are eminently qualified for mission work? I reply, let them tackle the script. They can learn to read and translate. Men with a minute knowledge of the written language are greatly needed in every mission. That missionaries should know what is written in the newspapers and magazines and what there is of value in ancient Japanese literature is most important. That some missionaries should exclusively devote themselves to literature is highly desirable from every point of view. The Roman Catholics and some of the German Missionaries are fully persuaded of this. Let me say to you all, "Don't attempt too much." It is related that an aged German, who was a great Greek scholar, when on his death-bed turned to a friend and said—"Ah! Sir,—could I but live my life again, I would give the whole of it to the study of the Second Aorist." To make one's mark in life one must be a specialist. You have no doubt all been struck by the vastness of this language, the vastness of these two languages, it would be more correct to say. Know Japanese? Who is there even among the Japanese themselves that knows it? Each Japanese scholar knows his own subject fairly well. Ply him with questions about things outside that; go to a man who teaches history and ask him to explain legal, medical or psychological terms, and he will say, "That's not my province." The first thing, ladies and gentlemen, which you have to do when you come to this country is to map out for yourselves a course of study, and to define precisely what you purpose trying to do. I have known men who have done nothing but dabble in this and that in a most unscholarly fashion for ten or twelve years, ending with being linguistic "Jacks of all trades and masters of none." Life is all too short for the work that earnest minds wish to get through. There are some people who spoil their whole lives by perpetually attempting to do too much. My motto is, "Only do what you can do effectively. Let the rest alone." Quite early in my career I made modern Japanese literature my special sphere, and I have kept to it and intend to do so to the end of my life. With those missionaries who have tolerably good ears the thorough mastery of the colloquial language is of course the first task they set themselves to accomplish. There are many here who stand in need of no advice on this subject, but there are others who perhaps feel somewhat bewildered by all the seemingly contradictory rules of Japanese speech. I will suppose myself to be talking to a missionary who has lately arrived. I have arranged what I have to say to-night under the three following headings:—I. The Study of the Colloquial. II. The Study of the Written Language. III. General Remarks on the language and its future.

I. *The Study of the Colloquial Language*.—(1) *First begin with Chamberlain's "Handbook of the Colloquial Language."* That book, it seems to me, tells a man if not all, nearly all, he can want to know about the structure of the language and rules of speech. There is one point,

however, on which I think Mr. Chamberlain's advice cannot be followed with safety. On page 19 or 20, I forget which, he says: "New comers cannot do better, at least for the first few years, than to endeavour not to accentuate at all." I object to this advice on two grounds. First, it seems to me that the wording implies that after the first few years students of the language may learn how to accentuate, but that the art cannot be acquired right away in the manner that pronunciation is learnt by a child,—a view that, even if correct, ignores the fact that nothing is more difficult in the study of a language than correcting a bad habit. Secondly, the assertion that there is hardly any perceptible accent in Japanese seems to me misleading. I grant that with two-syllable words like *yama* and *mizu* there is often no perceptible difference between the stress laid on one syllable and that laid on the other, though there are some exceptions even to this rule, but when we come to three or more syllable words I maintain that the accent is most distinct. Take words like *watakushi*, *dorobo*, *kobiru*, *jigoku*, *hanahada*, *gozarimasu*. For guidance as to pronunciation, supposing them to be heard for the first time, they should be marked thus, *watakushi*, *dorobô*, *kobiru*, *jigoku*, *hanahada*, *gozarimasu*. With what Mr. Chamberlain says about the tendency of foreigners to over-accentuate I entirely agree, but to refrain from accentuating at all because there is a danger of overdoing the thing is not a course to be recommended. The accent in Japanese is not so pronounced as it is in English by a long way, but it is distinctly audible nevertheless and must be reproduced by the foreigner who aims at "speaking like a native."

(2) *When you commence to study begin to make your own collection of words.*—It is a splendid test of the accuracy of your ear if you can correctly dot down words that you hear spoken. Always verify them by reference to the dictionary promptly before the remembrance of the sound passes away from your memory, as you may have wrongly recorded them. Use the words you have heard spoken as much as possible at first. By acting thus you are sure of your ground; for many dictionary words are seldom used. To get words for use in conversation out of the dictionary is precarious work, and may end in your telling the servant to bring a *kwaji* when you only want *hi*. When you write words down mark the accent.

(3) *During the first years of study keep away from Romaji as much as possible.*—I am persuaded that much of the mispronunciation of Japanese one hears comes from the almost exclusive use of books written in *Romaji* during the early years of study. The foreign newspapers published in Japan do not take the trouble to mark the long vowels. The consequence is that quite half of the foreign speakers of Japanese mispronounce the vowels habitually; speaking of a High School as a *Koto Gakko*, which might mean a Harp School, but does not to Japanese ears mean a High School, or a school at all for that matter, if the last vowel is pronounced short. Some foreigners seem to forget that *ko* and *kô shu* and *shû* are quite different words, and to use the one for the other is to render oneself unintelligible to ordinary Japanese. At first keep to the *kana*, and get your pronunciation of the words from your teacher. To the newly-arrived Englishman or American the Japanese vowel sounds are anything but familiar. It is better for him to learn the pronunciation of ㄎ ㄗ ㄗ by spelling out the *kana*. *Gyô* does not represent the sound to the uninitiated student. So much importance did Sir Ernest Satow attach to our keeping to Japanese phonetic signs that at one time he printed all Japanese names in Romanized *kana*, and for a while Mr. Chamberlain followed suit. Some Asiatic Society papers written by these gentlemen were printed in this fashion. *Romaji* no doubt is convenient for transcribing Japanese words when the pronunciation of these words is well known, but even then in no case should the marking of the vowels be omitted, as our memories are apt to prove treacherous in the case of words seldom used. It has always been a source of regret to me that the *Japan Mail* in its general news columns should year after year print Japanese names in the way it does. One of the chief reasons of this is the fact that the

editor resides in Tôkyô and the paper is printed in Yokohama. Hence in the hurry of a newspaper office attention to vowel marks becomes very difficult.

(4) *Read books written in colloquial.*—You will find lists of such works in Mr. Chamberlain's Handbook and elsewhere. Encho's works have, in my opinion, never been surpassed as specimens of the great capabilities of colloquial Japanese and as models of powerful oratory, albeit not always of the most refined kind.

(5) *Attend Japanese lectures and sermons, and listen to speeches on various topics.*—As it is the aim of the missionary to become an effective public speaker, he must study Japanese models. Good public-speaking differs essentially from conversation. The sentences are longer, the tone of voice varies according to subject. In delivering orations in this language it is desirable that as far as possible we should do it in Japanese fashion. I would advise you to listen to the sermons of some of the more eloquent of the Buddhist priests. At one time in my life I was so often seen at various temples that the report went out that I had serious intentions of becoming a Buddhist. My object was the study of the language used by the preachers. I would advise those missionaries who are connected with schools to encourage debating societies and to take part in them for the sake of the practice they afford in the use of the language.

(6) *Prepare your discourses very carefully.*—I have always followed the practice of writing out my notes in English, with a few Japanese words inserted in red ink above the English words in the case of technical terms or difficult idioms. In the preparation of a subject it is necessary to make yourself thoroughly acquainted with all the nomenclature connected with it. If you are going to speak about a river you must know what the Japanese call its bed, its banks, &c. If a ship be the subject, the words for the masts, the decks, the bow, the stern, &c., must be ready for use if required. If you fail to think of all this beforehand, in the middle of your discourse you will find yourself stuck for an important word and your audience will perceive that you only partially know your subject. In preparation consult your teacher about certain western ideas and idioms that you propose to express in Japanese. If you neglect to do this, you will either say something that is quite unintelligible or you will say something that you did not mean to say. The mistake most of us make is to render idioms too literally.

(7) *Arrange your ideas in a clear manner and be in earnest.*—Earnestness is the soul of eloquence. The language usually comes to the man who has something pressing that he wishes to say. Let the subject stir you. Be carried away with it; and you will as a rule take your audience along with you.

(8) *I would say to beginners, don't speak too fast.*—When speaking our own language, however rapid may be the utterance, we are usually understood, because we run the words into each other in a way that is familiar to our hearers. As regards the words that can be joined together in speech the usages of languages differ. As a rule an Englishman when beginning to speak Japanese joins the words in English fashion rather than *à la japonais*. When he is thoroughly up in the language there is of course no reason why a foreigner should not speak it as rapidly as a native.

(9) *Be careful in the choice of a teacher; and under no consideration use a man who knows English.*—It is customary with some young missionaries to employ young men who happen to be connected with the mission or with the mission school as teachers. The practice is decidedly objectionable. Such men are not reliable guides in teaching the language, as most of them are unscholarly, and have never given any attention to the problems connected with the Japanese tongue. I would recommend missionaries to employ men who have positions in Government Schools as teachers of Japanese. Get a Middle School or a High School teacher if you can. These men are not invariably skilful teachers, but you will find in them none of the linguistic ignorance and careless-

ness of the ordinary Japanese student. It is not desirable to employ a very young man unless he be a genius. To take a man who knows English is to begin walking with a crutch. The young fellows who offer themselves to the missionary as teachers have as a rule a most imperfect knowledge of their own language and when interrogated on any point they "rush in where angels fear to tread," and the result is the most inaccurate and unscholarly translations imaginable. Begin with a man who only knows Japanese. Your progress at first will be rather slow, but every question you put will give you practice in conversation. The fact that you are eager to have a point cleared up will prove a constant spur to your attention; and after a year's study, you will find that most things the teacher says to you are fairly intelligible. In adopting this plan you will avoid endless trouble and numerous mistakes. When your acquirement of the language depends on your own scholarship, you will make sure progress, but with a rash, semi-educated youth as your guide there is no saying into what pitfalls or quagmires you may be betrayed. In all study there is nothing more dangerous than bowing to authority which has no real title to homage. The notion that a raw student is an authority on Japanese would be laughed to scorn in any good Government school in this country, yet this is the assumption made in not a few cases that have come under my notice.

(10) *If you can, get a friend to dot down your mistakes when preaching or speaking in public.*—It is hard to get a Japanese to do this. As a rule he is too polite to undertake such a task. But I have occasionally found Japanese who after having had explained to them the great benefits to be derived from friendly criticism have been willing to correct mistakes. Where two missionaries are constantly listening to each other, mutual criticism is to be recommended.

(11) *Don't keep too much to one class of subjects.*—In listening to the sermons of some missionaries I have been struck by the limited nature of their vocabulary and by the constant recurrence of idioms that might have been varied without any substantial change in the sense intended to be conveyed. Just as one of the London or New York clergy is expected to be conversant with all the subjects and questions which are occupying the public mind, so the missionary in Japan should show his audience that there are few regions of thought that he has not visited—that he is a "well travelled man." In order to teach religion effectively, extensive knowledge of the world's affairs is absolutely essential and you will find that whenever you take excursions into the outside world you will come back laden with new words, phrases and ideas, all of which may be utilised for your own special purpose in life. A Japanese audience listens with special attention to the man who shows that he is a keen observer of the world's "passing show."

(12) *The art of conversation needs to be specially studied.*—There are of course many eloquent speakers who are perfect bores when they begin to converse. In some respects conversation in Japanese is much more difficult than public speaking. One has to be quite sure of the point of the remark made in order to frame an appropriate rejoinder. In listening to the conversations carried on between Japanese and foreigners I have constantly observed that the foreigner has misunderstood the real import of the remark made by his Japanese friend. For conversation a quick ear and a very extensive vocabulary are necessary. An educated Japanese will leap about from subject to subject with great agility, rattling off technical terms, recondite allusions, ancient Chinese and Japanese idioms and figures of speech with astonishing facility. It is only after many years of close attention and practice that lively conversation carried on between educated Japanese in the hearing of the foreigner can be thoroughly understood and appreciated by the latter, and even the most experienced foreign listener will often find that the meaning of what he hears is obscure owing to the introduction of a few technical terms that are quite new to him. Ideal conversation is that wherein both parties have an equal chance of expressing their thoughts. In all countries there is far too much one-sided

conversation, where one of the speakers finds it difficult to get in a word edgewise. These want-to-have-all-the-say sort of conversationalists should take to public speaking and give up trying to converse. They were born for the platform rather than for the parlour.

II. *The Study of the Written Language.*—(1) *Settle at the outset the extent to which you intend to go.*—As those present here to-night are nearly all missionaries I should say that those of you who have not already defined the limits of your studies would do well to make it your object to be able to read the *kana* and the Chinese square characters in common use only. By so doing you will place yourselves in the position of being able to read all public notices, the newspapers and magazines, modern books of every kind and a great many ancient ones. I attach very little importance to writing characters. It seems to me that an enormous amount of time has been wasted over the attainment of an art that is of little practical use. Any ordinary Japanese will scribble off a letter in 5 minutes that would take a foreigner at least half an hour. It is useful to be able to write one's addresses on letters and to be able to transcribe characters with facility when desired, but beyond that, I would say, don't attempt to go. My advice is, "Read, read, read." Enlarge your knowledge of the written script. There is more to be got out of this kind of knowledge than out of any other. Among all the foreigners who have attempted to write ideographs I have never heard of more than 5 or 6 who can be called skilful penmen from the Japanese point of view. One would like to know how much time has been spent over the acquirement of the art by those who have succeeded and what use the accomplishment has proved to them. As missionaries your dealings are with ideas rather than with mere forms. The sign has only an interest for you as an ideograph, an idea-symbol. The mere mechanical multiplication of these difficult symbols you can leave to unintellectual copyists and to the printing presses. A few cents paid to a scribe will produce strokes that would take you years to learn how to form. Confine yourselves to the nobler art of transferring the thoughts that eminent Japanese express by means of the characters into your own language. Let alone the study of the variations of the cursive hand-writing. If anybody asks why I give this advice, I simply say, from my point of view, which I think is your point of view also, the study in question does not pay. You can't do everything; be thorough in what you do. Don't aim at mere showiness, as some students seem to do. Don't be like those modern journalists who pretend to know everything and to be able to write on any subject. Be content to be an authority in your own special line.

(2) *Begin your study of the written language with Mr. Chamberlain's "Mojji no Shirube" as your guide.*—It will save you endless trouble and many mistakes. To be able to study characters so as to learn those which are most frequently used first and afterwards gradually go on to others, is an accomplishment that until that book appeared was next to impossible. I would say omit all the exercises in the cursive hand.

(3) *Keep your eyes about you as you go through the streets.*—Every town is full of notices and signs of various kinds. The characters are usually written very large and hence will soon become intelligible to you if you pay attention to them. It is not enough to be learning characters at one's desk only. Pick them up as you go along the streets; and in order that unfamiliar ideographs may become thoroughly known to you, look at them again and again as you pass in your *jinrikisha* or on foot, and you will find that after a while it is impossible to forget them. The difficulty of acquiring a knowledge of characters has been greatly exaggerated by some foreigners. What is wanted is more attention, more observation, more real mental application to the task.

(4) *Begin to read the newspapers as soon as possible.*—You can commence with papers that have *kana* at the side of the characters and that are written in a semi-colloquial style, such, for instance, as the *Yomiuri Shimbun*; then go on to the *Fiji*, ending up with the *Nichi Nichi* and the

Nihon, which to a foreigner are, I think, the hardest to understand.

(5) *After spending a year or two over the newspapers, go on to magazines and books.*—In many respects magazines and books will prove to be easier than the newspapers. The subjects treated in them are mostly learned subjects with which you are all more or less acquainted, and almost all the good Japanese modern writers have been trained in Western fashion and hence their methods of handling subjects are quite familiar to us. The number of technical terms met with is a difficulty, but this can be got over by the free use of the technical dictionaries now procurable. Remember that an extensive knowledge of the written language will take years to acquire and that if you aim at proficiency, you must keep up your reading.

(6) *Supply yourself with the best dictionaries to be had.*—For general purposes Brinkley's Dictionary has no superior, though of course it does not contain a great many words in common use and is defective in other ways. I would suggest that you insert in your copies words not found there. In the course of years you will find that you have accumulated a most valuable word treasure in this way. Next to be recommended is Gubbins' Dictionary, which is excellent as far as it goes. It is a great pity that it has never been enlarged. Santo's *Gyokuhon*, published first in 1878, is very well arranged and contains the English as well as Japanese equivalents of the most commonly used characters and a good many rare ones. The *Genkai*, and the *Kotoba no Izumi* as well as Owada's Dictionaries, though necessary for the study of ancient Japanese, contain few of the terms in constant modern use. I would advise you to purchase dictionaries on special subjects. They are sold at a very cheap rate. For 10 or 12 *yen* you can procure a dozen volumes. Not being at home, I am unable to supply you with an exhaustive list of those that have been published, but I know that you can obtain dictionaries on the following subjects:—Law, Medicine, Mathematics, Botany, Philosophy, Diplomacy and Commerce. These, however, are all English-Japanese Dictionaries, which is a drawback from our point of view. There is a German-Japanese Military Dictionary which furnishes all one wants in this line. Col. Churchill's dictionary, it seems to me, can hardly be called a technical dictionary. As a Dictionary of Military Terms it contains much superfluous matter. For a fuller account of Japanese Dictionaries I would refer you to the Monthly Summaries of Current Japanese Literature which for the past seven years have contained reviews of the principal lexicons that have been published. Advanced students should certainly possess Dr. Williams' Chinese Dictionary and if possible that published by Dr. Morrison too, if they are not inclined to purchase Professor Giles' Dictionary, which is far and away the best Chinese-English Dictionary in existence. Doolittle's Vocabulary, published by the Shanghai Presbyterian Press in 2 vols., a work which I have constantly used for over 20 years, is a most valuable reference book for technical terms of all kinds in common use in both China and Japan. There, under various headings, you will find medical, theological, ethnological, philosophic, Buddhist, Taoist, Confucian terms and sayings by the hundred. As regards my own studies perhaps no one book has ever taught me so much as Doolittle's Vocabulary. It is most unfortunate that Japanese dictionaries should all be printed in such small type. The characters are with few exceptions printed in No. 7 type. The remedy for this is to use a magnifying glass. When studying at night use a good student's lamp with a green shade, and for characters that you don't know well use your glass. It will save time and save your eyes, which I take it you value more than time even. There is a great need for a thoroughly up-to-date Japanese-English Dictionary. The Mombushô ought to bring it out. With a committee consisting of Japanese and foreign experts it could be accomplished in a satisfactory manner. The standard of English-Japanese dictionaries has now reached a level that renders the task of preparing a Japanese-English Dictionary infinitely easier than it would have been ten years ago.

(7) *Keep note-books on all sorts of subjects.*—In the course of years information of a highly useful kind accumulates; arrange it and keep it handy for reference. Dictionaries, however many you may possess, will not supply you with all the terms and idioms that you need. Have your own little stock of reference books. Collect proverbs, collect terse sayings, collect words, collect names. It will add interest to the passing years, and enable you many a time to clinch an argument by an effective quotation or a telling allusion. Don't depend too much on your memory. Things are apt to fade away as one grows old. In our minds, as in our houses, the space is limited and one article is made to give place to another. The most recently acquired knowledge absorbs our attention to the exclusion of the ideas that once acted powerfully on us. The remedy for this is to have everything in writing.

(8) *Try your hand at translation as soon as you can.*—Do the work as much as possible unassisted. Act on what the Buddhists call the 自力, *Jiriki*, system. When translating from Japanese into English only consult your teacher when the meaning seems obscure to you. Once having mastered the meaning, give yourself a free hand. Aim at being strictly accurate without being too literal. Steer clear of baldness, the rock on which so many translators of Oriental works have shipwrecked, Dr. Legge, among them. Translation is difficult work and requires great delicacy of touch and sense of literary beauty. But there is enormous pleasure to be got out of it. Just as the artist regards with supreme satisfaction his vivid representation on canvas of great ideas which he has been the first to symbolize, so the translator regards with no little pride a delicate piece of literary workmanship over which he has expended hours of thought. Like so many other things, it is only after years of practice that anything like a high ideal is reached. But it is fascinating work, and I must confess that to one who is fond of language study there are few more exciting occupations than tackling a stiff piece of Japanese that abounds with technical terms and difficult idioms with the determination to turn the whole into English and to make it as readable in one language as it was in the other.

III. *General Remarks on the Language and its Future.*—I have already occupied much more time than I can reasonably expect you to give me, so that I am compelled to compress into a few words what I wish to say as to the character and capabilities of this language. If asked whether Japanese ancient literature repays all the labour required to understand it, with Sir Ernest Satow and Mr. Chamberlain, I say, no. Mr. Aston seems to be of a different opinion. But Mr. Aston has for many years, on account of ill-health, been obliged to give up all active duties and he has made the study of Japanese literature his special hobby, and hence he may perhaps be under a spell. But judging from what he has published in English on the subject, which I have read carefully, I am of opinion that he has not succeeded in showing that Japanese literature is rich in ideas that are worth digging for. Mr. Chamberlain says in his article on "Literature," in "Things Japanese," "Much of that which the Japanese themselves prize most highly in their literature seems intolerably flat and insipid to the European taste." This we think to be the general opinion among those who have given special attention to the subject. I don't pretend to have gone very deeply into the study of ancient literature. To me modern literature has always had more charms, because of its close connection with one of the greatest events of modern times—the adoption by an Oriental people of Occidental civilisation. The student of modern Japanese literature knows perhaps better than anybody else how this has been brought about. He watches with keen interest year after year the various processes employed by the Japanese in transferring thought from our languages to their own, and he is struck more and more by the enormous capabilities of this language. Sinico-Japanese has in these modern days been put to a very severe test. It has been called on to express a great variety of

thought elaborated in the course of centuries by European minds. It has been found capable of doing it accurately, fully and even elegantly. This fact, I maintain, gives a special interest to the study of modern Japanese. The intricacies of a language that has shown such aptitude are worth exploring. Dismiss from your minds the dream that the ideographs will be abandoned and our beloved Romaji be used in their stead. I won't say this will never happen, but it certainly will not take place in the lifetime of any one present here to-night. What Mr. B. H. Chamberlain has repeatedly written on this question represents the opinion of almost everybody who has given attention to the subject. The existing written language is immensely superior to colloquial Japanese as a terse and a precise instrument of thought. But this is solely owing to the fact that it employs the Chinese ideographs. "Supported by the Chinese character," says Mr. Chamberlain in his article on "Writing" in "Things Japanese," "Japanese writers can render every shade of meaning represented in the columns of a European newspaper or the pages of a technical European work, whether financial, diplomatic, administrative, commercial, legal, critical, theological, philosophical, or scientific. Who could wish them to throw away their intellectual weapons, and put themselves on a level with the men of the stone age? They could not do so if they would." The diminution of the characters in constant use we shall see. The simplification of styles of writing and the blending of the classical and colloquial styles we shall witness, and a great many other improvements that could be named, but in my opinion the ideograph will be retained at any rate for another fifty or one hundred years, if not still longer. The difficulty of obtaining a fair knowledge of the written language has been greatly exaggerated by certain foreigners. Let men begin young; let those be chosen who have an eye for form, and let them set about the task of acquiring ideographs earnestly, and the progress made in a few years will fall little short of that made by the Japanese little boys and girls, who get to know several thousand characters in a very short time. The system has enormous merits, as Mr. Chamberlain has taken the trouble to point out in his recent lecture and in his *Moji no Shirube*. Those who pronounce it to be barbaric are of the *tabezu kirai* type of critics that are not worth consideration.

Having been engaged for over 20 years in translation and yet most of my work in this line having been published in newspapers in an inconvenient form for reference, last year a friend suggested that I should collect a few specimen pieces and publish them with the originals in parallel columns for the use of students of the language. This I did and the result was a small book of 156 pages containing 43 separate translations, which was brought out by the Sanseidō, in Tōkyō in August of last year. The pieces chosen for translation are written in a great variety of styles, ranging from stilted, classical Chinese down to the colloquial language in everyday use.

I need hardly tell you in conclusion that for me the study of the Japanese language is a most restful occupation and that I find in it a special fascination. I am inclined to apply to my study of the literature of this ancient and interesting people the old Bible words "And they found fat pastures and good, and the land was wide and quiet and peaceable, for they of Japan had dwelt there of old."

Note—This lecture together with the address delivered by Prof. Chamberlain before the Hakone Summer School will be reprinted in pamphlet form. Copies can be obtained, price 50 *sen* each, by applying to the Manager, *Japan Mail Office*, 55, Yokohama.

The Nagasaki Customs officials on Sept. 22nd detected an attempt by a Korean named Tei Koh-shung to smuggle opium ashore there. In his baggage, closely packed away among articles of clothing, were found five tin cases of opium and two pipes. He was arrested.

OMOIDE NO KI.

(JOTTINGS OF MY REMINISCENCES.)

It is with a feeling of great satisfaction that one reads this popular novel by one of Japan's well known writers, Mr. K. Tokutomi. It is rather long (567 pp.), and in places too minutely descriptive, but it is the ideal record of an earnest Japanese youth of the present time, who made his own way up to success through exceedingly trying circumstances. It tells how his mother startled him out of his aimless life when a boy, how he came in contact with Western thought through the English language, how he formed his moral and religious purpose and stuck to it, how he worked his way through the Doshisha and the Tokyo University, and at last married the girl he had long loved and who had secretly felt the same affection for him. The book is frankly Christian, it is wholly clean and inspiring, and the reception this first of Christian novels has received from the young men shows that they have much of a high moral power. It went through five editions in five months, and its sale did not stop there. It is the first Japanese novel that I began to read, and I never should have had the courage to attempt so great a book but for the following fact.

One day a student came to my house with this confession:—"I have ruined myself and disgraced my house. Once in Tokyo and once in an inland town I fell into evil habits and have gone to the bottom of everything bad. It is now or never with me. I beg you to teach me how I can be saved." He said among other things that he had long known the main facts of Christianity, and indeed it turned out that I had taught him with others, twelve years ago, the story of Christ. But none of that touched him in the least. "It was Tokutomi's novel that has aroused in me the hope that I may be able to reform. I read it twice, and I have made my great resolution, and beg your aid again."

It was this tearful confession and the sight of that young man in church that made it my duty to know what this novel is about, by taking time now and then to go through it for myself. And having done this, it is a pleasure to give a brief review of it to others, and to recommend it for all classes of readers. It is worthy of a place in every Sunday school library, in every girls' school, and in every home that can afford to pay sixty-five *sen* for it.

The story begins in Kyushu, and the first thing that at once captivates the Japanese heart, and startles the foreign reader is the immoral morality of the Spartan-like mother, who feels that she must arouse her only child, Shintaro, a careless, aimless boy, and inspire him with the lofty purpose of re-establishing their house which was in danger of becoming extinct. She solemnly took him to his father's grave, and, kneeling there, sternly rebuked him in the face of the dead for his thoughtless life, and then drawing a dirk from her bosom handed it to him with this awful command:—"Die! Coward! Die with this dirk! Then I follow on."

Now it is not an unknown thing for a terrible self-sacrifice like this to have occurred in *samurai* families of old, and the boy knew from the stern resolve in his mother's face that she meant literally every word she had spoken. His *samurai* blood began to boil, and though the sight of the fatal dagger sent a chill to his very bones, he grasped it and was about to give himself the deadly stab, when the mother, seeing that there was good stuff in the lad, jerked the dagger from him and exclaimed again, "Coward!" The boy painfully began to awake to the moral meaning of life. It dawned on him that it is far more brave to face life and its battles with the strong purpose to conquer, than to commit suicide and so shirk it all. It was a complete inner revolution in a moment, and bursting into tears, the mother and her son bowed before the dead, the mother with a new hope, the son with new heart. And all through these pages the writer has a deep reverence for woman, because "the fire of my mother's face burned into my soul and gave me the supreme decision of my life. Therefore I am a worshipper of my mother, and from that I always advocate

the education of girls." And so all through this novel, all the women are treated with genuine respect, and in the marriages they are represented as worthy to be loved. Indeed love in this book has the same lofty and pure place it has in the best of Western literature, from which Mr Tokutomi has confessedly drunk deeply.

Omitting some two hundred pages of very interesting school experiences, where the Kyoto Doshisha, under the guise of the Kwansei Gakuin of Kobe, figures largely, Shintaro's slow conversion to Christianity forms the second great crisis of his life. Here we see all the steps in the thoughtful student's life of to-day—of change from utter indifference to more or less of disgust at the follies of some Christian students, then to admiration for the high purpose of others, then to deep doubt of the great verities of the Christian religion, to the impossibility of escaping from decision when once the soul is aroused, then to deeper doubt over the Providence that kills his dearest friend by lightning on Hieizan, and at last to conviction. In all this experience he sees clearly the pessimism that is ruining the lives of so many truly earnest students in Japan, and that, in one case in this book, leads to the saddest kind of suicide by a fine scholar. Anyone who comes much in contact with the student class in this country must be deeply impressed with the pessimism that exists among the best of non-Christian students, and its very strong tendency to suicide. This fact is brought out in this novel and thus it is the more valuable for young men.

The passage where his Christian friend, Kento, just before the lightning stroke that ended his promising life, pleads with Shintaro, meeting his objections as only a student dealing with a student can successfully do, cannot but be of interest to all who are watching the progress of Christianity among the student classes. "Faith surely is not for foolish old men and women, it is the duty of superior people. Man is a part of the universe, and can't be satisfied unless at harmony with the First Great Cause. It is the instinct of man to long for the Supreme Being. You are already seeking Him. Your heart's problems are but the restlessness that longs for the Spiritual Father. Why stop there? Which is better, to be lamenting your loneliness with shut eyes while all the time being held in the arms of the Supreme Being, or to recognize the fact that you are surely thus held? To die lost in doubt, or to die believing, which is blessedness? The question of one's destiny is not one to be lightly dismissed. Precious time is passing!"

To see his best friend killed by lightning right before his eyes just at the end of this appeal, naturally raises the blackest kind of doubt. "He killed Kento! To ask me believe Him, why, it is an outrageous contradiction. I'll never believe Him, no, never!" This however is but the prelude to the morning light, which soon dawned clear and bright. "Let atheists talk, and utilitarians smile. There is a God over all, and by His providences I have been led. I believe! Kento is my friend who really died for me, he is my little Christ."

It is the story of a healthful and helpful conversion. The proof of the existence of the Christian's God is not so much in argument, but it is in the witness of God to Himself in the soul. It is not so much head conversion as it is heart conversion. He puts Christ above all heroes. "In Christ's presence all others lose light, as the stars pale before the sun. By this light my ideals, aims, standards of judgment, and ways of thinking are all completely changed, and instead of worldly aims done before men, I now laid them aside and lived, acted and thought as before God."

Young Japan seriously doubts personal immortality, but is ready to accept family immortality, and the imperishability of the memory of the great dead. But Shintaro, whenever he thinks of his two friends who have passed on, cannot content himself with any faith short of personal immortality. "Men say they are dead. But they are splendidly alive. They are living members of the great spiritual world. The soul is indeed indestructible."

The book ends with a delightful love story on Japanese lines. The lovers know that they love

each other, but he can make no move until some one becomes a go-between. He was so dead in love that he wishes he were a foreigner so that he could propose directly. Then when in good time the engagement is effected, she goes to her country home to learn cooking and house keeping, where she allows no one in the kitchen, her whole soul and body working to become the best wife possible for the one she thinks of day and night. The curious thing is that they do not correspond. Each side is kept informed by the relatives who save the young couple the trouble of doing any writing. And even when she is brought to Tokyo for the marriage, he almost dies to see her, yet keeps away till the day comes. Then comes a Christian wedding and a feast without *sake*, and a home started in such a way that it cannot fail. That noble mother-in-law has business in Kyushu, and does not tarry to exercise authority over the *yome*.

The book tells all the way through of conflicts and trials, but the close is victory. The mother who hated Christianity is won by the noble life of her boy. Friends who came through tribulations enter into paths of peace and prosperity that are for the benefit of others. One man's life enters into the lives of a dozen others and enriches them with the best of Heaven's treasures.

The Middle Schools of Japan forbid the students to read novels, for the vile character of Japanese novels is notorious. The principals of these schools can do nothing better than to encourage their students to read in their spare time this most excellent story, that is too full of real experiences to be called a novel. Mr. Tokutomi has preached a very effective gospel to a wide audience where direct evangelistic work is as yet of little avail.

Sendai.

J. H. DE FOREST.

CRICKET.

BORN IN JAPAN VERSUS THE REST.

A more perfect day for cricket than Saturday could not have been desired. Brilliant sunshine, a gentle breeze, with the fine tonic quality in the air which characterizes the early days of autumn in Japan: such were the ideal conditions which prevailed, and the game was enjoyed to the full by spectators and players alike. For the fifth time since these matches have been started the Born in Japan have won, and won fairly on their merits. The Captain of the Rest, however, is to be commiserated on his defeat for several reasons. One of the strongest players in his team, whom he had been relying upon both for bowling and with the bat, never put in an appearance, and worst than that sent no apology for his absence; while another of the team was called away early in the game and had not returned when his time came for going to the wicket. These little things rather go against the grain of good sportsmanship and surely could be avoided by the exercise of a little forethought and consideration for the feelings of others. Besides throwing the eleven out of gear, there is also this to be borne in mind, such actions keep other good men from being invited to make up the eleven, an important consideration in a Club of the size of the Y. C. and A. C. We were glad to see Mr. C. M. Duff making a re-appearance behind the wickets, and trust that it forecasts his resolve to take part in the Interport Match at Kobe next month. An Interport Match without Charlie Duff keeping wicket would be robbed of much of its interest.

The Born in Japan won the toss and elected to bat, and play began about a quarter to two o'clock. P. B. Clarke was soon dismissed, having the misfortune to put up the fourth ball of White's second over, which Wilkinson held at cover-point. The brothers Kilby were then partnered and runs soon came steadily but surely. After six overs, E. W. Maitland relieved Fradgley at the bowling, and an over later E. W. Townend took the ball from White. Forty runs had been made at this point, and neither bat was giving any chances to the field. At five-and-twenty to three, 50 was telegraphed, and very shortly after 60, the bowlers being treated rather contemptuously by the Kilbys, who were

now well set. Threes and fours continued to come and 70 was hoisted. Soon after a change in bowlers was made, Fradgley going on again, this time at the Pavilion end, and Edward Kilby sent the last ball of the first over to the fence for 4. Lammert relieved Maitland, and a single made off his first delivery by H. W. Kilby brought the score up to 80. About this time a funny thing happened. Fradgley sent down a ball which the Umpire called a "no-ball," E. W. Kilby therefore let it alone and the ball struck the wicket, displacing the middle stump. Lammert in the next over brought about a separation of the brothers, clean bowling E. W. Kilby just after the score had reached 100. The retiring bat's score was 56, and it included six 4's, three 3's and five 2's. W. S. Moss filled the vacancy and broke his duck with the last ball of Lammert's over, but after knocking up six runs he was run out—115-3-6. Allcock partnered H. W. Kilby and began by sending Lammert to the Pavilion for 4. At 131, Fradgley went off, White going on to bowl again. Still the runs came and at 146, Maitland took over the leather from Lammert, while at 160 Jeffrey went on in place of White for one over, during which 13 runs were made off him. This was far too expensive and Lammert went back to the trundling. At last H. W. Kilby put up a ball from Lammert, which White held at long on—178-4-88. Kilby was deservedly cheered on his return to the Pavilion. His score included ten 4's; three 3's; and eight 2's. Strome, the new comer, did not stay long, Lammert taking his bails with the fourth ball of the over—181-5-0. The next man to go was Allcock, neatly caught by White off Maitland—185-6-25. Sydney Wheeler having broken his duck, lost Kingdon, his partner, the next ball, clean bowled by Lammert—186-7-0. After this a stand was made by Wheeler and Hunt and the score rose quickly to 200, which was hoisted at 10 minutes past 4. Four more runs were made and then the innings were declared closed. Score:—

BORN IN JAPAN.

P. B. Clarke, c. Wilkinson, b. White	4
H. W. Kilby, c. White, b. Lammert	88
E. W. Kilby, b. Lammert	56
W. S. Moss, run out	6

E. Jeffrey	6	13	—	—

Fradgley bowled one wide ball and one no ball.

The Club began their innings at half-past four o'clock, Crawford and White facing the bowling of P. B. Clarke and E. W. Kilby. Seven runs only had been made when Kilby caught and bowled White—7-1-6. Maitland partnered Crawford; the score rose to 27 before a separation was effected, and then Crawford played on to his middle stump a yorker from Kilby, immediately following a wide ball from the same bowler—27-2-15. Duff, the new-comer, made three runs and was then run out. Abbott joined Maitland and 40 was soon hoisted. A change of bowlers was now tried, H. W. Kilby relieving Clarke, but the runs still came and 50 was telegraphed. Sixty was next hoisted and then Hunt went on to bowl at the Settlement end. His second ball found Abbott's stumps—62-4-9. The light was fading rapidly when Fradgley went to the wickets. He made 5 and then played a ball from Hunt on his wickets—68-5-5. Soon after Maitland skied a ball from Clarke—68-6-23. Then Jeffrey was caught, and Townend went in as the last man to bat. Lammert, his partner, hit out freely and 78 was reached before he was bowled and the game concluded. Score:—

OVER THIRTY V. UNDER THIRTY.

Taking advantage of the National Holiday on Wednesday the Y.C. and A.C. arranged a match Over Thirty v. Under Thirty. A capital game resulted, the seniors knocking up 153 runs, and the Juniors compiling 149 for the loss of four wickets in the time left for play. The match was therefore a draw very much in favour of the Under Thirty. It was a pity, we think, that Wilkinson played such a waiting game; had he but forced the pace the match would doubtless have been played out, a much more satisfactory conclusion than a draw. The weather was again all that could have been desired.

With commendable punctuality for a Bank Holiday, play began about a quarter to two, White and Crawford facing the bowling of P. B. Clarke and E. W. Kilby. Luck at first was against the seniors, Crawford being caught by Wheeler, off Clarke, in the third over when 5 runs had been scored. The retiring bat had failed to break his duck unfortunately. White was the next to retire, being held in the slips by Stuart—a single-handed catch—off E. W. Kilby—18-2-14. Wilkinson and Edwards were now partnered, and making a stand despite a change in bowlers, the score rose steadily. At length at 58, Edwards put up a ball from Fradgley and was held in the slips by Moss—58-3-23. Then Maitland joined Wilkinson and opened with a single off Clarke with the last ball of the over. Sixty was hoisted at five minutes to three. For a while things were dull, both bats playing with discretion, and four maiden overs in succession went down to Fradgley's account. A change in bowlers was made at 68, H. W. Kilby relieving Clarke. His second ball saw Maitland run out—70-4-3. The new comer was Duff. Soon after this Stuart relieved Fradgley with the leather, the latter's six overs reading one wicket, one run, five maidens. The next ten runs came slowly, nearly all by singles, and 80 was telegraphed at 3.30 p.m. Then Duff woke up and, hitting out freely, sent the score mounting at a quicker pace for a while, until 90 was reached, when Fradgley took over the leather from Kilby and run-getting fell off again. The century was reached at 19 minutes to 4, Duff making the hit—a single off Stuart. Eventually Duff brought a capital sporting innings to a close by being caught in the slips by Moss off Stuart, the ball glancing from off his hand—108-5-23. Wilkinson next received Abbott as a partner. Together they took the score to 115, when Wilkinson was caught at cover-point by Strome, off Stuart. His 35 included four 4's, and four 2's, the rest being singles. Brady began his innings by sending Stuart to the fence for 4; two overs later he made another boundary off the same bowler, and followed this up with a single. A change in bowlers was made and Brady, lifting a ball from Clarke was caught at long-on by Fradgley—128-7-9. Lammert joined Abbott and began his score with a couple off Stuart; the next ball he treated in the same fashion. Runs came steadily from Abbott and 140 was hoisted at a quarter past four. Then Fradgley missed Abbott—a difficult catch—in the long field, and two balls later Lammert, through over-eagerness, was run out—143-8-4. One of the baseball substitutes,

Thorne, partnered Abbott, and keeping up his wicket saw the figures rise to 151, when he was caught by Allcock. The last to go in was Blake, another colt, and he sent the sixth ball of Clarke's over to leg for one; after making another single, he skied a ball from Clarke, which Allcock held at the wicket, and the side retired—153-9-2. It was now 4.36 p.m. Score:—

E. G. Fradgley	48	6	6	1	1
H. W. Kilby	24	6	1	—	—
F. O. Stuart	78	47	—	2	—

It was a case of playing against time for the under Thirty. The Kilby Brothers opened for their side, facing the bowling of White and Edwards. They made four, two singles apiece, in the first over; and five in the second; the third over was a maiden. The first boundary was made by H. W. Kilby, who sent the last ball of White's third over to the Pavilion. At 6 minutes to 5 o'clock 20 was reached. Six singles and a boundary, the latter by H. W. Kilby, brought the score to 30. At 34, E. W. Maitland took over the bowling from White at the Pavilion end, and Lammert went on in place of Edwards. Still the runs came and 40 was telegraphed, and then 50, boundary cuts to leg being frequent. The brothers were keeping their scores very level, E. W. Kilby being now 29 and H. W. Kilby 27. Brady at this point relieved Lammert, and had three made off his first over, putting E. W. Kilby one ahead of his brother's score by the time 60 was reached. The light was beginning to fade by now, and at 5.20, when 70 had been made, the whole ground was in shadow. At 86 H. W. Kilby was caught in the slips by White, off Maitland—86-1-38. Clarke joined E. W. Kilby, and the latter at once made a boundary which took the figures to 90. The century was attained by 5.35 p.m. with a boundary cut by E. W. Kilby. Then Clarke broke his duck with a couple. Hitting out freely Kilby carried the score up to 100 three minutes later. The light was getting dimmer and dimmer but Kilby was set for run-getting and 120 was soon hoisted, but at 129 he was unfortunately run out, Blake fielding the ball very smartly from square leg—129-2-80. G. C. Alcock partnered Clarke and the latter forced the pace so well that when the newcomer was caught by Lammert, off Maitland, the score stood at 144. Moss, next in, was cleaned bowled by White. Then Stuart joined Clarke, only to be stumped after making a boundary with his first ball. The score stood at 149 when stumps were drawn. Score:—

“SECRET SERVICE” AT THE PUBLIC HALL.

So many years have elapsed since Yokohama was favoured with a visit from a first-class travelling dramatic troupe that it is little wonder that the Public Hall was crowded to its utmost capacity on Saturday evening when the Neill and Frawley Company—now on their way to Manila—gave a performance of Gillette's play, “Secret Service.” The usual seating capacity of the hall was largely increased by the addition of chairs in every possible place, and even then many had to stand. The general theatre-going public of the home-lands is a monster with strange likes and dislikes, and queerer appetites and desires, but one leaning it is fairly constant to, and that is towards the melodramatic in Thespia's realm. Melodrama always pays in London, no matter how crudely the dramatist casts his situations or writes his lines. The big human heart of the crowd beats responsive to the appeals that the fine-drawn honour of the hero make upon its sluggish imagination; while the villain can always be sure of instant recognition of his most despicable traits. We therefore are not surprised that “Secret Service” has had a tremendous run in London and the English provinces and in the big cities of the United States. It is melodrama pure and undiluted, laid down in the boldest outlines with all that the general public requires in the way of hero, heroine, villain, heavy mamma, with the lighter reliefs of juvenile lovers, negro servants, and Confederate soldiers: all moving along at the highest tension and all thoroughly prepared for startling episodes of the most improbable—no, we beg pardon, of the most probable description according to the accepted canons of the playwright's craft. We fear the Neill and Frawley Company have gone away with the impression that a Yokohama audience is the coldest and most apathetic collection of human beings, they have had the misfortune to play before. But in this they would be mistaken. The general verdict on Saturday night was high in their favour, the opinion of the majority present being that some really first-class acting was wasted on a most indifferent play.

The full cast was as follows:—

Brigadier-Gen Nelson Randolph, commanding in Richmond	Jeffrey Williams
Mrs. Varney, wife of a Confederate officer of high rank.....	Mrs. Gardner Crane
Edith Varney, her daughter	Mary Van Buren
Wilfred Varney, her youngest son.....	Chauncy Southern
Caroline Miford, from across the street.....	Elizabeth Stewart
Lewis Dumont, U.S. Secret Service, known in Richmond as Captain Thorne	Daniel Frawley
Henry Dumont, U.S. Secret Service, Lewis Dumont's brother.....	Arthur Garrells
Mr. Benton Arrelsford, Confederate Secret Service	Gardner Crane
Viss Kittredge, sewing for the hospitals	Eva Dennison
Lieut. Maxwell, President's detail	J. R. Amory
Martha.....	Negro House
Jonas.....	Servants
Wallace Shaw	
Lieut. Foray, first operator military telegraph	Edward Wall
Lieut. Allison, second operator military telegraph	Oscar Dearborne
Sergeant Wilson	Herbert Ashton
Corporal Matson	John P. Wade
Orderly	Chester Sutherland
Messenger from Hospital	Roy Mack
First War Department Messenger.....	Roy Stephenson
Second War Department Messenger.....	William Clarke
Third War Department Messenger.....	William Finche

The plot briefly is this. The sham Captain Thorne, in pursuance of his duties in the Secret Service of the Federals, manages to enter Richmond during its siege, and win the confidence of the members of the family of General Varney, a confederate officer at the front. Through the daughter, Edith Varney, he manages to get a commission from President Jefferson Davis upon the staff of the War Department's Military Telegraph Service. A brother of his, also in the U.S. Secret Service, enters Richmond at this time with a secret dispatch for Captain Thorne, but is arrested and sent to Libby Prison before he can deliver it. But this matters little, he gets part of it sent to his brother through the Varney's negro servant Jonas, and then breaks out of Libby himself,

reaches the Varney house, delivers the rest of the message, and shoots himself at his brother's feet to save the latter from arrest on suspicion of being a spy. For a moment this *ruse* succeeds and the next scene allows the audience to see the sham *Captain Thorne* about to send a false message to the Confederate Generals at the front whereby a certain division will be ordered to retire and thus weaken the defence of Richmond and allow of the city's capture by the Federals. Meantime a *Mr. Benton Arrelsford*, of the Confederate Secret Service, a former suitor for the hand of *Miss Varney*, has suspected *Thorne* and takes steps to denounce him to her as a spy. Of course such conduct on his part meets with the usual result; he is scorned and vituperated for his pains, but he induces *Edith* to come to the Telegraph Office and see for herself the truth of his statements. They reach the Telegraph Office and in the sequel of some very melodramatic stage-play, *Arrelsford* is himself arrested, *Thorne* nobly refuses, through the greatness of his love for *Edith*, to send the false dispatch, and the curtain descends upon *Virtue Triumphant* being tempted by Love to escape from the city while there is yet time. Of course our noble hero refuses to do any such thing, and the last scene seems about to culminate in his being lead out to be shot instanter as a spy, when Providence, in the shape of a *Brigadier-General Nelson Randolph*, commanding in Richmond, steps in and revises the decision of the drum-head court-martial, being moved thereto by the many heroic qualities of heart and mind which he has discovered in *Thorne*. And so for sudden death is substituted imprisonment in Libby until such time as the Confederate Army marches into Washington, an operation which the General expects to be carried out before the Fall of the year. We gather that the majority of the audience on Saturday night were not Southerners, for when *Thorne* scoffed at the General's idea of the probable issue of the War, he was cheered to the echo.

As we previously remarked, the acting was first class: far too good for the play. Miss Mary van Buren is an actress who to a queenly presence unites rare gifts of elocution and dramatic abilities of the highest order. But if Miss Van Buren stirred our emotions by her beauty and intellectual qualities, Miss Elizabeth Stewart, as *Caroline*, won our hearts by her pretty, bewitching ways, her dainty wit, and her graces of acting generally. Nothing prettier have we seen on the stage than her love-making with *Wilfred Varney*, while her encounters with some of the other characters were provocative of heartiest laughter. *Mrs. Varney*, as played by Mrs. Gardner Crane, was a convincing piece of earnest work. Among the men Mr. Daniel Frawley stands out well. He had the "star" part, but he did not abuse his privileges and created a most favourable impression in consequence. His gifts are on an equally high plane with those of the leading lady. The minor parts were well-filled, particularly those of *Mr. Benton Arrelsford* and *Wilfred Varney*. Altogether the company is decidedly above the average of general excellence and they should receive hearty support wherever they appear in the Orient, for they deserve it.

FIRE ON THE CREEKSIDE.

About 2.15 a.m. on September 24th fire occurred in the upper storey of the French restaurant, No. 117, Yamashitacho, Yokohama, occupied by Madame G. Rosnet. The flames were first seen by a police constable of the Kagacho Police Station, who was on duty in the vicinity, and he at once reported the matter to the station. So prompt was the action of the Kagacho Police Brigade that the flames were almost entirely suppressed before the other fire brigades arrived on the scene, the result being that the restaurant was the only building destroyed. There was fortunately no wind at the time, but had not the fire been seen by the officer as above stated the result might have been serious. The cause of the accident is not yet known, but it is believed that it originated in the upsetting of a lamp. Happily there was no casualty to life or limb.

DEATH OF THE YOKOHAMA MAYOR.

We regret to have to announce the death of Mr. Y. Umeda, Mayor of Yokohama, the sad event taking place on September 20th about 5 p.m. at his residence. The deceased, as we have already reported, had long been suffering from cancer in the stomach, which at length terminated fatally. Prior to his death, the deceased had his Court rank raised by one degree, namely to *ju-goi*, by order of the Emperor. He commenced his career as a local petty official in Tottori Prefecture in June, 1873, and after serving in various local offices was appointed Chief of the Shiba Ward Office, in Tokyo, in 1883, and promoted to be a Councillor of the Department of Education in 1891, the Sixth Class Order of Sacred Treasure and the Court rank of *sho-rokui* being subsequently conferred upon him in recognition of his services. In June, 1896, he was appointed Mayor of Yokohama, which post he held at the time of his demise.

The funeral of the late Mr. Y. Umeda, Mayor of Yokohama, took place on the afternoon of September 24th, the cortege leaving the residence of the deceased at one o'clock for Kuboyama cemetery. Among those who followed the remains to their last resting place were Mr. Sufu, Governor of Kanagawa Prefecture, Mr. Otani, President of the Yokohama (Japanese) Chamber of Commerce, and many others, both foreign and Japanese.

Among the foreigners were H. E. Count Arco-Valley, German Minister; Baron von Stengen, German Vice-Consul; Dr. Ritter, Swiss Consul-General; M. de Sivers, Russian Consul-General; Mr. Bure, Belgian Consul-General; the Chinese Consul-General and two Secretaries; Sr. de Bonilla, Spanish Consul, M. Kutschera, Austro-Hungarian Consul; Mr. V. Gielen, Danish and Brazilian Consul; Mr. O. Haynemann, acting Peruvian Consul; Mr. Hobart-Hampden, British Pro-Consul; Mr. J. McLean, U.S. Vice-Consul-General; Mr. G. H. Scidmore, U.S. Deputy Consul-General; M. Tronquois, Chanceller-Interpreter of the French Consulate; Marquis de Nembrini Gonzaga, Dr. Van der Heyden; Mr. J. P. Mollison; Mr. E. Flint Kilby; Mr. H. J. Holm; Mr. A. Bianchi; etc.

At a meeting of the Yokohama Municipal Council held on September 21st it was agreed to present *yen* 916 as funeral expenses to the bereaved family of the late Mr. Y. Umeda, Mayor of Yokohama. The sum was handed on the 22nd to Mr. Umeda Katsutaro, son and heir of the deceased, who is now a Lieutenant of Artillery.

YACHTING.

Four 39-raters started on Saturday but owing to the lightness of the wind only one finished, *Maid Marion*, which got home at 6.05.32 and so won the first prize (the Mosquito Yacht Club cup) and two record points. The others gave up.

The 21-raters also raced on Saturday and the three leaders made quite an exciting contest of it. The wind was very light, which perhaps accounts for *Wettinge* being out of it, but only a minute and a quarter separated the first from the last of the other three scratch boats.

Following are the corrected times:—

	Corrected Club.			Corrected Arbitrary.		
	h.	m.	s.	h.	m.	s.
<i>Winsome</i>	4	45	10	4	45	10
<i>Pele</i>	4	46	25	4	46	25
<i>Edna</i>	4	45	25	4	45	25
<i>Wettinge</i>	4	50	30	4	50	30
<i>Stella</i>	5	17	03	4	48	25
<i>Yugao</i>	—	—	—	—	—	—
<i>Wiven</i>	—	—	—	—	—	—
<i>Nandeska</i>	4	59	20	4	55	23
<i>Sodeska</i>	5	04	13	5	00	25
<i>Pima</i>	—	—	—	—	—	—

Winsome therefore takes the first prize given by the Mosquito Club and two points, *Edna* the second and one point and *Pele* the third.

The 12-raters *Madaleine* and *Dora* raced round their usual course. The latter came in first but was disqualified for touching the bathing barge.

LAW CASES.

A YOUTHFUL MURDERER.

Judgment was delivered in the Yokohama Chiho Saibansho, by Judge Danno, on Friday afternoon in the case of Osada Toyo, 13 years old, the son of a *sendo* at Nakano-mura, Tsukui district, Kanagawa Prefecture, who put to death Hirai Nobutaro, nine years old, at Misawa-mura. The accused was sentenced to seven years' imprisonment. Mr. Kuwata, his Counsel, has decided to appeal against the judgment. As already reported in these columns, the affair occurred on the morning of May 27th when Hirai Nobutaro, the victim, attempted to cross a river in a ferry-boat, which was then in charge of the little prisoner. The boys quarrelled and the prisoner drew his knife and cut the chest of his antagonist, who finally fell over-board and was drowned. On the occasion of the public trial which took place on September 17th, the prisoner, replying to the Judge's questions, said that the quarrel originated over the possession of some 25 *sen* which the smaller lad Hirai Nobutaro, was carrying. Prisoner further admitted that when his victim fell into the water he rose to the surface but he (prisoner) would not catch hold of the drowning boy.

LIN v. UNION FIRE INSURANCE CO.

In the Yokohama Chiho Saibansho on Saturday morning, before Judge Kato, the hearing was resumed of the suit, adjourned from June 18th, brought by a Chinese named Lin Hok-sen now residing in Colombo, against the Norwich Union Fire Insurance Company. Plaintiff claims *yen* 5,120.10 insurance money from defendants. Mr. Koide appeared for plaintiff and Mr. Sawada for defendants. At the outset of the proceedings, Mr. Sawada contended that the plaintiff should be required to deposit security as he is now out of Japan. Mr. Koide replied that this demand was quite unreasonable and asked the Court to summon the Chinese Consul, in Yokohama as an expert to give his opinion as to Chinese law with regard to such matters.

The Court granted the application.

Mr. Sawada then raised an objection to the genuineness of the power-of-attorney held by Counsel for the plaintiff. The latter consented to prove his power-of-attorney by means of an official document and applied for the postponement of the case. The hearing was adjourned until October 14th.

JOVANSSEN v. HOPKINS.

In the criminal section of the Yokohama Chiho Saibansho on Monday morning, before Chief Judge Danno and Associate Judges Mabuchi and Kobayashi, the proceedings in the adultery charge brought by Adolphe Jovanssen, formerly manager of the Club Hotel, against Reginald George Hopkins, ex-Secretary of the same Hotel, Yokohama, and Mrs. Jovanssen, charging them with having been unduly intimate were resumed. Public Procurator Ohira conducted the prosecution. Messrs. Ohashi and Otsuka appeared for the accused, who were both allowed to take their seats at the Counsels' table. Mr. Hattori, Court interpreter officiated.

Mr. Hopkins was first examined.

The Chief Judge to Mr. Hopkins:—Tell me your name, age, profession, nationality, present abode and birthplace.—My name is Reginald George Hopkins, I am 33 years old, am disengaged at present, a British subject, reside at No. 129-c in the former Settlement, and I was born in Liverpool, England.

The Chief Judge to Mrs. Jovanssen:—Now tell me your name, birthplace, profession, etc.—My name is Rachel Bretel, I am 34 years old, I was born in France, and I am now employed in the Club Hotel as house-keeper.

The Public Procurator then read the following indictment:—The accused Rachel Jovanssen is a French citizen. The marriage ceremony between her and Adolphe Jovanssen, Danish subject, took place at Stockholm, Sweden, on March 20th, 1890, and they are husband and wife from a legal point of view. They came to Yokohama with their child in September, 1901, and the

husband was employed by the Club Hotel as its manager from the beginning of October the same year. Since then they lived together in the Hotel. While there, Mrs. Jovansen became familiar with Mr. Hopkins, Secretary of the Hotel, and the latter had illegal intercourse with her. In March this year Adolphe Jovansen was suddenly dismissed from the post of manager, but the accused Rachel refused to live with her husband and remained in the Hotel. The two accused continued to hold secret meetings either in the Hotel or in the house of Evangeline Clyde at No. 133-B, Bluff up to about the middle of May. Adolphe Jovansen made a complaint with regard to the said adultery to the Public Procurator of the Yokohama Chiho Saibansho on June 26th, this year. The above-mentioned facts have been sufficiently established by depositions made by the witnesses Ukai Gihachi, Nakamura Gen, Evangeline Clyde, Mitoda Jirobei and others and a marriage certificate of the accused Rachel. The offence is a misdemeanour falling within the provisions of Art. 353 of the Penal Code, (which provides that a woman who having a husband, carries on illegal intercourse with another man, shall be subjected to punishment ranging from six months to two years' major imprisonment).

The Chief Judge to Mrs. Jovansen—Have you ever undergone any legal punishment in Japan?—Never.

The Chief Judge—Is it true that a marriage ceremony between you and A. Jovansen took place in Stockholm on March 8th, 1890?—Quite true, I was married in the church on that day.

The Chief Judge—Had you been living in Sweden for some time?—No, I went to Stockholm the day before the marriage, namely on March 7th. Prior to the marriage I was living in Copenhagen, Denmark.

The Chief Judge—What profession had you been pursuing in Copenhagen?—I was living with a French lady.

The Chief Judge—What profession had your husband been pursuing at that time?—My husband was employed as a waiter in a hotel at Clandenburg, near Copenhagen.

The Chief Judge—How long was Adolphe Jovansen staying in Copenhagen before March 8th, 1890?—He was there for five months before the marriage.

The Chief Judge—At what church was the marriage ceremony conducted?—At St. June.

The Chief Judge—Who officiated at the ceremony?—Rev. Levre officiated and there were also present Messrs. Oscar Peterson and John Elevens who acted as witnesses.

The Chief Judge—Did you receive your marriage certificate?—Oh, yes.

The Judge thereupon produced a copy of the marriage certificate and handing it over to Mrs. Jovansen asked: Is that a copy of the certificate you received on that occasion?—Yes, this is identical with the certificate I received.

The Judge—Did you return to Copenhagen soon after the marriage?—No. I remained in Stockholm with my husband for about three months and a half, and then we went to London to live together.

The Judge—How long did you and your husband stay in London?—For twelve years.

The Judge—Were you and your husband in London until you came to Yokohama?—Yes, certainly, and we came to Yokohama about September 20th last year.

The Judge—What was the reason of your coming to Yokohama?—My husband had no work for about one year and saw an advertisement that the post of manager to the Club Hotel was vacant. Continuing she said—My husband saw two advertisements in a newspaper, one for the post of manager in the Hotel Metropole, Tokyo, and the other in the Club Hotel, Yokohama. In the meanwhile the vacant post in the Hotel Metropole was filled, and consequently my husband applied for and obtained the post of manager of the Club Hotel.

The Judge—How many children have you?—I had four children, but they died; I have now only one girl aged six years and a half.

The Judge—Where was the girl born?—She was born in London.

The Judge—To what nationality does she belong?—I don't know rightly.

The Judge—What is the reason that you are now calling yourself Mrs. Rachel Bretel instead of Mrs. R. Jovansen?—Because I learned that my marriage was an illegal one.

The Judge—When did you begin to name yourself Mrs. Rachel Bretel?—After the present case occurred. I went to the French Consulate some time ago and asked the opinion of the Consul with regard to the marriage certificate. The Consul told me that the certificate was illegal. So I discontinued calling myself Mrs. R. Jovansen afterwards.

The Judge—On the occasion of the preliminary examination held at this Court on March 16th you said that your name was Mrs. R. Jovansen and your husband was named A. Jovansen. What was the reason of your answering to that effect?—I thought I was his legal wife at that time.

The Judge—For what reason do you now say that your marriage was illegal?—My marriage ceremony was only conducted at the church above referred to and no further proper steps were taken so far. That is not legal.

The Judge—Were your parents living when you were married?—Yes, they were. Replying to the Judge's further questions, she said: My husband was employed by the Club Hotel as manager on Oct. 1st last year and I was employed as house-keeper of the Hotel subsequently. My husband left the Hotel on March 1st this year, but I am still engaged there as house-keeper of the Hotel. I was once disengaged with my husband but re-engaged afterwards.

Mr. R. G. Hopkins was next examined.

The Judge—Have you ever committed any crime: at Hongkong?—I was once subjected to a penalty at Hongkong and sentenced to 18 months' major imprisonment. In answer to the Judge's questions, he further stated: My crime referred to something like embezzlement, and I fled to Shanghai with another man's wife, but was arrested. I came to Yokohama about January 15th last year and was employed by the Club Hotel from May 7th last year to July this year and re-engaged until August 18th this year. I was first employed as a writer and afterward appointed Secretary; I am not quite sure about the date.

The Judge—You knew that Mr. Adolphe Jovansen was the manager of the Club Hotel in the latter part of last year?—Yes, I knew.

The Judge—Were Adolphe Jovansen, his wife and child living together in the Hotel?—Yes, they were.

Asked by the Judge to what creed she now belongs, Mrs. Jovansen said: I belong to the Catholic religion and my husband is a Protestant. I am still a believer in that faith.

At this stage, the Judge announced that as the further hearing might prove detrimental to public morals the case would be taken with closed doors.

The Court room was pretty well crowded and a few foreigners were among the spectators.

Mr. A. Le Prevost, who has been in charge of the Silk Department of Messrs. Cornes & Co., No. 50, Yokohama, was arrested by the Bluff police and taken to the Chiho Saibansho on September 22nd about 3 p.m. on a warrant issued by the Court with regard to charges of fraud, embezzlement, etc. After undergoing preliminary trial, which lasted until about 10 p.m. the same night, the accused was conveyed to the Negishi prison for detention pending further examination. The examination was continued on Tuesday and Mr. Le Prevost was again conveyed to Negishi.

A return having been moved for by Lord Charles Beresford showing the best shot with each type of heavy gun in the Royal Navy on each station, his lordship has been informed by the Secretary to the Admiralty that after giving the matter careful consideration, the Board of Admiralty are of opinion that it would not be in the interests of the service to furnish the return in the form suggested.

THE CHRISTIAN DAIMYO.

CHAPTER VIII.

Conversion of Arima Yoshisada and of his son Harunobu.—Otomo hesitates to become converted.—On the contrary his son and his nephew embrace Christianity.—Defeat of the Ito and war between Otomo and Shimazu.—Yoshishige receives baptism and cedes his estates to his son Yoshimune.—Disagreement between these two.—Defeat of Yoshimune.—Conversion of the Ito and of several other personages.—Story of Ichijo Kanesada and of his son Uchimasa.

It is time to return to Kiushu where the events of the six preceding years were not less in importance than those which passed in central Japan. The faith had made such progress there that in 1581 the number of the Christians was calculated at more than 100,000. The protection of the *daimyo*, and still more the conversion of several of them, had contributed much in bringing about this result. Arima Yoshisada, the elder brother of Omura Sumitada, had been baptized on the 8th of April, 1576, under the name of Andrew. The reader already knows that Yoshisada had himself invited the Religious to preach in his domain, and that for years he had never ceased to shower on them marks of his good-will. The reader may also remember that this kindness had for its object the attracting of Portuguese by means of the Religious, to the port of Kuchinotsu, where in 1562, he had already offered the latter very favourable conditions. The Portuguese but poorly responded to the advances of Arima who, attributing this reluctance to his brother Sumitada, in 1573 allied himself with the *daimyo* of Isahaya and Hirado to make war on him. Sumitada remained the victor, however, in this instance, and Arima was expecting reprisals when Sumitada pardoned him like a Christian. From this moment the two brothers were for ever reconciled and Arima was really converted.

Yoshisada did not live long after his baptism: he died in the following year. His son Harunobu, who succeeded him, was a fervent Buddhist and declared war on the Christians. Already at the death of his father he had, in spite of the reiterated request of the dying man, forbidden the summoning of a Religious and had conducted the obsequies in accordance with the Buddhist rite. But ideas in this country being even more variable than the weather, Harunobu declared one fine day that he was captivated by the Christian religion. He was baptized in 1579 and took the name of Protase. He was then scarcely 20 years of age. He married the year after and his wife received in baptism the name of Lucy. Of all the Christian *daimyo*, Arima Harunobu is perhaps the one that displayed the most generosity towards the Jesuits. He may be regarded as the type of Japanese who is filled with enthusiasm for an idea and who sets no limit to his liberality when it is a question of favouring the development of that idea. He provided for all the wants of the Religious, founded the college of nobles at Arima, the first that Japan had seen, opened schools for the instruction of children in the European arts, such as painting and the carving of images, the construction of organs and clocks, objects at that time much sought after. The many churches that the domain of Arima saw rise as from the earth, were constructed thanks to the liberality of the young *daimyo*. Thus it was that, from the beginning, the peninsula of Shimabara became one of the centres of Christian activity.

With Otomo Yoshishige things had not progressed so rapidly. Twenty-seven years had passed since Francis Xavier conjured him to declare himself a disciple of Christ but, continually solicited by other influences, Otomo had deferred his conversion from day to day. In spite, however, of this hesitation he had not ceased an instant to protect the Religious and those that had embraced their doctrine. Usuki, his favourite residence, owed to him a magnificent church. At Funai, the capital of his territory, he had given the Jesuits a superb building comprising church, residence, hospital, all endowed with revenues sufficient for the maintenance of the Religious who acted in this mission. And yet, despite these favourable dispositions, despite even his sincere desire to become a Christian, obstacles high as

mountains reared themselves between him and the realization of this dream, which formed the object of his continual aspirations. His soul, thirsty for the truth, was not only a prey to doubt, it was also a captive, a slave to the senses. By a singular anomaly, while he sought to penetrate the truths of Christianity, he ordered to be brought from Kyoto the bonzes who were most deeply versed in Buddhist philosophy, and passed entire years discussing with them fundamental points. As these bonzes were of the "Zen" sect, which denies a future existence and consequently the reward of good and the punishment of evil, Yoshishige understood at last that such a doctrine was contrary to common sense and would conduct infallibly to libertinism. He therefore dismissed the bonzes and devoted himself entirely to the consideration of the Christian religion and this time a profound conviction came to crown his efforts. But between this and an entire conversion there was still an abyss. Without speaking of his differences with Mori, who had usurped the succession of the Ouchi of Yamaguchi to the detriment of the Otomo family, the question of women presented quite other but nevertheless grave difficulties. Conformably with the custom of the country Yoshishige had several wives who had all borne him children. Moreover he had agents at Kyoto and Osaka continually occupied in looking out for new concubines for him. It can be understood that such conduct as this was scarcely in harmony with Christian morality. Finally Yoshishige's legitimate wife, who had nevertheless everything to gain from the conversion of her husband, was far from encouraging him to take this step. She was a fanatical Buddhist disliking the very name of Christian. Her dislike was such that the Religious had nicknamed her Jezebel.

The unexpected conversion of one of the sons of this woman turned her aversion into implacable hatred. From his childhood this lad had been destined for the monastic state and had been educated with this end in view. Custom thus placed him among a not inconsiderable number of cadets who, sometimes too lively, might, if they had remained in the world, have disputed with their elders the sweets of power. In order, however, to render the seclusion of this child as pleasant as possible, Yoshishige had constructed for him at Usuki itself a magnificent monastery endowed with princely revenues. But when they proceeded to conduct the young bonze thither, he declared that not only would he never put foot in this monastery, but that he wished to become a Christian. Nothing could turn him from this determination, neither the remonstrances of his father nor the tears and reproaches of his mother: he declared that he would die sooner than yield. The fact is that he did not yield; and as in Japan, truly a paradise for children, the parents fall in as a rule with the wishes of their little ones, Yoshishige gave entire liberty to his son, who was baptized in December, 1575, and received the name of Sebastian. He was then no more than 14 years of age.

Sebastian's example became contagious. On the day after his baptism, his cousin Chikatora, 16 years old, declared himself ready to embrace Christianity. This Chikatora was the adopted son of Tawara Chikakata, elder brother of Yoshishige's legitimate wife and one of the principal vassals of the latter. Not having a male child Chikakata had, on the occasion of a journey to Kyoto, asked a *Kuge* to give him one of his numerous sons. The *Kuge* happy to procure so enviable a position for one of his children, gave him one who was then only seven years old. The child, to whom they had given the name of Chikatora, was brought up in Yoshishige's residence and it was probably there that he and Sebastian laid their heads together. The opposition of Chikatora's relatives was terrible. They threatened to send him back to his father in Kyoto, they struck him, they shut him up in a castle in Buzen, a province of which his father was governor, but nothing could bend his resolution. They had even recourse to Father Cabral, whom they conjured to preach submission to Chikatora. The Religious wrote in effect to the young man, advising him to put off his conversion, and

to obey his father in all things not contrary to the law of God. Chikatora promised all and was set at liberty. But ascertaining a short time after that his father was seeking, with the intention of turning him from his religious ideas, to make a libertine of him, Chikatora ran to the house of Father Cabral and asked to be baptized. The ceremony took place on the 24th of April, 1577. (62) The anger of Chikakata was such that the newly baptized Christian had for some time to hide in the house of the Jesuits of Funai.

Soon the young people of the best families declared themselves Christians. Their number rose to fifty. Several times a week they met at the house of the Religious of Usuki to study the most difficult religious questions. Issuing thence they used to enter the temples, provoking the bonzes to religious discussions. As the latter could not always respond to the objections urged against their doctrine, the affair ended generally in an indescribable squabble. If these young enthusiasts had not gone further, however, all would have been excusable.

Unfortunately they allowed themselves to go to regrettable excesses. Sebastian, having gone to Funai escorted by a numerous party of followers to celebrate there the feast of Christmas, he declared to his companions that he would never tolerate a pagan in his service. Then these young bloods began to batter down the idols and to destroy several temples. The bonzes, attributing this outbreak to the insinuations of the Religious, at the instigation of Yoshishige's wife excited the populace against them. But Yoshishige interposed and severely forbade any injury being inflicted on the Religious. Happily the fermentation ceased directly for external difficulties soon came to absorb all the attention of Yoshishige. Ito Yoshimasa, *daimyo* of Obi (Hiuga), who died in 1569, had left his lands as well as his wife and his two sons to his father Yoshisuke. The latter, continually at war with Shimazu, had just been defeated (1578), and had, with all his family, taken refuge with Otomo Yoshishige, whose help he implored. Yoshishige, being the uncle of the late Yoshimasa, received them kindly and promised to restore them to their rights. (63) Meanwhile the young widow, with her two infants, the eldest of which was only ten years of age, took up her residence with her uncle Yoshishige. The latter set out immediately against Shimazu, who had already invaded the domains of the Ito, and succeeded in expelling him from the province of Hiuga. He understood, however, that this defeat would in no wise discourage the warlike Shimazu, who would take advantage of the first opportunity to recommence hostilities. To provide against this inconvenience Yoshishige resolved to establish himself in Hiuga in order to be the better able to prevent new invasion.

Meanwhile a family quarrel had just precipitated the conversion of Yoshishige. Before leaving for Hiuga he wished to give one of his daughters in marriage to Chikatora. But Yoshishige's wife, who had never been able to pardon the young man for his conversion to Christianity, opposed this union with all his force. Then Yoshishige, tired of the intrigues and the bad faith of his wife, signified to her that she might retire and that henceforth a wiser woman would take her place. The divorce being thus accomplished, Yoshishige married another woman whose daughter was about the same time married by his son Sebastian. Then, after having relegated his concubines, each to her own dwelling, Yoshishige announced to the Jesuits that he had irrevocably decided to henceforth lead a Christian life and demanded baptism. Thus, after a delay of 27 years, Otomo Yoshishige was baptized with his new wife at Usuki on August the 28th, 1578. (64) In memory of Francis Xavier, who had first tried to convert him he took the name of Francis at his baptism.

Yoshishige was then 48 years of age. It is the age towards which most Japanese retire from

(62) Hay, p. 10.

(63) Annals of the Itos. Yoshisuke's wife, consequently Yoshimasa's mother, was the sister of Otomo Yoshishige.

(64) Solier, p. 107. Letter of Father Carrion, Kuchinotsu, 1 Dec., 1579.

active life, in order to pass in repose their last years. (65) Without having at all in view this much-desired repose, Yoshishige nevertheless ceded his domains to his eldest son, Yoshimune, changed his name and took that of Sorin (66) under which he is generally known in history. Finally towards the end of the year 1578, he set out for Hiuga. His wife, his son Sebastian with his spouse, Chikatora, whom his adoptive parents had turned out of doors, and three Religious accompanied him to his new residence (67). Sorin thought he would taste there some moments of repose, but the saddest occurrences were to trouble his last days.

When Sorin placed his territory in the hands of his son Yoshimune, the Otomo were the most puissant *daimyo* in Kiushu and were reckoned among the greatest in Japan. Their authority extended over six provinces, and the riches they had amassed through their commercial relations with the Portuguese were immense. With reason, therefore, could Sorin answer those who reproached him with his love for the foreigners as well as his zeal in honouring their God, that the foreigners and their God had brought him more riches in a year than all the Japanese divinities could ever offer him. However, this splendour of the Otomo was to fade through the fault of the incapable Yoshimune. A fact which cannot be doubted is that the eldest children in families, especially those of great men, are often more than mediocre: and in Japan the occurrence is frequent enough, for a proverbial locution, "*Soryo no jinroku*, that dunce of a first-born," so to say, consecrates it. It would be difficult to explain the reasons of this psychological mystery: however it is probable that the sort of worship, of which an eldest son is made the object from his tender infancy, is no stranger to it. Accustomed to see himself flattered as the repository of the name and the traditions of the family, he easily lets himself be dazzled by the dignity of his position, without having the least idea of trying to make himself worthy of it.

Yoshimune, the heir of the great Sorin, realised on all points the type of the "first-born" in question. Of feeble character, mediocre intelligence, given to pleasures, he believed himself called upon to change the face of Kiushu. He succeeded in so far that he lost, one by one, the provinces that his father had conquered during a struggle of more than 30 years. It is indeed one of those fatalities which cannot be avoided; a state must undergo the vicissitudes inherent in human things, and it will not escape the decline which inevitably follows greatness. It is, however, the duty of those who preside over the destinies of a country to try to delay this decline as long as possible; but this Yoshimune did not seem to understand.

So long as he heeded the wise counsel of his father, peace reigned at least in the interior, a rare enough thing then, when a crowd of vassals, jealous the one of the other, passed their time intriguing. Then, what still further increased the difficulty, was the rivalry between Christians and Pagans. The circumstance may seem strange, but it is sufficient to know even ever so little of the situation of the Christians of our days to understand that a minority so very small can give umbrage. Yoshimune was to have an experience of it. Probably on the advice of his father, he at first bestowed all his sympathy on the Christians. To those who remonstrated with him on this, he urged the example of Nobunaga, then arrived at supreme power and known all over Japan as an ardent protector of the Christians.

Yoshimune would even have become converted, had not his father, knowing the instability of his character, advised him to reflect seriously before taking the resolution.

Outwardly the situation was nothing less than reassuring. Shimazu had returned to the charge in 1579, and after having overthrown Tawara

(65) This retreat is called "Nyudo," i.e. to enter into the way (religious), as we say to enter religious life. They used to shave their heads and wear garments similar to those of the bonzes.

(66) The annals of the Jesuits designate him under the name of "Civan," which is nothing else than a corruption of the word "Kian," another name which Sorin also took at this epoch.

(67) Solier, p. 408.

Chikakata, Yoshimune's commander-in-chief, he had invaded all Hiuga. Yoshimune himself had been literally crushed at the Mimigawa(68) and among the dead was the young Simon Chikatora. Sorin had to leave Hiuga and return to Usuki. At the same time Shimazu's allies invaded, Riuzoji the province of Chikugo, and Akizuki Tanezane that of Chikuzen. Yoshimune, whom so many reverses had broken down from the beginning, committed imprudence on imprudence. The pagan party, which had been long waiting to turn its grievances to account, told him that the gods were at last avenging themselves. Yoshimune had to promise to re-establish their worship and to restore to the bonzes all that had been taken from them; the pagan vassals threatened that if he did not do so they would pass over to the enemy. By the mere fact of his complying with all these demands, Yoshimune condemned the conduct of his father, and from this moment harmony ceased to exist between the two. On the other hand the repudiated wife of Sorin and mother of Yoshimune triumphed and with her all the pagan party. Occupying the very residence of Yoshimune, she got him little by little to share her resentment against Sorin and thus precipitated the ruin of her son. In fact, scarcely a year had elapsed, when the provinces of Hiuga, Chikugo, Chikuzen, Higo and Buzen no longer formed part of his domains. Bungo alone remained to him and even this province was a prey to internal troubles.

In the middle of this terrible disorder, Yoshimune felt that if he had not recourse to the prestige of his father, all was lost. Knowing the greatness of mind possessed by the latter, he sought him and implored him with tears of repentance to snatch him from the abyss into which his lack of skill had precipitated him. Sorin allowed himself to be moved and succeeded in a short time in re-establishing peace in Bungo. Touched by the clemency of his father, Yoshimune turned anew to the side of the Christians and even wished to receive baptism. Sorin, believing that this ceremony would transform his son, strongly urged him to do so, but the Religious opposed the wish. The third son of Sorin was received, however, into the number of the neophytes. He was called Chikamaru and took the name of Pantaleon. Adopted by Tawara Chikakata, he obtained the fief of Mie (Bungo). About the same time the widow of Ito Yoshimasu also received baptism at Usuki with all her family. Her eldest son, Yoshikata, was called Bartholemy; the younger, Yoshikatsu, Jerome, who had been baptized some time before, was then in the college of Azuchi. Yoshimasu's sister, the spouse of Ito Shurinosuke, also took part in this ceremony with her two sons, who received, at their baptism the names of Mancio and Justus(69). Mancio later on became the most celebrated Christian of this family. Finally a great number of nobles became converted at the same time; among these Kioda Shigetoki, a son-in-law of Sorin, and Paul Shiga Kozaeon were the best known.

However, as if all the misfortunes of his son had not sufficed to sadden the last years of Sorin, the adversities of Ichijo Kanesada, his son-in-law, came to still further increase his burthen of care. The history of this personage is one of the most tragic. In 1470 the *kuge* Ichijo Norifusa had deserted Kyoto where his slender resources no longer allowed him to live, and repaired on the invitation of the Chosokabe, to the province of Tosa, of which he became suzerain. Although this title was simply honorific, the Ichijo handed it down from generation to generation and thus passed relatively happy days. But not even they escaped the consequences of that spirit of revolt, which in the 16th century breathed over all Japan. Kanesada had to undergo a sad experience of this evil tendency; and, to speak frankly, he rather deserved what he got. At the age of 15, he had espoused the daughter of Utsumomiya, a little *daimyo* of the province of Iyo, and, after having had by her two children, he abandoned her to unite himself to a peasant's

daughter. His *kerai* suffered by this conduct and one of them, Dai Sosan, having remonstrated with him in this connection, Kanesada killed him with his own hand(70). But towards the age of 21 he seemed to return to a better disposition, and, after having dismissed his mistress, he celebrated a second marriage with Otomo Yoshishige's daughter. But it was then too late: his misconduct had so embittered their minds, that it was no longer possible to recover the affection of his subjects. Chosokabe Motochika, the most influential of his vassals, had already rejected his authority and was inciting the others to do the same. As these, however, disliked to have recourse to violence, they took him by artifice. Under the pretext that a conspiracy was being formed against him, Kanesada's *kerai* pressed him to leave the country till the storm had subsided. Without the least distrust, Kanesada fell into the snare and embarked with several *kerai*, whom he regarded as devoted attendants. But hardly were they in sight of the coast of Bungo, when the *kerai* put Kanesada into a boat and abandoned him to his fate. Only then did Kanesada comprehend the extent of his misfortune. There was no need to tell his father-in-law what had happened: Yoshishige had foreseen this catastrophe. He offered hospitality to Kanesada and sent for his wife and children, whom the fugitive had left behind in his residence at Nakamura. Kanesada soon forgot his misfortunes. The Religious that he met in the house of his father-in-law interested him considerably and he lost no time in becoming their friend. He was at first very much astonished to learn that there were in this world men so virtuous and disinterested. The one point in their character which seemed to him the most incomprehensible was the sentiment of humility. He could not grasp either the necessity or even the reason of this virtue. There is room for believing, however, that in the sequel he became better acquainted with this flower of the Christian virtues, for when, some time after, Yoshishige brought about his recall to Tosa, Kanesada begged Father Monti to baptize him before his departure. The ceremony took place at Usuki, in 1576, and Kanesada took the name of Paul.(71)

In returning to Tosa, Kanesada resolved to govern his subjects as an affectionate father. But a second revolt came to destroy his plans. Again he had to fly and to conceal himself in the house of Hokezu Norinobu, one of his vassals. A touching episode attaches to this precipitate departure: Kanesada already on horseback threw his eyes on a glycine that he had planted and attended to with his own hands. This sight softened his poetic soul and moved him to these words of adieu:

*Ue-okishi
Niwa no fujinami
Kokoro araba
Kon haru bakari
Sakina noizo.*

"O glycine that I have planted with my own hands,"

If thou hast a heart, give neither flowers nor odour next spring."

The legend adds that the glycine did not flower in the following spring.

In his concealment the neophyte, whose faith was still tottering, abandoned himself without reserve to his grief. In a long letter to Father Cabral, he was profuse in bitter complaints regarding this new adversity. Convinced that misfortune could be only a punishment for evil, he tried to discover what might be the cause of this new misfortune. The answer of the Religious came to alleviate his pain and strengthen his weak faith. Father Cabral pointed out to him how much he was mistaken with regard to the true nature of the adversities that had overtaken him and proved to him from Scripture that the justest men have often been overwhelmed by them. Kanesada understood and was resigned.

When in 1581, Father Valignani passed by Tosa, he found him despoiled of all and living as a private individual in the house of one of his former followers. When Kanesada saw the Religious, he prostrated himself at the latter's feet and made

a profession of faith so sincere that those present were moved even to tears. He confessed that he had never felt so happy as he did in this absolute destitution. The only thing that disturbed him was that he did not know a secure place to which to send his son Uchimasa, then 13 years old. The Father, in order to tranquillize him, brought the child to the college of Arima. From that moment Kanesada thought only of living and dying as a pious hermit, but the desire was not to be realized. One of his *kerai*, Irie Sakon, in order to ingratiate himself into the good graces of Chosokabe, resolved to assassinate Kanesada. Pretending to place himself at the service of the latter, he was received kindly by his old master who induced him to share his only chamber with him. The traitor, say the annals of the Ichijo family, profited by the sleep of his host to cut off his head with one blow of his sword. However a letter of the Jesuits(72) relates that Kanesada, having only a part of his throat cut by the murderer, recovered from his wounds and lived for several years afterwards.

To finish this sad story, some years later Chosokabe fearing the vengeance of Kanesada's son, conceived the design of getting rid of him by treason. Pretending the greatest devotion to the cause of the Ichijo, he invited Uchimasa to come and live with him, promising him his daughter in marriage. Uchimasa responded without distrust to this invitation. During two years he was able to believe in the sincerity of his father-in-law, but all at once the latter carried off his wife from him and sent him into exile. Uchimasa, scarcely 20 years of age went away with his two children, a girl and a boy called Chikamasa. The province of Iyo was to serve him as place of exile. Surrounded by spies, lacking even the necessities of life, his days were of the saddest. One morning he was found dead in his bed; Chosokabe had poisoned him. With Uchimasa was extinguished the Christian branch of the Ichijo. His two children were taken in by the Ichijo(73) of Kyoto; and, after that, history loses all sight of them.

LITERARY GOSSIP.

By the death of George Douglas Brown, author of "The House with the Green Shutters," which took place on Aug. 28th in London, there was cut short a literary career full of promise. Brown was a native of Scotland, was educated at Edinburgh and Oxford universities and settled in London to literary work. His novel was a failure until Andrew Lang took notice of it and its author. Since then the latter has been one of the literary personages of London.

From a Boston (Mass.) telegram of August 11th, we learn that Mr. Henry Haynie, who was for almost twenty years Paris correspondent of the *San Francisco Chronicle* and other leading American dailies, as well as on the staff of the *Paris Figaro*, is preparing a book at his Newton home on "Paris, Past and Present," which is to be issued in the fall. It is understood that Haynie will include in his work some sensational matter relating to the diplomatic life and inside secrets of the political circles of the French capital. From his association with M. de Blowitz, the Paris correspondent of the *London Times*, his position as president of the Foreign Journalists' Club and intimate relations with diplomats, Haynie is well qualified to speak of such secrets.

The *Graphic* Special Coronation Number, which reached us per the Vancouver mail, forms a complete Pictorial Record of all the ceremonies attending the Coronation. The main features of the Procession, both going and returning from the Abbey, are admirably depicted, while the Service and the various forms and ceremonies inside the Abbey, are illustrated in the fullest manner by various special artists from the time their Majesties enter the Abbey to the act of homage and the crowning of the Queen. The

(72) Letter of Father Coelho, Nagasaki, Feb. 13, 1582.

(73) Annals of the Ichijo family.

Number contains two extra supplements, one depicting the actual crowning of the King, the other a large four-page plate representing a general view of the scene after the Queen's Coronation, and constitutes a valuable and absolutely authentic souvenir of one of the grandest historical pageants in the annals of the English Crown.

An artist of the *Daily Graphic* has represented the King at the Colonial Review, without any staff, standing all alone at about a pace from a body of marching Chinese soldiers, with his hand at the salute. The impression that such a picture will make on the mind of the Chinese, if the *Daily Graphic* goes to China, may be left to the imagination, says a contemporary.

NEWS OF THE WEEK.

Lord Milner has started on a tour of the Western Transvaal in order to gain local knowledge of the progress of the settlement of the country, and will afterwards visit other regions.

It has been repeatedly reported and as often denied that H. M. the King of Siam was taking an extended tour abroad this year, says the *China Mail*. This year's Siamese Budget provides one million ticals (about £62,500) for the expenses of such a trip.

There is much indignation in Tonkin because the contractor for one of the railway lines under construction there has had the audacity to employ a Greek overseer! This is not the first time that the French colonists have protested against the employment of foreigners on semi-public works.

A Shanghai contemporary is informed that the following are the official names of the seven masts of the new seven-masted schooner lately built in the States. From the bows aft they are called Fore, Main, Mizen, Spanker, Jigger, Driver, and Pusher.

On the occasion of his departure from Bangkok on Sept. 4th, Captain de Richelieu was presented by a large number of friends with a beautiful solid silver centre piece of Siamese design. Captain de Richelieu is retiring to his native land—Denmark. He was connected with the Siamese Navy since 1883.

A scheme is being promoted in Yamaguchi with the view of laying a railway between Yamaguchi and Kogori, Yamaguchi Prefecture. Mr. K. Watanabe, Chief of the Yamaguchi Town Office, left that town for Tokyo on September 23rd to hold a conference with Baron Utsumi, Home Minister, relative to the plan.

Mr. A. R. Evans informs the *Kobe Herald* that five others and himself, while on the launch coming from the boathouse on the morning of Sept. 17th, saw a shark about six feet long. This should be a warning to bathers at Mirume who hitherto have been under the impression that no shark would venture up so far.

The Bank of Japan will lower its rate of interest at no distant date. This is believed, says the *Asahi*, to be due to the fact that owing to the possibility of the rice crop being more plentiful than at first anticipated there will be no large import of foreign rice and the economical world of Japan will remain undisturbed.

Negotiations for amalgamation have recommenced between the Sanyo and the Bantan Railway Companies, and it is generally believed that the negotiations will be attended with success this time. The Tokyo Stock Exchange has been asked by the Bantan Railway Company to suspend transactions in the company's shares for the time being.

A fatal accident occurred in Yokohama harbour on September 20th, the victim being a Japanese *sendo* belonging to Honmoku. Shortly after noon he was engaged in fastening a boat to the dredger *Tsubaki* by means of an iron chain one end of which was fastened to a heavy anchor. While he was so occupied the anchor dropped into the water, a buoy attached to it striking

him on the temple and nose and he fell unconscious. The man was at once taken to the Juzen Hospital, where he died shortly afterwards from the effects of his injuries.

A Tientsin contemporary publishes the following advertisement: "Wanted.—A jinricksha suitable for a lady with rubber tyres."

The property of the Yokohama Street Electric Railway Company was formally transferred to Morimoto Seiyemon, in charge of the Arima-gumi, a business corporation, on September 23rd, when yen 154,000 was paid to the promoters of the concern, that sum being the balance remaining unpaid. The work of construction will be started in the near future.

It is stated that the Osaka Ryu-so Kaisha (Sodium Sulphate Company) having made a contract with an establishment in Adedaide, Australia, for a supply of 5,000 tons of phosphoric acid manure will forward thither, through Messrs. Illies & Co., of Kobe, 2,000 tons of the same on September 26th. The price is said to be about yen 35 per ton. This is the first instance of the Japanese product being exported abroad.

A terrible tragedy occurred at Filey, near Scarborough, on August 22nd. Five children, who were playing on the sands, were cut off by the inflowing tide and drowned, before their mothers, who were sitting on the beach, had noticed the danger which threatened them. The shore was deserted, and no boats were available. The mothers of the children and others made heroic attempts at rescue, but failed.

Mr. H. L. Wigmore, an American officer, now at the Grand Hotel, applied on Sept. 19th, through the United States Consul for Yokohama, to Police Inspector Ikariyama, of the Kagacho Police Station, asking that the authorities would kindly allow him to be instructed in the art of fencing and *jujutsu*. The application was at once granted and the foreign officer received his first lesson at the Station the following day.

A very cool attempt to rob the dining room of the Nagasaki Hotel was made by an American, a passenger by the C.P.R.S. *Tartar*, says the *Nagasaki Press*. He went first to the bar, and having taken refreshment, walked into the dining room, where he gathered together ten spoons, four forks, and seven knives. His action was observed by a boy, however, the police were called in, and the man was arrested and taken to the police station. There he made the remarkable statement that the articles had been placed in his pocket by the boy.

The latest intelligence from the Paris branch of the Central Tea Guild, Tokyo, says that Japanese teas now command a good sale in Paris. For instance, the Paris branch is in receipt of many orders from tea dealers in the French capital and other places, where Japanese teas are favourably spoken of. The greater portion of the tea consigned by the Kyushu Tea Refining Company for sale has already been disposed of. It is stated that the Guild intend to forward a quantity of black, green and oolong teas, collected from various tea refining companies, at an early date.

The following was the result of the drawing for the new Australian subscription horses which have arrived for the N. R. C.:—

11.—	L. Mottet.	23.—	Wada.
12.—	Sir Claude MacDonald.	24.—	Kawakita.

There is a rumour that a proposal has recently been made by leading officials of the Department of Justice to transfer the Yokohama Chiho

Saibansho to some other site in the near future, probably in the vicinity of Negishi prison. With reference to the above, the *Yokohama Shimpō* says that should such really be the case the Yokohama City Authorities would come forward and purchase the building of the Chiho Saibansho for the purpose of converting it into City Offices, as the present premises are too limited. Mr. Otani Kahei, President of the Yokohama (Japanese) Chamber of Commerce, is reported to be willing to assist the City Authorities in this matter for the simple reason that he is also desirous of making use of rooms at the Saibansho for the benefit of the Chamber. According to present ruling prices, the property of the Court, including grounds attached thereto, is estimated at about yen 400,000.

Recently the Kihin-kai (Welcome Society), in accordance with Art. IV. of its regulations, added to its list of honorary members the following personages:—Count Katsura, the Ministers of State of all Departments, Marquis Ito, Marquis Yamagata, Marquis Oyama, Marquis Saionji, Counts Inouye, Matsukata, Itagaki and Hijikata, Viscount Enomoto, Baron Senge, Mr. Sufu, Governor of Kanagawa Prefecture, and four others. Marquis Hachisuka, President of the Society, is said to be desirous to include all the Foreign Representatives in Tokyo in the list of honorary members.

The report of Messrs. S. Moutrie & Co., Ltd., for the year ended 30th June last, shows a successful year's working. After deducting the interim dividend of 4 per cent. an amount of \$19,999.77 remained for appropriation. The Directors recommend dividing this as follow:—Final dividend of 6 per cent. (making 10 per cent. for the year) \$7,500.00; to be written off goodwill account \$10,000.00; Bonus to staff, \$1,650.00; leaving a balance of \$849.77 to be carried forward. The report notes the transfer of the Yokohama business of the company to Mr. C. Thwaites, who had managed the branch for several years. The company recently opened a branch at Tientsin.

It was officially stated in Singapore on the 3rd of this month that with an estimate of 3,000,000 gallons daily there was enough water in the reservoir to last for forty days. A Chinese deputation has recommended boring for water on certain sites but that cannot be done till boring implements are obtained. At present, however, the Municipality have none, and the nearest place from which they can be obtained is Sumatra. Officials take an optimistic view of the situation, which they say, is nothing like as bad as it was in Hongkong in 1891, when the supply was restricted to half-an-hour daily. If the worst comes to the worst, condensing apparatus will have to be requisitioned, but ere that will be necessary there is ample time for a good rain-fall.

A Bagdad Jew, named Saul Levy, and his daughter, Mozalle, are now under trial in Hongkong on a charge of having counterfeit notes of the Hongkong and Shanghai Bank in their possession, and the male prisoner is further charged with uttering some notes well knowing them to be forgeries. It is stated that Levy went to the Hongkong and Shanghai Bank on the 3rd inst., and handed over the counter at the Savings Bank Department two \$50 notes and one \$10 to be paid into his own account. The shroff examined the notes and then referred them to Mr. G. H. Ardron, who was in charge of the Department, and who found that the notes were forgeries. The services of Sergeant J. J. Watt, who happened to be in the Bank at the time, were called in; and, obtaining a search warrant, he went to the accused's residence at No. 11, Staunton Street, where, in a box belonging to the girl, he found thirteen \$50 forged notes. Six of the notes bore the same numerals as the two \$50 notes tendered at the Bank, but the remainder had the same numbers with additions. Mr. J. C. Peter, accountant of the Bank, stated in evidence that the notes were excellent forgeries and that it was only by comparison and seeing the numerals were similar that they could be detected.

CORRESPONDENCE.

RUSSIAN MISSIONARIES IN MANCHURIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Against the startling declarations of the *Hochi Shimbun* that "sixty and lately a hundred and forty" more Russian Missionaries have poured into Manchuria, allow me to communicate to you the real statistics of the Russian Ecclesiastical Mission in China. The Chief of this Mission is Bishop Innocente, who now returns from Russia to the place of his former service in Peking. He brings with him three new priests (Rev. Neophyte, Simeon and Pimen) and two deacons; two more priests (Rev. Abraam and Nicolas) have been in the place before. So now there are "eight" missionaries altogether, with the bishop and his deacons included in that number, for the whole Chinese Empire, not excluding Manchuria. In the suite of the bishop there are some inferior attendants, who by no means can be called missionaries, as two psalmists, some church singers, sexton, personal servants and even a carpenter and blacksmith, as the bishop is going to build a church and houses for the mission, all our missionary settlement in Peking having been completely ruined by the Boxers.

Yours very faithfully, BISHOP NICOLAI.
Tokyo, Russian Eccles. Mission, Sept. 18th, 1902.
(Rumour has quite out done itself on this occasion — Ed. J.M.)

THE GENERAL HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In an article on the General Hospital Question on Friday evening the *Japan Herald* hazards the opinion that the Foreign Community could and ought to support the Hospital by voluntary contributions, but I was under the impression, that it was just their inability or unwillingness to do so proved, by years of experience, that led to the present arrangement being made with Dr. Mecre. That, however, was a long time ago, and the Foreign community is larger and, perhaps, wealthier now, possibly also more public spirited. So that the idea might be worth consideration, provided that Dr. Mecre is willing to surrender his lease. To enable the public to weigh the matter intelligently, however, it is necessary that they should be made acquainted with the nature and terms of that lease, which I presume are no secret; what Dr. Mecre pays for his privileges, to whom he pays, and what becomes of the money; what amount is annually subscribed to the Hospital, and how that money is spent. In fact a full statement of accounts and of the position generally are required, making it clear to the community what it would cost them to take over and run the Hospital themselves. I imagine the amount will be greater than is bargained for, but whatever it is the public must know it before they can form an opinion one way or the other. I hope, therefore, the Committee will give the needful information as speedily as possible.

Yours truly, ENQUIRER.

JAPAN EVANGELICAL ALLIANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you have the goodness to find space in your columns for the following:—

JAPAN EVANGELICAL ALLIANCE.

Hitherto the impression seems to have prevailed that the Japan Evangelical Alliance was composed only of Japanese pastors, evangelists and representatives of churches; but the fact is that all Christian workers, whether Japanese or foreign are entitled to membership and a voice and vote in the General Conferences. Moreover it is the earnest wish of our Japanese brethren that all evangelical missionaries in Japan should join them in carrying out the purpose of the Alliance, which is "to promote the closer fellowship of all churches holding principles commonly called evangelical, plan for united work, and make known to society the spirit of Christianity." The necessity having arisen during the *Taikyo Dendo* of last year for some authoritative definition of "principles commonly called evangelical," it was decided at the General Conference of the Alliance held last April, that "by those holding evangelical principles we mean those who regard the Bible as the perfect rule both for our faith and practice, and believe that our Lord Jesus Christ who came down to this world for men and for their salvation is God."

The truly evangelical character of the Alliance having thus been placed beyond question, it is hoped that every missionary in Japan in sympathy with its purpose and principles will become identified with it without delay. To meet the expenses of the Alliance involved in publishing the programs for the week of prayer, a statistical table of church

work, postage and stationary, salary of secretary and the travelling expenses of speakers sent out from time to time to promote the work of the Alliance, particularly this year in connection with *Taikyo Dendo*, the rule has been made that all churches and organizations connected with the Alliance shall pay an annual subscription of not less than one *yen*, while all foreign and native workers shall pay not less than fifty *sen* each. Will you not therefore please send your subscription at your earliest convenience to the undersigned or to the Rev. Jozo Takano, Y. M. C. A. Hall Kanda, Tokyo, and urge the church or churches with which you are connected to send theirs. (Two *sen* or three *sen* postage stamps will be accepted.) *Promptness in this matter will greatly facilitate the work of the Central Committee.* Will you not unite with us in prayer and effort, depending only on the Holy Spirit, to make the fall campaign of the *Taikyo Dendo* in October and November next, for which we are now preparing, even more blessed in results than were witnessed last year.

HARPER H. COATES.

(On behalf of the Central Committee.)

Hongo, Tokyo, July 23rd, 1902.

Before leaving Tokyo at the end of July I gave instructions that the above should be addressed to all the Protestant Missionaries in Japan, but found on my return a few days ago that "some one had blundered," and that it was only within the past week or ten days that they had been sent. As this seems such a flagrant violation of that "promptness" which I am urging upon my brethren, I hasten to apologize for the long delay, and to express the hope that the response to this appeal may be more prompt and hearty than the issuing of it.

I wish to add that at a meeting of the Central Committee held on Sept. 15th the following open letter to all the churches in Japan in sympathy with the aims of the Evangelical Alliance was ordered to be published in the Japanese Christian periodicals:—

"It is the earnest desire of the Central Committee of the Japan Evangelical Alliance that every church throughout the country should avail itself of the favourable opportunity afforded this autumn for pushing an aggressive Evangelistic campaign. We will try to send out suitable speakers to assist in localities that so desire, but we hope that as far as possible each locality will provide for the expenses involved."

It will be observed that the burden of responsibility for the carrying on of a forward evangelistic movement this year, is laid, not as heretofore, upon the local Branches of the Alliance, but upon the individual Churches and workers. The Committee earnestly urges the Churches of the various denominations to plan for union meetings wherever local conditions will permit, and pledges itself to do all in its power to provide speakers to help; but if the workers in the several localities, will, without depending on outside help, or waiting for some one else to take the initiative, throw themselves without reserve upon the promises of God and launch boldly out, we see no reason why the gains in the spiritual life of believers and the substantial accessions to the churches this year may not far exceed what we have yet experienced. We care not for the outward form, but for the inner reality. Like our Master let our compassion be stirred as we see the multitudes longing for the bread of life, and, adding fresh fuel to the fires already kindled let us each go forth with a flaming enthusiasm of love, "by all means to save some."

HARPER H. COATES.

Hongo, Tokyo, Sept., 19th 1902.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE SANDHURST CADETS.

London, September 19.

Henceforward the cadets at Sandhurst are to be restricted to beer at meals, wine not being allowed.

THE BOER GENERALS.

The Boer Generals appear to have abandoned their European tour, largely owing to the plain hints from Germany and other powers that no anti-British demonstrations would be allowed.

ARCTIC EXPLORATION.

The Peary-Windward Expedition has arrived at Sydney in Cape Breton. It did not reach the North Pole but made some important scientific discoveries.

ILLNESS OF LORD SALISBURY.

Shanghai, Sept. 20.

Lord Salisbury, who is in Switzerland, is unwell. He is suffering from gout but there is no cause for anxiety.

NEW AMBASSADORS.

It is rumoured that Viscount Hayashi and Sir Claude MacDonald will be raised to the rank of ambassadors.

RUSSIA IN MANCHURIA.

A Peking telegram says that M. Lessar has announced that Russia is determined to keep her promise to restore Southern Manchuria as far as the Liao river and the Shanghai-kwan railway on the 8th of October.

LONDON TEA RING.

Steps are being taken to smash the ring which the London wharfingers have formed for bonding tea, which has since become a monopoly. A new bonded warehouse has started at much lower rates. Lipton's, Horniman's and other leading firms are supporting the movement.

ROYAL PROGRESS.

The Royal Progress through the streets of London appointed for the 27th June takes place on the 25th.

THE QUEEN IN DENMARK.

Queen Alexandra has arrived at Copenhagen.

DEATH OF THE QUEEN OF THE BELGIANS.

London, Sept. 21.

The Queen of the Belgians has died at Spa from a heart attack during dinner. None of the family were present.

[NOTE.—Queen Marie Henriette, was born on August 23rd, 1836, and was the daughter of the late Archduke Joseph of Austria. She was married on August 22nd, 1853. There were three daughters of the marriage.—Ed. J.M.]

ARCTIC EXPLORATION.

The Captain of the *Fram* has arrived at Stavanger, after having been ice bound for four winters in Jones Sound. The vessel's crew has mapped the unexplored portion of Ellesmere and to the westward. The surgeon and another person have died.

AERIAL NAVIGATION.

Mr. Stanley Spencer, the well-known aeronaut, navigated an airship throughout a distance of 30 miles yesterday from the Crystal Palace across London to Harrow. This establishes a world's record. The ship was easily managed; the steering gear worked well. This voyage marks a decided advance in the science of aerial flight.

PRINCESS STÉPHANIE AND KING LEOPOLD.

London, Sept. 23.

King Leopold arrived at Spa yesterday, immediately upon hearing of the death of the Queen of the Belgians. He insisted that Princess Stéphanie, who is now the Countess Lóngay de Nagy Lónya, should leave the royal villa. She left for Brussels at once, weeping bitterly. The news of the incident preceded her, and on her arrival an immense crowd met the princess at the station. Every head was bared, and there were cries of "Long live Princess Stéphanie" on all sides.

DEATH OF ADMIRAL BURGESS WATSON.

Rear-Admiral Burgess Watson, Commander-in-Chief of the British Mediterranean fleet since 1901, had died of pneumonia at Malta, aged 56.

[NOTE.—Rear-Admiral Burgess Watson entered the Royal Navy in 1860. In the early nineties he

was a frequent visitor to Yokohama while Captain of H.M.S. *Leander*, and he made hosts of friends here. After serving for some time on the Australian station he was promoted Rear-Admiral in 1890. He had no war-services, but his record in the Navy as an administrator was very high.—*Ed. J. M.*

RUSSIAN TORPEDO-BOATS AND THE DARDANELLES.

The *Standard* says that an *Irade* has been issued authorizing the passage of four torpedo-boats through the Dardanelles at intervals of 24 hours, under a commercial flag, and having no ammunition on board or any naval crews.

WIRELESS TELEGRAPHY.

London, Sept. 24.

At the instance of Germany an international conference will be held in October with a view to an international agreement regarding wireless telegraphy, similar to the international telegraph convention.

PRINCESS STÉPHANIE.

Princess Stéphanie left Brussels on her return to England amid renewed demonstrations of sympathy. She denied having created a scene between herself and King Leopold, though later he intimated to her that her presence at the Palace was undesirable.

SOUTH AFRICA.

The Commission on Martial Law in South Africa has prepared a first list recommending the immediate release of 113 prisoners.

THE KING AND QUEEN.

Their Majesties lunch at the Guildhall on the 25th October. The date of the Royal Progress through London to attend the Coronation Thanksgiving service in St. Paul's Cathedral is fixed for the 26th of October.

PANAMA.

An American warship has arrived at Colon and landed 320 marines and six field-guns.

AN APPEAL BY THE BOER GENERALS.

London, Sept. 25.

The Boer Generals have issued a manifesto in which they appeal to the civilized world on behalf of the widows and orphans and the ruined Boer people. They declare that ten times the amount given by Great Britain would be insufficient to cover even the direct losses. The manifesto has created an unfavourable impression.

RUSSIA AND FINLAND.

Russia has drafted drastic laws subjecting the administration and the judiciary, including the Senate, in Finland, to the Governor-General's control.

PRESIDENT ROOSEVELT.

President Roosevelt has undergone a slight operation for an abscess between the left knee and the ankle, caused by the recent carriage accident.

FRANCE, SIAM AND JAPAN.

The announcement that a Japanese has been appointed legal adviser to Siam has caused a flutter in Paris, where there have been apprehensions regarding the effect that the Anglo-Japanese alliance might exercise on Siam.

(RECEIVED AT THE LEGATION OF FRANCE.)

CROWN PRINCE OF SIAM.

Saigon, Sept. 21.

The Crown Prince of Siam has just arrived in Paris.

M. Beau, Governor-General of Indo-China, has embarked on the *Annam*.

KELANTAN.

The press comments on the occupation of Kelantan by the British. The British Government continues to deny it. The *Temps* says that if the English occupy Kelantan, they have the right to do so, but that the French Government prefers to regulate clearly and pacifically its difficulties with Siam by discussion and not by the occupation of territory.

THE CONCORDAT.

Saigon, Sept. 22.

At a great banquet which took place in Lower Charente the President of the Council, M. Combes, declared that the Concordat remained the politico-religious policy of the Government. He protested against political adversaries who sought to give a bellicose sense to some words which had escaped without premeditation from a Minister who, for the rest, had no commission to speak in the name of the Government. M. Combes affirmed that the political line of France is pacific.

THE LATE QUEEN OF THE BELGIANS.

Her Majesty the Queen of the Belgians died suddenly of disease of the heart from which she had long suffered.

(RECEIVED BY THE DEPARTMENT OF WAR.)

GENERAL FUKUSHIMA.

Bombay, Sept. 21.

Major-General Fukushima was attacked recently by fever. He entered the Omobara Hospital and during some days after the 7th instant his illness was very severe, but from the 20th instant the case yielded to treatment and there was a marked improvement.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

KOREAN JUBILEE CELEBRATION POSTPONED.

Intelligence has been received from Söul to the effect that in consequence of the prevalence of cholera the ceremonies in commemoration of the 40th anniversary of the Emperor's coronation are to be postponed until March or April of next year.

THE NORTHERN RAILWAYS.

Peking, Sept. 23.

Arrangements for the restoration of the extra-mural railway have been effected by the Russian officials. Viceroy Yuan is to proceed to Shan-hai-kwan in two or three days to take over the line, and the Governor of Shinking has already gone thither.

(FROM THE "JAPAN HERALD.")

THE CANADIAN ROUTE.

London, September 18.

The *Globe*, favourably commenting on a resolution passed by the Hongkong Chamber of Commerce for an accelerated steamship service *via* Canada, suggests that steps be taken to ascertain what the increased cost will be and whether it is possible to increase the present subsidies.

TO POACHERS ON THE SIBERIAN COAST.

M. Vermoloff, the Russian Minister of Agriculture and Domains, notifies that Japanese and American poachers captured on the Siberian coast are liable to three months' imprisonment and to have their ships and cargoes confiscated.

FRANCE AND SIAM.

London, Sept. 21.

Notwithstanding British denials the French press treat the British occupation of Kelantan as a fact.

The *Eclair* says that France runs no risk of a conflict with England because she will give

France *carte blanche*. Japan, adds the paper, is the real element of danger in the Siamese question.

THE MARCUS ISLAND AFFAIR.

London, Sept. 22.

It is reported from Washington that Captain Rosehill has lodged a claim through the Foreign Office for \$4,000,000 compensation from Japan.

TAXING THE TRANSVAAL MINES.

The *Financial News* learns that the revenue authorities claim income tax on the whole past profits of the De Beers Company. It is calculated that the tax to date amounts to a million pounds.

RUSSIA'S FAR EASTERN SQUADRON.

London, Sept. 24.

Russia's new cruiser *Pallada* is ordered to the Far East.

The second-class cruiser *Djigit* leaves in October to serve as a training ship for the crew of the Siberian flotilla.

(FROM THE "JIJI SHIMPO.")

FRANCE AND ITALY.

London, Sept. 17.

The Italian press severely criticizes the (*gwan-ko*) aggressive views expressed by M. Pelletan, French Minister of Marine.

[The Minister had declared the necessity of constructing fortifications in Corsica with a view to aiming at the heart of Italy in the event of emergency.]

THE UNITED STATES AND COLOMBIA.

The Government troops of Colombia having interrupted traffic on the Panama railway the United States Government has demanded an explanation for this disregard of the treaty rights existing between the two countries. The Captain of the United States war-ship *Cincinnati* has received instructions to keep the railway open to traffic.

AN AMERICAN BANKER ASSASSINATED.

Mr. Nicholas Fish, American banker, has been assassinated in New York.

A GOLD MINE.

A gold vein extending twenty miles in length has been discovered in the neighbourhood of Witwatersrand, South Africa.

ENGLAND AND SIAM.

London, Sept. 19.

The recent Kelantan affair is now explained. The fact is that the Chief of the State has lately increased the number of police and Sikhs, and this fact has been greatly exaggerated. They have no relation whatever with British troops. The French press, however, is still discussing the affair.

SOUTH AMERICAN TROUBLES.

Traffic on the Panama Railway is being kept open under the protection of United States forces. The President of Colombia, with 4,000 troops, is marching on Valencia to reinforce General Gastro; General Matos of the rebel army, is now stationed at Orituco.

THE HAYTI AFFAIR.

General Nord of Hayti has been defeated at Lembe. The rebel army under command of General Sahnave is advancing on Cap Haytien to attack it. The citizens of that town are panic-stricken.

SIAM.

London, Sept. 21.

The French press continues to criticise the recent Kelantan affair. The *Eclair* states that the danger to Siam has its origin in Japan.

AERIAL NAVIGATION.

Mr. Spencer has successfully navigated a balloon over the city of London.

FRANCE AND ITALY.

M. Pelletan, French Minister of Marine, explains with regard to his recent utterances that he had no intention whatever to provoke war.

CENTRAL AMERICAN TROUBLES.

London, Sept. 22.

Eighty marines, with two quick-firing guns, from the United States war-ship *Cincinnati* landed at Colon. Reinforcements have been called for.

Perera San Pablo is in command of a large number of rebels.

THE HAYTI AFFAIR.

The British cruiser *Indefatigable* has started for Hayti to protect British residents on the island.

SIAM AND JAPAN.

The French paper *Dever* (? *Debats*), referring to the Menam affair, urges that France and England should exchange views in the matter. Otherwise, adds the paper, Japan will finally gain foothold in Siam, and so injure the interests of England and France.

FRANCE AND ITALY.

M. Combes, French Premier, explains with regard to the recent utterances of M. Pelletan, French Minister of Marine, that the language of a member of the Cabinet throws no responsibility upon the Ministry, inasmuch as M. Pelletan's remarks were made in the course of an after-dinner speech.

(FROM THE "DEUTSCHE JAPANPOST.")

THE FRENCH MINISTER'S SPEECH.

Berlin, Sept. 18.

M. Delcassé, the French Minister of Foreign Affairs, feels very much annoyed at the speech delivered at Ajaccio by M. Pelletan, French Minister of Marine, in which the latter pointed out the necessity of strongly fortifying Corsica, because it is situated just opposite the heart of Italy. M. Delcassé feels he has to apologize in Rome.

FRANCE AND MOROCCO.

Italy and England are very suspicious regarding France's proceedings in the Morocco question as they are afraid that France intends to take advantage of it with a view to establishing her hegemony in the Mediterranean.

MME SARAH BERNHARDT.

Sarah Bernhardt will appear at Berlin in October.

THE RIOTS IN SZECHUAN.

The news concerning the Boxer riots in Szechuan is exaggerated. A French man-of-war has disembarked a number of marines and guns near Tschengtuff (?) on the Yangtse river.

A NETHERLANDS SHIPPING COMPANY.

A Shipping Company has been established in Holland with the intention of starting a line of steamers between Java, China and Japan. The Company's capital is said to amount to six millions.

PEARY'S EXPEDITION.

The expedition started and commanded by the arctic explorer, Lieut. R. E. Peary, with the intention of trying to find and eventually bringing relief to the missing aeronaut André and his companions, was also supposed to be lost, but has now been found. Peary has reached the 83° 50' degree of north latitude.

THE DUTCH EAST INDIA BUDGET.

The budget of the Dutch East Indies shows a deficit of twelve millions.

JEWS IN ROUMANIA.

Berlin, Sept. 22.

As is generally known, the Roumanian Government for some years past has been banishing all Jews from the country. A great many of them are emigrating into the United States, and to this end they choose the route *via* Canada so that they may not be affected by the conditions of the American law issued against the immigration of paupers. Now England and the United States have protested in a joint note against the proceedings of Roumania. The whole of the European press is discussing the contents of this note. It appears that the Powers will not explain their views concerning this matter before Roumania has given her opinion on the question.

GERMAN POLICY IN CHINA.

The *Ostasiatische Verein* in Hamburg has addressed a letter to Count Bülow in which the German merchants return their thanks for the energetic German policy during and after the Chinese troubles, and for the energy shown by the German Government in supporting the claims of the German merchants in China to recover the damages caused them by the troubles.

THE ALLEGED OCCUPATION OF KELANTAN.

In the French and English press a lively discussion is going on regarding the situation in Siam, especially the occupation of the Kelantan, Malay States by English troops. But on both sides one can observe an inclination of soon coming to an understanding on this question.

THE SULTAN OF MOROCCO.

In Marrakesh the mother of Sultan Mulay Abdel Aziz of Morocco has died. The Sultan, who suc-

ceeded his elder brother in 1894, has often followed the advice given him by his mother in favour of the Europeans.

THE GERMAN CROWN PRINCE.

Berlin, Sept. 24.

The *Norddeutsche Allgemeine Zeitung* denies the rumour that the German Crown Prince Wilhelm will accompany Prince Arthur, Duke of Connaught, on his intended trip to India.

COUNT INOUE.

Count Inoue, Japanese Minister in Berlin, has left Germany for Japan to-day.

AN ARCTIC EXPLORER.

The Kaiser sent telegraphic congratulations to Svedrup, the famous arctic explorer, upon his return to Norway after an absence of four years.

FRANCE AND SPAIN.

The rumours of an alliance between France and Spain are denied officially.

FIRE IN A RUSSIAN VILLAGE.

In the Russian village of Werbze a conflagration has destroyed 60 lives.

ALLEGED SOUTH AFRICAN WAR INDEMNITY.

The report that England claims from the Transvaal and the Orange River Colony a war indemnity amounting to 100 millions sterling is not confirmed.

THE GERMAN TARIFF.

Count Posadowsky declared in the Tariff Committee, that the Government has met with so many political difficulties regarding a higher tariff in favour of the German farmers, that the proposals of the agrarians regarding a still higher tariff will not be agreed to under any circumstances.

THE GERMAN MINISTER TO PEKING.

Berlin, Sept. 25.

The German Minister to Peking, Freiherr Mumm von Schwarzenstein, made a report yesterday to the Imperial German Chancellor, Count von Bülow, on the latter's estate near Hamburg.

TAXING THE SOUTH AFRICAN MINES.

On behalf of those concerned Mr Werner Beit in London has protested against the English Government's intention to impose contributions upon the South African mines.

THE EXCLUSION OF JEWS FROM ROUMANIA.

On account of the joint Anglo-American note concerning the banishing of the Jews from Roumania and their immigration into the United States, via Canada, the German Government journals tried to persuade the German Government to take energetic measures which might induce the Roumanian Government to reform the law in question. But it is by no means likely that the German Government will agree to coercive measures against Roumania.

OPERATION ON ROOSEVELT.

President Roosevelt has undergone at Indianapolis an operation for an abscess on the tibia. The discharged pus weighed 60 grammes. It is said that the abscess has been caused by a painful inflammation on the tibia.

A BOER APPEAL.

The Boer generals have appealed to the public for help to the Boer people by private means.

(FROM THE "CHINA MAIL.")

DEATH SENTENCE AT SINGAPORE.

Singapore, Sept. 11.

The Frenchman Goin who murdered a ricksha puller here on the 6th July has been sentenced to death at the Assizes.

(FROM THE "MANILA FREEDOM.")

SENSIBLE DEMOCRATS.

New York, Sept. 5.

The much-discussed anti-expansion plank will in all probability not be incorporated in the democratic platform.

All old Democratic doctrines are ignored in the campaign book which has just been issued by the congressional campaign committee; but it charges the republicans with thwarting anti-trust legislation, advocates the revision and reduction of the tariff; an effectual conclusion of reciprocity treaties, and in this issue accuses the Republicans of inexcusable and unnecessary delay.

ACCIDENT TO THE "BROOKLYN."

While participating in the manoeuvres of the North Atlantic Squadron yesterday afternoon, the United States cruiser *Brooklyn* encountered an obstruction off New Bedford, Massachusetts.

Although the vessel was not going at full speed, the shock was sufficient to displace a number of plates, and tear a large hole. The framework was not seriously damaged.

At no time was the ship in danger, and she proceeded to the Brooklyn navy yard under her own steam, where she will be repaired.

White Java and Penang	6.00 to 6.80
White Refined	8.20 to 10.10

EXPORTS.

RAW SILK.

After some slight hesitation buyers have again entered the market on a large scale, and prices have been forced up to the quotations given below. Consumers follow very slowly and complain loudly that they cannot afford these prices. But nothing seems to stop the local operators, and in addition holders are taking every advantage to get good prices for their goods.

QUOTATIONS.

Filatures—Extra Best, Coarse	Y. 1,080 to 1,100
Filatures—Extra, Fine	1,040 to 1,050
Filatures—Extra, Coarse	1,040 to 1,050

JAPAN STUDENTS AID SOCIETY.

WE beg to state that since the Japan Students Aid Society (Nippon Rikko Kwai) was organized in January of the 30th year of Meiji (1897) with the sole object of rendering assistance to students in distress, over three hundred and fifty of them have been enabled to earn their own support for the prosecution of their studies in Tokyo.

But the number of needy students having steadily increased since last spring, the Society has, by way of obtaining its funds, undertaken a benefit concert, which, under the patronage of a number of ladies and gentlemen who displayed no small zeal for the purchase of tickets, has proved a complete success. This enabled this Society to extend the scope of its business and consolidation so far as to place it in a position to support three to four hundred more students.

Nevertheless, we regret to say, that we had no suitable houses or buildings for their accommodation,—a source of no small inconvenience to them. We have therefore considered it expedient to hold a concert for the benefit of the said society at 2 p.m. on 4th (Saturday) of October at the Musical Academy at Ueno, Tokyo, so that the receipts thereof may be contributed to relieve the Society from its immediate distress.

We trust that all benevolent ladies and gentlemen like you will in sympathy with our motives, be willing to purchase the tickets, that we may offer for your acceptance. We ought to visit each of you in person for this purpose, but as we are afraid that in doing so we may happen to interfere with your business hours, we may be allowed to solicit your special patronage by letter.

Hoping this will suit your convenience,

We remain, yours respectfully,

PROMOTERS:—Mr. S. Shimada, M.P., Mr. H. Morita, Mr. I. Tokutomi, Proprietor, "Kokumin Shimbun," Mr. R. Tatsui, Proprietor, "Nichi Nichi Shimbun," Mr. K. PATRONS:—Prince Konoye, Count Okuma, Count Hijikata, Viscount Nambu, and Baron Kanda.

Headquarters of Japan Students Aid Society (Nippon Rikko Kwai Hombu), No. 76, Haramachi, Koishikawa. Tel.: No. 1248 Bancho.

Business Office of Japan Students Aid Society, No. 10, 1-chome, No. 1 Boarding House ("Lion" House) of Japan Students Aid Society, No. 1, 3-chome, Misakicho, Kanda.

Milk Distribution Section of Japan Students Aid Society, No. 21, 1-chome, Harukicho, Hongo.

P.S.—Sympathizers of the Japan Students Aid Society's work are sincerely requested to send in their contributions to the office, even in case they are prevented by circumstances from attending the concert.

PART I.

1. SATSUMA BIWA (four stringed lute), Horaisan and Shiroyamakyoku—Mr. T. Taira. These are the two pieces of music best suited for the Satsuma Biwa. Mr. Taira's fame as a lute musician is deservedly great.
2. HAYASHIGUMI (the "No" dance in its classical purity). Kantan—Mr. Minoru Umewaka, Mr. R. Kawasaki, Mr. S. Masumi, Mr. G. Ko and Y. Issu. Kosode Soga—Mr. R. Umewaka, Mr. R. Kawasaki, Mr. Manzaburo Umewaka, Mr. G. Ko and Mr. Y. Issu. Genjo—Mr. T. Kwanze, Mr. R. Kawasaki, Mr. G. Ko, Mr. S. Masumi and Mr. Y. Issu.
3. KYOGEN (comic theatrical performances). Urinushibito (Melon Stealer)—Mr. H. Yamamoto. Niku Juhachi (Two Nines Times Eighteen)—Mr. T. Yamamoto.

Messrs. Umewaka and Kwanze are the most distinguished "No" actors in Japan.

PART II.

1. SHAKUHACHI (flute), Zangetsu (Remaining Moon)—Mr. T. Araki. Sato no Akatsuki (Morning in a Hamlet)—Mr. K. Araki. These two performances are to be accompanied by the "Samisen."
2. KOTO (harp), Shinsarashi—Mr. K. Imai (harp) and Mr. S. Takahashi (guitar).
3. NAGAUTA (a dramatic song), Nanko—Mr. I. Yoshimura (song), Mr. R. Kineya (guitar), Mr. K. Okayasu (song), Mr. K. Fujita (song), Mr. K. Kineya (guitar) and Mr. S. Kineya (guitar).
4. SHINGAKU (Chinese music), Sangokushi (History of the Three Kingdoms), Sochosui (a pair of Butterflies)—Mr. S. Nagahara and his troupe.
5. ODORI (dance), Accompanied with songs and samisen, Kasuga no Tsubone—Mr. K. Fujima (dancing), Mr. I. Yoshimura (singing), Mr. K. Okayasu (singing), Mr. K. Fujita (singing), Mr. R. Kineya (samisen) and Mr. S. Kineya (samisen).
- The dancers and singers above mentioned are unsurpassed in skill, and their fame is spread throughout the length and breadth of the Empire.

TRUE HAIR GROWER

When I was bald I came into possession of the secret of a genuine hairgrower. My hair grew to its present length in about 40 days. Hundreds of other similar cases. I am selling the marvelous preparation. To introduce it I will post you a trial box in sealed plain parcel for only 4 stamps. Try it, as I did, and convince yourself. Address:—

JOHN CRAVEN-BURLEIGH,
110, St. Martin's Lane, London, W.C.

Hair 55 Inches Long Grown by Cuticura.

MISS B—, of L—, sends us through our British Agents, Messrs. F. NEWBERRY & SONS, 27 and 28, Charterhouse Square, London, E. C., a strand of soft, glossy hair cut from her own head and measuring fifty-five inches in length,

of which the annexed drawing is a photographic fac-simile. She attributes her magnificent head of hair to frequent shampoos with CUTICURA SOAP, followed by light dressings of CUTICURA gently rubbed into the scalp. Previous to the use of CUTICURA, her hair was dry, thin, and lifeless, and came out in handfuls to such an extent that she feared she would lose soon it.

This is but one of many remarkable cases of the preservation and restoration of the hair in seemingly hopeless cases by warm shampoos with CUTICURA SOAP, followed by light dressings of CUTICURA, purest of emollient skin cures. This treatment at once stops falling hair, clears the scalp of crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates the hair follicles, supplies the roots with energy and nourishment, and makes the hair grow on a clean, sweet, wholesome, healthy scalp, when all else fails.

MILLIONS OF WOMEN use CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, and for all the purposes of the toilet, bath, and nursery.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most torturing, disfiguring, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Aust. Depot: R. TOWNS & Co., Sydney, N.S.W. So. African Depot: LENNON LTD., Cape Town. "All about the Skin, Scalp, and Hair," free. POTTER DRUG AND CHEM. CORP., Sole Props., CUTICURA REMEDIES, Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 4TH, 1902.

SUMMARY OF NEWS.

The Crown Princess returned to Tokyo on Sept. 30th from Hayama, where Her Highness has been staying for several weeks.

MR. MATSUI KEISHIRO, First Secretary of the Japanese Legation in London, who lately returned to Tokyo on leave of absence has been transferred to Peking.

MR. STANLEY SPENCER'S air-ship, which he has successfully navigated across London, is 75 feet long and 20 ft. in diameter; her propeller blades are ten feet long.

CONCERNING the house tax question, the *Tokyo Asahi* says that in accordance with the provisions of the protocol made public a few days ago the Japanese Government will appoint either Mr. Denison, of the Foreign Office, or Mr. Motono,

Japanese Minister in Paris, presumably the latter, as delegate on Japan's part at the Hague tribunal.

COLONEL Buck, the United States Minister to Japan, is expected to arrive at Yokohama on October 3rd on the war-ship *New York* from Nagasaki via Kobe.

THE Home Minister issued instructions on October 1st to the Yokohama City Assembly to select a candidate for the Mayoralty, rendered vacant by the death of Mr. Y. Umeda on Sept. 20th.

CAPTAIN MATSUMURA, a naval attaché to the Emperor, was dispatched to Yokosuka on October 1st to inspect the condition of the battle-ship *Shikishima*, which was blown on the rocks off Yokosuka during the storm of September 28th.

THE launch of the steamer *Keijo Maru*, which has been built at the Kawasaki Shipbuilding Yard, Kobe, for the Osaka Shosen Kaisha, took place successfully on September 25th. The vessel will trade between Korea and Japanese ports.

ABOUT 3 a.m. on September 30th a Japanese woman attempted to commit suicide by jumping from the Bund, Yokohama, just in front of No. 8. She was seen by a policeman and taken to the Kagacho Police Station, and afterwards sent to her husband.

AT a meeting of members of the Yokohama (Japanese) Chamber of Commerce held on Sept. 26th a resolution was passed to the effect that the Chamber shall be preserved as it is and carry on business as heretofore in accordance with the requirements of the new law.

A CHINAMAN named Tseng Hsing Kuei, who was arrested on Sept., for smoking opium at his house in Yamashita-cho, Yokohama, has been sentenced at the Yokohama District Court to one year and six months' major imprisonment, the smoking implements being confiscated.

THREE notorious pickpockets were arrested on Friday afternoon just as they were about to enter a second class carriage at Shinbashi station. They had certain drugs in their possession, from which it is suspected that they are in the habit of drugging and robbing travellers.

A DANGEROUS burgler named Nishikubo Ikutaro, aged 25, who was arrested on Saturday by the Metropolitan Police, has confessed that he murdered five persons in the course of his nefarious career. When he was arrested, a revolver, a sword-stick and a dagger were found on him.

DOG-BREEDING kennels, called the Tokyo Yoken-jo, have been established at No. 6, Fujimicho, Azabu, Tokyo, under the auspices of Messrs. Ayai Takeo, Iida Heisaku and several others. At these kennels various species of sporting dogs will always be kept and they will be either sold or exchanged.

SUNDAY, September 28th, being the anniversary of the birthday of Confucius the occasion, was duly celebrated by Chinese residents in Yokohama. A number of the students belonging to the Daido Gakko, a Chinese school in the former Settlement, carrying rifles, marched through the streets of the town in honour of the occasion.

A PEKING telegram to the *Jiji* states that the railway within the walls of Tientsin was formally handed over to the Chinese Authorities on the morning of September 29th, there being present Viceroy Yuan, Sir Ernest Satow, British Minister to China, his secretary, Mr. Clay, and others. The railway between Shanhai-kwan and the

Great Wall was returned to China by Russia on September 26th.

ON the morning of October 1st Serizawa Kin-ichiro and Marumo Dosho, employees of Mr. Makahara Shozaburo, dealer in metals, of Shichome, Ogimachi, Yokohama, were badly injured by the explosion of some bullets which they were handling in amusement. They were at once taken to the nearest hospital for treatment.

AT the beginning of September, Mr. S. Komor lost a valuable ring, the article being abstracted from a jewel box in his private house. He gave information to the police and Sergt. K. Yassufuku, of the Bluff Police Station, took the matter in hand. On the 28th Sept. Mr. Komor was informed that the ring had been recovered, having been found in Shizuoka.

IT is reported that the Emperor has commissioned Mr. Hino, an Imperial Chamberlain, to proceed to Torijima and adjacent islands, and investigate the state of affairs caused by the disastrous eruption, as also to convey to the survivors of the calamity His Majesty's condolence. Mr. Hino is expected to leave Yokohama early next month.

As a step towards thoroughly adjusting the finances of the Yokohama Water Works, Mr. Asada Matashichi, President, is now occupied in investigating various matters. Meanwhile Mr. Kobaashi Tadayuki, chief of a bureau, has tendered his resignation. In September, Mr. Saito Eikichi, chief of the workmen's bureau, was dismissed and it is stated that more than thirty employes will be turned off shortly.

IT has always been understood that Hokkaido, especially Hidaka province, is better suited for the breeding of horses than any other district in Japan. During the month of August tenders for the sale of the animals were invited at various places in the province and the greater number of the stock was purchased for the Seventh and Eighth Army Divisions. Altogether 807 horses fetched a total of yen 48,192, the average price being yen 45 for each mare and yen 69 for each stallion.

THE death is reported from Elmira of Mr. Francis Hall, a member of the former firm of Walsh, Hall & Co. of Yokohama. Mr. Hall first came to Japan in 1859, just after Yokohama was first opened and he quitted Japan in 1866, having in the brief period of seven years made what is described as a comfortable fortune. Mr. Hall was a great traveller, but found time to take part in public life in Elmira, being responsible for many improvements there. He died on August 27th from acute bronchitis.

SPEAKING at the welcome meeting given by members of the Shoko Keizai-kai (Commercial and Industrial Economic Association) at the Imperial Hotel on the evening of October 1st Count Matsukata, ex-Minister of Finance, after adverting to the rapid progress made by America and Europe in commerce and industry, said that his own observation in Siberia raised the hope that Siberia will become great a market for Japanese articles, especially for earthen-ware, coal, tea, etc., should proper measures be taken by Japanese merchants to meet the tastes of the inhabitants of that vast region. The speaker then referred to the material progress made by the United States, the method of doing business in New York and the perfectly organized system of the banks of Paris.

CHINESE NEWS.

Saturday, Sept. 27.

The extra-mural railway question seems to have been invested at the close with an element of quaintness. The Russians wanted to give it up sooner than the Chinese were prepared to receive it. A telegram to the *Asahi Shimbun* describes how the Russian Minister in Peking fixed the 11th of October as the date of rendition; how the Russian officer in command in the Liaotung Peninsula intimated his intention of giving it back at once; how the Chinese officer in command in Shingking pleaded he had no orders to take it over; how the Russian officer suggested that he had better get orders; how the Chinaman, adopting the suggestion, telegraphed to Viceroy Yuan, and how the Viceroy, in some surprise, sent the Superintendent of Railways to Shanhai-kwan to take delivery. The meaning of it all, we presume, is that as Russia is making rapid preparations to evacuate Shingking, she finds the railway an encumbrance. So long as it remains in her hands, she has to guard it, and that can not be done without a distribution of troops inconsistent with her arrangements for withdrawal. By the 8th of October she has pledged herself to remove her Shingking garrison completely. How can she keep that pledge and at the same time, continue to guard the railway until the 11th of October? It seems to us that the commandant in Liaotung is taking an inevitable course, whereas the Minister's date would be most embarrassing.

Tuesday, Sept. 30.

It is stated that a French syndicate, acting through Chinese co-operators, has obtained a concession of mining rights in the whole province of Fuh-kien. Such concessions are not in accord with China's treaties, since they have a discriminative and exclusive force, but, so far as we know, the corresponding concession obtained by Germany in Shantung has never been abandoned: it still stands, though under protest from Great Britain.

There is a rumour that several influential persons in Peking are endeavouring to prejudice the Throne against Wu Ju-lung, who is now in Tokyo making educational investigations, and that his friends have sent him telegraphic messages hinting at the advisability of not returning to Peking.

Prince Ching junior, who recently visited Japan, is said to have reported that Mr. Tsai, the present Chinese Representative in Tokyo, has not been diplomatically successful, and that his removal would conduce to the interests of China. It is added that Mr. Wang, who accompanied Prince Ching on his visit to Tokyo, is likely to succeed Mr. Tsai. Our readers will observe that there have been many rumours of this kind but that they all remain unverified. The only thing certain is that Mr. Tsai has many enemies, which, as things go, is not, perhaps, a reproach to him.

It is quite curious to observe how exceedingly receptive the Chinese mind has become of all rumours tending to discredit foreigners. Detailed news from Hunan shows that the murder of two missionaries at Chênchow, instead of being an isolated outrage, might well have been one of a series had not the local officials throughout the province shown much vigilance. The spread of the cholera epidemic appears to have at once served as fuel for the flame of anti-missionary suspicion.

" Oftimes it seems," says the Changsha correspondent of the *North China Daily News*, " as if we were living on the side of a volcano that would pour forth its hot streams of lava at any moment." An instance is mentioned of the photographing of a religious procession by a missionary. He had obtained leave and the people photographed were quite pleased to be taken. But immediately afterwards a rumour spread that the photographer had been trying to impair the power of the deity carried in the procession, and the result was that wrecking of missions and, perhaps, slaying of missionaries were averted with no little difficulty. Another illustration is furnished by the case of a lunatic, who, having attempted to scale a temple wall and fatally injured himself in the essay, was at once said to be a patient of a mission dispensary and to have lost his senses by imbibing three days' physic at one dose. A mere accident prevented dire consequences. What must strike every thoughtful person as singular is the marked divergence between inference and fact in the Chinese mind so far as missionaries are concerned. The missionary devotes his life to good works; his unique and obviously single-hearted aim is to benefit the Chinese and to alleviate the hardships of their lot. Yet never a calamity visits the Chinese that they are not ready to impute to missionary machinations.

Wednesday, Oct. 1.

One of our Tokyo contemporaries publishes a table showing the numbers of different nationalities employed in the Chinese Imperial Maritime Customs Service, namely:

British	487
Americans	83
Germans	112
French	46
Russians	11
Austro-Hungarians	40
Norwegians	8
Belgians	30
Danes	7
Italians	12
Spaniards	6
Dutch	13
Portuguese	7
Japanese	14
Swedes	0
Persians	2

There were no Japanese employed before the war of 1894-5, but they are now represented by 14. It will be seen that the total number of foreign employees is 878, and in the very improbable event of the new commercial treaty going into force, the number will doubtless be greatly augmented. Our contemporary thinks that the service is bound to remain under the direction of an Englishman, for though no one apparently possessing Sir Robert Hart's remarkable abilities is at hand to succeed him, the immense preponderance of British trade will decide the question.

Mrs. Archibald Little, the gifted authoress, whose book "The Land of the Blue Gown" has had such a large sale at home, is passing through Yokohama. She is a passenger by the *Hongkong Maru*, which, by the way, encountered the fringe of the typhoon on nearing the Japanese coast. Heavy seas were encountered which swept the vessel fore and aft, carrying away a life boat and badly injuring one of the crew. Mrs. Little's adventures on her present run out to China include a rather nasty train accident in America, but she is none the worse for her experiences, and is only apprehensive lest the troubles in Szechuan should detain her in Shanghai, and thus prevent her from getting up to Chên-tu, her journey's end.

Mrs. Little's books on China are very

illuminative, and we are not surprised at the success which has attended the sale of "The Land of the Blue Gown." Apart from the letterpress, the illustrations which she has judiciously introduced are very charming. In the opinion of many, however, her latest book, "Out in China," is by far the most forcible thing she has written. It deals more particularly with Amoy and missionary life in and around that out-of-the-way corner of the huge Chinese empire. Seldom have we come across anything that more vividly brings before the mind's eye, the manner of life which these devoted servants of God lead in the land of Sinim. The tragedy of it all, too: it eats deep into the heart while reading Mrs. Little's pages.

THE OSAKA DISPUTE.

A little more care might advantageously be taken by the *Japan Herald* in commenting on the alleged statements of other journals. Alluding to the Osaka affair, our contemporary says in its last issue:—

The *Japan Mail* * * * says that it, at any rate, from the outset recognised the vicious nature of the charter, though it does not for a moment ignore the fact that legal right is on the side of the Company, and that if the directors choose to exact their pound of flesh they are entitled to do so. The *Japan Mail*, however, has only recently come under the category of those that support the Company.

Our first comments on the subject of the Osaka Gas Company appeared in our issue of August 28th. We then said:—

Tested by the now generally recognised rules of political economy, the demand made by the Osaka Municipality is altogether proper. But whether it has a legal right to make such a demand is another question. Apparently the Gas Company's original charter contains no such provision. On the other hand, we can scarcely conceive that the charter has an unlimited coefficient of elasticity. It must have been granted, in the first place, with reference to the gas supply of certain fixed districts, and the present large increase of capital doubtless means a corresponding extension of operating area. If it does mean that, then a reasonable conclusion is that the charter requires amendment, and in sanctioning a change, the Municipal Authorities would seem to be justified in imposing a new condition. If, however, the development of capital and the enlargement of scope do not involve any alteration of the charter, then the Municipality is not legally justified in the course it is adopting; though as to the Company's wisdom in defying public opinion and refusing to shoulder a strictly equitable obligation, there can not be any second opinion. Without legal right on its side the Municipality is powerless, and that legal right will be enforced by the Home Department if appealed to, no doubt can be entertained.

When the above was written, the exact nature of the demands made by the Osaka Municipality was not known; neither were the exact terms of the Company's charter. Not until the *Nichi Nichi Shimbun's* articles appeared, at a much later date, was this information forthcoming, and we then expressed the opinion that the Municipality's demands were extravagant. From the outset the Company's legal right has never been questioned by us. But it is a mistake to say that we now "support" the Company, if by "support" is meant entire approval. We entertain not the least doubt that the Company is under a moral obligation to pay some portion of its net profits into the treasury of the municipality, though it is under no legal obligation whatever. Since we do not live in the sulphureous atmosphere of Kobe journalism, it does not occur to us to despatch a detonating document to our local contemporary charging it with fraudulent perversion and other sins, but we enter a gentle protest against misunderstanding. Concerning the contention that the quality of the charter is "a side issue," as claimed by the *Japan Herald*, we can only smile.

SIAM AND JAPAN.

The apprehensions expressed by French newspapers with regard to the relations between Japan and Siam are ridiculed in Tokyo. It is true that some Japanese have been engaged by the Siamese Government in the capacity of advisers. They are Mr. Kusaka Kametaro, formerly procurator of the Osaka Court of Appeal, Mr. Masao Tokuchi, a doctor of law of an American College, Mr. Toyama Kumataro, who is to superintend sericulture, and a military captain and a lieutenant. This captain, whose name is not published in Tokyo journals, formerly assisted the Siamese against the Shans, and it is probably his appointment, more than anything else, that has suggested sinister inferences to the French. No one acquainted with Japanese politics need be told that such inferences are chimerical. Like every vigorous Power, Japan is bound to grow, and her expansion may possibly cause complications at some time or other, since nations do not show any more implicit obedience than individuals to sociological rules. But it verges on hysteria to charge her with aggressive designs because she responds to her neighbours' application for assistance in scientific, industrial, legislative or military education. Her own success in assimilating Western civilization has secured for her an unique position in the East, and it is just as much her duty to assist in propagating that civilization as it was her duty to make use of it on her own behalf. She may detect a compliment in the suspicions with which she is regarded, but they can not be very agreeable to her, nor do we think that her conduct in the past warrants them.

The *Niroku Shimpō* says that the centre of depression which has recently made itself apparent in the region of foreign politics, is of Germany's creation. Germany is trying to persuade Japan to lay hands on Korea and to take Siam for a sphere of activity; and the same Germany is secretly warning Russia against Japanese designs in the former quarter and France against Japanese aspirations in the latter. We congratulate the *Niroku* on its Rowland for the French Oliver. The Tokyo journal's analysis is worthy to be bracketed with the suspicions of Paris. Great events spring from small causes, says the proverb. We imagine that it is illustrated in this instance, for the first cloud of any magnitude emanated from the Rue du Consulat in Shanghai.

DEATH OF MR. IMAMURA SEINOSUKE.

The death is announced of Mr. Imamura Seinosuke, a well known merchant. He expired at 8.45 p.m. on the 26th instant, at the age of 53, having been ill with gastric trouble since last November. The funeral is announced for the 30th, the cortege leaving the deceased's residence in Tamachi at 2 p.m., and proceeding to Zojoji. Mr. Imamura leaves four sons, of whom the eldest is a graduate of Cambridge, the second a graduate of the High Commercial School in Belgium, the third is studying in Germany, and the fourth is in one of the High Schools.

NEW JAPANESE LOAN.

We hear that the Hongkong and Shanghai Banking Corporation and Messrs. Baring Bros. have arranged a loan to the Japanese Government of £5,000,000 sterling bearing 5 per cent. interest.

CRUELTY TO ANIMALS.

In former years we printed many letters from correspondents and wrote many notes and articles about the need of a society in this country for the prevention of cruelty to animals. No observant person could doubt that Japan offered a field for the benevolent work of such a society. There is a marked difference observable in this country between the treatment of animals in the cities and in the country districts. When one visits the country, whatever be the part chosen, one sees fine sleek animals; admirably cared for; never over-burdened—or, at least, so rarely that the exception proves the rule—; evidently proud of themselves and kindly treated by their drivers. In the cities, on the contrary, especially Tokyo, decrepit, broken down, emaciated animals are often seen yoked to loads which they can not drag any distance without most painful effort, and one sees also that poultry are often carried to market in a manner that must cause great agony. The difference between country and city, so far as the treatment of animals is concerned, may doubtless be attributed to the fact that in the country the peasant, if he does not own the animal he uses, is at any rate directly responsible to the owner for its condition, whereas in the city a horse is generally driven by a man who has no personal interest in its well-being and who thinks only of getting a maximum of work out of it. But we may remark, in parenthesis, that even where horses are otherwise well and kindly treated, there is a shockingly cruel method of guarding against any tendency to become unmanageable. We refer to the habit of dragging down the animal's head and tying it to the girth by a rope or strap passing between the fore-legs. No more effective method of ensuring docility could be devised, but the suffering caused to the horse must be almost unendurable in some cases. We have seen animals thus trussed up, pacing along slowly under a heavy load, their eyes blood-shot and their bodies giving every indication of agony. Perhaps we ought not to dwell upon this so long as the bearing rein is used among ourselves. The bearing rein is one of the most barbarous instruments that ever was invented, and no reasonable excuse can be offered for its employment. Its sole purpose is to improve the appearance of a horse; to make the poor beast hold up its head and look pretty whatever may be the pain involved in the necessity. The Japanese dragging rein may be partially extenuated by the plea that without it the animal would be unmanageable, but if there is no rational explanation of the bearing rein, neither can it be denied that the dragging rein would be needless if imperfectly trained horses were not employed. However, we are not making comparisons. We frankly admit that before societies for prevention of cruelty became active in England, far more shocking spectacles might have been seen in London than can be witnessed now in Tokyo; that bear-baiting, bull-baiting, cock-fighting, prize-fighting and sword-slashing were popular amusements in Great Britain not so very long ago; and that no society in Japan will have to deal with the terrible cases of cruelty to children that disfigure our own records even in modern times. But two wrongs do not make a right, neither do three or four. Last year, when the formation of a society for the prevention of cruelty to animals was announced in Tokyo, every one hoped that a

remedy would soon be furnished for whatever is inhuman in the daily life of the capital. But we have not heard of a single prosecution at the instance of the Society, and yet there are abundant abuses calling for its intervention. Attention was recently drawn by one of our correspondents to the method of carrying cattle in Japanese steamers, and a harrowing picture was drawn of the things that happen when a ship encounters heavy weather, the rings being sometimes torn from the cattle's noses, and the animals ultimately trampling each other to death. That is an old story. It has been told again and again in these columns, but evidently something more than newspaper criticism is needed. Why does not the Society take up the matter? Surely the members can not imagine that the mere fact of their organization represents a sufficiently restraining influence. They may say that it is no business of ours. But it is. It is the business of every humane person, whatever his nationality.

AN ACCIDENT AT VISCOUNT YOSHIKAWA'S HOUSE.

A 60-lb. Armstrong shell which had stood at the vestibule of Viscount Yoshikawa's house in the Azabu district of Tokyo for 9 years, exploded suddenly at noon on the 25th instant, wounding a maid-servant so badly that she expired shortly afterwards in hospital, and slightly injuring the Viscount's factor, who was seated in a room near the vestibule. The shell must have been made some 30 years ago. It was dug up in Etchujima, at the time of building the Naval College, and its explosive elements having been entirely removed—so, at least, the Japanese newspapers say—it was presented as a curiosity to Viscount Yoshikawa, such shells having become obsolete.

All this is quite inexplicable, unless the shell was of some extraordinary kind. The old Armstrong shell was built up with cubical segments fitting together in accordance with the arch principle, so that, while opposing no strength against the action of an internally disruptive force, the shell could not be crushed by any external pressure. Such shells carried no bursting charge nor any fuze. Both charge and fuze were inserted at the moment of using the shell. It is to us quite inconceivable that the shell could have been loaded and fitted with a fuze during 9 years without any one's knowledge. And why should it have exploded? The fuzes used in these shells were either time fuzes or percussion fuzes. The former were ignited by the shock of discharge; the latter by the shock of impact. Neither kind of fuze could possibly have become active while reposing quietly in a shell. We recommend the matter to the attention of the police. There is, of course, just a possibility that some particles of powder adhering to the interior of the shell were ignited accidentally by a spark from tobacco ash. But that is extremely unlikely. Particles of powder exposed to the atmosphere for 9 years do not retain explosive force.

THE TOKYO WATER WORKS.

The *Jiji Shimpō* has caused a scientific examination to be made of the water supplied by the Tokyo Water Works. After the recent heavy rains had ended on the 9th instant, a space of four days was allowed to elapse and specimens of water were then taken from 10 places in Tokyo. It had been observed during the wet season that

the water showed marked traces of impurity and this fact, supplementing the previous discovery of leeches, led the *Jiji* to undertake an investigation. The result was that 260 bacilli were found in each cubic centimetre of the water. Previously to passing through the filter-beds the number of bacilli was 1,500, but 1,240 of them were removed by the filters. Still there remained 260, which is at least 100 more than the maximum that should be contained by drinking water. Happily these bacilli were all of an innocuous nature, but that must be counted an accidental blessing—poor consolation to the citizens of Tokyo who spent large sums and waited long years for a supply of pure water. The engineers of the city are understood to say that they want bigger filter-beds. That is a valid excuse truly! We venture to suggest that they want something else. Meanwhile the city's thanks are due to the *Jiji Shimpō*.

THE CORONATION POSTPONEMENT.

It is suggested in England that the sudden illness of King Edward, which caused the postponement of the Coronation, was a Judgment of Providence. The Rev. C. H. Wright, D. D., a Bampton lecturer and former professor of divinity at Oxford, is the author of the idea. He supports it by logic which seems rather perplexing. In olden times it mattered very little, we are told, whether a King's character was good or bad, for every one accepted the doctrine of divine right. But people are now beginning to learn that there is only one supreme King, Christ, and that "to him all other kings must bow." The English nation, however, does not adequately recognise the fact, and a divine judgment consequently overtook it in the form of a postponement of the Coronation. What are we to conclude from this? That in old times even immoral rulers were acceptable to Heaven because of the blind faith of the ruled in their divine right to govern; but, that, in modern times, since nations have lost that blind faith, they are to be recalled to it by miraculous obstacles to the crowning of their Sovereigns, even though the latter be good men? Without following the logic too closely, however, we find the salient conception to be that the British nation is degenerate, and that its pageants are consequently interrupted by Providence. "Since the English sovereign reigns under the supreme sway of divine Providence, his trial must have been decreed by that Higher Potentate. And it is not irrational to suppose that the calamity which stunned the nation's consciousness was ordained to remind all rulers, as well as all peoples, through the earth, of the allegiance due to the King who is so largely forgotten, ignored or dishonoured in this age of materialism."

THE WAKAMATSU FOUNDRY.

Some changes of officials at the Wakamatsu Foundry are announced. Dr. Yasui Yoshiaki and Mr. Kobana Fuyukichi are allowed to retire—they both sent in their resignations at the time of Mr. Wada's retirement—and Messrs. Hattori Zen and Hayakawa Ukichi are appointed in their place. There is also talk of Mr. Oshima, a well known expert, being appointed superintending engineer.

DR. HATOYAMA'S COMPARISON OF THE FRENCH AND JAPANESE CIVIL CODES.

When Dr. Hatoyama recently visited Yale to receive the degree of LL.D., the subject he chose for his address was "the Civil Code of Japan compared with the French Civil Code," and the printed address fills forty pages of an octavo volume. We need scarcely say that the work is well done. For that Dr. Hatoyama's reputation prepared us. But we venture to compliment him specially on the form he has chosen and on the remarkably lucid nature of his expositions. He sets out by explaining the causes that led to the compilation of the present Civil Code of Japan. Foremost among these was the necessity of replacing by one uniform system of law and procedure the various systems that had existed in feudal times when Japan was divided into some three hundred *imperia in imperio*, and when class distinctions possessed almost the rigidity of unalterable laws. Of course the compilation of a code could not but occupy several years, and in the meanwhile legislation necessarily fell behind the rapid changes of the era and its quickly growing needs. The difficulty of trying to adjust some kind of legal and judicial machinery to the wants of the epoch is illustrated by an edict—to which Dr. Hatoyama refers—issued in 1875, by which judges were instructed to render justice according to law where law was available; according to custom where law was not available; and according to just principles where law and custom were alike unavailable. Naturally the judges of Japan went in search of "just principles" to the jurisprudence of Europe and America, eliminating, as far as possible, any accidental or purely historical features of such foreign laws, and selecting only basic principles which might be regarded as common to all. It was a perplexing task for judges whose training did not exceed that of Japanese judges a quarter of a century ago, but they were much assisted, Dr. Hatoyama says, by the researches of barristers many of whom were already well versed in jurisprudence. Those of us who lived in Japan at that time remember very vividly how clearly the influence of European and American laws could be traced in the judgments of Japanese tribunals. Dr. Hatoyama notes a fact of much interest in this context, namely, that when the Prætorian Courts were established in Rome, they too had to adjudicate in accordance with what they believed to be the principles of justice, and thus, in the course of time, a system of jurisprudence was elaborated from their edicts and judgments. But Japan could not wait for the slow development of that process. All the many problems of a new and strenuous life were pressing upon her. Then there was her desire to recover judicial autonomy. Dr. Hatoyama does not think that extraterritoriality in Japan "worked any serious harm as the number of European and American residents was very small," but he alleges that, "as a matter of principle, it was strongly objectionable to the highly sensitive Japanese." To advocates of its abolition objection was always made that the laws were incomplete. "I do not myself think that this objection was tenable," writes Dr. Hatoyama, "since no one has a right to question the adequacy or the completeness of the laws of the country to which he resorts"—a proposition undeniable in theory but not likely to obtain practical recognition where the decision rests with the Occident as against the Orient. Codification of civil law

commenced in 1870 in Japan—that is to say, three years after the fall of the Shogunate, but still three years before the complete abolition of feudalism,—and in 8 years Japanese experts, working without foreign assistance, submitted a draft to the Government. It was rejected, and in 1880, Professor Boissonade, having completed the penal code, was invited to turn his attention to the civil. A year later his draft was submitted to a committee formed of members of the Senate and of the Bench, who, after 8 years, made their report, and, this having undergone some alterations, four books were published in 1890. These four books were based on M. Boissonade's project, but "the remaining portions of the Code were drafted exclusively by Japanese jurists." Another book soon followed, and the whole should have gone into operation from January, 1893, had not public criticism and parliamentary scruples interfered, the result being the appointment of a revisionary commission in 1892. These experts, instead of revising the Code, recast it, and in the end it did not go into operation until July 16th, 1898. Dr. Hatoyama takes the Code and analyses it carefully, not article by article but subject by subject. He shows in each case where the principle and procedure of the Japanese system differ from those of the French, and sometimes from those of the German, and he shows also where there is identity. It is a highly interesting study, but of course we can not attempt to follow the learned jurist into the details of his exposition. What we would say is that any one desiring to obtain a clear comprehension of the spirit of the Japanese Code—apart from the books on family relations and succession, which contain so many features peculiar to Japan that Dr. Hatoyama has wisely omitted them from his comparative study—must of necessity equip himself with a copy of the "Yale Law Journal" for the second quarter of 1902, unless he is fortunate enough to obtain the separate brochure containing Dr. Hatoyama's lecture, which is possible, perhaps, by application to Ryders' Printing House, New Haven.

KOREA.

It is now stated that although the prevalence of cholera in Sōul is assigned as the reason for postponing the projected celebration, the true cause is want of money. Impecuniosity has long been spoken of in connexion with this affair, and it is to-day alleged that the Korean Government applied to the Russo-Chinese Bank for a loan of 200,000 *yen*, but accommodation was refused. Another circumstance which threw a damper on the affair was that the Lady Won did not meet with much success in her endeavours to make her own public recognition a feature of the celebration; and yet another was the unwillingness of foreign Powers to send special envoys. Japanese journals are indulging in a good deal of merriment about the hair-cutting order. They say that it was not a genuine reform at all, but merely a concession to appearances for the special occasion of the coronation ceremony. The Emperor made much ado about this hair-cutting business. He deprived the War Minister of his portfolio, and threatened other officials with imprisonment. Moreover, His Majesty turned the phials of his sarcasm on some officers who wanted to keep their hair for just two days longer until they could conclude the

autumnal ceremony of ancestral worship. The Emperor asked what they intended to do next autumn, and scathingly told them to dock their top-knots at once. But now the whole business of hair-cutting has been postponed until next February, in consonance with the postponement of the coronation commemoration. The Japanese regard it all as a play, and call the new coiffure *go-keiji-atama*.

The *Asahi* has a telegram from Mokpho, under date of September 28th, that Ikuno Yasaburo, a native of Yamaguchi Prefecture, and a resident of Mokpho, has been arrested and charged with having imported a quantity of forged nickel coins by the steamer *Dailo Maru* the previous day.

The Soul correspondent of the *Jiji Shimpō* reports under date of September 29th that cholera is still raging in the Korean capital in a fearful manner, despite the chilly weather that has already set in there. Over 150 cases are daily reported. According to inquiries made by Dr. Kodake, Japanese instructor in a medical school in Soul, a few days ago over 700 patients were found in houses on both banks of the river traversing the centre of the capital. The Ministers of State and other high officials at present refrain from attending the Imperial Palace in view of the epidemic among their families and as a matter of course administrative business is in a state of abeyance.

Mr. Li, Minister of Justice, tendered his resignation on September 29th on the plea that his father is dangerously ill.

THE UNITED STATES & THE HOUSE TAX

In the spring of this year we stated that the Government of the United States of America was not a party to the land-tax arbitration and that it accepted Japan's view, reserving, however, for its nationals the right, under the most favoured nation clause, to benefit by any advantages resulting from a different interpretation should such be secured by other Powers. We were much denounced at the time by some of our local contemporaries, and freely charged with deliberately publishing false intelligence. Reference to a despatch—now public property—of Mr. D. I. Hill, Acting Secretary of State, dated February 7th, 1901, will show the grounds of our assertion. Mr. Hill says:—

In the United States the courts lean against that construction of a grant by a State which implies exemption from the ordinary powers and burdens of taxation as belong in the nature of a renunciation of sovereignty. Such exemption must be clearly and expressly given and is in general strictly construed.

This view is re-inforced by the consideration that, as is stated, no buildings were on the land at the time of the original grants, in consideration of which the ground rents were payable, and by the further consideration that improvements are ordinarily assessed for taxation in the United States on account of the increased value of the land.

It does not, therefore, seem clear that under the terms of the said lease and treaty, alien holders of the perpetual leases can object to a law merely requiring their assignees to register and have recorded separately lands and houses; nor to the 2½ per cent. tax on houses erected since the coming into operation of the treaties, nor even to such tax on houses before erected.

Art. II. of the Treaty puts them in respect of taxes on a footing of equality with the subjects of Japan or with the citizens or subjects of the most favoured nation; unless it can be successfully maintained that the treaty stipulation for the confirmation of the leases, without other conditions than those contained thereon, implies *ex vi termini* exoneration of land and buildings from all taxes and charges other than the annual payment of the ground rent.

The treaty provides for the confirmation of leases in perpetuity without conditions other than those contained in leases then existing.

The only condition of the kind named is the payment of the ground rent. It does not prohibit the segregation of the leasehold estates into lands

and houses for the mere purpose of registration, so long as the title and estate is not diminished or impaired; and unless the original lease stipulates expressly or by implication a perpetual exemption from registration or taxation other than ground rent, the treaty between the United States and Japan does not seem to forbid it. The Department, however, appreciating the force of the arguments adduced in support of such exemption in virtue of the treaty, reserves its decision for future consideration of this point.

It certainly was not too much to say that the Acting Secretary of State, representing the American Government, did not deny the justice of Japan's claim, so far, at any rate, as the treaty between the United States and Japan was concerned. His figures are incorrect: he imagines that 2½ per cent. is a tax on houses, not on land. But otherwise his language is as plain as could reasonably be expected under the circumstances. Obviously he did not see that, in view of the terms of her treaty with Japan, America could legitimately be a party to the arbitration. Elsewhere, in the same despatch, he is inclined to think that a better case for the leaseholders can be set up under the French treaty, and he, therefore, reserves the rights of his nationals under the most favoured nation clause. But he certainly indicates acquiescence in the justice of Japan's claim from the point of view of the United States Treaty.

ON SOME RECENT CORRESPONDENCE.

Some interesting revelations have recently been made by newspaper correspondents who discuss the house-tax question and the position of foreigners under the revised treaties. Occasionally people allow themselves to be carried away by their subject and are thus betrayed into exaggerations which do not accurately represent their views. Such an exaggeration, it seemed to us, was an assertion made by "Treaty Rights" that the position of holders of perpetual leases is infinitely worse than that of the Japanese. "Infinites" are beyond the range of ordinary comprehension and, for our own part, we thought it scarcely worth while to treat such a complaint seriously. But another correspondent, signing himself "Facts," has come forward to defend "Treaty Rights" position, and the defense has the merit of being unexpected. "Facts" has a friend who holds 900 *tsubo* of Bluff property under the usual perpetual lease. (How easily, we may observe in parenthesis, how easily it comes to any user of the English language to speak of leased land as "property held under lease.") This property is valued by a Japanese agent at from 20 to 30 *yen* a *tsubo*, yet the lessee "can not get any one among his Japanese friends to advance the amount of 5,000 *yen*, the reason given being that the property is held under a perpetual lease, whereas were it superficies or Japanese property, the amount required would be gladly advanced." We do not know exactly what "Facts" means by "Japanese property," and we therefore pass by that part of his complaint. But the rest is clear enough. If he were a superfiary instead of a perpetual lessee, "Facts," or his friend, could get an advance at once. We offer our condolences to "Treaty Rights." He has found a strange ally. "Treaty Rights" charges the Japanese Government with trying, for the space of two years, to convert the perpetual leases into superficieses, and devoutly thanks Providence that they did not succeed. But now comes "Facts" to demonstrate the correctness of "Treaty Rights" position, and his demonstration is

that if the holder of this Bluff lot had a superficies instead of a perpetual lease, all his troubles would be at an end, and that since he has a perpetual lease and not a superficies, he is "infinitely worse off" than the Japanese.

As for the difficulty of finding a Japanese to lend money on the Bluff lot, we are disposed to think that the nature of the title is not the trouble. Loans on the security of land are not made by Japanese banks, and there is little money to be found for such a purpose anywhere in Japan at present.

Another remarkable statement comes from "Centaur." He attaches much importance to the word "now" in the celebrated eighteenth article. Of course "the little word" has already been impressed for large duty by the opponents of the house tax, and its meaning and force were fully discussed long ago. But "Centaur" put the case in a new manner. "The existing conditions under which property is now held," he says—"now" meaning the time when the treaty was concluded—"were that the so-called Ground Rents covered all taxes to which the property (land, buildings &c.) had ever been liable." It is possible that in thus writing "Centaur" is not conscious of begging the whole question? Were it true, or could it be proved, that in anti-Revision days the "so-called Ground Rent covered all taxes to which the land and buildings were liable," there would be an end of the discussion. For if the houses had a right to exemption under the old system, they certainly were not deprived of that right by revision. What can be the end of a discussion in which one party complacently bases his demonstration on an assumption of the proposition he undertakes to prove?

Then we have another correspondent signing himself "Experience." Some time ago the *Japan Gazette* advanced the singular statement that "every perpetual leaseholder is concerned in seeing the conditions of his lease upheld," for "no one wishes to see himself surrounded by Japanese tenants." That remarkable confession was made in support of "Treaty Rights," who, with some show of excitement, had accused the Japanese Government of deliberately violating the conventions because it enacted a law for giving effect to a specific provision of the German and the Austro-Hungarian treaties. Of course it must be assumed that neither the *Japan Gazette* nor "Treaty Rights" had observed the existence of any such provision in those two treaties, and since no one is always fully posted in his subject, an oversight of that nature did not call for much remark. But the *Japan Gazette's* reasoning could scarcely be excused on the plea of oversight. "No one wishes to see himself surrounded by Japanese tenants." What a pretty speech to come from an English journalist in Japan! We do not want to accentuate its mischievously offensive character by commenting on it. It is to "Experience" that we address ourselves. "Experience" says:—"It is well recognised in Yokohama that the proximity of Japanese tenants to foreign holders invariably depreciates the commercial value of the foreign holdings." There is no weak display of doubt on the part of "Experience." "It is well recognised that the proximity of Japanese tenants invariably depreciates, &c." One would suppose that the proximity of Japanese tenants to foreign holdings was an incident so common as to furnish ground for an established rule. Yet, when we come to

examine the proofs advanced by "Experience," they dwindle to one solitary case of land purchased by Japanese, who converted their acquisition into a general play ground for the town, and thus created a species of pandemonium very irksome to their neighbours. Is it then a frequent habit with the Japanese to buy lands and convert them into public play grounds? Are there many examples of that kind of thing on the Bluff? Are there so many as to constitute the bases of an invariable rule? Does "Experience" intend to be taken seriously? "The only way for foreigners to do is to buy or lease the adjoining Japanese property or sell their own at a forced sale and get out of Japan." That is the moral of his story about the public play ground. Really of the two we think that the wholesale prejudice of the *Japan Gazette's* declaration is preferable to the retail silliness of "Experience's" reasoning."

JOURNAL OF THE COLLEGE OF SCIENCE OF THE IMPERIAL UNIVERSITY OF JAPAN.

The College of Science of the Imperial Japanese University, which now issues parts of its sixteenth and seventeenth volumes, has changed its methods of compilation, and will henceforth page each article independently, the object of the change being to secure greater rapidity of publication, since, instead of waiting until all the component parts of a volume are complete, essays can now be printed independently as soon as they are ready. This is essentially a case of the old proverb *ittoku areba ichigai aru*; for the result is that in one and the same volume we have two, three, or even more different pagings. However, the advantage probably outweighs the inconvenience. As usual the contents of the two new volumes indicate that paleontology, botany, chemistry and so forth have greater attractions than the exact sciences for the savants of the College. The contents of the new publications are:—

- Corollina veræ Japonica, by K. Yendo.
- Revisio Umbelliferarum Japonicarum, by Y. Yabe.
- Revisio Alni Specierum Japonicarum, by I. Matsu-mura.
- Contributions to the Embriology of Amphibia, by S. Ikeda.
- On the Development of Lingula anatina, by N. Yatsu.
- Notes on Histology of Lingula anatina, by N. Yatsu.
- Studies on the Hexactinellida, by I. Ijima.
- Preparation of Sulphanide from Ammonium Amidodulphite, by Ed. Divers and M. Ogawa.
- Some New Scyphomedusæ of Japan, by K. Kishinouye.
- Some Fossils from the Islands of Formosa and Riukiu, by R. B. Newton and R. Holland.
- Notes on a New Fossil Mammal, by S. Yoshiwara and T. Iwasaki.

This last is, perhaps, the only one among the learned essays that has general interest, though all bear witness to the activity and industry of the college experts. The fossil in question was found at Togari in the province of Mino, in tufaceous sandstone belonging to the Neogene Tertiary, and at a distance of about half a mile from the site of discovery the lower jaw and other bones of a rhinoceros were found, this being the first time that the rhinoceros had made its appearance among Japanese fauna. Japanese paleontologists recognised that the fossil mammal had something in common with the Mastodon, but, on the other hand, it showed features that seemed to differentiate it from that genus. The literature available in this country not being sufficient for purposes of exhaustive comparison, they sent the

fossil to Professor Osborn, who declared it to be an early type of Mastodon, primitive in some respects and highly specialized in others. Messrs. Yoshiwara and Iwasaki add a valuable note about the phylogenetic aspect of the specimen found in Mino, but their statements are too technical to be reproduced here.

AMERICA'S NAVY.

America has been having naval manœuvres on an unprecedented scale, and she contemplates continuing them. This fact has led some thoughtful Americans to infer that their country is getting ready for war with some one, though the modern theory is that military and naval preparations are designed to prevent war. The matter has inspired various journalistic utterances, two of which, as quoted by the *Literary Digest*, are worth studying:—

"Since the war with Spain there has been no concealment by officials and officers of the navy of their belief that the next war of the United States is likely to be with Germany, and there are few in Washington who have forgotten Admiral Dewey's prediction, while returning to this country from Manila, to the same effect. Nor have the authorities overlooked the fact that Emperor William forced his parliament to vote a naval programme which by 1916 would add thirty-eight battle-ships, twenty large cruisers, forty-five small cruisers, and sixteen divisions of torpedo-boats to the navy then under the German flag, and that he subsequently obtained authority to complete this programme by 1908. As the keynote of this argument for a larger fleet Emperor William declared that 'Germany requires peace on the sea,' and to attain this condition he insisted that the empire ought to have a navy so powerful that none would dispute with it.

"Since the assumption by Mr. Roosevelt of the presidential chair there has been a decided change in the attitude of Germany toward the United States. While welcoming the friendly overtures of Emperor William, the President has adopted, with a single important change, the declaration of his majesty as the maxim this country should observe: 'The United States requires peace on the sea.' President Roosevelt proposes, therefore, that during his administration there shall be developed a highly efficient navy of sufficient strength to fully protect the United States and its possessions and the isthmian canal when that waterway is constructed."—*Transcript*.

"The naval manœuvres now taking place on the northeast coast ought to remind us that we are very fortunate in being so far away from the Powers of the Old World that we are not likely ever to have an encounter with them. England, by her North American colonies, is so situated that she could do us harm, but nobody believes that she will ever take an aggressive attitude toward us. The only Power that could give us any anxiety in this respect is bound to us by ties that forbid the thought of any wanton attack upon us. In the Venezuela affair England displayed much more moderation than we should have shown toward any Power that had addressed threatening words to us, whether the words were justifiable or not. She could have annihilated the small navy we then had, and blockaded all of our Atlantic and Pacific ports. She refrained from doing so because of the pregnant future, which her statesmen of 1812 misconceived or disdained. The chances of a war with Great Britain, not of our seeking, are unimaginable, and may be dismissed wholly from the world's reckoning. As to other Powers, none of them could attack us, even if they were so inclined. Their distance from us is too great. Their supplies of coal would soon be exhausted, and could not be replenished. For similar reasons we could not attack them. The three thousand miles of water that roll between us and our possible naval foes are a blessing to both them and us—a priceless blessing to all except those who are seeking to build up a great navy, which will be useless when obtained except to make people along the seacoast stare when the commodores are manœuvring to get into harbour by stealth or to keep each other out by vigilance and swiftness. Uncle Sam has a great deal of money—more than is good for him—and the worst use he can make of it is to spend it for more of the implements of death than he really needs. The passion for such tools grows by what it feeds on."—*Evening Post*.

THE LEGISLATIVE BUREAU.

The public will learn with regret that Mr. Okuda, Chief of the Legislative Bureau, is obliged to resign his post owing to illness. He has suffered for some time from catarrh of the stomach, and complete rest is now imperatively prescribed.

Several Tokyo journals insist that the retirement of Mr. Okuda, Chief of the Legislative Bureau, is not owing to ill-health, but because of the Cabinet's manner of dealing with his programme of administrative reform. His scheme, they say, would have effected a saving of 10 million *yen*, whereas the Ministry have cut it down to 3 millions, and under the circumstances, he feels himself discredited. These papers—the wish, no doubt, being father to the thought—add that Mr. Okuda's resignation is not unlikely to be followed by that of the Cabinet, as was the case with the Matsukata-Okuma Ministry, when Mr. Komuchi went out of the office which Mr. Okuda has just vacated. Probably these rumours are little deserving of credence.

Mr. Okuda is succeeded by Professor Ichiki Kitokuro, of the Imperial University, who now, in addition to his duties as professor, discharges those of Councillor to the Department of Agriculture and Commerce.

"THE TIMES" AND THE HOUSE TAX.

The following excellent letter appears in *The Times* of August 21st:—

SIR,—The question of the house tax, which has created so much friction amongst the foreign communities in Japan, is now, it may be hoped, on the eve of final settlement, as an agreement has been arrived at between the representatives of the Powers chiefly interested and the Japanese Government with regard to the terms of arbitration. But you may nevertheless be willing to place on record the views of a prominent British resident, who sends me a detailed commentary on the letter from your Tokio Correspondent which appeared in *The Times* of May 21. Your Correspondent has put before you, with his usual ability, the case for the Japanese, but he would himself, no doubt, be ready to admit that that is not the whole case, and that there is, perhaps, a stronger case for the foreign resident than would be gathered from his letter.

The following is the substance of the British resident's commentary.

The point is not that the foreign resident merely thinks he is exempted conventionally from any obligation to pay house tax, but that the British and other Governments, after due consideration, have informed both the Japanese Government and their own nationals that, in accordance with existing treaties, he actually is exempt from such taxation. There is therefore a fundamental difference of opinion between the Governments as to the interpretation of an important treaty clause. That clause, as far as British nationals are concerned, is Article XVIII. of the Treaty of Commerce and Navigation between Great Britain and Japan, signed in London, July, 1894. The construction placed upon that article by the British Government, presumably under advice from the law officers of the Crown, was formally brought to the knowledge of the Japanese Government at least two years ago, and it was only after it had been repeatedly urged upon the latter that they were not entitled to assume the right of acting upon their own interpretation of an article in a bi-lateral treaty, the authoritative text of which is, moreover, the English text, that they consented to refer the point to arbitration. Such consent cannot properly be described as a concession, for persistence on the part of Japan to levy a tax in contravention, as the British Government maintained, of an existing treaty would have been, to say the least, contrary to international comity. Although the new treaties came into force in July, 1899, it was not until November last that the Japanese Government notified the Powers of the interpretation they placed upon the article at issue—namely, that the word "property" meant the land only, and not the houses built upon the land, and that, therefore, such property could only be exempted from the land tax, but not from the house tax. The foreign residents, in refusing payment of the house tax, except under protest, cannot be charged with placing themselves in opposition to the law, since their refusal was the result of an intimation officially made to them that the British

Government regarded the tax as contrary to treaty stipulations, and therefore illegal. It was not till the Japanese Government refused to accept payment under protest that British subjects were advised officially to pay only when distraint was employed against them, and it is certainly to be regretted that the Japanese authorities were not empowered to accept payment everywhere under protest, as they were apparently empowered to do in Formosa, where that procedure was cheerfully accepted on both sides. That there was not more friction over the levying of the tax, between the Japanese and the British residents, at any rate, was due not merely to the courtesy with which the Japan officials individually performed their unpleasant task, but to the advice given to British nationals by their Legation to place the money in an easily accessible place, and the fact nevertheless remains that the Japanese Government forcibly seized the property of the subjects of a friendly Power in payment of a tax which that Power asserted to be illegal and contrary to treaty. With regard to the action of other Powers, France, Germany, and also Holland protested from the first against the house tax on the same grounds as Great Britain, and as for those Powers that stood aloof, for the simple reason that none of their nationals owned property under "perpetual lease," and therefore remained unaffected by the controversy, Russia has since joined on principle. The American Government has also joined.

So far my correspondent, who, I am sure, would join with me in hoping that the whole controversy will very soon possess a purely retrospective interest, now that arbitration has been accepted. No case could indeed be more suitable for arbitration, since it is one in which both parties are equally convinced of the justice of their own contention, and their contention is based solely upon the interpretation of a treaty stipulation of which the text is as much beyond dispute as is the loyal determination of both parties to abide by the obligations it may be adjudged to have imposed upon them.

Yours truly,

X.

NOTES ON CURRENT EVENTS.

The competition between the Government railway and the private railway between Nagoya and Kyoto has ended in an agreement that both sides shall charge the same rates.

The action at law instituted by the Atsumi section of the Higashi Hongwan-ji against Mr. Ishikawa has been withdrawn.

The *Nichi-Ro* (Russo-Japanese) Society held its inaugural meeting at the rooms of the *Doki Club* in Tsukiji on the 27th instant. About fifty persons were present, the most distinguished being Count Inouye, Viscount Enomoto, Dr. Hatoyama, Mr. Nakada, Mr. Komuchi and Mr. Uchida. Viscount Enomoto acted as chairman. His opening speech was of a general character. In spite of the propinquity of Japan and Russia, he said, the peoples of the two empires do not hold close intercourse with each other and have no intimate mutual knowledge. The *Nichi-Ro Kyokai* is formed to remedy that defect. Subsequently various rules were read and passed. On the motion of Mr. Nakada, Viscount Enomoto was appointed President of the Club, and Count Inouye consented to serve on the organizing committee. His Excellency M. Iswolsky, Russian Representative in Tokyo, was declared an honorary member of the Society.

The religious services for the repose of the soul of the late Queen of the Belgians took place in the Catholic Church, Tsukiji, Tokyo, on the morning of October 1st. The ceremony was conducted in a most impressive manner and was attended by the *Chargé d'Affaires* for Belgium, by Prince and Princess Komatsu, who represented the Emperor and the Empress on the occasion, as well as by the Premier, Count Matsukata, Ministers of State, members of the Diplomatic Corps and many others.

THE BOOKSHELF.

The Territory of Wei-hai-wei, by C. E. BRUCE-MITFORD; Shanghai and Yokohama, Messrs. Kelly and Walsh.

AFTER being capitally fortified by Major von Hanneken, sustained a siege, assault and capture; seen the suicide of one of the bravest Chinese Admirals of these latter days; been occupied by a Japanese garrison; then turned over to Great Britain on a lease which has to run so long as Russia occupies Port Arthur, it has become the fate of Wei-hai-wei to sink into an unfortified naval base and exercise ground for the British squadrons in these waters, with the possibility of becoming the sanatorium *par excellence* of the Far East. It is only right, then, that a guide-book should be published about the place, for the use of intending visitors as well as of the public generally. Such a book has appeared. The author is the head of the English school at Wei-hai-wei, and has qualified himself for his task by observation and residence at the port. On the whole he has done his work well and in the short compass of his 50 odd pages we can learn all that there is to tell of Great Britain's latest acquisition in Chinese waters. Whether a great future lies before Wei-hai-wei or not time alone can tell, but our author, while not unduly optimistic, points to the fact that Hongkong, now the third shipping port in the world, was long held by the authorities as a useless burden on the Imperial exchequer. But then has Wei-hai-wei such a *hinterland* to draw upon as that which lies between Hongkong and Canton, with huge waterways teeming with human life and rich plains and valleys swarming with the most industrious and business-like race in the whole of China? All who have visited Wei-hai-wei speak well of its climate. This is the territory's great asset, and Mr. Bruce-Mitford lays much emphasis upon it. We have little doubt that the booklet he has compiled will serve a most useful purpose in bringing before the eyes of dwellers in Treaty Ports in China and Japan the diversified beauties of scenery and the many other attractions which Wei-hai-wei has to offer those seeking health and recreation and having not the time or money for a trip to the home lands.

Dorothy Vernon of Haddon Hall, by CHARLES MAJOR; London, Messrs. Macmillan & Co.; Yokohama, Messrs. Kelly & Walsh, Ltd.

THIS is a book which caught the favour of the vast book-buying public in America and was soon carried to the gusty heights where publishers reckon sales by the hundreds of thousands. On the whole it is a well-told story though it has faults of style and temperament galore, while its historical errors are appalling, despite the license usually allowed a novelist. The love-story of wilful Dorothy Vernon of Haddon Hall, and brave John Manners of Belvoir is ostensibly related by one of the characters in the book, but, alas! the author has not managed to divest himself of his nineteenth century trains of thought and habits of mind, and so we find Mistress Dorothy and her lover, her cousin, and her friends using words and phrases, similes and expressions such as could never have passed their lips. We need not quote examples; suffice it to say that the atmosphere of the spacious days of good Queen Bess does not pervade the book, strive the author never so wisely in his attempt to create it. His

illustrator, too, makes a similar failure at reproducing the past. The faces and poses which he gives to Dorothy, John Manners and Malcolm Vernon are those which we see in American magazines of the present year of grace as types of the representative well-bred American men and women of today, *a la* Gibson and Christy. From historical, archæological and temperamental points of view the book is a splendid failure: as a good healthy love-story told in vigorous prose it is a triumph.

The Conqueror, by GERTRUDE ATHERTON; London, Messrs. Macmillan & Co.; Yokohama, Messrs. Kelly and Walsh.

MANY discerning folks are assured that in this book Mrs. Atherton has put forth her best work. Certainly her style is more matured, her character sketching more assured, and the story she has to tell quite as absorbing as any of her previous tales. One can easily believe the statement of the authoress that when she first sat down to write the book she intended producing a biographical study pure and simple, but got carried away by her enthusiasm and so ended by making it into a novel instead. Its circle of readers should widen with the daily orbit of the sun.

East of Asia, Vol. 1, No. 2; *North China Herald* office, Shanghai.

THE second number of this publication has just appeared. It contains a number of interesting essays, clearly printed on fine paper and handsomely illustrated. The frontispiece is a coloured picture of a Japanese girl writing a letter. The technique is good but the individual is an essentially vulgar type, and underneath is a strange legend, "Hand-painted by Kuhn and Komor, Yokohama." We did not know that Messrs. Kuhn and Komor were painters, though we do know that many very beautiful objects of art pass through their hands.

The number commences with a long and very detailed account of the Lama temples in Peking. It contains much information, historical, descriptive and religious, and the illustrations are particularly interesting as affording materials for a comparative study of Chinese, Thibetan and Japanese architecture. The author, Mr. Ernst Ludwig, tells us that hand-clapping, as practised in a Lama temple, has different symbolical meanings. In the prayer hall hands are clapped to frighten and drive off evil spirits. During instruction and examinations the clapping is to quicken a student's faculties. But he does not suggest that hands are ever clapped to call down the deity who is about to receive a suppliant's prayers, as is the case in Japan.

The second contribution—if we pass over a page of "Pearls from Chinese Literature"—is a story entitled "The Heartless Husband," translated from the Chinese by Father Henninghaus. This is another—we presume the true—version of "A Twice-Married Couple," which Mr. R. K. Douglas has already made familiar to the Anglo-Saxon public by his book published nine years ago. Father Henninghaus translates; Mr. Douglas merely paraphrased, with additions, and we accordingly find that the latter's tale includes a villain and a love-lorn maiden who do not figure in the Rev. Father's version. The latter derives additional interest from its fidelity to the original.

A short essay on Siam by Dr. Frankfurter seems rather slight and disappointing, but it is followed by three papers of value, "Selections from 'The Three Kingdoms,'"

by Dr. F. L. Hawks Pott, character sketches from Chinese History," by Mr. Metzelthin, and "Chinese Coins" by the Rev. H. Hackmann. "The Three Kingdoms" is the most popular and widely read novel in China, according to Dr. Pott, though, if we remember aright, Mr. Herbert A. Giles claims that distinction for the *Hung-lou-mung*, and also alleges that the *Liao-chai-chih-l* of Pu Sung-ling has been for two centuries as familiar throughout the length and breadth of China as the "Arabian Nights" is in Anglo-Saxondom. China having some 18,000 classical novels and a population of 400 millions, the assertions of both these learned sinologues require a great deal of confirmation. Dr. Pott is not sympathetic. He calls the well-known story of Chou Yü and Chu-ko Liang "a fair sample of the trickery lauded by the Chinese in war or diplomacy," but truly we think that Chu-ko Liang's device well deserves to be lauded in whatever country and under whatever circumstances it occurred. Mr. Metzelthin's historical studies are to be continued, we presume. The one now published introduces us to Tsin-shih, the builder of the Wall and burner of the books. We have always supposed that the literary iconoclasm which has made Tsin-shih infamous for all time was mainly due to the opposition he encountered from the literati, not merely political opposition but also ethical, Tsin-shih's leanings being towards Taoism rather than Confucianism, and towards changes which the conservative literati condemned. Mr. Metzelthin bears out that conception and shows constructively how mistaken is the popularly entertained notion that Tsin-shih ordered the destruction of the books out of pure vanity, his project being to have all literature date from his own time. One passage from the memorial of the prime minister Lisze, who advised the work of destruction, is worth quoting, such an exact prototype is it of the view expressed again and again by nineteenth-century European critics:—

The Literati form a special class by themselves in the Kingdom. Having an accepted position among the people, and conceited with their pretended merits, it appears to them that their minds alone radiate light. They see things worthy to be striven after only in ancient customs, in the old ceremonies which have no more use for our time. Truly the only useful thing is this empty knowledge which they exalt so much in their own eyes and which they render inapplicable to the needs of the rest of mankind!

Fancy such a commentary penned by a Chinese Minister of State two thousand years ago!

We have not space to refer at length to Mr. Hackmann's essay on Chinese coins, though many people will find it the most interesting contribution to this number of the Magazine. He reminds us at the outset that what happens in China at present would be paralleled in Europe if people were buying and selling with coins of the time of Charlemagne, for the everlasting *cash* is as old as that. Further back, copper tokens are found which were simply facsimiles of domestic and agricultural implements, as spade-coins, yoke-coins, comb-coins and knife-coins; but it seems impossible to determine the exact era when these clumsy media were exchanged for round coins. At all events, that marked step of progress is not more modern than the fourth century before the Christian era.

The Rev. K. Wilhelm contributes a learned essay on what he calls the "Three Character Classic," generally known as the "Trimetrical Classic," and the last paper in the volume is called "Seoul," and is from

the delightful pen of "Esson Third," familiar to readers of the *North-China Daily News*. If any of our readers desire to see an exact prototype of Japanese temple architecture, we refer them to "The Great Audience Hall," photographed in this essay.

CREATING A NAVY.

Those of our readers who are aware of the valuable services rendered to Japan by M. Bertin, who was for some years naval adviser to the Government of this country, will read with regret but also with amusement the following absurd story that appeared in a London morning paper the other day:

Devouring activity in a statesman may be a disadvantage to the State. Thus, M. Jules Ferry, whose energy unloosed some dangerous forces, hurried Japan into great naval and military preparations. He hoped, in pushing on the island empire of the Farthest East, to create a well-armed enemy against China, with which he had gone to war. We now often read in the papers of the astonishing progress of the Japanese navy within the last twenty years. Few know that this acquisition of naval strength is due to M. Jules Ferry having lent the Japanese Government an eminent naval engineer connected with the Marine Ministry—namely, M. Bertin. He so well discharged his mission that on his return, after many years spent in Japan, his own Government rewarded him by placing him at the head of the technical section at the Ministry of Marine. M. Bertin is there director of Naval Constructions. He created most of the existing Japanese dockyards, ports, and arsenals, and obtained for French ship-builders orders from the Mikado's Government to build the fast cruisers and other vessels that enabled the Japanese to crush the Chinese fleet in the last war. If Japan is now the worst thorn in the side of the Russo-French alliance in the East, it is due to M. Bertin. This, surely, is a result on which M. Jules Ferry never reckoned.

CHRISTIAN MISSIONS IN JAPAN.

The Bishop of South Tokyo (Dr. Wm. Awdry), who is on a visit to England, has given a *Church, Family Newspaper* interviewer some information regarding the progress of Christian Missions in Japan. "There is," he says, "A Church of Japan, and we are members of it. It was agreed 15 years ago that the Japanese Church should be organised independently; that it should be a National Episcopal Church." For the present the bishops are sent four from England and two from America, but this is a transitional state of things, and in time we hope the Japanese will have their own bishops as they have their own clergy and lay workers. I am going to meet the Archbishop of Canterbury and some other of the bishops to see under what conditions the bishops in Japan might consecrate Japanese bishops. We do not expect to do so for some years, but we hope to find some men suitable for the office in time. In fact, I might say I know one at least who is suitable now. At the last Synod of the Church of Japan the matter was earnestly discussed, and it is certain that the Japanese churchmen are setting their minds to it. They are considering how to bring together the means for the support of a Bishop, and under what conditions they might reasonably choose a Japanese and ask for his consecration."

"How many Japanese Christians are there now altogether, and what proportion does the membership of the Church of Japan bear to that of other Christian bodies?"—"Altogether there are about 130,000 Japanese Christians. Our mission is, compared with some of the others, small, but we are increasing at a greater rate than most of the others. The Roman Catholics are very strong. They are tremendously earnest and vigorous in their mission work, and they have made great progress. They number about 50,000. The Eastern Church also is very strong. That is almost entirely due to the work of one man, Bishop Nicolai. He is a splendid man, with whom we work in closest friendship. What would happen if he went I cannot think. The Eastern Church is not much given to missions, and I see no one who could take his place.

The Presbyterians are also strong, and are well organised. Our members are from 10,000 to 11,000."

"Why are the Roman Catholics so strong,"—"It is not generally known, but it is a fact that they are reaping the fruits of seed sown two or three hundred years ago. Everybody knows that in the sixteenth century the Roman Catholic missionaries in Japan met with great success. They made an immense number of converts; in fact, there were then many more Christians in Japan than there are now. But the missionaries, Spanish and Portuguese, mixed in politics. They made themselves political agents of the two Powers named, which then threatened to absorb the world, and the result was that the Japanese Government suppressed them. The converts, where they could be discovered, were slaughtered out, and Christianity was denounced as the 'pernicious sect.'

"Until quite recent years there were notice boards in the country districts warning the people against murder, theft, and other vices—treason, sedition, and adherence to the 'pernicious sect.' I have in my possession one of these boards once exhibited in a country village. When the Christian missionaries were allowed to re-enter, the Roman Catholic agents were sought out by a large number of persons, who declared that their families had, under stress of the direst persecution, kept the faith secretly for 250 years. These secret Christians had managed for nine generations not only to remain Christian in heart, but they had also managed to train their ablest young men to remember the words of the baptismal rite and to perform the ceremony. The ground was, therefore, ready for the new Roman missionaries. It is a wonderful story, one of the most remarkable testimonies to the power of the Gospel I have ever heard of. It is from the ranks of these old Christians that the Roman Catholics pick their celibate Japanese priests. But while the Roman Catholics have so much in their favour, they have one great disadvantage. They are essentially a foreign sect, and they must ever remain foreign. They take their orders and are governed from Rome, and the Japanese are very resentful of foreign interference. They regard Roman Catholics with the same aversion that the Roman Catholics regard secret societies, such as Freemasons. The Japanese, although very anxious to learn from the West and to assimilate Western ideas, are a proud Imperial race. I sometimes find it difficult to make our people, who are accustomed to regard Asiatics as inferior and subject, understand that the Japanese require to be treated on terms of absolute equality. It is an Imperial, independent country, and we must treat it just as we should treat France or Italy."

FIRE AT NEGISHI.

Mr. V. Blad had the misfortune to have his villa at Negishi, together with its contents, completely destroyed by fire on Monday morning. The house, a one-storied building, is near Mr. C. V. Sale's villa and close to the estate generally known as "Bavierville," which is not far from the race-course. Mr. Blad, we gather, was aroused from sleep about a quarter past three in the morning, and, feeling uneasy, tried to turn on the electric light. In this he was unsuccessful and just then he smelt the acrid fumes of smoke. Springing from his bed at once he only just managed to save his children by the skin of the teeth, as it were, for not a single article of clothing beyond their sleeping suits could be picked up, ere the whole building was ablaze. The little ones spent the rest of the time before the dawn in the stables near-by, wrapped up in horse-blankets. With daylight came friends, and Mr. Blad managed to borrow clothes wherewith to proceed to town. He thinks that the fire originated in the kitchen, and of course once under way in such a gale as was then raging there was no possibility of saving anything. Mr. Blad was insured. The Bluff and Police Fire Brigades were quickly on the spot and prevented the fire from reaching adjacent houses.

THE "FOREIGN ADVISER."

ONE of our local contemporaries reproduces the following from a Kobe journal:—

Of late years the field of the foreign adviser has become somewhat circumscribed. Japanese statesmen have taken the larger questions into their own hands, to the very great advantage of Japan, whose diplomacy in important matters of policy has obtained a well-deserved reputation for avoidance of all unnecessary self-assertion. The foreign adviser has been reduced to such questions as that of the House-tax, which at first was apparently regarded by the Ministers as a very small affair upon which the opinion of a foreign adviser might very well be taken. Events, however, have shown that what appeared a trifling matter has steadily grown into a question of first-rate importance, until Japan is now about to submit to The Hague Arbitration Court a question which, if it is won on technical points, will be won at the expense of antagonising a large body of foreign residents, and if it is lost will involve a loss of "face" that will certainly not be to the credit of Japan. Had the matter been kept in the hands of Japanese statesmen from the first, we believe the whole question would have been amicably settled. Instead, the "foreign adviser" element got its work in, and the result in promoting foreign distrust and setting up irritation is not one upon which Japanese statesmen can look with much feeling of satisfaction. It seems to us that the Japanese Government might well consider whether the time has not come to abolish an office that has for thirty years been a constant source of irritation and estrangement between resident foreigners and the Japanese Government.

This paragraph is a very good illustration of the reckless assumption of knowledge that characterises some journalists; a simulation which is not morally distinguishable from deliberate falsehood. It is absolutely impossible that the Kobe newspaper can possess any information qualifying it to distinguish between questions with which the Japanese Government deals independently and questions which it submits for the opinion of its foreign advisers. No one outside of the Foreign Office—evidently the Foreign Office is chiefly alluded to since "diplomacy" is in question—can possess any such knowledge. Therefore the whole of the opening portion of the paragraph quoted above is a falsehood. We can not use any gentler expression, for when a man undertakes to make positive statements about matters which lie entirely beyond the range of his knowledge, he betrays palpable indifference to truth.

Concerning the generally mischievous character of such writing as that quoted, it is scarcely necessary to say much. No conception immediately presents itself to us of anything meaner or more contemptible than the Kobe journal's deliberate attempt to poison the mind of the Japanese Government against its foreign employees by an appeal to its vanity. "Get rid of your foreign advisers. The clumsy and narrow-minded counsels they give you have merely the effect of beclouding the fine judgment you always display when you rely solely on your own intelligence and magnanimity." That, in effect, is what the Kobe journal says, and nothing, so far as we can see, could be more despicable. A foreign newspaper endeavouring to persuade Japan that her foreign employees are a mischievous element, and that her reputation would gain greatly by throwing them overboard! At one time a Yokohama newspaper, notorious for its violent prejudices, used to

throw mud occasionally at Japan's foreign assistants, and to suggest that no self-respecting Occidental would consent to serve her. What view Europe and America take of such matters is pretty clearly shown by the honours and distinctions they have bestowed on the returned employees of this country. But wrongheaded as the Yokohama journal was, the plea of good solid racial prejudice could at least be entered in extenuation of its intemperance. Not so with the Kobe newspaper. The Kobe newspaper's aim is to prove that the foreign employee is not worthy of the service he has adopted and that Japan would be much better without him. What are the limits of that doctrine? Does Japan's superiority cease when the employee is the standard of comparison, or does it extend to the foreigner in general? Resentment so blind that for the sake of casting some dirt at those from whose opinions it happens to dissent, does not hesitate to bespatter its own countrymen in general as well as all nationals engaged in Japan's service, is a kind of moral condition which we rejoice to think is altogether exceptional. And it is altogether of a piece with the contemptible effort which the same journal makes to convert the house-tax question into an unhealable sore. "Japan," we are told, "is now about to submit to the Hague Arbitration Court a question which, if it is won on technical points, will be won at the expense of antagonizing a large body of foreign residents." What does that mean? It is a studied attempt to contrive that the ill-feeling caused by the house-tax question shall survive the result of the arbitration. If Japan wins, her victory will be on technical points, and on the other side of the account will stand the antagonism of a large body of foreign residents. Is that the spirit with which Englishmen approach the arbitral tribunal? Do they intend, if the issue be against them, to condemn it as a mere concession to technicalities, and to maintain their conviction that they have been harshly and unjustly treated? We have never observed anything warranting such an insult to Englishmen's sense of fairness. They will approach the arbitral tribunal with a very different mood, unless their habits of thought should greatly change within the next twelve-month. They will approach it with the frank intention of accepting its judgment, just as they have accepted its intervention, loyally and unreservedly, and the last prompting of their disposition will be to descend to the littleness of discounting the other side's victory by attributing it to technical pleas, or citing their own success as a reproach to Japan. If that be the Kobe journal's estimate of its countrymen's character, we must agree with it that the services of Englishmen, at all events, could not be advantageous to Japan.

THE PROTOCOL AND COGNATE SUBJECTS.

IN our last issue we published the text of the house-tax arbitration protocol, together with that of a despatch addressed by the Minister of State for Foreign Affairs to the Representatives of the Treaty Powers, on the subject of further collections of the tax pending the decision of the arbitral tribunal. The despatch is understood to represent a step voluntarily taken by the Japanese Government. We have already explained that, so far as our information goes, an agreement to arbitrate the case would have probably averted any forced levy, provided that the persons liable stood on an uniform footing. But they did not stand on such a footing. Twenty-five per cent. of the foreign residents had paid of their own accord, and it would have been manifestly unjust to hold the money of these householders while allowing the rest to enjoy the benefit of default. Besides, arbitration had not yet become an accomplished fact, and subsequent events showed that to have postponed the collection of the tax pending agreement as to a basis of arbitration might have placed Japan in an embarrassing position. On the whole it is difficult to see what course offered except collection.

The despatch of the Foreign Office shows, further, that householders who have voluntarily paid stand on exactly the same footing for purposes of arbitration as persons who have paid under compulsion: they will not be in any respect prejudiced. That brings us once more to the old questions, was distraint necessary and how might it have been avoided? That it was not necessary is now clearly shown by the guarantee given to those who paid without suffering distraint or making any protest. Some claim, however,—as was recently affirmed by "X" in *The Times*—that the Japanese Authorities refused to accept protests and that to suffer distraint thus became inevitable. We have never been able to verify that assertion. Our information is that there was no such refusal, but that the uselessness of protests under the circumstances was pointed out. For a protest can have but one purpose, namely, to preserve a legal remedy, and there was no question of legal remedy in this case. The remedy was international, and a protest from the individual could not be regarded as anything but waste paper. A protest from the Representatives of the objecting Powers would have been another matter, and it is there that we have always seen an easy substitute for distraint or for any other disagreeable incident. Suppose that a Foreign Representative had asked the Japanese Government to accept from him a written protest guaranteeing the cause of his nationals against any prejudice from payment, is it imaginable that the Japanese Government would have rejected the proposal, or that such a precaution would not have served all the purposes of suffering distraint without any of the unpleasantnesses?

It must have been perfectly evident to every one of the Foreign Representatives that their objections could not suffice to suspend the operation of a Japanese law. They have no power except to hold Japan responsible for the consequences of the operation of her laws. If the British Parliament enacted a law which, in the opinion of one of the European Ambassadors in London, conflicted with England's treaty obligations to his nationals, does any one imagine that an objection from him would have the effect of suspending the enforcement of the law? Of course not. The law would be enforced and Great Britain would take the consequences. That was precisely Japan's position, and to ensure a remedy against the consequences of her act, not to interfere with the exercise of her Sovereign rights, seems to us to have been the only legitimate aim of diplomacy.

"UNCONVINCED."

WE have only to congratulate "Unconvinced" as to his manner of dealing with troublesome arguments. He simply dismisses them. Perhaps the easiest way to meet such a method is that of the "parallel":—

"UNCONVINCED'S" FIRST STATEMENT.

The Japanese Government * * * fixed the annual *rent* to be paid, on a scale far beyond ordinary land tax and sufficiently high not only to cover the land tax, but likewise whatever taxes might afterwards be considered leviable on the property, whether for Imperial or municipal purposes.

"UNCONVINCED'S" SECOND STATEMENT.

The Editor of the *Japan Mail* asserts that in my analysis of the components of land-rent, I omitted what he calls the essential element of "rent." This sounds rather like a contradiction in terms. Moreover, I did not attempt the analysis ascribed to me, but let that pass. What I did say was that the Ground Rent, so-called, covered all taxes of whatever kind including land-rent.

We submit that no careful reader of the first statement could possibly discover that the writer intended to "include land rent." If such was his intention, his argument becomes obviously inconsequential, for until the land rent is deducted from the total payment, no inference can be drawn as to the amount included in that payment on account of taxes. However, we of course, accept "Unconvinced's" statement that he meant to include land-rent, and we therefore ask him kindly to state what part of the total payment he regards as land-rent. Until that point is settled, there can be no intelligent comparison between the land taxes paid by foreigners and those paid by Japanese subjects, for obviously such discussion must be preceded by a clear understanding as to the sum actually representing the foreign lessee's taxes. Hitherto the contention has been advanced that the foreign lessee purchased his perpetual lease for a lump sum, and was thus relieved from all future liability on account of rent. "Unconvinced" evidently sees that no such contention can hold in the case of Yokohama and Nagasaki, where nothing whatever was paid for the leases; or in the case

of the other settlements where the amount of payment was explicitly fixed on the basis of the expenses incurred by the Japanese Government in reclaiming and preparing the land, and did not include any equivalent for the privilege of perpetual tenure. "Unconvinced," evidently aware of all these things, admits that rent is included in the annual charge. We ask him, then, to explain how much of the charge represents rent.

Another statement made by "Unconvinced" is this:—

Whether the stipulation as to house-building emanated from the Foreign Consuls or from the Japanese is immaterial. It was made and agreed to, and, in accordance therewith, buildings were erected that formed part of the *property*, thereafter and for all time exempted from taxation, because of the inordinately high Ground Rent charged in the first instance with the intention that it should cover everything.

Whether the ground rent was "inordinately high" can not, as we have just pointed out, be discussed until the total payment is divided into its components, so as to determine what it actually represents. Perhaps it may be interesting to note, in this context, that according to official documents recently published, the ground rent paid on a certain Consular lot in the Yokohama Settlement is 0.0018 of the value of the lot, and the ground rent paid on Bluff property held by the Consul is 0.008 of the value; whereas, were these lands taxed on the Japanese scale, they would be liable, respectively, to payments of 5 and 3.3 per cent. on account of land tax alone, to say nothing of land rate, house tax, rent and other items. However, that by the way. To revert to "Unconvinced." He contends that "whether the stipulation as to house-building emanated from the Foreign Consuls or from the Japanese is immaterial." Does he really propose to commit himself to such an assertion? Does he propose to affirm that a stipulation suggested by the Foreign Consuls solely in the interest of the foreign lessees and endorsed by the Japanese Government in that interest, can be held to have created a new right of property for the foreign lessee? Surely such a claim is plainly unthinkable. What happened about the house-building proviso was this, so far as is known:—In June, 1860, the French Consul in Yokohama, on his own initiative, issued an order requiring that all land-lessees in the "French concession"—so he called it—must erect within six months certain buildings upon their lots so as to constitute evidence of a *bonâ fide* intention to reside. In September of the same year, when the first Land Regulations—those of Nagasaki—were drafted, they included a clause embodying the Yokohama Consul's precaution. Such is the incident on the strength of which a claim is now set up that the buildings became legally a part of the leased "property!"

"Unconvinced" finally puts this question:—

Will the Editor of the *Japan Mail* kindly try to explain in a straightforward way why they did not use the word *land*, confining himself to my question and not going beyond it? I don't want the usual

answer "because in the context 'property' must necessarily mean 'land' only." Although from my point of view, the word "property," that is "land and buildings," is clear enough, from the Japanese interpretation placed upon it "land only," it requires explanation—else why all this controversy? On the other hand, there could have been no possible difference of opinion as to the meaning of the word "land." Why then was "land" not used?

We have already answered, again and again, that if the word "property" be separated from its context, it undoubtedly means all that "Unconvinced" claims for it and a great deal more also. But what right has "Unconvinced," or any one else, to separate the word from its context? Was such a method of interpreting a document ever heard of, or ever proposed by serious persons? "Property" is altogether a vague term, a term of most comprehensive significance. It does not mean land and houses alone; it includes a great many other things. What, then, does it mean for the purposes of a particular document in which it is used? Surely we must go to the context for explanation, and when we do so we find that the special property referred to is the "property held under the perpetual leases." Thereafter we refer to the leases to find what property is held under them, and we find that, as "Unconvinced" himself admits, it is land and land alone. If it can be clearly shown that by some subsequent process, not indicated in the leases, houses came to be legally included in the property held under them, then "Unconvinced" will have a good case. But it must have been a process anterior to treaty revision. For the eighteenth article of the Revised Treaty creates no new right: it merely confirms those already existing.

CHINA AND CHRISTIANITY.

WE recently published an interesting letter from the Rev. WILLIAM ASHMORE on the subject of Christianity in China. Our correspondent took exception to a statement made by us that "it is not too much to say that Christianity has been forced upon China at the point of the sword." He based his objection on the facts that neither the war of 1842 nor the war of 1857 was waged on account of Christianity, and that the toleration clause in the American Treaty of 1858 was a concession which the Chinese were induced to make by amicable representations and which was "the freest and most spontaneous thing in the whole Treaty."

Certainly we did not think of suggesting that any war was waged with China for the explicit purpose of compelling her to permit Christian propagandism or to tolerate the Christian religion. What we meant, and what our reading of China's history leads us to think incontrovertible, is that the toleration of Christianity was one of the articles of a treaty which China had no choice but to accept. Mr. ASHMORE himself might be quoted in support of our view, for he writes:—

Three treaties, the English, the French and the American, were all made and signed within less than ten days of each other. Americans rather con-

gratulated themselves on their peaceable acquisition of concessions which the English and French were extorting by force. It was a delusion. The concessions to America were in reality a tribute to English and French gunpowder and were also a display of Chinese cunning. They took pains to find out what the English intended to insist upon and hastened to respond to the Americans in advance, thus saving face by an appearance of voluntariness.

If the toleration clause in the American Treaty is to be included among the concessions which were a "tribute to English and French gunpowder," the justice of our assertion as to Christianity's having been forced upon China at the point of the sword would be vindicated. But Mr. ASHMORE evidently thinks that the toleration clause must be excepted from the list of "gunpowder concessions," and his reason for so thinking is that Dr. WELLS WILLIAMS and Mr. MARTIN persuaded the Chinese Commissioners to insert the clause, not as a matter of necessity, but as an act of friendship. Truly we do not think that any such fine distinction can be drawn. The treaties concluded at Tientsin in 1858 were offered to China for signature after Canton had been bombarded and captured, after the Taku forts had been cannonaded and seized, and after the allies had forced their way up the river. How is one part of such documents to be differentiated from another? How can the historian put his finger upon a special article, and say "this was a voluntary concession whereas those others were obtained by gunpowder"? Apart, too, from that obvious consideration, we do not read the history of the "toleration" event in quite the same light as Mr. ASHMORE does. The Russians were the first to propose the insertion of an article referring to Christianity, and the Chinese showed themselves not unwilling, for though they were "wholly ignorant about toleration as a religious question," they saw no reason against allowing missionaries to travel through the country, inasmuch as they could generally speak the language. Dr. WILLIAMS obtained the Chinese text of this Article and drafted a similar one for the American Treaty, but inserting the words "Protestant and Roman Catholic Churches," so as to distinguish them from the Greek Church, which had long been represented in Peking. This Article the Chinese rejected. They proposed, in its place, an Article restricting American Missionaries to the open ports and placing them "under the semi-surveillance of the consuls and local authorities, while they preached religion." The American Minister replied that rather than allow such an article, he preferred its total omission, and Dr. WILLIAMS tells us that for a moment he despaired. After a night's reflection, he drafted another article, but this too was altered by the Chinese so as to render it "illegal for any one, native or otherwise, to profess Christianity anywhere except at an open port." Then Dr. WILLIAMS made another draft, and here is what ensued:—

I decided at once to go to see the Viscount (Chang) and try to settle the question with him personally. Chairs were called, whose bearers seemed to Martin

and me an eternity in coming but at last we reached the house. * * * Our amendment was handed to Chang, who began to cavil at it, but he was promptly told that he must take it to the Commissioners for approval as it stood, since this was the form we were decided on. Our labour and anxiety were all repaid and ended by his return in a few moments announcing Kweiliang's assent to the Article as it now stands in the Treaty.

It is not easy to discover in all this any evidence of spontaneity or voluntary concession on the part of the Chinese Commissioners; neither can we see that the result was attributable in any sense to the feelings of friendliness and respect entertained by the Chinese Commissioners towards Dr. WILLIAMS and Mr. MARTIN, as Mr. ASHMORE suggests. Rather is it plain that the Chinese yielded to what they regarded as inevitable. It is certainly true that had they persisted in rejecting the Article, the United States Minister would have signed the Treaty without it. But of that the Chinese had no idea. They were so vividly impressed by the menaces of which Mr. HORATIO NELSON LAY was a willing mouth-piece, that the notion of declining to concede everything they were asked for did not seriously present itself. As for the fraudulent methods subsequently employed to secure large extensions of religious privileges, they are doubtless well known to Mr. ASHMORE.

"X."

IN this issue we reproduce an interesting letter from *The Times* which that journal had published over the signature "X." While generally endorsing the contents of the letter, there are one or two points that call for a word of comment. Thus "X" states:—"Although the new treaties came into force in July, 1899, it was not until November last (1901) that the Japanese Government notified the Powers of the interpretation they placed upon the article at issue—namely, that the word 'property' meant the land only, and not the houses built upon the land, and that, therefore, such property could only be exempted from the land tax but not from the house tax." This assertion may be founded on some technicality not generally appreciable, but, as a matter of fact, the discrimination made by the Japanese Government between land and buildings had become publicly known before the close of 1899, and was officially announced by Notification No. 41 of the Judicial Department, dated July 10th, 1899. In the second Article of this Notification, it was provided that "the local courts shall prepare land registers relating to the rights of foreigners or foreign juridical persons in accordance with the forms Annex No. 1, and registers of buildings relating to the rights of foreigners or foreign juridical persons, in accordance with the forms Annex No. 2." On January 19th, 1900, a meeting of land-renters in Yokohama passed various resolutions, the last of which was:—

That properties held by foreigners in the former foreign settlements have been made subject to new conditions and taxes and charges from which, in the opinion of this meeting, the revised treaties were intended to exempt them.

In April, 1900, the Executive Committee of the American Asiatic Society of Yokohama, compiled a memorandum, setting forth, among other things:—

That the tax now levied, or any tax to be levied by the Japanese Authorities on the buildings upon the land held under perpetual leases, is a violation of treaty stipulations properly construed, and that the method employed in estimating the value of the buildings for taxation and the taxes so levied are unjust, and with other taxes are a hardship.

That in consequence of long tenure and use of their lands and buildings under extraterritorial jurisdiction, not taxed and not disturbed by the Japanese Government or the local authorities, prescriptive rights have been acquired, and now the Japanese Government, on assuming jurisdiction over their property, should be estopped from enforcing her tax laws upon the buildings as well as upon the lands.

It is thus seen that this question of house tax was before the foreign communities and had become matter of public discussion in the beginning of 1900, as, indeed, every foreigner residing in Japan at that time must be only too well aware. We do not understand, therefore, what "X" means by saying that not until November, 1901, did the Japanese Government notify the Foreign Powers that "property meant land only." The fact is that the Japanese Authorities had been endeavouring to collect the house tax for many months prior to November, 1901, and that several foreign residents paid the tax during the first half of 1901.

Another statement made by "X" is this:—

It was not until the Japanese Government refused to accept payment under protest that British subjects were advised officially to pay only when distraint was employed against them, and it is certainly to be regretted that the Japanese authorities were not empowered to accept payment everywhere under protest, as they were apparently empowered to do in Formosa where that procedure was cheerfully accepted on both sides.

We have already pointed out, more than once, that there was no refusal to accept payment under protest. What happened was that the Japanese Government denied the validity of protests by individual taxpayers, and to this day no one has succeeded in showing that any useful purpose could have been served by such protests. If there was any occasion to specially safeguard the alleged rights of the foreign lessees, an official declaration from their diplomatic Representative to the Japanese Government would have fully met the case. As to Formosa, the conditions of land tenure are radically different from those existing in the former settlements of Japan, and we are surprised that any attempt should be made to establish a comparison.

There is yet another questionable point in "X's" letter. He says:—

With regard to the action of other Powers, France, Germany and also Holland protested from the first against the house tax on the same grounds as Great Britain, and as for those Powers that stood aloof, for the simple reason that none of their nationals owned property under "perpetual lease" and therefore remained unaffected by the controversy, Russia has since joined on principle. The American Government has also joined.

What is meant by "Powers that stood aloof for the simple reason that none of their

nationals owned property under 'perpetual leases'?" For the matter of that no foreigner "owns" property in Japan "under a perpetual lease;" but we assume that "X" intended to say "holds" instead of "owns." To what nationals, then, does he allude? Does he mean to say that Russian subjects do not hold land under perpetual leases; or Italian subjects; or Belgian subjects; or Austro-Hungarian subjects; or Spanish subjects; or Swiss citizens; or Mexican citizens; or Danish subjects? Truly the number of nationalities that stood aloof because they had no property as stake, dwindles to a very small fraction when we come to compile the list. And when did America "join"? We do not find her name in the Protocol, nor have we heard that she made any departure from the attitude assumed by her Acting Secretary of State in February, 1901.

In commenting upon these points we do not wish to be understood as dissenting from the general tone of "X's" letter. On the contrary, we think it a very able letter and are glad that the limits of the responsibility of the foreign land-lessees for the line they have followed should be thus clearly defined.

BASEBALL.

PEERS' SCHOOL, TOKYO V. Y. C. AND A. C.

The weather was in a tetchy mood on Saturday and treated the baseball teams so scurvily that the game arranged between the Cherry Baseball Team of the Nobles' School and the Y.C. and A.C. had to be abandoned when two and a half innings had been played. When the game began there was a faint promise that the rain would hold off long enough to enable the match to be played to an end, but the signs in the heavens were delusive and players and spectators alike were thoroughly drenched ere the umpires cried, "hold, enough." By this time the local team were a long way ahead in the score but it was decided that only the first two innings should officially count, so the Y.C. & A.C. are credited with 6 runs, the visitors with 4. The local nine were in capital form, the practice of the last ten days having improved them tremendously, both in batting and fielding, and it looks now as if they will give a good account of themselves in the Interport matches next month.

Play began punctually, the home nine going to bat. McChesney was the first to get home and he was quickly followed by Merriman. E. W. Kilby succumbed to strikes and Cowan sending up a fly was smartly held. Rain had begun to fall when Blake went to bat, but he got to second and Thorne reached first. This brought Vancleve to bat and his hit to the right field brought both Blake and Thorne home. H. W. Kilby then went out on strikes and the side retired. Four runs.

A capital catch by H. W. Kilby, who was playing at third base, prevented Iwamura from reaching first; but Kayeda got down safely and took second on a passed ball. Kayeda eventually got home, and was followed by Mishima. Tanaka, the next batter, worked round to second, and saw Kamei put out at first before reaching home. Shinjo going out on strikes, the side retired. Three runs.

Goddard led off the batting for the second innings, but failed to get to second base. McChesney received a base on balls, and similar luck befel Merriman, the ball being by this time saturated with the rain. McChesney worked round to 3rd, and saw Blake send a fly into the right field which was held. Then McChesney ran home, Merriman to 3rd and Thorne to second base. Edward Kilby receiving a base on balls all the bags were filled. Then Cowan had

a base given him by the pitcher and Merriman got home. Vancleve, however, was caught on a fly and the side went out. Two runs.

The visitors scored one run in their innings, Kuroda getting home. The others were quickly retired, the fielding of the home team being excellent.

The rain was now coming down heavily, but play continued, and seven local men got home, the fielders being hopelessly handicapped by a sodden ball and swampy turf. It was then determined to abandon the match and the runs made in the last innings of the home side were not counted in the score. The players were:—

LAW CASES.

"THE HAMBURG" CASE.

In the Osaka Appeal Court on Sept. 25th before Judge Itakura, and Associate Judges Ono, Mori, Kuwada, and Inouye, the appeal was heard of Mr. L. H. Petersen, master of the steam-launch *Hamburg*, against a decision of the Kobe Chiho Saibansho delivered on July 23rd last. The appellant, it may be remembered, was charged with an infraction of the Shipping Law, in that while the steam-launch *Hamburg* was under his control she entered Innoshima, a port not open to foreign trade, without obtaining a special permit, and he was ordered to pay a fine of yen 200, while the launch was ordered to be confiscated. The question being raised by the Procurator of whether an accused person in a criminal case should appeal in person the court adjourned to consider the point.

UNLICENSED PILOTING.

A foreigner, whose name is given as Feichney, living at No. 112, Motomachi, 2-chome, Yokohama, has been fined yen 100 at the Yokohama District Court for acting as a pilot without a proper licence on the Austrian steamer *Suevia*, which left the port for Moji on the 28th July, this year. It is stated that the same person was fined yen 50 in October last for the same offence.

A MURDERER.

Judgment was delivered by the Yokohama Chiho Saibansho on September 29th in the case of Ishiwatari Hikosaburo, of Daishigawa, Kanagawa Prefecture, who murdered five persons on the night of February 23rd this year. He was sentenced to death. The affair arose out of a love quarrel.

JOVANSEN V. HOPKINS.

The above case will again come up for hearing on October 16th in the criminal section of the Yokohama Chiho Saibansho. Professor Loenholm, of the Tokyo University, will be examined as an expert to give his opinion with regard to the law governing the case.

JOVANSEN V. CLUB HOTEL.

This case will be resumed in the Yokohama Chiho Saibansho on October 16th when several witnesses will be examined.

HIOKI V. SAMUEL SAMUEL & CO.

The suit brought by Mr. Hioki, Bankruptcy Administrator in the estate of Messrs. Mourilyan Heimann & Co., Yokohama, against Messrs. Samuel Samuel & Co., claiming recovery of a certain amount of money in connection with the Formosa Camphor Monopoly will be heard the same day.

HAYANO V. DEARING.

In the Yokohama Chiho Saibansho on Thursday morning, before Judge Kato, was heard an action brought by Mr. Hayano Yonejiro, No. 75, Bluff, Yokohama, against Mr. J. L. Dearing, No. 75-a, Bluff, claiming yen 474.70 damages. Mr. Kawakubo appeared for plaintiff and Mr. Sato for defendant.

Mr. Kawakubo stated that his client's house was located just below the cliff on which defendant's house stands. Owing to the dangerous condition of the cliff plaintiff often asked defendant to take suitable measures to prevent the fall of the cliff but no steps were taken by defendant. About 1.30 a.m. on May 15th this year the cliff, as was feared, gave way with the result that plaintiff's house was badly damaged. In consequence plaintiff claimed the sum above referred to.

Mr. Sato admitted the collapse of the cliff on the day mentioned, but urged that on the following day, namely on May 18th, plaintiff privately asked defendant for compensation of yen 260.65 damages. Plaintiff now claimed yen 474.70, such figures being twice as much as the original demand. Plaintiff was also inaccurate in his statement of claim, for defendant did take steps to prevent the accident, by providing a wall of timber and boards.

Mr. Kawakubo's counsel said that as defendant was the owner of the land above his house he ought to pay compensation and he asked the Court to dispatch an official to the scene to inspect the wall, with the view to ascertaining whether or not it was strong enough to prevent an accident.

The Court, however, rejected this proposal.

The proceedings were adjourned until Oct. 21st.

DOERING V. KANNHAUSER.

In the Yokohama Chiho Saibansho on Thursday afternoon, before Judge Kato, was heard an action brought by Mr. J. G. Doering, No. 75, Yamashitacho, Yokohama, against Mr. E. Kannhauser, formerly an employee of the plaintiff, claiming yen 5,550 with five per cent. interest from May 10th this year until the execution of judgment, costs of the case to be borne by defendant. Mr. Sato appeared for plaintiff, but neither defendant nor his Counsel were present.

Mr. Sato stated that a contract was made between the parties in Germany on October 2nd, 1901, whereby it was agreed that defendant should be employed by Doering for four years at a salary of yen 150 per month for the first year, yen 160 per month for the second year, yen 170 for the third year, and yen 190 for the fourth year, defendant's principal business being to repair pianos and other musical instruments. Defendant arrived in Yokohama on December 20th last year and took up his duties at once. On May 10th this year defendant refused to perform his duties under the contract and ultimately severed his connection with plaintiff, having apparently joined another establishment. As a result, plaintiff not only incurred great loss in business but also lost his credit entirely. Accordingly plaintiff claims from defendant the above sum as compensation.

The Court announced that judgment would be given on October 4th.

In connection with the arrest of Mr. A. Le Prevost, formerly in charge of the Silk Department of Messrs. Cornes & Co., Yokohama, four arrests of Japanese were made on September 30th on charges of embezzlement, fraud, etc. They are Sawada Tokusaburo, Usui Tatsujiro, Nishida Yoshikata and Kokura Kinta, all belonging to the Silk Department. After undergoing the usual examination at the Yokohama Chiho Saibansho the accused were taken to the Negishi prison.

THE SEPTEMBER TYPHOON.

BEGINNING OF THE BLOW.

Monday, Sept. 29.

The weather experienced in Yokohama during the morning and forenoon of Sunday may, we should imagine, be quite justly described as a typhoon. Undoubtedly the conditions—practically all the conditions—were such as herald and accompany such a visitation. The first intimation received was the storm warning issued at 7.55 a.m. on Saturday the 27th which read: "Threatening weather expected off shore." The location of the lowest barometer (750 mm.—29.53 in.) was given as in Southern Liukiu and the glass was stated to be falling rapidly in that vicinity. The direction of progress was said to be N. E. It is hardly to be supposed that this depression reached Yokohama and Tokyo in 24 hours, but there is no doubt that a very serious depression passed over the locality, or probably some distance inland, going in a N.-Ely. direction, on Sunday morning. We print tables which Messrs. Favre-Brandt have very kindly supplied to us, from which it will be seen that at ten o'clock in the forenoon the glass stood at 28.33. That is perhaps the most significant indication of the presence of a typhoon that could appeal to a mariner. Dr. Doberck, of the Hong-kong Observatory, notes that "at the centre and during the height of the storm the barometric pressure may fall as low as 28.50 inches;" during the lull on Sunday forenoon the glass fell far below this.

In addition to the behaviour of the glass there was the action of the wind. At four o'clock on Sunday morning any one opening his door and looking forth at the weather would have been met by a wave of hot air, the unfailing precursor of a storm. And he would have seen his barometer falling in an apparently inexplicable fashion—because there was hardly any wind and only a light drizzling rain. An hour later the wind began to come away from the north, and by six o'clock it was developing typhoon characteristics with heavy rain and a steadily falling glass. At seven the wind was coming along in heavy gusts. Between 7 and 8 the gale gathered in intensity, the rain fell in showers, the weather apparently clearing for a few moments now and then. By eight o'clock the glass had dropped to 29.16. Thence it steadily fell, till, as we have said, it registered its lowest.

Though the gale raged with great violence between 7 and 8 it was not till about the latter hour that it attained its utmost severity. Long before this time, however, tiles had been flying off roofs on both Bluff and former settlement, and the passengers along the Bluff at eight o'clock—there were very few—saw an almost unbroken succession of prostrate fences. Chiefly, it may be said, these were of the bamboo interwoven variety; a levelled wooden fence was a rarity. At this hour the wind was still blowing from N.E. and its force was tremendous, thickened as the gale was with heavy rain.

HOW THE SHIPS FARED.

The shipping in the harbour were now feeling the force of the wind. Most prominent among these was the German mail steamer *Preussen* which lay in the outer berth on the north western side of the pier. This vessel only arrived in the harbour on Saturday and as is customary uncoupled parts of her engines for overhauling. About 7.30 a.m. her pier hawsers began to give way; first one bollard went, then another and at length she was fairly adrift, beyond control and going towards the Benten shore. She went on easily the bottom being mud but it was not till about 9.30 (she had gone on at low water) that she got off, having by this time steam on her engines. The *Preussen* brought up with two anchors close to the end of the pier with the intention of reberthing, but a telegram from Tokyo in the afternoon caused the harbour-master to forbid this and about 4 p.m. she steamed outside and anchored.

About the same time the steamer *Pembrokeshire* took charge and she fetched up on the shoal westward of the *Preussen*. Eventually she also got

off on the rising tide and steamed outside the breakwaters where she lay for some hours, subsequently moving further out.

Another unfortunate was the red funnel steamer *Khalif* which during the stress of the northerly gusts dragged on to the north breakwater, outside of which she was anchored, and lay there for some time. At length she too got off and lay in safety when the wind shifted.

It was probably from 7.30 to 8.30 that the greatest damage was done. At eight o'clock it was absolutely dangerous to attempt to reach the Bund by any of the streets leading to it. Already on the Bluff trees were falling in every direction and every now and then a flock of boughs were snatched from the giants on the French Hill and sent whirling off like birds over the settlement. Also window shutters had got loose on some of the houses in Camphill and were thrashing out showers of glass which, driven along with the rain, strewed the roadway for many yards. Previous even to this, however, while the gale had not attained its full force, that is to say a little before seven o'clock, one of the local landmarks of the former settlement had gone down. This was the large tree (*kusu*, camphor-wood, we believe) which grew on the Creek side of the Yaku-sama or Zotoku-in Temple. Of this there only now remains a stump.

The Bund, as we have said, was hardly to be reached about eight, for the fury of the blasts combined with the solid sheets of rain and the flying gravel and tiles and glass to forbid adventures of this kind. About this time the spindrift was so dense that it was only possible to see a few yards to windward, but probably it was during this most boisterous outburst of the storm that the damage caused to yachts was sustained. How it happened no one seems to know, but it is thought that *Sodeska* got adrift and after nearly fouling *Pelee* and miraculously getting through a crowd of others brought up on *Nandeska* and *Yugao*. At any rate when the weather cleared a little, *Yugao* and *Sodeska* were under water; *Dryfe* and *Nandeska* were pounding close by each other on the Bund wall, a 12 rater lay at the English Hatoba under the bilge of a big steam launch; the 17 rater *White Violet* was sunk at her moorings and *Coogee* was ashore. *Nandeska* and *Dryfe* were badly injured. All were raised or got off in the course of the afternoon.

During the forenoon the steam-launch *Aoi Maru* of the Nippon Yusen Kaisha was upset and lost outside the breakwaters. Her captain and engineer, who were the only persons on board at the time, were washed overboard and drowned shortly before the boat was wrecked. Many lighters and boats in the harbour were also wrecked, but no further lives seem to have been lost. In the former Settlement and the Japanese portions of the town, no extensive damages were inflicted so far as our observation went, but minor damages such as the breaking of fences, roofs, windows, etc., were numerous, doubtless every household having suffered more or less. In Tobe, a carpenter had his head broken by a falling tile while walking in Tobe-machi, and was at once taken to the nearest hospital for treatment.

Five men, probably from a boat, were cast on the northern breakwater early in the morning. A small launch from the Engine and Iron Works was despatched to render them assistance, but after getting outside the breakwater found it was impossible to proceed, the launch being nearly swamped. Later, when the wind had gone down, a powerful steam tug from the Nippon Hatoba took them off the breakwater by means of ropes, and it is understood that no lives were lost.

Many telegraph and telephone posts between Yokohama and Tokyo were blown down and as a consequence communication between the two cities was suspended during part of Sunday, though last evening the telephone was in satisfactory working order.

DAMAGE IN YOKOHAMA.

On the Bluff and in the former settlement as we have said, visible damage was done to property. All along the main road of the Bluff fences are down, gates broken, tiles and plaster displaced and trees uprooted or broken off. The damage is so general that it is impossible to

make a list of those who have felt the storm most, but we may mention the General Cemetery as suffering once again in the destruction of its fences. Christ Church also suffered and the inner lining of the north aisle was stripped by the wind, letting in much water. Only a very small congregation assembled at morning prayer. In the Settlement the Grand Hotel suffered considerable damage to the tiles and windows of the old building, in fact it is said that the damage amounts to several thousand yen. The Club Hotel and a number of other buildings were also subjected to considerable loss in roofing tiles, gates, &c. The *Japan Mail* office was flooded owing to breaking of skylights.

We are informed by Captain Mahlman, late Harbour Master in Kobe, that his barometer dropped half an inch between 6 and 8 a.m. on Sunday morning, the minimum being 28.22, the lowest reading he has ever recorded in Japan.

Tuesday, Sept. 30.

It was on the 28th that the typhoon reached Tokyo and Yokohama, but in truth the gale commenced in the neighbourhood of the Riukiu Islands on the 25th, and it may be said to have devastated Japan from that day until the afternoon of the 28th. It swept over the whole country, with the exception of the northern part of Hokkaido, and it took the southern half of Korea *en route*. The centre seems to have travelled northward in the vicinity of the eastern coast of the main island.

DAMAGE IN YOKOHAMA.

The results in Yokohama were as follows:—On the Bluff, four buildings of the British Naval Coal Depot and a store-house belonging to the Kirin Beer Brewery Company were blown down; a landslip near No. 48 to the extent of about 12 feet. Damage to telegraph posts and fences was extensive. It may be said that the property of every foreign resident suffered more or less. In the harbour, as we have already reported, Mr. Morita, Captain of the N.Y.K.'s steam-launch and the engineer, Nakago Isaburo, were washed overboard while attempting to put back to the port and their remains have not yet been recovered. The losses to and damages sustained by small craft were so numerous that it was almost impossible to record them. Taken altogether, no less than thirty boats were either wrecked or are missing, including craft belonging to the Nippon Yusen Kaisha, and other shipping establishments. A watch-boat of the Water Police, which was fastened just below the Yato Bridge, was washed away during the typhoon and has not been found as yet. Many *sendo* on lighters and junks were saved from drowning. A number of timbers, masts, silk boxes, casks and other articles have been washed ashore at Kanagawa and elsewhere.

The roofs of the Yokohama Railway Station, the Aioi theatre, the Yoshida Gakko, the Post and Telegraph Office at Choja-machi, the Central Warehouse and other high structures were damaged to a great extent, while the Hiranuma theatre, now in course of construction in Tobe-machi, was destroyed. Fortunately no lives were lost save that of a carpenter, of Tobe, who died from the effects of injuries received on the head. The poor man was named Sasajima Kyujiro and resided at No. 107, Shichome, Tobe.

A seaman belonging to the German steamer *Preussen*, now in Yokohama, while working on board during the storm was badly injured on the head and other parts of his body and taken to the German Hospital, on the Bluff, for treatment.

One result of the storm which was hardly anticipated was the demolition of the eastern breakwater over nearly half its length. From the white light house shoreward the blocks are lying in disorder, many apparently having been smashed by the force of the waves. There is a much smaller gap on the north breakwater.

ODAWARA BAY AND THE COAST.

Among the accounts hitherto published, that from Kozu is most vivid. The sea at that part of the coast showed extraordinary disturbance. Waves said to have been from 30 to 50 feet high rolled up at Odawara, sweeping away houses and drowning some 200 people. Baron Otori Keisuke

barely escaped. His villa was over-thrown and he found himself lying under the roof. One small exit remained, and he was so fortunate as to find it. Tokyo suffered greatly, especially the Fukagawa district. Several houses were more or less wrecked, and various injuries to men and women are reported. The wind blew with impartial violence during its first onset from the north and its second attack from the south, and many trees and palings which had merely been loosened by the former assault were levelled by the latter.

It may be roughly stated that the eastern coast of the main island has not been visited by such a storm for many years.

A telegram from Yokosuka says that the battle-ship *Shikishima*, which was lying off the Third Fort, went ashore during the gale. Steps were being taken to float her off at the time of the telegram's despatch, and it is supposed that she sustained little injury.

No damage was inflicted at Hayama Palace, where the Crown Princess is now staying.

THE TIDAL WAVE AT ODAWARA.

A traveller who came through the district devastated by the Odawara tidal wave on Sunday, writes that no one who has not been through it can possibly conceive of the extent of the damage done from the Sakawa-gawa onward, by the force of the wave. The wall of water must have been over 60 feet high to have reached some of the places which were over-whelmed along the shore, and the force behind it carried the wave for between a $\frac{1}{4}$ and $\frac{1}{2}$ a mile inland. At every little fishing village in Odawara bay it is the same tale, every house on the coast is destroyed, and the rice-fields are covered with sea-sand. The tramway track from Kodzu has been lifted bodily, sleepers and rails together, and carried right away from the roadbed. A kombu-factory not far from Kodzu has been entirely demolished, leaving a twenty-ton boiler alone to tell the tale of its former existence. Our correspondent estimates that the loss of life must run to 300 souls. Of course river bridges on the way from Odawara to Yumoto are all damaged, in some cases entirely destroyed, and connection with Miyanoshta and district is very difficult.

RAILWAY ACCIDENTS.

A train at Karuizawa, consisting of 6 carriages, was upset by the wind, but as there were no travellers the accident had not any serious result. Traffic on the Nippon Railway, from Omiya northward, was interrupted from the evening of September 28th, as was also telegraphic communication. A goods train was capsized on the Tsuchiura line by the force of the gale during the same morning, but no casualty occurred.

In addition to the railway accidents already reported by us, several other cases occurred during the storm of September 28th. A passenger train, consisting of 12 carriages, was capsized at Koyama station, on the Nippon Railway, about 9 a.m. that day. As a result, eleven passengers were injured, one very badly. On the Abiko section, of the same railway, a goods train was upset by the force of the gale, but fortunately no one was injured. Many carriages in Koyama, Utsunomiya and the neighbouring stations were also blown over. An official message from Chiba reports that a passenger train was capsized in the vicinity of Fusa station on the Abiko section with the result that over sixty passengers received injuries, though not fatally. A similar accident took place on the Fusa-Kinoshita section, of the Narita Railway, causing injury to 38 passengers.

SNOW.

It is further reported that in the afternoon of the same day snow fell in Matsumoto (a town near Nagano) and its neighbourhood.

THE RICE CROP.

Japanese newspapers do not speak of the probable effect on the rice crop, but undoubtedly much injury must have been caused. The only redeeming feature is that the ears are now full and that even where stalks have been laid by the gale, the grain will ripen.

It may be added that the buildings of the Imperial Palace, in Tokyo, were uninjured,

damages being limited to trees in the compound of the Palace.

A report issued by the Central Meteorological Observatory on September 28th at 3 p.m. says that the typhoon passed off in the direction of Sado island, Japan Sea, at 2 p.m. the same day. Meanwhile another centre of depression has appeared off Kiushu and is gradually travelling to the north-east.

Through the courtesy of Messrs. C. and J. Favre-Brandt we publish the following table:—

SAMEDI 27 SEPT., 1902.

	BAROMETRE.		THERMO.	
	mm.	inches.	Cent.	Fahr.
Midi p.m.	759	29.882	21.1	70
2	758	29.843	22.2	72
4	757.5	29.823	22.5	72.5
6	757	29.804	23.3	74
8	757	29.804	22.2	72
10	756	29.764	21.1	70

DIMANCHE 28 SEPT.

Minuit a.m.	755	29.725	20	68
2	753	29.646	18.9	65
4	750.5	29.547	20.5	69
6	746	29.371	21	69.8
8	737	29.016	21.5	71
9	728	28.661	22	71.5
10	719.5	28.327	24	75.2
10.30	731	28.780	24	75.2
Midi p.m.	740	29.134	24	75.2
2	743	29.252	25	77
4	743	29.271	25	77
6	742.5	29.243	24.5	76.1
8	743.5	29.232	24.5	76.1
10	744	29.292	24	75.2
Minuit	743.5	29.271	24	75.2
2	748	29.449	23	73.4
8	751	29.567	23.5	74.3

To the above figures it may be added that on Oct. 7th, 1899, the barometer locally showed a reading of 719mm.=28.308 inches, but on that occasion Yokohama was not visited severely.

BAROMETER WARNINGS.

Messrs. Favre-Brandt are kind enough to supply us with the following remarks by Pere Sechi with reference to the Philippines, and particularly Manila, but also they think very well applicable to Japan:—

When the Barometer is at
710 mm. to 730 mm. or 27.953 to 28.741 inches, (Destructive hurricane or storm);
730 mm. to 747 mm. 28.741 to 29.410 inches, (Severe or intense hurricane):
"If the sky clears and the wind abates, the vortex passes through the locality; will be followed by violent gusts of wind from the 2nd (East) and 3rd (West) quadrant."
"If the wind shifts from North to South through the E. the vortex passes through the S."
With Barometer at
747 mm. to 751 mm., (hurricane in the locality or very near):
"With winds from the 1st and 4th quadrant the hurricane commences."
"With winds from the 2nd to 3rd quadrant it passes disappearing."
"With winds from the 1st or 4th quadrant the hurricane approaches."
"With winds from the 2nd or 3rd quadrant it disappears."

THE TALE OF DEATH AT ODAWARA BAY.

Wednesday, Oct. 1.

Owing to the difficulty in compiling statistics, no accurate figures are yet obtainable regarding the exact loss of life by the tidal wave in Odawara Bay. It is stated, however, that in Koyawata-mura 123 houses were either carried away or destroyed and over 30 houses partially damaged, while eleven persons lost their lives; 140 were injured and 48 are missing. The whole place has been turned into a desert. In Sakawa-mura 90 houses were carried away, 20 houses damaged, 28 persons killed, 30 injured and 50 are missing. Over 50 persons, all injured, were taken to the Sofukuji temple for treatment. In Odawara, three persons lost their lives, 50 were injured more or less seriously, 500 houses were destroyed, and over 1,000 houses flooded. The building of the Odawara primary school, various temples and Viscount Okubo's villa were thrown

open to receive over 500 homeless people. In Kozu, 34 houses were washed away, 15 houses damaged, 17 persons drowned and many injured. In Oiso, the damage was slight; 7 houses being destroyed, and 9 houses damaged. No lives were lost. It is scarcely necessary to state that all the fishing boats on the coast were carried out to sea by the wave.

Madame Sufu wishes to acknowledge the following kind donations towards the relief fund she is raising for the sufferers from the Odawara tidal waves:—

	Yen.
Bavier & Co.	100
Illies & Co.	100
Siber, Wolff & Co.	100
E. V. Thorn, Esq.	10
Nembrini Gonzaga, Esq.	10

THE "SHIKISHIMA."

Reports of disaster come from Shizuoka, Tottori, Akita, Saitama, Tochigi, Gunma, Kanagawa, Nagoya and other places.

News from Yokosuka has it that the first class battle-ship *Shikishima* was still on the rocks on the afternoon of September 29th. Efforts are being made to lessen the weight of the vessel, but it is believed that several days will elapse before she can be successfully pulled off. The vessel was launched from the Armstrong Company's Yard in 1898, the cost of her construction being about yen 15,000,000. Captain Tomioka is in command.

The famous Red Bridge at Nikko was entirely destroyed on Sunday, owing to the sudden rising of the river. The destruction in the gorge is said by travellers, who reached Yokohama on Tuesday, to be terrible, and the loss of life will be great, we fear. The flood swept away bridges, houses, and shrines in its relentless onrush, but fortunately the chief glories of the place were high above the reach of the destroying waters.

U.S. ASIATIC SQUADRON.

A Washington telegram of September 10th said it was announced at the Navy Department on that date that Rear Admiral Frederick Rodgers will turn over the command of the Asiatic station to Rear Admiral Robley D. Evans at Yokohama, Japan, about October 20th, and that Admiral Rodgers then will sail for the United States aboard his flagship the *New York*, coming across the Pacific to San Francisco instead of through the Suez Canal. Upon his arrival in this country, it is understood, the *New York* will be attached to the North Pacific squadron, and Rear Admiral Rodgers will assume command of the New York Navy Yard. A permanent assignment of the *New York* to the Pacific station will keep her from participating in the joint manoeuvres of the North Atlantic, South Atlantic and European squadrons in the Caribbean sea next winter.

The following transfers on the station were announced on Sept. 8th:—Asiatic Station: Commander J. C. Fremont ordered home; Lieutenant-Commander F. S. Carter to the *Monadnock*; Lieutenant A. T. Long from the *Vicksburg* home; Surgeon J. E. Gardner transferred from Cavite to the *Kentucky*; Surgeon G. P. Lumsden from the *Kentucky* home; Midshipman L. Brooks Jr. transferred from the *Vicksburg* to the *Kentucky*; Midshipman H. S. Klyce from the *Kentucky* to the *Vicksburg*.

A Hindu paper, writing of the aid given by Japan for the Hindu Buddhistic Conference, to be held at Tokyo this month, says:—There is a pathetic magnanimity in the spectacle of Japan remembering in her palmy days the old fallen country which in its better days freely gave her the best it had to give—Buddha's gospel of peace and love. Let us hope that this invitation may prove the precursor of those varied ties by which we wish the two countries should be bound to each other. Already a few of our enterprising young men are looking to Japan for industrial and scientific training.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

The *Chûô Kôron* (No. 8) contains an extremely lively and well written article which, under the title of *Kyôiku Jiheidan* (A Talk on the Educational abuses of the time), gives an account of the present educational situation in Japan, which seems to us on the whole to be borne out by facts. The writer informs us that he has no connection whatever with schools or with the Department of Education, but that he has closely watched the course of events in the educational world. He starts with the suggestion that the term "Middle Schools" had better be dropped and the term "State Schools" or "National Schools" be used in its stead. The term "Middle School" implies a connection with lower and higher schools, which does not exist as a matter of fact. There are at present 258 Middle Schools in the country, attended by 101,570 pupils. Now, supposing that the students at these schools are desirous of finishing their education in some higher institution, their wish cannot be gratified in the great majority of cases. There are, says the writer we are quoting, seven High Schools and the following high-class technical schools: the High Commercial School, the High Normal School, the High Industrial School, the Sapporo Agricultural School, a Medical School (Tôkyô), a Foreign Language School, a Fine Art School and a Music School. The entrance examinations for these schools are all competitive, resulting year after year in an enormous number of rejected candidates. The figures for the High Commercial School this year give one a fair idea of what is taking place all over the country. The number of students who offered themselves for examination was 1,235; the successful candidates numbered 250 only. The Middle Schools not only imply a connection with higher institutions which does not exist in respect of the name they bear, but the subjects taught have been chosen with the express object of preparing the students for a course of instruction which most of them can never receive. The present action of the Mombushô might well be compared to that of a person who guarantees to take a friend to Europe but who abandons him at Shanghai. The writer then passes on to consider the defects of Japanese students, which he takes to be: (1) Want of strength of character; (2) want of common sense and practicality; (3) a deficient knowledge of foreign languages. (1) The first alleged defect has been so fully discussed elsewhere that nothing need be said about it here. (2) In the matter of common sense and practicality, says the writer we are quoting, we ought to follow England. It is said that in their examinations the English think more of general knowledge and common sense than anything else.* In our system of teaching an enormous amount of time is spent over historical and geographical details which are of little practical use. Our students ought to be made thoroughly acquainted with China and Korea and with the chief events of the *Meiji* era. The whole tendency of our teaching is to produce impractical men. (3) The failure of University students and even professors to understand foreign languages when they hear them spoken is too well known to need lengthy reference here. The fact is that the Mombushô would do well to give up trying to teach everything in one institution. If the students to whom a knowledge of colloquial English or German is essential were allowed to spend a few years in studying language at the Foreign Language School in Tôkyô, the results would be most satisfactory. But in the matter of the teaching of foreign languages in Government schools it is most important that a connected system should be followed in the lower and higher institutions. Coming to the subject of private schools, the writer we are quoting says that the Mombushô has been a veritable stepmother to them. For years they were persecuted. They are now

receiving more lenient treatment, but still the Department is by no means disposed to grant them the same privileges as are enjoyed by Government schools. Since the Keiogijuku and the Semmon Gakkô are now constituted like Daigakkô, there is no reason why the diplomas of graduates of these institutions should not rank as high as those given by the Imperial University. It is said that private schools are not properly organised, but this is to a very large extent the result of the treatment they have received from the Mombushô. Were privileges granted to them on certain conditions relating to efficiency, the conditions would undoubtedly be fulfilled. Even in this thirty-fifth year of *Meiji* the obstacles to free competition in education are most formidable and the feeling against their removal is still very strong. The *Kwanan-Mimpi* (官尊民卑) spirit still prevails, the Government is exalted and the ordinary citizen despised. Though political clannism has to a large extent been abolished, educational clannism still remains and blocks the way to progress.

Dr. Ueda Mannen contributes an article to the *Chûô Kôron* on the future of the Japanese language, in which he points out that it is desirable that in linguistic reform the following three principles should be observed. (1) That without going as far as to introduce obsolete words or little known archaisms, the Japanese language should be employed rather than Chinese. (2) That in the retention of Chinese care should be taken to drop such homonyms as cause confusion when used in speech apart from the written character. (3) That in cases where the translation of foreign terms is found to be difficult, the original terms should be introduced. Under these headings Dr. Ueda writes in the following strain:—(1) The history of the German language contains a parallel to the relation of our Japanese tongue to the imported Chinese. There was a time, and that not so long ago, when instead of the German terms now in use French words were used by the Germans. They were usually shorter and more expressive than the German equivalents, but the Germans felt that they wanted to develop their own native tongue by putting it to new uses. They stuck to the German nomenclature until to a very considerable extent it replaced the French. I am in favour of our substituting Japanese words for Chinese whenever it can be done with ease, but we must avoid going to extremes in this matter. The idea of resorting to the *Kojiki* and the *Nihongi* for terms rather than retain those now in use—an idea which has its advocates—seems to me absurd. I would draw the line at obsolete words and words not generally understood. (3) It is not to be supposed that Chinese terms which have been in use thousands of years can be got rid of in a day, but there are a great many superfluous and confusing characters in daily use. Many of these could be dropped and other terms used in their stead. Take, for example, 公爵, *Kôshaku*, Prince, and 侯爵, *Kôshaku*, Marquis, 私立, *Shiritsu* and 市立, *Shiritsu*, 化學, *Kwagaku*, Chemistry, and 科學, *Kwagaku*, Science; 文科, *Bunkwa*, Literature, and 分科, *bunkwa*, faculty. As these cannot be properly understood apart from an explanatory context, there are times when substitutes would prove very convenient or the words might be explained in some such fashion as the following: "The *Kô* of the first *Kôshaku* is the *Kimi Kô*; the *Kô* of the second is the *Sôrô Kô*." As regards the term *bunkwa* for literature it need not be employed at all. The same may be said of many other words in constant use. (3) It seems to me that both in China and Japan in a great many cases it would have been better to have introduced the original terms rather than attempt to express their meaning in ideographs. There are some who say that it spoils the effect of a sentence to introduce foreign

* We think this is hardly borne out by facts, much as the adoption of the course indicated is urged by certain writers.—(WRITER OF SUMMARY.)

† The first term is applied to schools or other establishments originating with private persons; the latter to those started by municipalities.—(WRITER OF SUMMARY.)

words; but after all what is our Japanese language as it exists to-day but a mixture of two languages that have little affinity to each other? Our *Yamato-kotoba* is nearer Aryan languages in sound than the Chinese. After transforming the Chinese language to such an extent that a Chinaman hardly recognises it as his own tongue, is it not absurd to stick to the introduction of a few Occidental terms into Japanese? Dr. Ueda concludes his article by observing that steps ought at once to be taken to improve and to enrich pure Japanese. The language, he thinks, is capable of answering all the multifarious purposes for which in this busy and progressive age it may have to be used, but in order to do this it needs altering in various ways. Practical men should set about this at once.

* * *

The *Nipponjin* mourns over the tendency to multiply laws and rules in this country and thinks that good government is more hindered than furthered by the multitudinous regulations issued month after month by the various Departments of State. It is not necessary that Japan should follow in the wake of any other nation in this matter. Nations all have their peculiarities and if a perfect network of rules suits certain nations (the reference evidently is to Germany especially) it does not follow that they are necessary under different conditions. In European and American history nothing is more striking than the way in which the great nations have each followed their own special bent and have not allowed themselves to be diverted from their courses by the oft-times opposite action of their rivals. There is a continuity about the lives of the Anglo-Saxons, the French and the Germans. Their strength has consisted in each following the bent of their own natures. Our people for centuries were quietly governed without the hundred-and-one regulations now in force. We are far too ready to imitate foreigners when it would be better for us to keep to our own ways of doing things. We have been informed that in some parts of the country local assemblies have been borrowing wholesale from the systems of certain foreign local boards. If this is done the chief object of local government—the adaptation of rules to special local conditions—becomes unrealizable. It is said that in a transition age much imitation of others is unavoidable, but we carry the thing to excess and the trouble is that in too many cases we take the shadow and the form for the substance and the reality. So many of our reforms are not carried into actual life, they exist in writing only. What Miss Hughes remarked of our educational system is true of a good many other things. She said that though our system of education seemed very perfect, the practical results it yielded were in no way remarkable. It is astonishing with what blind persistency for centuries we have been multiplying rules. Japan was never more quietly, and certainly never better, governed than when Shôtoku Taishi's Constitution consisting of only 17 articles was in force. These articles when examined to-day are seen to contain the essence of the best foreign codes or systems of law. The writer here gives a minute account of the enormous extent to which Japan borrowed from China in former times. It was only during the Kamakura era that Japan's rulers ceased to take delight in the display of rules and regulations taken *en masse* from Chinese books. According to the writer we are quoting the statesmen of the *Meiji* era have outdone all their predecessors in the matter of over-legislation.

* * *

In his organ the *Shinjin*, which breathes a very earnest spirit, Mr. Ebina Danjô writes as follows

* The contention of Dr. Ueda and those who agree with him on this point is that when our technical terms are rendered in Chinese the ideographs in many cases have to be understood in quite new senses and that it takes as long to learn these new senses as it would to master the meaning of the original terms. Into this discussion we cannot go here. There is much to be said in favour of both views, but the majority of Japanese experts have always preferred to rely on the ideographs as a better medium than the original terms.—(WRITER OF SUMMARY.)

on University graduates and their worldly prospects:—On July 11th a large number of University students received their diplomas. Though persons who fail to look beneath the surface may be full of jubilation over such an event, when I think of the hard future that lies before these students I cannot refrain from shedding a tear. If what the newspapers say is correct an Engineering Graduate cannot be sure of receiving more than 40 yen a month for his services and a Law Graduate can only command 30 yen. When one thinks of all the expense involved in the education of these graduates, it does seem deplorable that the economic conditions of the country should be such that no higher remuneration can be given them. These graduates should not remain in the capital, but seek employment in the provinces, or, better still, go abroad. Surely in China and Korea there are openings for such men, and perhaps even India and Siam might afford promising fields for them. If this country is at present overstocked with trained men, there are many other countries where the demand for them is brisk. Let young men seek their fortunes in foreign lands and thus will they make Japan better known to the outside world.

* * *

Moving with the spirit of the times the *Taiyō* has of late assumed a new rôle. It has hitherto aimed at being a high-class literary organ chiefly, but it has now been converted into a trade journal. It reveals this in its new name, "The Sun Trade Journal," and Dr. Kato Hiroyuki, one of its old contributors, who with all his love of philosophy has a very practical mind, has published in a recent number a very interesting article entitled *Seifu no mīngyō* (民業), in which he discusses the relations of the Government to private enterprises and maps out the course which he thinks the authorities ought to follow in industrial and commercial matters. We proceed to epitomize his remarks:—The question of what it is the duty of a Government to undertake and what it had better leave to private enterprise has been keenly discussed in Europe for over 200 years. The old notion was that Government should undertake everything which affected the welfare of the country. The tendency of enlightened public opinion in the most advanced countries has all been in the direction of limiting the duties of Government to as narrow a sphere as possible. Speaking generally, everything that can be efficiently carried on by private individuals or by properly organised companies should be left to these agencies. The Government should only step in when there are insurmountable difficulties in the way of the successful conduct of great enterprises by private effort. While not agreeing with those who represent the defence of the peoples' rights and the administration of the laws to be almost the sole functions of a Government and who hold that it should not embark on any great business undertaking under any circumstances, we hold that the Government should allow private persons to transact most of the necessary business of a country. The latter should own and run the railways and have the control of telegraphic and postal communication. Of course there are times when the people need to be led by the Government, when it is necessary for a Government to convince people that a certain industry or the construction of a railway line or a road will lead to substantial profits. But on such occasions the Government should only lead the way and only take such steps as will allow of its subsequent withdrawal without substantial injury to the business which it has pioneered. The tendency in some countries of the West is to revert to the old state of things; in which the Government was relied on for every big undertaking. This course has many serious drawbacks. In this country one of the great disadvantages attending the conduct of business by the Government is the grand airs its functionaries are apt to assume. Up to a very recent date one could always tell when one had passed from a railway line owned by a private company to a Government line by the demeanour of the railway employees. In replying to a letter containing some request the term 許可, *kyōka suru*, was

constantly used by Government Railway officers, when *shōchi itashimasu* would have been more appropriate. This abuse is on the decrease as far as Government railways are concerned, but in other lines of business red-tapeism and arrogance are as strong as ever and constitute a serious obstacle to the rapid despatch of business. If the Government is running railways or managing a telegraph line, it has entered the business world and should feel itself to be on the same footing as ordinary business men. The Government that administers the Law and superintends the defence of the country is to be distinguished from the Government that runs a railway. There is a dignity attached to the former that is not associated with the latter. It is the failure to realise this fact that causes the assumption of lordly airs on the part of Government business men. *Seifu wa tōsen Seifu no suru koto to Seifu no suru mīngyō to kubetsu sezarubekarazu.* "The Government must distinguish between what it does in its proper capacity as a Government and what it does in the capacity of a body carrying on business for the nation." This subject has been repeatedly discussed in the columns of the *Jiji Shimpō*. According to that journal there is an enormous amount of silly arrogance still prevailing in Government offices and the waste of time and unpleasantness caused by the lordly airs of petty officials are still very considerable.

* * *

Dr. Soeda Juichi, who was the founder of the *Kōgyō Ginkō*, publishes an article in the *Taiyō* entitled *Sangyō Seisaku* "Government policies for increasing products," which contains some valuable facts and statistics. The following is the gist of Dr. Soeda's essay:—The prosperity of a country depends largely on its adjusting its expenditure to suit its revenue. If the spending goes on much faster than the making of money a country is going down the hill. It may be well to put Japan's present position to the test of figures. But first I wish to call attention to several indisputable facts. (1) The productive land throughout the country has not been improved in any way; so that it is incapable of producing more per year than it has hitherto done. (2) The savings of the people are exceptionally small, and what hoarding there is mostly consists of putting things and even money away in storehouses, where they are quite unproductive. (3) The amount of labour which our workmen get though in one day is only about one-fourth of that accomplished by American workmen. The pay the Japanese workman receives is about one-third of that of the foreigner; so that it is more economical to employ a foreign workman than a Japanese. When a number of men have to be used, where one foreign workman has perhaps to be housed and fed four Japanese have to be accommodated. We see then that in the elements that go to enrich a country, a productive soil, a thrifty and economic people and diligent workmen we are in a most unfavourable position. Now observe how expenditure has been increasing in recent years, especially since the China-Japan war. The following table shows the aggregate Prefectural and City (Fu) Debts during the past 9 years.

	Yen.
1893	9,093,801
1894	10,061,253
1895	10,299,934
1896	10,518,414
1897	13,738,161
1898	20,264,480
1899	24,628,299
1900	30,769,473
1901	33,187,806

The next table shows at what rate we have been sending money abroad in recent years.

	YEN.
1896	53,831,714
1897	56,165,693
1898	111,748,403
1899	5,472,033
1900	82,831,851
1901	3,467,101

Total 313,516,796

Thus it is seen that most of the money we obtained from China was sent abroad. What we have purchased is out of all proportion to what we

have produced* and hence it is that the business world has drifted into speculation, with the creation of a number of small companies, and what not. This state of things is largely the cause of the prevailing political corruption. From the following table, which gives the wealth of the various countries of the world, we can see where we stand.

COUNTRIES.	YEN.
America	128,240,000,000
England	94,000,000,000
France	85,980,000,000
Germany	64,370,000,000
Austria	38,550,000,000
Italy	29,630,000,000
Japan	11,000,000,000†

The next table shows the annual value of the commerce carried on by seven of the leading countries of the world.

Countries.	Yen.	Average per man of the population.
England	7,402,000,000	Yen 190
America	3,200,000,000	" 50
France	3,110,000,000	" 80
Russia	1,185,000,000	" 10
Belgium	1,110,000,000	" 80
Italy	940,000,000	" 30
Japan †	472,000,000	" 11

The following figures show the extent to which each of the great nations saves.

MONEY ENTRUSTED TO SAVINGS BANKS.

Countries.	Yen.	Average per man of the population.
America	4,358,837,000	Yen 69
Germany	2,484,050,000	" 77
Austria	2,062,982,000	" 49
England	1,731,395,000	" 42
France	1,708,522,000	" 44
Italy	873,106,000	" 27
Russia	537,218,000	" 5
Japan	51,908,000	" 1

Japan has cause for real gratification in the state of her education, her laws and her army and navy, but her trade and industry are in a poor way compared to those of other Powers. What is the real cause of this? No other than our love of old habits of thought and life. The normal Japanese prefers to sit still and do nothing, or to while away time by spinning theories or knocking down those that others have spun. He despises business and is content to saunter through life in an utterly nonchalant manner. Dr. Soeda supplements these remarks with an earnest appeal to the nation to arouse itself and to adapt itself to the new conditions with which the progress of events have surrounded it. Summarised, the recommendations of Dr. Soeda are as follows:—(1) That efforts be made to make use of all the natural resources of the country to the very utmost; (2) that steps be taken to accumulate capital and that endeavours be made to encourage the habit of saving; (3) that the results of labour be augmented by inciting workmen to put more energy into their work; (4) that better means of land and water communication be established; (5) that the burdens of the producing classes be lightened; (6) that legal procedure of all kinds be simplified and unnecessary delay in the trying of cases be avoided; (7) that local Government assemblies take up the subjects of agriculture, commerce and industry earnestly and devise measures for increasing the produce of the country; (8) that in our relations with other countries our pecuniary interests be made a primary concern, and that all members of the Diplomatic body be required to pay more attention to business matters and Japan's material interests; (9) that the development of our armaments be regulated by the development of our commerce; this will mean that greater importance should be attached to our navy than to our army; it is most important that our merchant ships should always be able to

* Dr. Soeda does not seem to take into account the fact that much of the money sent abroad is for wealth-producing machinery and material. Excessive imports are not of themselves an unfavourable symptom. In England's case they are associated with unusual prosperity.—(WRITER OF SUMMARY.)

† Japan's wealth is usually stated to be 15,000,000,000 yen.—(WRITER OF SUMMARY.)

‡ The figures for Germany are omitted in this table as those for Russia were in the last.—(WRITER OF SUMMARY.)

rely on our protection wherever they may go. (ro) that business men should occupy a higher place in public esteem. Hitherto they have been despised and hence many weak-minded men have been prevented from choosing a business profession. Sentiment goes for a great deal in these matters. * * *

In the *Shakaigaku Zasshi* (Sociology) Mr. Nunokawa Seiyen writes on four alleged defects in the Japanese learned world. I. *There is want of sufficient interest in science and of greater facilities for the study of the same.* According to the report of the Teikokukai Zushokan for last year the books on Law, Politics and Economy in that library numbered 13,660 volumes; those on History and Biography, 9,404; and on Literature, 8,714; those on Mathematics, 7,642; those on Philosophy, 6,857, and those on miscellaneous subjects, 5,532. Those on Science and Medicine only numbered 481 and those on social statistics 280. II. *There is a lack of places for conducting chemical examinations, experiments and analysis.* In the whole country there are not more than two or three such places and they are all under Government control. When some chemical question like the Ashio copper poisoning affair comes up for discussion it is desirable that ordinary citizens should have access to laboratories in which chemical changes resulting from contact with various substances may be properly tested. When a dispute arises between the Government and private citizens relating to some chemical process it is essential that the latter should possess the means of testing the matter scientifically. III.—*There is a lack of statistical facilities for various investigations.* There are a number of social questions of great importance which it is now impossible to study scientifically in Japan on account of the want of thoroughly reliable statistics. There is a good deal of noise made in the literary world about the desirability of studying Japanese Sociology, but the means for doing it have still to a very large extent to be called into existence. IV.—*The study of Law, Politics, and Economy is overdone.* There are far too many students engaged on these subjects. It is a result of the traditional love of dialectics which is so common among Japanese youths. Hundreds of these students start on a career that offers no tempting prospects whatever and end by being forced to accept posts for which their education has in no way qualified them. The creation of such a surplus of unproductive young men is one of the evils of the time. There are more talkers than doers.

On the position Japanese occupy as regards the acquisition of wealth Mr. Kure Bunso the well known statistician writes in the *Shakaigaku Zasshi* as follows:—There are only two men in Japan who pay an income tax of over 250,000 yen. There are only 13 men in the whole country who pay 39,000 yen, being in the proportion of 4 persons to every 100,000 inhabitants; only 67 who pay 24,000 yen, being in the proportion of 2 persons to every 10,000 inhabitants; 96 persons who pay 17,000 yen, being in the proportion of 2.8 persons to every 10,000 inhabitants; those who pay 11,000 yen number 140, being in the proportion of 4 persons to every 10,000 inhabitants. Out of each 1,000 inhabitants there are only 7 persons who make 2,700 yen a year. Thus it is seen that when compared with the French and the English the Japanese are extremely poor. The Germans seen to be rich to the Japanese, though when compared with the French and English they are poor. General Grant when in Japan nearly 20 years ago remarked that Japan was fortunate in having such an equality among all classes of the people. He said that the gulf between the rich and the poor did not exist here. Equality may be all very well in its way, but says Mr. Kure, a state of equality in which most of the people hardly have enough to live on is anything but desirable.

Lane, the Australian swimmer, has just succeeded in swimming three hundred yards, in a tournament at Liverpool, in 3 min. 42 1/5 seconds, which is the world's record for this distance.

AMERICAN TOPICS.

The Stoughton Musical Society is the oldest organization of its kind in America. It celebrated its centennial in Stoughton, Mass., on June 6th, 1886, and at its annual reunion a few weeks ago at Highland Park, Avon, 15,000 people listened to its performances.

It is stated that investigations made by the board of American naval officers as to the utility of liquid fuel for the navy are not favourable to its use. Rear-Admiral Melville is satisfied from the tests that, while oil can be burned as a fuel with facility, it is not an economic fuel for naval purposes. He does not believe there is any prospect of liquid fuel being used in the navy in place of coal, with a possible exception of the very small craft. The experiments, however, will be continued.

When Mr. Alexander Shepard was Governor of the District of Columbia, during General Grant's occupation of White House, so much money was spent on public improvements in Washington that he became the best hated man by the taxpayers of the district. He left Washington poor and under the darkest kind of a cloud, and went to Mexico to seek a change of fortune. He has since become very wealthy through fortunate mining ventures, and recently returned to Washington. Public opinion concerning his acts as Governor of the district is now so changed in his favour, remarks a Californian paper, that a movement has been started to appoint him to a vacancy which exists on the Board of District Commissioners. The people who are thus disposed to honour and trust him now with the management of the public works of the district would have burned him in effigy twenty years ago for performances which they did not understand but the enormous value of which time has since proved.

The following pathetic story was told in New York on Sept. 8th:—As a result of the surgical operation which his physicians thought necessary to save his life, Bradford B. McGregor, the young Standard Oil millionaire, lies dead at his home in Mamaroneck. Mrs. McGregor, who married the young man just before the operation, that she might nurse him back to health, if possible, and who became a widow within, thirty-six hours from the time she became a bride, is prostrated from the shock and from exhaustion. Before the operation was performed, at which the young bride was present, McGregor made a will by which his widow will inherit over \$1,000,000. Ex-rays had been used to ascertain McGregor's ailment. They had shown a heart-shaped stone in one of the kidneys, and to remove it the surgeons had made an incision in the back. They removed the stone, weighing 500 grains, and the wound was closed and antiseptically dressed. Mr. McGregor had only recently divorced his first wife.

Making all allowances, people seem to live longer than they used to in the United States. This is the conclusion to be drawn from the figures in a statement issued by the U.S. Census Office in which the median age of the population under the census of 1900 is compared with that under several preceding censuses. It may be explained that the median age is such an age that half the population is over it and half under it. The median age of the total population in 1900 was 22.8, as compared with 21.9 in 1890. The median age of the white population is higher than that of the coloured portion, being 23.4 in 1900, as compared with 19.7 for negroes, Indians and Mongolians. In 1890 the figures were 22.4 for the whites and 18.3 for the coloured people. There seems to have been an increase in the median age of the white population during each decade from 1810 to 1900. In the ninety years intervening the increase amounted to 7.4 years. Of course a number of influences have cooperated in bringing about this result. Three are specially mentioned, namely, the rapid progress of medical and sanitary science, which has tended to increase the average length of life; the decrease in the relative number of children born, which has made

the earlier-age periods less preponderant numerically in the total population, and the influx, especially since 1840, of great numbers of adult immigrants, increasing the number in the older-age periods.

The American Bicycle Company, which was organized in 1899, is the first of the big trusts to go to the wall, says the *San Francisco Chronicle*. The company has never paid any dividends on its \$20,000,000 common stock and \$10,000,000 preferred stock, bearing 7 per cent. cumulative interest, and it has failed to meet the 5 per cent interest due on the \$9,500,000 of outstanding bonds. The combined plants in the trust represented 60 per cent. of the bicycles manufactured in the States. In 1897 these plants sold 562,100 bicycles; in 1898, 661,232, and in 1899, when they were consolidated, 841,642. Since then the sales have diminished, until last year there was a genuine slump, and this year's business has been no better, hence the combine finds itself unable to meet its bonded obligations.

In a recent number of *Outing* Mr. William J. Lampton declares that at present automobiles are too complicated and prices are too high for general adoption. The ratio of machines to population in the United States, 12,000 to 78,000,000, say; that is, one to every 6,500 persons, does not at first appear promising, but when we consider that only three years ago the ratio was one to 1,500,000 persons a very different aspect is presented, and it may be safely concluded that with such possibilities of demand the automobile must of necessity grow to meet the measure of its greatness. American makers are quicker to see this opportunity than are their foreign rivals, as is proved by prices. Foreign machines are sold in America at from \$2,500 to \$20,000, the record price paid by a wealthy New Yorker for a French machine, while the highest-priced American machine is \$5,000, and hundreds are in use which cost their owners from \$650 to \$800. A good horse and waggon may be had for \$200, and the automobile must approximate this figure to become popular. That this may be done and still be profitable to makers is shown in the history of bicycle prices, and in the further fact that one of the first American makers, with the popular idea in view, made machines to sell at from \$400 to \$600, and advanced his prices later because he could get whatever he asked.

It is reported, says *Railway and Locomotive Engineering*, that the Boston and Maine and the Boston and Albany railroads are about to discontinue oiling their roadbeds, after a three years' trial. The New York, New Haven and Hartford has also given up the practise, and the Long Island Railroad discontinued the practise about a year ago. Several of these roads are ballasting the permanent way with broken stone, which, after the rain has thoroughly washed it, gives no further trouble from dust. Elsewhere the oiled roadbed is giving every satisfaction. On the Atchison, Topeka and Santa Fé, when the road was first oiled, enough was put on to penetrate the ballast to a depth of four inches. From 2,000 to 2,200 gallons to a mile of single track is used, at a cost of from \$35 to \$45. The treatment leaves the fine sand, which flew in clouds about a train, firmly anchored to the earth and with the appearance and consistency of brown sugar. It is claimed for the oiled roadbed that the oil destroys vegetation along the line and thus saves the cost of weeding, also that it helps to preserve the ties by rendering the track waterproof, and that it deadens the noise. Many ordinary highways in the West have been "oiled" with satisfactory results.

NEWS OF THE WEEK.

The *Calcutta Statesman* announces that a Bhujya manuscript of great antiquity, entitled *Isah Samhita*, by Parasara, the great astronomer and ascetic of ancient India, has been discovered and is now in the possession of Mr. John A. Francis, Calcutta. The manuscript contains an

account of the incarnation singularly in harmony with the sacred story of Christianity.

The will of the late Mr. W. A. Main (61) of 7 King-st., St. James, for thirty-four years in the service of the Chartered Bank of India, Australia, and China, has been entered for probate at £35.752.

Further discoveries have been made in the great ruins at Zimbabwe, Rhodesia. Two ancient ascents leading up to the citadel itself have been cleared. An old stairway was also discovered, and various objects, including gold bangles and pieces of pottery, were found. One of the passages which was penetrated for the first time is 994ft. in length.

The steamship *Siberia*, built at Newport News for the Pacific Mail Steamship Company, left that port on Sept. 8th on a trial run, with Vice-President Schwerin of the P. M. Company on board. She returned to Old Point on the evening of the 10th after a most successful trial at sea, making a maximum speed of twenty-one knots. She made the run of 360 miles from the Capes to Nantucket shoals in twenty hours, averaging eighteen knots an hour under natural conditions. Coming back several spurts were made, and the *Siberia* ran easily from nineteen to twenty-one knots an hour. She was to leave in about two weeks for San Francisco.

The news from Acheen about the recent successful surprises of patrols by Achinese have aroused a painful impression in Holland, says the *Strait Times*. The Achinese, it is evident, are as daring as ever despite thirty years of warfare, and those who keep the field continue to be irreconcilable. Such onslaughts were seldom heard of a few years ago. Now they are becoming too common. The fault is said to lie in not sending troops enough to the seat of disturbance. The result is that in the remoter districts the enemy actually outnumber the forces of the Government, and can come into action in overwhelming strength.

Among the curious points mentioned in the English postal report is that over £1,000 in coin was found loose in the post last year. The increase in receipts for telegrams for the year was £55,201. The average weekly number of words contained in Press telegrams was 14,344,883, as compared with a weekly average of 16,065,602 for the previous year. As an instance of the work thrown on the department on special occasions it may be mentioned that the number of words transmitted from London on the evening of June 2, in connection with the announcement of the terms of peace amounted to nearly 740,000. In this connection it may also be recorded that on March 19 a business firm despatched a telegram to 7,720 different addresses.

The *Tokyo Asahi* has a paragraph to the effect that in July this year when Mr. Musashi Kumataro, a Japanese resident in Korea, with several Chinese was taking a quantity of timber down the Yalu river the party was attacked by Korean soldiers. As a result the timber and the money of the party were plundered by the soldiers, who, not contented with this, took the party to their station, where the Japanese and Chinese were detained for over ten days. Nor was this all. The prisoners were all subjected to cruel treatment. The matter was subsequently reported by Mr. Musashi to the Pingyang branch of the Japanese Consulate in the Korean capital but no step, says the paper, has yet been taken by the Japanese authorities in the peninsula.

In the Sydney Water Police Court on the 29th August the adjourned hearing of the charge against T. Ando, second steward, and K. Okumura, understeward, on the Japanese mail steamer *Yavata Maru*, of unlawfully interfering with 110 boxes of cigars without authority and not in accordance with the Customs Act of 1901, was resumed. The solicitor for the defence informed the Court that the defendant Ando pleaded guilty. Customs-Officer Donohoe stated that, as the result of enquiries, he had ascertained that the price of the

cigars was £8 per thousand. The defendant Okumura deposed that he was a boy on the *Yavata Maru*. He helped to carry the linen down the gangway, but knew nothing of the contents of the bundles. The magistrate found the defendants guilty, and fined Ando £60, or in default, three months' imprisonment. Okumura was fined £30, or two months' imprisonment.

REVISED IMPORT CUSTOMS TARIFF.

By Imperial Ordinance No. 219, published in the *Official Gazette* of Sept. 30th, the Specific Import Duties are revised, the new tariff to come into force on April 1st, 1903, when Imperial Ordinance No. 220 of 1898 will be repealed. It may be noted that the tariff is now revised under Art. 3 of the Customs Tariff Law which reads:

"In regard to those articles enumerated in the annexed Tariff, in respect of which it is found advisable to convert the *ad valorem* rates of duty into specific duties, the articles and their subdivisions may be determined by Imperial Ordinance."

The specific duties, above mentioned, shall be determined according to the rates of duty set forth in the annexed Tariff, taking average values for a period of six months or more, and calculated upon the basis prescribed in the preceding article."

The revised tariff is as follows:—

No in the Statutory Tariff.	Per Kin.	Specific Duty. Y. n.
23 Bullets	100	2.187
32 Biscuits:		
<i>a</i> Ship biscuits	—	.021
<i>b</i> Fancy biscuits	—	.054
33 Butter	—	.099
34 Cheese	—	.062
35 Coffee (berry)	—	.064

478	Soap (for washing)	100 1.256
479	Soap-stone (in lump or powder)	100 .127
484	Timber, santalum (shitan)	100 1.166
485	Timber, Teak	100 10.035
Note.—The word "kin" in the above table means the Japanese weight. The word "yard, foot and inch" are English measures. The words "pounds and tons" are English weights in avoirdupois. The word gallon is American standard gallon. The word "litre" is French measure.		

YOKOHAMA GENERAL HOSPITAL.

We have been asked to print in the public interest the following letter. It speaks for itself :—

DR. A. MECRE,
Manager, General Hospital.

SIR,—The Board of Directors of the Ladies' Hospital Fund held a meeting this morning, and I laid before them your letter, in which you decline their invitation to be present at a meeting, and explain fully to them your position regarding the reception at the General Hospital of a foreign trained nurse. They authorized me to inform you that, since you persist in your refusal to grant conditions which we fully believe are essential to the success of our attempt to furnish better care for hospital patients, we now withdraw our offer to pay the salary of a foreign trained nurse, and herewith terminate our present negotiations with you.

In order that you may know we are not acting on a sudden impulse, I will enumerate some of the reasons why we have insisted on the employment of a foreign nurse, and why we now withdraw our offer to you.

We undertook this work because of the representations at the investigation by the General Committee after Mr. Swan's death, from which it appeared that you could not, without personal loss, maintain the Hospital service in the efficient condition desired. Being concerned to obtain all the information possible regarding the management of the Hospital, so as to ascertain the best manner of affording relief, I and my associates in the work have conversed with nurses who have been employed in the General Hospital, from time to time, and with patients and the friends of patients who have been under treatment there. Everything we have heard confirms the belief that more intelligent supervision and stricter discipline among the attendants are imperatively demanded, and that any expenditure which does not take these elements into account is money thrown away.

Without reflecting at all upon the Japanese nurses, whom we believe to be gentle, faithful, considerate, and careful, we are convinced that they do not possess that firmness and general executive ability needed in a head nurse for foreign patients. We fully appreciated from the first that only a woman of exceptional tact, and good judgment could succeed in the position proposed, and we wanted freedom in selecting

whoever seemed to us most likely to possess the requisite qualifications. We also recognized that if it should be necessary to bring a nurse from England or America, we would suffer considerable loss should she not prove a success, but the need seemed so urgent that we were willing to accept the risk, until your persistent objections and prophecies of certain failure where you had the power to fulfill your own prophecies, convinced us that it was useless to continue our efforts further in that line.

We shall not abandon our attempt to provide suitable hospital accommodations for the sick of Yokohama, but we must seek such accommodation where we can be assured of the hearty co-operation of those in charge.

Very sincerely,

(signed) IDA I. BELLOWS,
President of Board of Directors.
Yokohama, Sept. 25th, 1902.

THE RUSSO-CHINESE BANK.

The Russo-Chinese Bank has now removed from its temporary habitation at No. 76 and is housed in what is probably the most handsome building in the business portion of the city. That is at No. 180, where the premises of Messrs. Grosser and Company formerly stood. While the previous buildings, however, had entrance from the wide street running up from the Hatoba the Bank's architect has placed the main entrance on the corner where, the crossing of four streets giving a fine open space, his fine treatment of the building may be seen and, as it deserves to be, admired. On entering the main door an open double staircase gives access to the general department and to the chief manager's office, the section of the Chinese shroffs, which may be entered from a side door, being also in connection of course with the general office. Nothing but teak has been employed in the panelling, and the door and window woodwork, the floors, except in the Chinese department and in the basement, where tiles are employed, being of the finest pine. The strong places are in the basement. They consist of a large book and document room (lighted by one well-protected window from the street) into which descends a lift by means of which books, etc., are sent between this room and other parts of the building. This elevator enjoys the possession of a properly protected door. In the actual strong room, which is both lofty and spacious, and is composed of steel frames covered with great thickness of cement, there is space to store a few indemnities, and also room enough for a whole wall-side-full of strong boxes, various in size, which are to be let as safe-depositories. The doors, etc., of these rooms have been supplied by the well-known maker S. J. Arnheim. In the basement floor, also, are quarters for the Japanese, a cloak room and a lavatory, all well lighted and with the best of ventilation.

The upper portion of the building is reserved for the residence of the chief manager. Passers-by cannot fail to be impressed by the fine elevation over the corner entrance. Three windows flanked with graceful pilasters are surmounted by an imposing copper-covered dome finished off in strict accordance with the canons of Russian architecture. Under this dome on the residential floor is a beautifully proportioned ball-room, and the other apartments are no less spacious and imposing. The dining room, especially, is a magnificent *salon*, round which runs high teak panelling, enriched with fine carvings of fruit and game; and the ceiling is equally a work of art.

It may be remarked that it is intended to light the buildings by means of an electric installation, the dynamo of which has already arrived. Operations only await the coming of the candelabra and other fittings which are by first-class Parisian makers.

The Bank is certainly to be congratulated upon the character of the premises that Mr. Seel has handed over, and the many visitors who called on Monday and drank success to the Bank and the Chief Manager, Mr. Groener, were not grudging in their eulogies.

A VERITABLE STOREHOUSE OF ART.

The glories of Kyoto needlework and the beauties of the textile fabrics turned out by the art-workers in the ancient capital of Japan have engaged the pens of many able writers of recent years, but we imagine that it requires a personal inspection of some of these magnificent products of the workshop and *atelier* before the mind can adequately realise all that Kyoto embroideries mean to the genuine lover of beautiful work. Such an opportunity is afforded to dwellers in Yokohama by the opening at No. 8, Honcho-dori of a branch store of Messrs. Benten & Co., so long established at No. 67 Shinmonzen, Kyoto. They have on show a truly superb display of embroideries, tapestries and cut velvets, set out in hangings, bed-spreads, fukusa, piano-covers, screens, pictures, draperies, kimono, table and mantel covers, etc., ranging from the simplest designs to the most complex. Some of the cut-velvets are very fine, and a study of a stag, a doe and a fawn will attract attention, we imagine, for its simplicity as well as its extreme naturalness. But fine as are these *yuzen birodo*, they pale their ineffectual fires before the regal splendour of the needlework so lavishly displayed on screens and draperies. These are the productions of real artists and lucky will be the folks into whose possession they will come. Considering the enormous amount of labour involved the prices placed upon the different articles are extremely moderate. We advise our readers, however, to defer their visits to the store until next week, when the internal alterations now being made will be complete and some specially rich parcels at present on their way from Kyoto will have arrived and been unpacked. Certainly no one should miss such a unique opportunity.

CLASSICAL ORIGIN OF PROVERBS.

In the *New Liberal Review* Mr. Churton Collins has one of those learned literary tit-bits articles which he does better than anyone else. It is concerned with popular proverbs and their origin. Mr. Collins shows that a very large percentage of our pithiest sayings are the wit and wisdom of ancient Greece and Rome. "His bark is worse than his bite" is as old as Quintus Curtius, who himself cites it as a proverb. "He is a wise child that knows his own father" is from a passage in the "Odyssey," where Telemachus says, "My mother indeed says that I am his [child]; for myself I know not, for never man yet knew his own father." "A rolling stone gathers no moss" is simply the translation of a Greek verse, "moss" being substituted for "seaweed." To Aristotle we owe "One swallow does not make spring," but even Aristotle quotes it as a proverb. "Familiarity breeds contempt" is taken literally from the Latin version of a sentence in Plutarch's "Morals," "*Nimia familiaritas contemptum parit*." "*De mortuis nihil nisi bonum*" is from Plutarch's "Life of Solon," where, speaking of Solon as a legislator, he says, "That law is also justly commended which forbids men to speak ill of the dead: for piety requires us to consider the dead as sacred." "The receiver is as bad as the thief" is a translation of a hexameter verse of Phocylides. "Better late than never" we owe to Dionysius of Halicarnassus, "It is better to begin late doing our duties than never." "Tread upon a worm and it will turn" is the Latin "*Habet et musca splenem*." "Set a thief to catch a thief" is Cato's saw, "*Ars deluditur arte*." "An old bird is not caught with chaff" is but "*Annosa vulpes haud capitur laqueo*" ("An old fox is not caught with a snare"). "Coals to Newcastle" is the exact equivalent of "Owls to Athens."

THE ARBITRATION.

PROTOCOL.

Whereas, a dispute has arisen between the Government of Japan on the one side and the Governments of Great Britain, France and Germany on the other, respecting the true intent and meaning of the following provisions of the Treaties and other engagements respectively existing between them, that is to say:—

Paragraph 4, Article XVIII, of the Treaty of Commerce and Navigation of April 4, 1896, between Japan and Germany: "Sobald diese Einverleibung erfolgt," [that is to say: when the several foreign Settlements in Japan shall have been incorporated with the respective Japanese Communes], "sollen die bestehenden, zeitlich unbegrenzten Ueberlassungsverträge, unter welchen jetzt in den gedachten Niederlassungen Grundstücke besessen werden, bestätigt und hinsichtlich dieser Grundstücke sollen keine Bedingungen irgendeiner anderen Art auferlegt werden, als sie in den bestehenden Ueberlassungsverträgen enthalten sind"; and § 3 of the complementary communication of the same date from the German Secretary for Foreign Affairs to the Japanese Minister at Berlin: "3. dass, da das Eigentum an den im Artikel XVIII. des Vertrages erwähnten Niederlassungsgrundstücken dem Japanischen Staate verbleibt, die Besitzer oder deren Rechtsnachfolger für ihre Grundstücke ausser dem kontraktmässigen Grundzins Abgaben oder Steuern irgend welcher Art nicht zu entrichten haben werden"; and the clause in the reply of the Japanese Minister of the same date, to the foregoing communication: dass die "darin unter Nummer I bis 4 zum Ausdruck gebrachten Voraussetzungen, welche den Erwerb dinglicher Rechte an Grundstücken, die Errichtung von Waarenhäusern, die Steuerfreiheit der Grundstücke in den Fremdenniederlassungen und die Erhaltung wohlhabender Rechte nach Ablauf des Vertrages zum Gegenstande haben, in allen Punkten zutreffend sind";

Paragraph 4, Article XXI, of the Revised Treaty of August 4, 1896, between Japan and France: "Lorsque les changements ci-dessus indiqués auront été effectués," [that is to say: when the several foreign Settlements in Japan shall have been incorporated with the respective Japanese Communes and made a part of the municipal system of Japan; and when the competent Japanese Authorities shall have assumed all municipal obligations and duties, and the municipal funds and property belonging to such Settlements shall have been transferred to said Japanese Authorities], "les baux a perpétuité en vertu desquels les étrangers possèdent actuellement des propriétés dans les quartiers seront confirmés, et les propriétés de cette nature ne donneront lieu à aucuns impôts, taxes, charges, contributions ou conditions quelconques autre que ceux expressément stipulés dans les baux en question"; and

Paragraph 4, Article XVIII, of the Revised Treaty of July 16, 1894, between Japan and Great Britain: "When such incorporation takes place," [that is to say: when the several foreign Settlements in Japan shall have been incorporated with the respective Japanese Communes], "existing leases in perpetuity under which property is now held in the said Settlements" shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property"; and

Whereas, the controversy is not amenable to ordinary diplomatic methods; and

Whereas, the Powers at variance, co-signatories of the Convention of The Hague for the peaceful adjustment of international differences, have resolved to terminate the controversy by referring the question at issue to impartial arbitration in accordance with the provisions of said Convention;

The said Powers have, with a view to carry out that resolution, authorized the following Representatives, that is to say:

The Government of Great Britain: Sir Claude Maxwell MacDonald, G. C. M. G., K. C. B., His Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary;

The Government of France: Monsieur G. Dubail, Minister Plenipotentiary, *Charge d'Affaires* of France;

The Government of Germany: Count von Arco Valley, Envoy Extraordinary and Minister Plenipotentiary of His Majesty the German Emperor, King of Prussia;

The Government of Japan: Baron Komura Jutaro, His Imperial Japanese Majesty's Minister of State for Foreign Affairs;

To conclude the following Protocol:

I.—The Powers in difference agree that the Arbitral Tribunal, to which the question at issue is to be submitted for final decision, shall be composed of three members, who are Members of the Permanent Court of Arbitration of The Hague, to be selected in the following manner:

Each Party, as soon as possible and not later than two months after the date of this Protocol, to name one Arbitrator, and the two Arbitrators so named together to choose an Umpire. In case the two Arbitrators fail for the period of two months after their appointment to choose an Umpire, His Majesty the King of Sweden and Norway shall be requested to name an Umpire.

II.—The question at issue upon which the Parties to this Arbitration request the Arbitral Tribunal to pronounce a final decision, is as follows:

Whether or not the provisions of the Treaties and other engagements above quoted, exempt only land held under leases in perpetuity granted by or on behalf of the Japanese Government, or land and buildings of whatever description, constructed or which may hereafter be constructed on such land, from any imposts, taxes, charges, contributions or conditions whatsoever, other than those expressly stipulated in the leases in question.

III.—Within eight months after the date of this Protocol, each Party shall deliver to the several Members of the Arbitral Tribunal and to the other Party, complete written or printed copies of the Case, evidence and arguments upon which it relies in the present Arbitration. And not later than six months thereafter, a similar delivery shall be made of written or printed copies of the Counter-Cases, additional evidence, and final arguments of the two Parties; it being understood, that such Counter-Cases, additional evidence and final arguments shall be limited to answering the principal Cases, evidence, and arguments previously delivered.

IV.—Each Party shall have the right to submit to the Arbitral Tribunal as evidence in the case, all such documents, records, official correspondences, and other official or public statements or acts bearing on the subject of this Arbitration, as it may consider necessary. But if in its Case, Counter-Case or arguments submitted to the Tribunal, either Party shall have specified or alluded to any document or paper in its own exclusive possession without annexing a copy, such Party shall be bound, if the other Party thinks proper to apply for it, to furnish that Party with a copy thereof within thirty days after such application is made.

V.—Either Party may, if it thinks fit, but subject to the right of reply on the part of the other Party within such time as may be fixed by the Arbitral Tribunal, present to the Tribunal for such action as the Tribunal may deem proper, a statement of objections to the Counter-Case, additional evidence, and final arguments of the other Party, if it is of opinion that those documents or any of them, are irrelevant, erroneous or not strictly limited to answering its principal Case, evidence, and arguments.

VI.—No papers or communications, other than those contemplated by Sections III. and V. of this Protocol, either written or oral, shall be admitted or considered in the present Arbitration, unless the Arbitral Tribunal shall request from either Party additional or supplementary explanation or information to be given in writing. If the explanation or information is given, the other Party shall have the right to present a written reply within such time as may be fixed by the Arbitral Tribunal.

VII.—The Tribunal shall meet at a place to be designated later by the Parties, as soon as practicable, but not earlier than two months nor later than three months after the delivery of the Counter-Cases as provided in Section III. of this Protocol, and shall proceed impartially and carefully to examine and decide the question at issue. The decision of the Tribunal shall, if possible, be pronounced within one month after the President thereof shall have declared the arbitral hearing closed.

VIII.—For the purposes of this Arbitration, the Government of Japan shall be regarded as one Party, and the Governments of Great Britain, France and Germany, jointly, shall be regarded as the other Party.

IX.—So far as is not otherwise provided in this Protocol, the provisions of the Convention of The Hague for the peaceful adjustment of international differences, shall apply to this Arbitration.

Done at Tokio, this 28th day of August, 1902, corresponding to the 28th day of the 8th month of the 35th year of Meiji.

(TRANSLATION.)

Department of Foreign Affairs,

Tokio, August 28th, 1902.

In view of the conclusion this day, of a Protocol, by which the Governments of Japan, Germany, France and Great Britain have agreed to refer to impartial arbitration the question whether or not the provisions of the Treaties and other engagements mentioned in the said Protocol, exempt only land held under leases in perpetuity granted by or on behalf of the Japanese Government, or land and buildings of whatever description, constructed or which may hereafter be constructed on such land, from any imposts, taxes, charges, contributions or conditions whatsoever other than those expressly stipulated in the leases in question, the Imperial Government have deemed it proper that the forcible collection of the taxes and rates in respect of such buildings, should be suspended during the arbitral proceedings. The undersigned, His Imperial Japanese Majesty's Minister of State for Foreign Affairs, has, therefore, the honour to acquaint.....

.....that the Imperial Government will suspend the forcible collection of the taxes and rates above mentioned until the arbitral decision is pronounced

or the arbitral proceedings are otherwise terminated; it being understood that such suspension shall not prevent the Japanese Authorities from collecting the taxes and rates in question so far as they can do so without recourse to distraint; and it being further understood that neither such suspension, nor the consequences thereof, nor the voluntary payment of the said taxes and rates, is to be invoked against, or to operate in any way to the disadvantage or prejudice of any of the above-mentioned Powers in connection with said arbitration.

The undersigned avails himself of this occasion to renew to.....the assurance of his highest consideration.

(Signed) BARON KOMURA JUTARO.

THE LATE EMILE ZOLA.

A strenuous life has been brought to a premature close by the accidental suffocation of M. Emile Zola. We take the following facts relating to his career from *Men and Women of the Time* :—

Zola, Émile, French novelist and patriot, was born in Paris, 10 Rue St. Joseph, on April 2, 1840, of a French mother, Emilie Aubert, and an Italian father, an eminent civil engineer, whose work, "Un Traité de Nivellement," gained him the membership of the Academy of Padua. François Zola is best known by the "Canal Zola" at Aix; he was born in 1796 at Venice, and died at Marseilles in 1847, leaving his family very badly off. His more famous son, Emile, passed his boyhood at Aix, where he studied at the local college, and came to Paris in February 1858. He obtained a scholarship at the Lycée St. Louis, where he was a pupil of Levasseur, who predicted the success of the future novelist on reading an essay of his on "Milton dictating to his daughter." All the same he failed to pass his *baccalauréat*, being rejected in literature in the *viva voce*. In 1860 he left the Lycée, and after working at the docks for two months, he preferred starvation and threw up his post. Towards the end of 1861 he obtained an introduction to Messrs. Hachette, the well-known publishers, and started in their office, first as a shopman at £4 a month, and afterwards as a clerk, when they saw his worth. He employed his leisure in writing short tales, which were afterwards published under the title of "Contes à Ninon" (Oct. 24th, 1864). During the next year he wrote tales for the *Petit Journal* and *La Vie Parisienne*; and a collection of articles for the *Salut Public* of Lyons, which were afterwards published under the title of "Mes Mameuses." This same year (1865) saw the publication of "La Confession de Clause," and on Jan. 31st, 1866, he resigned his position at Hachette's, convinced that he could earn his living by his pen. Villemessant employed him to write reviews for the *Événement*, and afterwards a set of articles on the "Salon," which created such a stir that they had to be cut short. Now-a-days they read very tamely. In the same paper appeared as a serial "Le Vœu d'une Morte," and in a provincial paper, "Les Mystères de Marseille." Neither of these achieved any great success. During 1866 and 1867 he wrote "Thérèse Raquin," which first appeared in Arsène Houssaye's paper *L'Artiste*, which had already published a wonderful study of Zola's on Manet. "Thérèse Raquin," the first title of which was "Une Histoire d'Amour," brought its author £24, and a violent series of letters in the *Figaro* and elsewhere. In 1868 he wrote "Madeleine Féral," a novel founded on a play which he had written in the previous year, but which he failed to get accepted. However, its serial career was cut short in the *Événement* to soothe the puritanism of its readers, and when published in volume form it attracted no notice. He formed with Flaubert, Daudet, and the Goncourts an informal "Naturalist School" in the last days of the Empire. To this period we must assign the first idea of the second greatest series of French novels of the nineteenth century, second only to Balzac's "Comédie Humaine." Up to now Zola had achieved no great success, in spite of his six published volumes. Then came to him the idea of bringing the scientific laws of heredity within the scope of romance, and he drew up, after eight months' hard work in libraries, museums, and the streets, the now famous genealogical tree of the family of the Rougons (to be found in "Une Page d'Amour" and in "Docteur Pascal"). In 1869 he went to his publisher, Lacroix, and offered to write twelve volumes of a series to be styled "Les Rougon-Macquart," and the contract was signed in May of that year. He applied his theory to the document *humain*, and in doing so he had to master the technical details of most professions, trades, and occupations. In June, 1870, the *Siècle* began the publication of the first of the series, "La Fortune des Rougon"; but the war soon interrupted its course, and it appeared in volume form in 1871. In

his preface he explains his object to be to show how a family can produce ten or twenty individuals appearing at a first glance totally different, but when analysed closely connected with each other. In 1872 the second volume appeared, "La Curée," which had been stopped in its serial publication. The third volume of the series was "Le Ventre de Paris," a description of the Paris markets, and from this time the firm of Charpentier became the author's publishers. Then came "La Conquête de Plassans," "La Faute de L'Abbé Mouret," an attack on celibacy and a vivid study of provincial life; and "Son Excellence Eugène Rougon." It cannot but be confessed that up to this point the success of the series had not been so great as the author and publisher had expected; but all this changes with the publication of "L'Assommoir." On its serial appearance in *Le Bien Public* it was, as usual, stopped by the outcries made as to its immorality and its anti-puritan bent; but an advanced journal, *La République des Lettres*, conducted by M. Catulle Mendès offered to continue the publication; and the discussion thenceforth raged more furiously. The author himself made a very powerful defence of his book, as being a work with a highly moral aim. It was dramatised by MM. Busnach and Gastineau, and the play was known in England as "Drink," in which Mr. Charles Warner made a great reputation. The next volume of the series was "Une Page d'Amour," and this was followed by "Nana," a work which made even a greater sensation than "L'Assommoir." It was published serially by the *Voltaire*, and its first edition ran into fifty-five thousand, a number up till then without precedent in French publishing. After this each successive volume of the Rougon-Macquart had its success assured beforehand, and their author was recognised even by his most violent opponents as one of the forces to be reckoned with in contemporary literature. The titles of the other volumes were: "Pot-Bouille" (1882); "La Joie de Vivre"; "Au Bonheur des Dames" (the sequel to "Pot-Bouille"); "Germinal," a study of French miners; "L'Œuvre," dealing with art and literature; "La Terre," an appallingly repulsive, and at times extremely humorous, study of the land-hunger of the French peasant, a book which, while grossly misrepresenting the better kind of French peasants, was the cause of five of M. Zola's disciples dissociating themselves from their leader's work. Of these MM. J. H. Rosny and Paul Marguerite have since achieved fame on different lines. Then came "Le Rêve," a book on romantic lines, which proves conclusively that M. Zola is not a master of sentimental romance, inasmuch as he lacks the poet's instinct. Report had it that this was an attempt of his to soothe the offended susceptibilities of the French Academy, and gain him admission thereto. "La Bête Humaine," dealing with railways, and "L'Argent," a study of the Bourse, followed; and then "La Débâcle," a vivid picture of the break-up of the Second Empire under the heavy hammer of the Teutons; and lastly, "Le Docteur Pascal," which completes the twenty volumes of this great series, and sums up the theories which he had enunciated in it. No man could be more justly proud of the efforts of his own brain, and his publishers gave him a déjeuner at which all literary Paris was present. On July 14, 1888, he was appointed a Knight of the Legion of Honour, and five years afterwards an Officer. From 1891 till 1894 he was president of the Société des Lettres. During the years that the Rougon-Macquart series was appearing M. Zola also wrote many critical articles, which were afterwards published as "Le Roman Expérimental," "Les Romanciers Naturalistes," and "Documents Littéraires." We must not forget to mention here that most powerful short story "L'Attaque du Moulin," published in a book entitled "Les Soirées de Médan," 1880, a volume named after his home near Paris, in which also appeared Guy de Maupassant's "Boule de Suif." It is a pathetic incident of the Franco-Prussian War, and has been made the subject of a well-known opera. A new set of critical articles appeared in the *Figaro* during 1880-81, which have been published as "Une Campagne." In 1893 M. Zola visited London on the invitation of the Institute of Journalists, whom he addressed on the subject of "Anonymity in Journalism." The next year he commenced a series of three novels, which he called "Les Trois Villes"—"Lourdes, Rome, and Paris." The first was a lurid picture of French pilgrimages to the southern shrine; the next, a book upon the Eternal City; and the last, a mass of documents which do not give a very clear idea of La Ville Lumière. In these three works he intended to represent the progress of an honest priest, the Abbé Pierre Froment, towards freethought, after discovering that the salvation of society is not to be effected by Catholic faith. It must not be forgotten that although a just appreciation of Zola is a commonplace of literary criticism in these days, very few years have passed since his translators and their publishers were treated as common criminals. In 1897 he achieved the unusual distinction of having a whole book written on his brain. This was a study by Dr. Edouard Toulouse, of the Paris Faculty of

Medicine, entitled "Enquête Médico-Psychologique sur les Rapports de la Supériorité intellectuelle avec la Neuropathie," which is an inquiry similar to that pursued in Mr. J. F. Nesbit's well-known work on the "Insanity of Genius." In this work we find every possible particular of the novelist's physical and mental life from the cradle to the date of publication. We learn that, as in early years he endured extreme privation, he was correspondingly thin. With increased prosperity came increased avoirdupois, until in 1887 he decided to diet himself. Dr. Toulouse ascribes M. Zola's best work to the period when he was still a fat man; that is, anterior to "La Terre." He now diets himself rigorously: at nine, on rising, partakes of a crust of dry bread, drinking nothing with it; he lunches lightly at one, again taking nothing to drink; immediately after this meal he goes out of doors, so as to avoid falling asleep; at five he has tea, and he dines, lightly and without drinking, at half-past seven. At ten he drinks two cups of tea. He has given up smoking, and he refrains entirely from wine except for an occasional glass after bicycling. The year 1898 was a momentous one in the novelist's life. Captain Alfred Dreyfus, condemned in 1894, had been languishing for three years off the fever-stricken coast of Cayenne; during those three years his devoted family and friends had been struggling to obtain a revision of his so-called trial. They could gain no hearing, but Zola, once convinced of the injustice that had been done, and supremely careless of all personal consequences, compelled France and the entire world to listen to his case. His letter *j'accuse* was published in M. Clémenceau's journal *L'Aurore* on January 13, 1898. It had been preceded by two letters, "Lettre à la Jeunesse" and "Lettre à la France." The sensation created was enormous, and he was immediately prosecuted for having said that the judges who tried Esterhazy had acquitted him by order. The trial took place in Paris from 7th to the 23rd of February, and was the one subject of interest at the time. People waited for hours for a chance of a peep into the court, and the courageous author had to be protected by the police from the attacks of a brutal mob. The evidence was strongly in favour of M. Zola's contentions, namely, that Dreyfus had been condemned illegally, that the facts against him had been without significance, and that the *bordereau* was written not by Dreyfus, but by Esterhazy. But General de Boisdeffre, the chief of the General Staff, came forward and threatened the jury with the resignation of the whole staff if Zola were acquitted, and in the end he was condemned to the maximum penalty, in spite of the heroic efforts of his counsel, M. Labori. He appealed against this decision, and the trial was quashed on an informality; again the military authorities decided to prosecute him, and he was again condemned, this time by default, at Versailles. Whereupon he left the country and came to England, where he lived in retirement in a village near Birmingham until the Court of Cassation gave its judgment on the whole question of revision. In consequence of his condemnation the Chancellor of the Legion of Honour erased his name from the roll, and François de Pressensé and others voluntarily gave up the order as well. His technical offence was defamation of a tribunal, *i.e.* saying Esterhazy had been acquitted by order; but his real offence was making himself the mouth-piece of the intelligent and thoughtful portion of the French public. He has dared to stand up for truth and liberty at a moment when many saw the peril of such conduct, but no other was ready to brave the extremity of personal danger in order to aid in averting it. Posterity will look beyond the studied intemperance of his language and will see in him a man who refused to sit still while a great wrong was being perpetrated, and calmly challenged the combined forces of army, Jesuits, and rabble. In May, 1899, his new novel, "Fécondité," began to appear as a *Feuilleton* in the *Aurore*. It is a picture of the life led by the working classes, and the hero is Mathieu Froment, a designer in a factory, and the son of the unfrocked priest, Pierre Froment, who was the protagonist of the trilogy of "Les Trois Villes." The best biography in English is by Robert H. Sherard (London, 1893), and countless pamphlets and books have been written for but chiefly against him during the last thirty years in France.

WHALING IN JAPANESE WATERS.

The *China Mail* of the 20th September gives the following account of a whaling vessel which has come out from Norway to engage in whaling in the Japan Sea:—

Perhaps one of the pluckiest adventurers known out here is Captain Olsen of the Norwegian whaler *Rex*, which arrived here yesterday morning from Christiana, having steamed all the way to Hongkong in fifty days, accomplishing the voyage from Singapore in six days two hours. Captain Olsen is to

engage in hunting a minor species of *Balæna* which is to be found in the waters of the Sea of Okhotsk and the Sea of Japan in the North Pacific. The habitat of the whale is fixed by the ordinary layman as somewhere in the Polar regions among icebergs and other "fearsome wild fowl," but there are certain species which inhabit temperate seas of both hemispheres, and it is to capture these that the vessel now in our harbour is on her way. The *Rex*, which is the name of the whaler, is the property of Mr. E. Lund of Christiana, in command of Mr. F. Olsen, the master, who has gained much experience in his line of work. The *Rex* is a steam vessel of 112 tons gross and 21 tons net register, and has no resemblance whatever to the grimy, barque-rigged, wooden whaling ship with which F. C. Bullen and other writers have filled our minds. The only thing to remind one that it is a whaler is the "look-out" which is fixed on the single mast, and from which a constant watch is kept when the whaling grounds are reached. Practically speaking the *Rex* is a large boat, and is of the same type as those in use off the coast of Norway to hunt the whales which frequent the fjords during certain seasons. The principal feature of the vessel is the harpoon gun, mounted at the fore part and resembling an old fashioned heavy duck-gun. It weighs over 75 lb., is about 4 ft. 6 in. long, the barrel being about 3 ft. with 1½ in. bore, and a wooden stock tapering into a "pistol handle," and is fired by means of percussion caps. The harpoon sometimes used is an "exploding harpoon," that is, it contains at the end a shell with a charge of about ¼ lb. powder which on striking the whale explodes and virtually kills the creature. The vessel does not boil down the blubber or have anything to do with that work, but simply kills the whale in a business-like way and takes it in tow to the nearest depot, of which there are many on the coast of Korea and Japan, where the operation of flensing and boiling down the blubber is performed. The whale fishing in the Japan Sea is not a large or important one, and only about six or seven vessels of the above type are engaged in the work; while the species of whale hunted in those waters is not so valuable as the Cachalot or Sperm Whale, or the Greenland or Arctic Right Whale, the cetaceans found in that locality are varieties of the Southern Right Whale (*Balæna australis*) such as *Falæna japonica*, and the gray whale (*Rachianectes glaucus*), which is about 35 to 40 feet in length. The officers and crew of the *Rex* consist of Norwegians, while the firemen and the cook are Japanese. She coaled on her way out at Gibraltar, Algiers, Port Said, Aden, Colombo, and Singapore, and is now bound for Nagasaki. She is 95 ft. long by 17 ft., and steams 12 knots. She looks like a miniature gunboat. Captain Olsen brought out the larger craft *Olga* about four years ago.

CORRESPONDENCE.

"THINGS JAPANESE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Professor Chamberlain, in the preface to the latest edition of his "Things Japanese," castigates the ruffians who quote from his book without acknowledgment and adds:—"The title, which it cost us much cogitation to devise, and which we borrowed ultimately from the Spanish phrase *Cosas de España*, has passed into general use, even coming to supply titles for similar works written about other lands in imitation of this one."

On the second page of the first volume of "The Capital of the Tycoon," published in 1863, I find "Things Japanese" standing out bold and unmistakeable.

The penetrality of psychology, surely! for Mr. Chamberlain must have read a book which he includes in the list of twelve relating to Japan he himself recommends.

I am, etc.,

W.

THE FIRE AT NEGISHI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The proofs of unlimited kindness which we have received from all our friends are such that I would like through your paper to thank them all most heartily. At the same time I wish to correct one statement in your last issue. It was but a few minutes after our safe arrival at the stable that all our kind neighbours, Mr. Bent, Mr. Happer, Mr. Sale, Mr. Sutton, appeared disregarding the imminent danger of their own homes and offered us their assistance. Ten minutes more found us all settled in Mr. Happer's comfortable home.

Yours, etc.,

VAL. BLAD.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

PANAMA TROUBLES.

London, Sept. 26.

The American cruiser *Panther*, now at Colon, has sent three more companies of marines to Panama.

HELP FOR THE BOERS.

Mr. Phipps, of the Carnegie Steel Trust, has donated \$100,000 to the Boer Fund.

ROOSEVELT'S RENOMINATION.

The New York Republican Convention has pledged itself to secure President Roosevelt's renomination.

JAPAN AND SOUTH AFRICAN TRADE.

The Japanese Trade Commissioners have concluded a four months' tour in South Africa. They will sail shortly for England. They anticipate the establishment of a large trade in Japanese goods, especially at Johannesburg; the only obstacle being the absence of direct shipping facilities. The Japanese Government, on receipt of the Commissioners' report, will arrange that only articles suitable for the South African market shall be sent.

PANAMA.

London, September 27.

The Governor of Colon has sent to the Commander of the U.S.S. *Cincinnati* a strong protest against the landing of American marines, declaring it to be an attempt to assume sovereignty in Colombia.

DISTURBED IRELAND.

Mr. John O'Donnell, M.P., has been arrested for abetting intimidation. Messrs. Reddy and Haviland Burke, M.P.'s, have been sentenced to two months' hard labour for participating in an unlawful assembly. They have appealed. Mr. Roche, M.P., has been arrested for failing to answer a summons for using incendiary language. Mr. William O'Brien declares that the time has come to apply the principles of the United Irish League so as to make landlordism intolerable by means of picketing, exclusive dealing, and social ostracism.

CYCLONE IN SICILY.

London, Sept. 28.

A cyclone and wave have visited Sicily. At Modica (a town in the south-east of the island) 100 bodies have been recovered, and numbers of persons are missing. Catania (on the east coast) was also visited, but less severely.

VOLCANIC ACTIVITY.

Mount Etna shows signs of activity and the Stromboli volcano is active.

RAILWAY COLLISION IN FRANCE.

The Lille and Paris express has been derailed at Alex when travelling at a high rate of speed. Thirty were killed and fifty injured, many of them fatally.

THE FRENCH SCHOOL CLOSING.

General Frater has been placed on the half-pay list in connection with the French School closing.

TOBACCO MONOPOLY.

The British and American tobacco trusts have amalgamated, forming a new British-American Tobacco Company, the form (? former) trusts, however, agreeing to respect each other's domain and to combine to compete in trade with the rest of the world.

THE SICILY CYCLONE.

London, Sept. 29.

Three hundred lives were lost at Modica.

THE U.S. MINING STRIKE.

A coal famine is threatened in the United States owing to the prolonged strike, which has lasted over twenty-one weeks. There have been twenty-one murders during the strike.

LORD MILNER'S TOUR.

Lord Milner's tour in the Western Transvaal has been highly successful.

PRESIDENT ROOSEVELT.

London, Sept. 30.

A rise in President Roosevelt's temperature and an increase in the local symptoms necessitated the making of an incision, exposing the bone, which was found to be slightly affected. His physicians are confident of the President's recovery.

P. & O. COMPANY.

The Peninsular and Oriental Steam Navigation Company are making Southampton a home port.

[NOTE:—Southampton has been making great improvements of late years and it may be that the P. and O. are going to give up Plymouth and call at Southampton again, homewards.]

RUSSIA AND THE MANCHURIAN RAILWAYS.

The *Standard's* Tientsin correspondent wires that the Russians restored their railway section to China on the 26th October.

EMILE ZOLA DEAD.

Later.

Emile Zola was found dead, being accidentally asphyxiated by a defective stove. His wife was also affected but is out of danger.

IRISH AFFAIRS.

The editor and manager of the *Irish People* have been sentenced to two months imprisonment. The secretary of the Irish League in East Limerick has been sentenced to three months imprisonment.

THE NAVY.

London, Oct. 1.

Sir Michael Hicks-Beach, speaking at Bristol, strongly urged the dangers of an ever increasing expenditure. He said a strong navy was vital to the safety of the empire, but now it was so strong relatively that increased ship-building next year was unnecessary.

INSURRECTION IN MACEDONIA.

An insurrection has taken place in Macedonia, headed by Colonel Jankoff, formerly of the Bulgarian Army. A provisional Government has been formed.

THE BOERS IN EUROPE.

Information from Boer sources is to the effect that the Kaiser has promised the leaders an audience. It is also hoped that they will secure a reception from the Tsar.

CHOLERA IN THE PHILIPPINES.

Cholera is making terrible ravages in the Philippines. A thousand cases daily are reported in some towns.

IRISH AFFAIRS.

Mr. John Roche, member for East Galway, has been sentenced by the Crimes Court at Galway to four months imprisonment, two months of which are with hard labour, for making intimidating speeches.

THE SHIPPING COMBINE.

Mr. Gerald Balfour, speaking at the Cutlers' Feast in Sheffield, announced that the arrangement of the Government with the Cunard and Morgan Combine involved a pledge that the Cunard line will remain in every respect a British Company; that they will construct two new vessels which, with the fleet, entire will remain at the disposal of

the British Admiralty. The Cunard Company are to receive a government subsidy of £150,000 per annum. The agreement with Morgan was to secure that the British shipping companies should remain really British.

THE BOER LEADERS.

Kritzinger, Touche, and Joubert have sailed for England *en route* for the United States where they will give a series of lectures.

THE GOVERNMENT AND THE SHIPPING COMBINE.

The Government arrangements with the Cunard-Morgan combination are generally praised, though there is some criticism as to the amount of the subsidy to the Cunard line, especially in shipping circles, where it is complained that this will handicap tramp steamers.

(RECEIVED AT THE LEGATION OF FRANCE.)

DEATH OF M. ZOLA.

Saigon, Sept. 30.

M. Emile Zola has been found dead in bed in the morning, having been accidentally asphyxiated, it is believed, by the emanations from a stove in his sleeping chamber. Madame Zola was also affected and is very ill.

(RECEIVED AT THE FOREIGN OFFICE.)

AN EPIDEMIC.

Imperial Japanese Consulate, Newchwang, Sept. 25.

Pest (cholera?) has broken out at Kaiping in the north of the Liaotung Peninsula and there are 40 or 50 deaths daily.

(FROM THE "JIJI SHIMPO.")

PRESIDENT ROOSEVELT.

London, Sept. 24.

President Roosevelt has undergone a slight operation for an abscess between the left knee and the ankle, caused by his recent carriage accident. The operation was successfully conducted. The President requires a rest for two weeks, and returned to Washington, his intended tour being postponed.

ENGLAND AND AMERICAN TOBACCO.

In consequence of rivalry between British and American tobacco merchants, the Duke Tobacco Company is said to have incurred a loss of £1,500,000. The British Tobacco Guild has purchased 3,000,000 lbs. of Kentucky leaf.

JAPANESE BONDS.

Five per cent. Japanese bonds are quoted at £105 on the London market.

THE TROUBLE IN CENTRAL AMERICA.

London, Sept. 25.

The United States is increasing the number of its warships in South American waters.

THE RUSSIAN TROOPS IN MANCHURIA.

According to the *Standard* a Russian statesman has again declared it impossible to withdraw the Russian troops from Manchuria before the term is up. This declaration is believed to have been made at the instigation of the Government authorities.

THE SHIPKA PASS.

London, Sept. 26.

A celebration in commemoration of the triumph at Shipka Pass in 1877 has taken place under the auspices of Grand Duke Nicholas and Prince Ferdinand of Bulgaria. General Ignachieff was present. The most friendly feelings were enthusiastically expressed between the soldiers of Russia and Bulgaria. Grand Duke Nicholas will proceed to Constantinople to visit the Sultan.

JAPANESE BONDS.

Five per cent. Japanese bonds have risen half a sovereign.

RUSSIAN MINISTER OF FINANCE.

London, Sept. 27.

Mr. de Witte, Russian Minister of Finance, after inspecting the Manchurian Railway, will visit Peking and Tokyo.

FRANCE AND RUSSIA.

The *Cologne Gazette* reports that the recent speech of M. Pelletan, French Minister of Marine, has caused excitement in official quarters at St. Petersburg. The *Novosti* and *Novoe Vremya* criticize the explanation given by M. Combes, President of the French Cabinet, with reference to M. Pelletan's recent utterances.

DISASTER IN THE MEDITERRANEAN.

The island of Sicily was visited by a disastrous storm and 400 lives were lost. The volcano Stromboli has become very active.

RUSSIA AND GERMANY.

The *Svet* referring to the construction of the Bagdad Railway, states that the undertaking will injure the interests of Russia and further urges that the Russian Government should take steps to prevent German aggression in Turkey in Asia.

PRESIDENT ROOSEVELT.

London, Sept. 29.

President Roosevelt has undergone a second operation which was successfully conducted. He is expected to recover shortly.

SOUTH AMERICAN TROUBLES.

The Colombian Government has rejected the peace protocol presented by the Liberal Party. Eight hundred Government troops of Venezuela, under command of General Pacheco have joined the rebels of Colombia.

TOBACCO MERCHANTS' COMBINE.

The rivalry between the British and American tobacco merchants is now over, the companies of the two countries having combined.

MARCUS ISLAND.

Captain Rosehill has asked the United States Government to dispatch a war-ship to Marcus Island with the view of effecting its restoration.

(FROM THE "JAPAN HERALD.")

JAPAN AND SIAM.

London, Sept. 27.

Les Debats warns England against letting Japan get too solid a hold on Siam, and adds that England should ask herself whether she is not fostering a fox who will devour her Asiatic fowls.

SIR MARCUS SAMUEL.

London, Sept. 29.

Sir Marcus Samuel has been elected Lord Mayor of London.

THE P. & O. COMPANY.

The *Shipping Gazette* states there is strong ground for belief that the Peninsular & Oriental Steam Navigation Co. will shortly abandon London as the home port, since the vessels now being built for the Company will be unable to enter the Albert Docks.

It is understood the Directors are in favour of making Southampton the home port.

THE EASTERN CHINA RAILWAY.

London, Oct. 1.

At the St. Petersburg Railway Conference it has been resolved to admit the Eastern China Railway into the Russian railway direct passenger and goods traffic system.

THE STATES AND RUSSIA.

The *Globe's* St. Petersburg correspondent learns from a reliable source that the tour in America of M. de Witte, the Russian Minister of Finance, is connected with the raising of a loan in the United States.

American financiers, it is reported, are at present disinclined to subscribe to a loan, owing to Russia's policy in the Far East of a closed door. M. de Witte is therefore studying the possibility of making concessions, and the negotiations will probably result in a commercial treaty between Russia and the United States.

(FROM THE "DEUTSCHE JAPANPOST.")

THE GERMAN TARIFF.

Berlin, Sept. 26.

The German Chancellor stated that the Government is not in a position to propose to the Diet an increase of the low limit duties, nor an extension of the latter to other imported articles.

PROFESSOR VIRCHOW'S SUCCESSOR.

Berlin, Sept. 26th.

Professor Johannes Orth has been appointed director of the Berlin Pathological Institute in succession to the late Professor Virchow.

AMERICA AND VENEZUELA.

At present negotiations are taking place between the U. S. and the republic of Venezuela regarding the action of some men-of-war of the latter.

JAPANESE IN THE CAROLINES.

The *Norddeutsche Allgemeine Zeitung* states, that the reports of the *Nirōku Shūmō* are not correct according to which Japanese dealers had been expelled from the Ruk-Islands (Carolines) by the German authorities after having been tried and sentenced for importing arms and ammunition. It is further untrue that any communications regarding this matter had been made to foreign Governments.

RUSSIA AND GERMANY.

Berlin, Sept. 27.

In case the Commercial Treaty between Russia and Germany should not be renewed, it is not probable that notice of this will be given before the end of December.

THE U.S. MINISTER TO ST. PETERSBURG.

The U.S. Minister to St. Petersburg, Mr. C. Tower, has been transferred to Berlin to take the place of Mr. Andrew D. White, who resigned on the occasion of his 70th birthday. Mr. C. Tower had been accredited to St. Petersburg since March, 1899.

THE GERMAN TARIFF.

In the duty tariff question the Kaiser completely agrees with Count Bülow.

THE CYCLONE IN SICILY.

Berlin, Sept. 28.

In Sicily a cyclone has caused great damage. The volcano Etna has become more active than usual. The lower quarter of Modica, the capital and largest town of Syracuse province with a population of 42,000, has been entirely destroyed; 80 bodies have already been found. On the S.W. coast of Sicily the cyclone killed 12 men. In Cassaro (?) all have been exterminated.

THE BOER GENERALS IN EUROPE.

Berlin, Sept. 30.

The Boer Generals Dewet, Delarey and Botha will probably arrive at Berlin on the 8th of October and possibly stay there for several days. It is said that the Kaiser will receive them which would be a proof that they acknowledge the annexation of the former Boer states by England as a legal fact and that the German Emperor will be delighted to honour them as gallant soldiers.

THE JEWS OF ROUMANIA.

The joint note of the U. S. and Great Britain concerning the Roumanian Jews has not caused any diplomatic complications.

DEATH OF EMILE ZOLA.

Berlin, Sept. 30.

The famous French novelist Emile Zola has been suffocated in his residence. His wife, overcome with grief, is dangerously ill. Emile Zola was 62 years of age, being born at Paris in 1840. It was owing principally to his energy that the proceeding against Captain Dreyfus were re-opened.

PRESIDENT ROOSEVELT.

President Roosevelt has undergone another operation in consequence of the severe injury of his leg.

RAILWAY ACCIDENT IN FRANCE.

Berlin, Sept. 30.

At the railway accident near Arleux, 10 *ken* S. of Douai in the Northern department of France, 20 men have been killed.

THE LATE EMILE ZOLA.

Berlin, October 1.

The death of the novelist Emile Zola was due to an accident. He had returned with his family to his residence in Paris after a longish stay in the country during the summer months. The stove of his bed room, not having been used during this time, was in bad order and Zola was found suffocated in his room. Mme. Zola, who had fallen sick with grief, is better now.

THE TROUBLE IN SZÉCHUAN.

The following telegrams have been handed to the *North China Daily News* by the Rev. J. W. Stevenson, Deputy-Director of the China Inland Mission:—

Suifu, Szechuan, Sept. 19.

The China Inland Mission premises at Meichou

have been destroyed, but no lives have been lost. The adjoining cities of Tanlinhsien, Hungyahsien, and Kiatingfu are threatened by the Boxers. The officials of the last-named city are on the alert.

Chengtū, Sept. 20.

The general situation is doubtful. A large area of the country is seriously disturbed. The city excitement has abated, and the officials are on the alert. The new Viceroy has just arrived. Missionaries and their property are under protection.

FUNERAL OF THE QUEEN OF THE BELGIANS.

London via Bombay, Sept. 23.

Impressive funeral services were held on Monday afternoon at Spa and Laeken. The Queen's remains were conveyed to the crypt of the church at Laeken in the presence of enormous crowds.

LECTURING TOUR OF THE BOER GENERALS.

The Boer Generals, lecturing at Rotterdam yesterday on behalf of the Distressed Boers' Fund, announced that America had contributed \$100,000. Their lecture at Antwerp yielded £400 sterling.

A MUCH-NEEDED REBUKE.

London via Bombay, Sept. 24.

Lord Roberts has issued a memorandum to all officers of the army commanding regiments, urging the necessity of stopping ragging, the prevalence of which is a disgrace to the army.

KEROSENE.

The market continues firm.

American	\$2.62
Russian	2.42
Langkat	2.40

SUGAR.

There has been a better demand recently and prices have advanced.

	PER PICUL.
Brown Takao	Y. 47.0 to 5.25
Brown Manila	5.25 to 6.45
Brown Daitong	4.30 to 6.50
Brown Canton	6.00 to 6.60
White Java and Penang	6.20 to 7.00
White Refined	8.20 to 10.20

EXPORTS.

RAW SILK.

Prices for raw silk are still maintained, with the exception of *Kakedas*, for which kind there is little demand at the moment. Generally speaking there is not so much anxiety on the part of buyers to operate at those high rates and there is a feeling in the trade that we are about at the top notch for the present season.

QUOTATIONS.

13.

BOVRIL ISN'T DEAR

in fact, value for value, it is one of the cheapest drinks, and one of the most economical foods that can be obtained. A cup of hot Bovril costs less than a drink of whisky, and while giving a more genuine and lasting warmth than the latter, contains, in addition, the nutritive principles of beef worth many times its cost.

Old fashioned beef teas and meet extracts, whether known as such, or disguised under more pretentious modern names contain none of the NUTRITIVE properties of beef. Baron Liebig himself admitted this fact; there is not a doctor to-day disputes it. Used as a nourishment Meat Extract is probably the most expensive article one can buy. Bovril one of the cheapest.

Cuticura

REMEDIES

THE SET

6s.

Consisting of CUTICURA SOAP, to cleanse the skin, CUTICURA Ointment, to heal the skin, and CUTICURA RESOLVENT, to cool the blood, is often sufficient to cure the most torturing, disfiguring skin, scalp, and blood humours, rashes, itchings, and irritations, with loss of hair, when the best physicians, and all other remedies fail.

SAVE YOUR HAIR

Warm shampoos with CUTICURA SOAP, followed by light dressings with CUTICURA, purest of emollients, and greatest of skin cures, will clear the scalp and hair of crusts, scales, and dandruff, soothe irritated and itching surfaces, stimulate the hair follicles, and produce luxuriant, lustrous hair, with clean, wholesome scalp, when all else fails.

Sold throughout the world. PRICE THE SET, 6s. or SOAP, 1s.; OINTMENT, 2s. 6d.; RESOLVENT, 2s. 6d. Post-paid by F. NEWBERRY & SONS, London. PORTER D. AND C. CO., Props., U.S.A. How to Cure Humours, free

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 11TH, 1902.

MARRIAGE.

On the 9th October, at the Royal Danish Consulate, before H.D.M. Consul Sophus Warming, LOUIS CHARLES NISSEN PHILIPSON of Copenhagen, to JOHANNA GEERTUIDA HENRIETTE RADERSMA of Riouw, Netherlands India.

SUMMARY OF NEWS.

MR. SAITO KAN, Japanese Consul in Honolulu, has been raised to the rank of Consul-General.

MR. NOMURA, Governor of Aichi Prefecture, died of dysentery at Kanazawa on the morning of October 2nd.

FROM the beginning of this year up to Oct. 8th 11,975 cases and 7,197 deaths from cholera were reported throughout the country.

THE battle-ship *Shikishima*, which was blown on the rocks off Yokosuka during the storm of Sept. 28th, was floated successfully on October 2nd.

THE Ashio copper mine and neighbourhood suffered damage during the recent storm. About

500 houses were either destroyed or washed away and over 300 persons drowned. Many are still missing.

A TELEGRAM from India dated Oct. 4th, received in Tokyo, reports that Major-General Fukushima is steadily recovering and able to take ordinary food.

THE population of Yokohama is yearly increasing in a marked manner. The total number of citizens at the end of 1901 was 299,202 with 54,674 houses.

ONE hundred horses, purchased by the Military Authorities for the Korean Court, were shipped from Yokohama on Oct. 4th by the N. Y. K. steamer *Moji Maru* for Korea.

THE Osaka Sugar Exchange has been dissolved. A special general meeting of share-holders was expected to be convened on Oct. 5th to discuss matters relating to the adjustment of accounts.

AN estimate of the expenditure connected with the China expeditionary force in India accounts, during the current financial year, places the total at just under one million pounds sterling.

FOLLOWING the example of the Bank of Japan, the First, the One Hundredth, the Mitsui, the Mitsu Bishi, the Fifteenth and the Yokohama Specie Banks decided to lower the rates of interest on Oct. 6th.

THE most interesting portion of the coming manoeuvres in the northern portion of Kyushu will be witnessed on November 9th and the next four days. The Emperor will proceed to Kyushu early in November to inspect the engagements.

THE statement that the Amir of Afghanistan has been invited to attend the Delhi Coronation Durbar is officially contradicted. The political state of Afghanistan it is explained would not at present allow of the Amir leaving the country.

IN consequence of the falling-off of cargo between Australia and Japan of late, the Nippon Yusen Kaisha and other foreign shipping companies, whose steamers ply on this line, recently lowered the rate of freight by five shillings per ton.

THE Fifth Domestic Exhibition in Osaka will be formally opened at 10 a.m. on March 1st next year. The chief of the commissioners in charge of the Exhibition recently applied to the Imperial Household Department praying that the Emperor honour the occasion with his presence.

THE *Union*, a Norwegian steamer, has been purchased by the Aichi Kogyo Kisen Kaisha, a shipping concern in Aichi Prefecture, for yen 100,000. She is now undergoing repairs in the Uruga Dock and will thereafter be named the *Aichi Maru*.

THE Japanese Coronation Squadron, the *Asama* and *Takasago*, arrived at Port Said on Sept. 30th. They are expected to return to Yokosuka about the middle of November. The torpedo-boat destroyer *Asashiryo* left Colombo on Oct. 6th for Singapore.

THE Kei-Hin (Tokyo-Yokohama) Electric Railway Company, at a special general meeting of shareholders held a few days ago, passed a resolution raising debentures to the extent of yen 250,000 at 8½ per cent. interest per annum, to be redeemed in one year.

THE yacht built by the Mitsu Bishi Company for the Crown Prince was launched at Nagasaki on Oct. 4th. She was christened *Hatsukaze* by Mrs. Arakawa, wife of the Governor of Nagasaki

Prefecture. The yacht will sail for Yokohama about Oct. 15th and will then be presented to His Highness.

LIEUT.-GENERAL BARON OKU, Commandant of the East Section Headquarters, has been ordered to proceed to India to attend the coming military manoeuvres, which will take place there shortly in honour of the Coronation of King Edward.

THE Chinese Minister to Japan has made a donation of two thousand yen to the Japan Red Cross Society. His Excellency also contributed yen 200 toward the relief of the sufferers in Odawara and the neighbourhood by the recent tidal waves,

ON Oct. 6th, Baron Utsumi, Home Minister, made a donation of yen 200 toward the relief of sufferers in Odawara and the neighbourhood by the recent tidal waves. The Minister, accompanied by Mr. Hamada, Chief of the Kanagawa Police, visited the devastated districts the same day.

COUNT MATSUKATA is reported to be contemplating the establishment of a large savings bank in Tokyo with a view to encouraging the habit of thrift among the Japanese generally. The *Asahi* says that the Count's recent visit to America and Europe has apparently convinced him of the necessity of starting the bank.

A JAPANESE steamer, the *Taura Maru*, plying between Yokosuka and Boshu, ran aground and sank off Uruga on the afternoon of October 2nd. The passengers and crew, over 50 in all, were fortunately rescued by the *Koki Maru*, a steamer launch belonging to the Yokosuka Admiralty, which happened to pass the scene.

THE *Aoi Maru*, a steam-launch of the N.Y.K., which sank outside the breakwaters during the storm of Sept. 28th, was raised on Oct. 3rd as the result of operations conducted by Mr Garry, of the N.Y.K. The remains of the unfortunate Captain and engineer of the steam-launch *Aoi Maru*, were recovered on October 1st off Honmoku.

DESPITE the ever increasing transactions in *habutaye* in Yokohama many complaints are made by Japanese dealers owing to the scarcity of orders from foreign firms. Some are in such a desperate condition that they will be obliged to declare themselves bankrupt shortly. The fact is the foreign silk merchants have opened direct transactions with the weavers in the interior.

THE boat races of the students of the Yokohama Commercial School took place on October 5th off the Bund. The races began shortly before 9 a.m. and continued until about 5 o'clock in the afternoon. The day being Sunday the events attracted many persons, while foreign ladies and gentlemen watched the races from the verandah of the Grand Hotel, Club Hotel and other buildings on the Band.

A BRONZE statue of the late Lieut.-General Prince Kitashirakawa, Commander-in-Chief of the Imperial Body Guards, was recently finished at the Koishikawa Arsenal, Tokyo, where the casting had been undertaken. The statue is to be erected just in front of the quarters of the First Regiment of the Imperial Guards and the unveiling ceremony will take place there on October 28th, the day on which His Highness succumbed to illness during the expedition in Formosa in 1895. It is stated that the statue represents the Prince on horseback, in military uniform.

CHINESE NEWS.

The tiresome question of the railways in North China may be said to have at length ceased to furnish matter for newspaper paragraphs. Some complications occurred at the end in connexion with the rendition of the Shanhaikwan-Newchwang line, the Russians having decided to adopt a very detailed method of procedure, and being, moreover, dissatisfied with the credentials of the Chinese Representative. These difficulties seem to have been finally overcome, and so far as is known at present, the rendition of both the lines, intramural and extramural, has now been accomplished. The moral of the whole business is that too much importance can not be attached to transactions such as those in which China engages lightheartedly now-a-days. Every railway concession that she grants to a foreign syndicate, especially at the instance of a foreign government, is a potential source of international complications.

Some days ago the telegraph informed us that a French syndicate had applied for a monopoly of mining concessions in the province of Fuhkien, and that the application, having been approved by the Viceroy, had gone forward to Peking. It is now alleged that the Finance Board has disapproved of the project, and that there is little probability of any such concession being granted. The Chinese Government probably realizes by this time that all concessions of that nature are not only dangerous to herself, but also constitution violations of her treaties.

The Osaka Tekko-jo has secured the contract for the two steamers required by the Hunan S.S. Company. The two vessels will cost 240,000 yen and were to be finished by the beginning of next September. The other competitors for the contract were the MitsuBishi; Messrs. Boyd & Co., Shanghai; and the Kawasaki Building Yard.

Monday, Oct. 6.

The American Association of Shanghai held a meeting on the evening of the 3rd instant, and adopted a resolution in the sense that the abolition of *likin* is plainly impossible for the Chinese Government, and that, consequently, the proposed new system by which a surtax and a consumption tax are to be substituted must be condemned. It may be assumed that the views of the Association will be endorsed by the Government at Washington, and that the United States will decline to endorse the arrangement effected by Sir James Mackay and his colleagues at a large expenditure of time and trouble. We have never entertained much hope that the Convention would go into operation. The probability of American objections seemed always imminent, and as for Germany her dissent appeared to be a foregone conclusion, while Japan also has obvious grounds of objection to some of the conditions. After all, cumbrous and slow as is the method of combined negotiation, the results thus secured have the advantage of being substantial. So soon as it became known that each Power was to discuss independently the terms of a new commercial treaty, no one could help apprehending that even though some broad general principles might guide all parties, the concessions separately sought in deference to special interests must ultimately amount to a total outweighing the common gains. If the whole negotiation be wrecked, one can not say that the unexpected has happened.

Tuesday, Oct. 7.

The *Asahi Shimbun* has a telegram to the effect that there has been a recrudescence of disturbance in Kwangsi, and that the Kweilin-fu insurgents have captured a Chinese official. It is now evident that the stories originally circulated about this insurrection were gross exaggerations, and we may reasonably hope that the seeds of discontent are not very plentiful.

Wednesday, Oct. 8.

The Emperor of China, according to a telegram from the *Fiji Shimpō's* Peking correspondent, has issued a decree in the sense that although many Chinese youths have been sent to Japan for purposes of study, the number sent to Europe and America with a similar object is comparatively small. This, the decree says, is not in the interest of the nation's progress, and Viceroys and Governors are consequently urged to select students and grant them such allowances as may enable them to prosecute their studies in the West. Japan's experience shows the value of such a factor of reform. It really begins to look as though the Chinese Court were in genuine earnest at last.

The *Asahi's* Peking correspondent wires that the Foreign Office in Peking has definitely refused the application made on behalf of a French syndicate for exclusive mining privileges in Cheh-kiang.

From the same source we learn that the Peking Government has issued instructions to the officers commanding in Manchuria in the sense that as China has undertaken the function of guarding the railways, no increase of Russian troops for that purpose is to be allowed.

The Russian evacuation of Newchwang is expected to be completed by the 9th instant. General traffic by the railway has been suspended, as the service is entirely occupied transporting troops and materials of war.

Thursday, Oct. 9.

Rumours from Peking seem to indicate that the Court believes in the possibility of putting a period to Prince Twan's punishment. His wife has already returned to the capital and is said to have been received by the Empress Dowager in a most friendly manner. She is supposed to be the forerunner of her consort, who will soon follow her from his exile in Kansu. All this appears a little premature. The Court itself returned to Peking last spring only, and most assuredly foreign Powers will take it ill should the Boxer leader follow their Majesties to the capital within less than a year. If anything of the kind happens, it will be difficult to suppose that Prince Twan is effaced, and still more difficult to imagine that he will be found a convert to the cause of reforms. The strong probability is that in Peking he would once again become the pivot of dangerous conservatism.

The operation of restoring the extra-mural railway to China has been at length accomplished. It involved considerable labour, as each section was handed over independently, but doubtless there were good reasons for that method of procedure.

Meanwhile the operation of withdrawing the Russian troops from Shingking is progressing steadily. All the troops in the first line have been withdrawn to the second, and the force is being transported as quickly as railway facilities permit.

Mr. D. M. Pozdneeff, who came to Shanghai to study the Tariff question, has, says the

N.-C. Daily News, been appointed by the Czar commissioner to negotiate a commercial treaty between Russia and China.

Friday, Oct. 10.

Another telegram has reached Tokyo, this time from the Peking correspondent of the *Fiji Shimpō*, to the effect that Mr. Tsai, China's representative in Tokyo, has submitted his resignation in consequence of the affair of the students. Previous rumours in the same sense having proved incorrect, it is impossible to tell what reliance may be placed on this new story. So far as we have been able to ascertain, the only point inviting criticism in Mr. Tsai's management of the student trouble was that he misled them—unintentionally no doubt—as to the value he purposed attaching to their joint guarantee. Last spring, the Throne issued an edict, having for its object to secure equal facilities for public and private students visiting foreign countries: both were to be placed on the same footing. But that was obviously impossible without some practical restrictions. The late Viceroy Liu Kun-yi consequently directed that persons desiring to proceed abroad for educational purposes and not being in a position to secure official franking, must undergo an examination test, receiving, in its sequel, a guarantee from some responsible official. A number of students now in Tokyo have not fulfilled these requirements. Their plea is that whereas the examination test would not give them any trouble, their resources do not suffice for purchasing an official guarantee as well as for supporting them during their educational career in Japan. In short, they plead that the corruption of their country's officials renders it impossible for them to comply with regulations such as those issued by Viceroy Liu. On the other hand, without some guarantee they can not obtain admission to public schools in Japan. In this dilemma their Minister suggested that five of them should unite to guarantee any one of their number. They gladly assented. But here a difficulty arose. The students had expected that Mr. Tsai would accept their united guarantee and on the strength of it, would himself go security *vis-à-vis* the educational authorities. Mr. Tsai, however, merely forwarded the combined guarantee of the students, and the educational authorities, of course, could not accept it. The students then conceived that their Minister had broken his promise, and, under the guidance of Messrs. Wu and Sun, invaded the Legation; conduct which ultimately led to the deportation of Wu and Sun. The public know that all difficulties were subsequently removed from the path of the students by the intervention of the *To-A Dōbun-kai*, but it is interesting to recall these facts in connexion with the alleged resignation of Mr. Tsai.

It is stated that Prince Chin (Junior), who recently visited Japan, has declared himself in a sense emphatically hostile to the conduct of Mr. Tsai, his judgment being that right is altogether on the side of the students. This is probably a great exaggeration. Meanwhile rumour says that Mr. Wan, who accompanied the Prince on his European tour, is to be sent to Japan in the capacity of overseer of students. Wan is believed to be a thoroughly enlightened man and an earnest advocate of progress. His selection for such a post is therefore very happy.

Prince Chin (Junior), interviewed by a friend in Tientsin on his return from the West, is said to have expressed unqualified approval of the administrative systems of

Europe and America and to have declared that fifty years of effort would be required by China in order to place herself on a level with the Occident in this respect. His Highness was not less appreciative of the state of affairs in Japan, but he pronounced the opinion that a decade of really earnest endeavour would suffice to put China upon Japan's plane. There are easily understood reasons for a comparison of that kind where a Chinese critic is the comparer. Yet it is startling to find the young Prince placing himself on record as alleging that what Japan has taken thirty years to accomplish could be achieved by China in a third of that time. Did he really say so? The world has fallen into the habit of calling Japan's progress extraordinarily rapid, and we ourselves must frankly say that although we prefer to leave to others the penning of eulogies, we do find, the longer we live in Japan, that there is always greater cause to admire her rate of advance and to appreciate the qualities by which it is maintained. If China can cover the same ground in ten years, the record will certainly be hers. Meanwhile, we share the world's view, Prince Chin *non obstante*.

Mr. Ota Tatsuto, formerly president of the Osaka Normal School and doctor of natural philosophy, is to proceed to Peking, to take charge of the department of natural philosophy in the new University. Professor Hattori Unokichi, whose appointment by the Government was recently announced, is to be head of the literary section in the same institution.

The Governor of Shantung is sending three Chinese to Japan to procure books and make preliminary investigations for establishing a technical school in that province.

THE LATE LIU KUN-YI.

Wednesday, Oct. 8.

An extra of the *Jiji Shimpō* published on the night of the 6th instant announces that Viceroy Liu Kun-yi expired on that day. No particulars are given, but the news can not surprise any one, as the Viceroy had long been ailing. His death is a terrible loss to China at this juncture, for the verdict of public opinion has long been that his country possessed no more truly great man among its high officials. Chang Chih-tung, Liu Kun-yi and Li Hung-chang may be said to have stood for "China" in foreign estimation during the last quarter of the 19th century. Only four months have passed since the funeral cortège of Li Hung-chang left Peking for Tungchow, and now comes the news of Liu Kun-yi's death, so that of the great triumvirate there remains only Chang Chih-tung. There have certainly been many eminent actors upon the Chinese political stage since foreign legations were established at Peking—Prince Kung; Wen Hsiang; Tseng Kwo-fan and his remarkable son, Marquis Tseng; Tso Tsung-tang, the conqueror of Kashgaria; Li Hung-chang, and Liu Kun-yi. But it may fairly be doubted whether any one of them has left so high a reputation as Liu Kun-yi. An honest obituary notice of all the rest must find something to condemn or to criticise.

Thursday, Oct. 9.

It need scarcely be said that, according to telegrams from China, the death of Liu Kun-yi has produced a profound impression. The foreign journals at the treaty ports declare that the great defender of the peace

of the Yangtse Valley has passed away, and that the loss is irreparable. We learn that the great Viceroy was 74 at the time of his death.

The Japanese press writes very sympathetically. Nearly all the Tokyo journals, after giving accounts of his career which may be said to have commenced at the time of the Taiping rebellion, agree in indicating him as the most potent force of reform in China. It was he that took the lead, after the war of 1894-5, in declaring that China's only hope of safety lay in assimilating Western civilization, and from that time he never wavered in his efforts to lead his country from conservatism to liberalism. Unhappily he has died at a moment when his continued labours were most essential, but the fruits of his work remain and will surely bear a full crop. Generally the late Viceroy's name was coupled with that of Chang Chih-tung, but of the two statesmen the former was the greater. The two were of a different order of genius. Chang is above all things a scholar; a man of accurate and minute mind. But Liu was a dealer in great issues; a statesman who grasped the essentials of a problem and went straight to his goal. Prince Konoye says that when on his recent visit to China, he visited Liu, he found the Viceroy in a greatly debilitated condition; so weak, indeed, that the Prince hesitated to converse with him. But Liu said that he was never too ill to talk about his country's affairs, and an animated conversation ensued, lasting forty or fifty minutes. The impression made upon Prince Konoye when he met Chang Chih-tung was that of meeting a friend. But his impression when he encountered Liu was that he had entered the presence of a great man. Liu was incomparably more popular than Chang is, and commanded a larger share of public esteem. Thus it fell out that the two, working hand in hand, supplemented each other, and accomplished far more than the sum of their separate efforts. Chang dressed their projects in literary garb and Liu lent to them the weight of his immense influence. Thus the celebrated memorial addressed recently to the Throne on the subject of reform, is understood to have emanated in the first place from an interchange of views between the two Viceroys, after which it was drafted by Chang and ultimately signed by Liu. The great deal power that worked for China's regeneration is now lost. Prince Konoye is further convinced that no official except Liu Kung-yi could have kept the *Ko-lao Hui* quiet during the Boxer troubles. He is said to have summoned the leader of that society and persuaded him that the salvation of China depended on localizing the outbreak and that if the *Ko-lao Hui* threw in their lot with the Boxers, an overwhelming national calamity must be the result.

Japanese journals expect that Liu will be succeeded by Chang Chih-tung. That would be the natural order of things, either Kwei Chung or Twan Tang taking Chang's place.

Major-General Nozu, one of the leaders of the *To-A Dobun-kai*, who has an exceptional knowledge of Chinese affairs and Chinese statesmen, speaks of the deceased Viceroy in terms almost identical with those used by Prince Konoye. He recalls some of the most remarkable incidents in Liu's career, and says that to him and Chang must be assigned the credit of having saved their country in 1900. The Major-General

shares the view that Liu's reforms will not die with him. He had carried them beyond the reach of any accident.

Friday, Oct. 10.

The Chinese Throne is heaping all kinds of honours upon the head of the late Viceroy Liu Kun-yi. He is to have a public funeral, his name is to be enrolled in the Temple of Sages; a shrine is to be erected to his memory; he is to have the title of tutor to the Heir Apparent, and various other marks of distinction are decreed.

Viceroy Chang Chih-tung has been ordered either to succeed Liu in the viceroyalty of the Liang-Kiang or to discharge the duties of the latter post temporarily. The telegrams are contradictory as to this. According to the *Jiji Shimpō's* correspondent the appointment is substantive, and Chang is to be succeeded by Twan Fang, now Governor of Hupeh.

The London press, according to a telegram to the *Asahi Shimbun*, unanimously eulogizes the career of the late Viceroy, and expresses a hope that the Representatives of China in Europe and America will employ all their influence to prevent the death of Liu from being made the occasion for promoting a follower of Prince Twan.

KOREA.

Mr. Otori Fujitaro, of the Japanese Legation in Seoul, has been attacked by cholera and is said to be in a dangerous condition. The telegraph says that the epidemic is diminishing in the Korean capital, but that there are still about 100 new cases daily, on the average.

It is stated that the Emperor of Korea has ordered Mr. McLeavy Brown to pay out of the Customs revenue the sum of 1½ million *yen*, due to the American firm which supplied the plant of the Seoul electric railway. The money is due on the 15th of this month, but there is no possibility of paying it out of the revenue of the railway. As a consequence of this manner of making the payment, the control of the railway will be assumed by the Customs, into whose hands it will pass completely next March.

Korea was very anxious that the Treaty Powers should send envoys to her celebration of the coronation anniversary, but it now appears that the result of her desire is likely to be embarrassing. One of the few Powers that agreed to send an envoy was Russia. She promised to despatch Mr. Waeber, and the telegraph says that he is on the point of arriving in Seoul. But the Korean Court having postponed the ceremony until next year, is perplexed as to the object of Mr. Waeber's coming, its inference being that he certainly does not intend to make a purely philanthropic journey.

Our readers are aware that the First Bank—Baron Shibusawa's Bank—recently began to issue 5-*yen* notes in Korea, and that they circulated readily among the people. It is now stated that the Korean Government asked the Japanese Minister in Seoul whether Japan would guarantee the redemption of these notes in the event of the Bank's failure to do so, and that the answer was of course in the negative, since the notes are issued solely on the Bank's credit.

It may be noted for what it is worth that Old Moore predicts a terrible year of war, pestilence and sudden death for 1903. Amongst the predictions we have for April "War in China."

THE INTRODUCTION OF FOREIGN CAPITAL.

In connection with the sale of Japanese bonds to the amount of £5,000,000 sterling which has just been arranged, it is scarcely correct to speak of it being concluded between the *Kogyo Ginko* (Credit Mobilier) and a syndicate composed of the Hongkong and Shanghai Banking Corporation and Messrs. Baring Brothers. The only parties signing the contract are the *Kogyo Ginko*, and the Hongkong and Shanghai Banking Corporation. The Hongkong Bank, it may be mentioned, assisted in securing the successful floatation of the *Kogyo Ginko*, acting as agents in Japan for receiving applications for the new bank's shares. It was therefore only natural that when the Hongkong Bank broached the idea of taking up 50,000,000 *yen* worth of Government Bonds, Mr. Soyeda should see his account in helping forward the transaction. As a result Japan comes into possession of ready cash at a most opportune time, and at a cheap rate, especially as compared with the present price of bonds in Japan. The bonds will probably be offered on the London market early this week and Messrs. Baring Brothers will assist in the floatation.

Another project of the Hongkong and Shanghai Bank by means of which the much-needed foreign capital will enter Japan, is on the point of completion. We refer to the Nagasaki Water Works Bonds. These amount to *yen* 1,444,000, and will bear 6 per cent. interest. The H. and S. Bank are willing to take the whole of the bonds, the value of the *yen* being calculated at $2/0\frac{1}{2}$. This negotiation has been on the *tapis* for some time, but naturally was temporarily put aside when the bigger project mentioned above came up for discussion. As soon as the big loan was arranged, however, the Bank took up the Nagasaki Water-works Bonds affair again, with the result that another channel has been opened along which can flow to Japan the cheap capital of the west.

Hitherto the Municipality has been obtaining accommodation from the Yasuda Bank at the rate of 2.7 *sen* per diem (9.855 annually) but finding that interest too onerous, it approached the Hongkong and Shanghai Bank and secured a loan of 1,444,000 *yen* at 6 per cent., the bonds being taken at 86, which is 2 points better than the figure obtained by Osaka for its harbour works loan.

It can not be said that the Japanese press is by any means unanimous in approving the recent financial transaction between the Hongkong and Shanghai Bank and the Treasury. Japanese five per cents, say the critics, are now quoted at 106 in the London market, whereas the terms obtained by the Bank enable it to sell the same five-per-cents. at 103. The effect will be to reduce the market price of Japanese securities. In 1897, when Messrs. Samuel Samuel and Company took over 43 million *yen* worth of five-per-cent. war bonds, they agreed to give the Treasury £102 for every 1000 *yen*, their prospect being the sale of the bonds at £103.10s. in London. The Hongkong and Shanghai Bank gives £98 per 1000 *yen* and proposes to sell the bonds at £103. There is certainly, say some Tokyo journals, a very marked difference in these terms. Then again, Count Matsukata obtained 86 for his four-per-cent loan, which means that had he sold five-per-cent bonds at the same rate, they would have fetched $107\frac{1}{2}$, being $9\frac{1}{2}$ more than the price now obtained. Moreover, the Matsukata rate of interest

works out at 4.65 per cent., whereas the rate now given is 5.10 per cent. The *Nippon*, writing on this subject, alleges that the H. & S. Bank offered to pay £98 in March, when the London quotation for five-per-cent. bonds was only 102, and that the Treasury, having refused the offer then, has accepted it now, though the London quotation has risen to over 106.

It need scarcely be said that these criticisms emanate from Opposition journals. They show, in our opinion, marked failure to appreciate some important facts.

We read in the *Chino Shimbun* that the bonds recently sold to the Hongkong and Shanghai Bank are to carry three months' interest. That fact would slightly modify the calculation made in our leading columns on the 6th instant, for purposes of comparison, but the difference is small.

We learn that the local branch of the Hongkong and Shanghai Banking Corporation has received a telegram from its London office dated 8th October, stating that the issue of the re-sale of the *yen* 50,000,000 Imperial Japanese Government 5 per cent. Bonds had already been over-subscribed and that the subscription list would close the following day.

FRANCE AND SIAM.

We learn from the telegraph that by the treaty concluded at Paris the other day, Siam cedes to France the provinces of Melouprey and Barsas as well as some territory on the great lake between the rivers Rolnas and Pickcompong; that France evacuates Chantabun and that Siam may keep only Siamese troops, officered by Siamese, on the right bank of the Mekong.

The terms employed in this despatch are not easily identifiable, but it will probably be correct to suppose that the Luang Prabang district has not been interfered with, and that so far the international agreements concluded in past years have not been modified. What has taken place seems to be that France has acquired territory to the eastward of a line leading from a point on the coast just eastward of Chantabun to the northern end of the Great Lake, and all the territory on the east side of a line drawn thereon north-easterly to the Mekong. By this measure the district of Melu Pre, just outside the Cambodian frontier, and that of Bassac, about a hundred miles north also on the Mekong, are included in the French possessions. The stipulation as to Siamese troops on the right bank of the Mekong must of course refer to the upper reaches of the river. The rivers Rolnas and Pickcompong, despite the frightful mutilation of their names, are doubtless the streams of approximate designations which flow into the Great Lake.

RICE.

The market price of rice has declined appreciably, as will be seen by the following figures:—

	Price on 8th inst. Yen.	Price on 27th inst.	Differ- ence.
For delivery in October ...	14.180	14.590	410
For delivery in Nov.	14.040	14.380	340
For delivery in Dec.	14.185	14.520	335

This change is attributed to the greatly improved climatic conditions that have prevailed since the recent storm. Immediately after the storm there was a marked appreciation of price, but confidence seems to have now been partially restored,

THE JAPANESE FOUR PER-CENTS.

The *Chingai Shogyo Shimpō* has a telegram from London to the effect that the news of the recent sale of Japanese five-per-cent. bonds injured the market, so that the four-per-cents have fallen thirty shillings and are now quoted at £85. That is not unnatural. If five-per-cents become more easily procurable, four-per-cents must necessarily lose something of their attractiveness.

There are rumours that party politicians will seek to employ this transaction as a weapon for attacking the Cabinet in the next session of the Diet. There is said to be some objection to the terms—probably an objection founded on the thoughtless writing of journals like the *Asahi Shimbun* and the *Nippon*. We can only hope that no politicians will be so foolish. It is not unnatural that Japanese patriots should feel chagrined when their country has to sell its bonds, at a rate lower than that procurable for the securities of certain small European Powers. We share that regret very sincerely. But, after all, Japan has to take what she can get. If she could wait to get what she wants, the case would be different. That is where men like Count Okuma find occasion for strong comment. They say that the aim of Japan's financiers should be, not to sell bonds and thus add to the empire's obligations, but to contrive that sales of bonds shall not be necessary, which can never be effected unless administrative and financial reforms are boldly carried out.

It is curious to hear this never-ceasing talk about administrative and financial reforms. In truth we seem to have been listening to the words *gyosei seiri zaisei seiri* for the past ten years without intermission. On the eve of a change of Cabinet, on the morrow of a change of Cabinet, whenever the Diet meets and as often as a politician of the "outs" finds occasion to assault the Ministry, the air is full of these empty expressions. But if administrative and financial reforms be at once so essential and so potential, how does it happen that no body of statesmen succeed in even elaborating a practical programme? We can not suppose that the whole agitation is mere froth. It must have some solid particles. Can no one collect them and construct at any rate a tangible outline of reforms? History will find much to ridicule in all this abortive chatter.

THE FLOODS AT NIKKO.

A new reason is assigned for the flooding of the Nikko river and the consequent destruction of all the bridges, including the celebrated red-lacquer structure—which, it may be remarked in parenthesis, was not by any means 200 years old, as some writers have asserted, but was in truth an entirely new affair, built during the past decade. The reason is that a huge landslip took place on the Nantai-san side of the Chuzenji lake, filling up a part of the lake even to the extent of creating an island, and suddenly raising the general level of the water by some feet. This produced, of course, a sudden flooding of the only river by which the lake discharges, namely, the Nikko river, and the people in the plain found themselves invaded without a moment's notice by a volume of water some three fathoms higher than the river's normal surface. The flooding of streams in mountain districts is always more or less sudden, but so long as only the ordinary

affluents are at work, people living near a river have ample time to watch its rise and make provision for their own safety at least. That is especially true of the Nikko river, which, being the chief outlet of a great lake only a few miles distant, rises and falls in tolerably accurate accord with changes in the level of the lake's surface. But when these normal processes are suddenly dislocated by an immense landslide, displacing an enormous volume of water in the twinkling of an eye, the valleys below are struck by a flood as unexpected as a cannon shot, and folks living within reach of the water have no leisure to escape from its onset. It thus becomes easy to understand how a hundred lives were lost along the course of the Daiya-gawa.

The shocking interest of this event is heightened by rumours that Nantai-san shows signs of volcanic activity. News recently came to Tokyo that rumblings had been heard from the direction of Shirane-san; which did not surprise any one, as Shirane was an active volcano twelve years ago. But Nantai has been quiescent certainly since the 9th century and probably for a much longer period. Its re-birth as a living volcano would be a strange event, difficult to reconcile with the sacred character of the mountain.

"PROPERTY."

Monday, Oct. 6.

While discussion is going on as to why the drafters of the revised treaties used the word "property" instead of "land" in the clauses confirming the perpetual leases, an object lesson in the every-day manner of employing that expression is furnished by the local papers. They contain, as any one consulting their advertisement columns may see, the following notice:—

SALE OF BLUFF PROPERTY.

At an early date—all that valuable bluff property known as Lot No. 159, together with the well-built family residence thereon.

The auctioneer, it will be observed, obeying, doubtless, the rules generally observed in drawing up descriptive notices in English, deemed it necessary to explain that the well-built family residence standing on the property would be sold *together* with the "valuable bluff property" itself. He regarded the "property" as land, and did not by any means consider that the sale of the property necessarily meant the simultaneous sale of the buildings that stand on it.

Immediately following the above there appears another notice in which the sale is announced of certain Dzushi "property," consisting of a two-storeyed house and the land on which it stands, such land being held under lease for 999 years; and in this case the auctioneer considered it necessary to add "the above to be sold together." He knew very well that unless this last condition were appended, the public might expect a separate sale with the option of removing the building. Supposing, now, that he had advertised for sale the "property held under the 999-years lease," (without explaining that the house was to be sold simultaneously), is there a solitary Englishman in this Settlement who would have interpreted that formula in the sense of "land and buildings?"

Wednesday, Oct. 8.

With reference to our comment—illustrated by examples from the advertising columns of the local press—that the word "property," as ordinarily used in English,

does not necessarily signify lands and houses, but may also be employed, and is frequently employed, to designate land alone independently of the buildings standing on it, the *Japan Gazette* adduces an example from our own advertising columns, where an auctioneer announces the sale of certain property consisting of land and houses *en bloc*. Why of course! No one has ever dreamed of denying that property, if unqualified or unrestricted by its context, means a great deal more than land, or even land and houses. But the position taken by "Unconvinced" and his fellow-thinkers is that the drafters of the revised treaty could not possibly have used "property" if they intended to designate "land" alone, and it is rather amusing—though not necessarily convincing, we admit—to find auctioneers in this very settlement employing the word in the very sense which, according to "Unconvinced," could not possibly have been intended by the treaty-drafters.

A little thing is often useful to anchor the thoughts to earth when they show a tendency to soar into the clouds of generalities. Such a little thing is furnished by any numeral. Let us take the numeral "999." Suppose, now, that an auctioneer were to announce the sale of a certain "property" adjacent to this settlement, "held under a land lease for 999 years." Could it be supposed that the thing advertised was a building? Could any one possibly suppose anything of the kind? And, to go a step further, could any one reasonably allege that because the auctioneer used the word "property" in describing the object of sale, he must of necessity have meant something more than "land?"

FOLK-LORE ON THE VELDT.

The *Spectator* has given the hospitality of its columns to a very readable article upon some of the curious folk-lore superstitions which have sprung up among the dwellers on the far-stretching veldt of South Africa. The writer is a Cape Colonist himself and thus can substantiate his statements by drawing upon a rich fund of his own childish recollections. He says that the life of the Boer boy on the farm begins not in the nursery but on the open veldt. In charge of the native servant, who binds him on her back in a springbok kaross while she washes her mistress's linen in some stream near the house, he goes to the veldt and listens to what she tells him. His first impressions of the common objects around are clouded by what he has been informed as to their properties and powers. All about him lies a vast new world, of which he has to read the signs by the light of the knowledge which the ayah imparts. Turning over the leaves of his memory the writer finds that one of his first recollections is of the ayah pointing up to the sky, which was speckled, as the face of a freckled man is spotted, by a multitude of tiny cirrus clouds that formed fantastic arrangements amongst themselves. "Some one is dead when the sky is like that," *baasie* [young master], she said impressively, and then how many proofs she had in support of the theory! On another occasion Ayah Kaatjie found two beautiful white bleached bones of a buck which had died on the veld, and wrapped them up in her handkerchief. "For mad oxen, young master, she said; and when we came home she showed how one could foretell the future by noticing the way in which the "mad oxen" fell across each other when they were thrown

into the air and allowed to fall on an open space which had been brushed with scented thyme. If the left fell across the right it was a good sign, but if it passed underneath the other it was a token of the gravest significance. With these "mad oxen," which are formed from the tail vertebrae of some veldt animal, one can forecast the future and tell the events which are going to happen the same day. The only essentials are that the bones should have been picked up when they were white-bleached, and that the collector should have been the person who actually intends to employ them.

Belief in magic is universal among the Boers as well as among their brethren scattered about Cape Colony. To quote our essayist:—

Some of the superstitions are evidently based on facts, for it is undoubtedly true that many of the so-called "snake doctors" who are regarded as magicians and wizards of the first order are thoroughly acquainted with the healing virtues of many herbs and simples. A general belief is that madness may be produced by giving the victim a pinch of powdered spider in his tea. The species of spider employed belongs to the genus *mygale*, one of the trapdoor-making kind, and though it is exceedingly hairy and ugly looking, its bite is not poisonous, nor does it seem to possess any marked toxic properties when it has been dried and powdered. Madness produced in such a manner can only be cured by the person who was instrumental in bringing it about, and then by a variety of plants and animals, the directions for effecting a cure differing in almost every district. The herbalists, both Boer and native, employ a large number of plants and animals, and allege that they have cured cancer by the use of a decoction of *amaryllis* bulbs. A stranger remedy for the same disease is a paste made of the leaves and roots of a brilliantly flowered leguminous plant that grows in many parts of the Colony. The Colonial botanist relates that at the time of the illness of the late Emperor Frederick a number of German farmers made up a parcel of the leaves of this plant and forwarded it to the Emperor with a recommendation that he should use it after breakfast! No doubt many of these plants possess powerful virtues of which both Boer and native know the use, but it is more difficult to understand for what reason goat's dung and the excrementa of the rock coney are given a place in the pharmacopoeia. The former is used in cases of measles and scarlet fever, and is only valuable as a diuretic, while there are other and less disgusting remedies equally efficacious.

So much for superstitions concerning the healing art. We wish the writer of the article had given more details of the folk-lore tales of the veldt. His reticence is most tantalizing. He says:—

The folk-tales—how the sand lizard's mother would not allow him to be married, how the jackal christened his children, and how the baboons got the better of the tigers—are known to every Boer boy and girl, and deserve a wider public, for they are thoroughly original and smell of the veldt. Some South African Grimm is needed to discover and put on record the many fairy-tales of the Maqua tribes and the higher Damaras, which are said to be extremely curious and interesting. Some of them are known to the Boers, but in general the Cape farmer does not care for such things. He prefers the more morbid subjects, and leaves the less exciting episodes to his children. It is extremely rare nowadays to meet a farmer who has at his fingers' ends the details of the history of the "little brother with the lame leg," "the iron mouse," or "the crowned snake,"—three folk-tales which were at one time well known. More widely spread is the belief in *On paai bully*, an imaginary person who fulfils a rôle somewhat similar to that of the bogey man in Europe.

Perhaps some day we shall have these stories told in print; at any rate we hope so.

DESTRUCTIVE FIRE AT AMOY.

A telegram to the *Fiji Shimpō* says that a very destructive fire occurred at Amoy on the 3rd instant. It broke out at 10 a.m. and was still burning at 7 p.m. when the telegram was despatched. The conflagration originated in the part of the town immediately behind the foreign settlement, and the premises of Messrs. Jardine, Mathe-

son and Company as well as those of Messrs. Douglas Lapraik and Company are said to have been completely destroyed while the custom house had to be blown up. Whether this represents the sum of the damage done in the foreign quarter we can not ascertain from the telegrams. The *Fiji Shimpō's* message speaks of a violent wind blowing at the time and says that the whole of the foreign settlement appeared to be in danger, but that statement must obviously be taken with reserve, for nearly all the foreign residences are on the island of Kulangsu, which is separated by some six hundred yards of water from the island of Haimun where the city of Amoy stands and where most of the foreign business is transacted. Any damage done to the foreign quarter must have been confined to the business premises, unless the fire occurred in Kulangsu, which can not be supposed as the telegram speaks of several thousands of Chinese houses having been burned. The circuit of Amoy city and suburbs is some 8 miles and it has a population of 300,000.

A telegram despatched from Amoy on the afternoon of the 4th instant said that the conflagration was still raging there. No foreign buildings had been destroyed except the warehouses of Messrs. Jardine and Matheson and of Messrs. Lapraik, Cass and Company, but although dynamite had been used to check the spread of the flames, success had not attended the effort. The fire broke out at 10 a.m. on the 3rd instant, and intelligence despatched on that night said that by 7 p.m. some thousands of houses had been destroyed. If, as this last telegram indicates, the flames had not been subdued by the afternoon of the 4th, great destruction must have been wrought.

ARCHBISHOP TEMPLE.

Anyone who knows the Archbishop of Canterbury, a correspondent writes, will be very unwilling to believe that he really intends to resign, as reported in *Truth*. When any allusion has been made to the subject the Primate has always had one invariable answer, delivered in that never-to-be-forgotten voice:—"I'm like an old cab-horse, all right so long as I am in the shafts." The infirmities to which *Truth* alludes are nothing new. The Primate's eyesight has been failing for years and he has, by the aid of his marvellous constitution, surmounted many illnesses more severe than his recent indispositions. Everyone knows that episcopal resignations are uncommon, but it is not so generally known that till the Bishops' Resignation Act, 1869, they were impossible. That Act enables a Bishop to retire with a pension of £2,000 a year, or one-third of the income of his see, whichever sum is larger. In the Archbishop's case the sum would be £5,000 a year. In addition to this the retiring Bishop may be empowered by Order in Council, under special circumstances, to retain his episcopal residence for life. The same Act provides for the appointment of Coadjutor Bishops in cases of permanent mental infirmity, but these sections have been seldom or never put in force. A surprising number of the Archbishops of Canterbury have attained a great age. Since the end of the fifteenth century no fewer than six out of twenty-eight Archbishops have been octogenarians—namely, Warham (1503-1533), Juxon, the favourite Bishop of Charles I. (1660-1663), Wake (1715-1737), Howley (1828-1848), Sumner

(1848-1862), and the present Archbishop: but none of these have attained a greater age than eighty-two, while Dr. Temple was only eighty on St. Andrew's Day last year. In addition to the six octogenarians, fourteen out of the twenty-eight attained the age of seventy. So far, Dr. Temple has held the Archbishopric for not quite half the average period for the last 400 years. He has been Archbishop for six years, while the average is fourteen. One very good story is told of Dr. Temple. It belongs to the days when he was Head-master at Rugby. A youthful Rugbeian was asked by his father during the holidays how he liked the Head. "Oh," said the lad, "Mr. Temple is a beast, but," he added with characteristic schoolboy candour, "he's a just beast." Dr. Temple is said to consider that tribute to his character as the highest he has ever received.

FOREIGN CUSTOMS AS TAUGHT IN JAPAN.

There is now in operation at the Engi-za, in the Akasaka district of Tokyo, a cinematograph which is about as bad as they make them. The pictures are blurred, and the mechanism is so defective that every spectacle projected upon the screen vibrates perpetually like the surface of a troubled sea, to say nothing of being profusely speckled and spotted. Fortunately for this miserable show its band, by banging a big drum in the streets without regard for surroundings succeeded in frightening the Russian Minister's carriage and thus caused an accident which served as an unique advertisement. However, the intrinsic badness or goodness of theatrical performances in Tokyo and the disorderly conduct of their staff, are not what we want to speak about here. We refer to the Engi-za cinematograph for the sake of a very glib exponent who does the showman in a highly creditable manner, so far as elocution and humour are concerned, but whose expositions are not calculated to convey to his audience a very accurate idea of foreign manners and customs. For example, he prefaces a series of views of the Corbett-Fitzsimmons fight by telling his audience that this is the manner of foreign wrestling, and with reference to a scene in which a drunken husband carries home his bottle, gets it smashed by his wife and then proceeds to retaliate by smashing all the crockery and household furniture, this truthful showman informs the tradesfolk and coolies forming his audience that though such domestic episodes never occur in Japan, they are common enough in the Occident. Well, they do not occur in Japan. That is a fact. The Japanese in his cups is not a truculent, destructive beast as the Occidental too often becomes. It is a part of the old story: the extremes are much further apart in the West than in the East. But in no region of the West are displays common such as that shown by the Engiza cinematograph. Perhaps the matter is scarcely worth a paragraph, but it may happen to some of our readers some day to be asked whether the reduction of crockery and furniture to fragments is not a normal practice of inebriated Occidentals. They will know, then, how such nonsense has passed into circulation.

NOTES ON CURRENT EVENTS.

The question of naval increment is again attracting public attention. It appears to be generally thought that Japan ought to have a navy equal to the combined force of any

two Powers whose flags are represented in Far-Eastern waters. Thus, taking Russia and France, their respective squadrons at present stand at 157,000 tons and 57,000 tons, a total of 214,000 tons. Japan's nominal strength, on the other hand, is 259,573 tons, but if from that total be subtracted the old ships and the vessels unworthy to take their place in the fighting line, there remain only something like 180,000 tons. Further, according to the present programme of France and Russia, their total strength in the Far East in 1907 will be from 350,000 to 360,000 tons. There can be no question, therefore, as to the expediency of increasing Japan's navy, and the present expectation is that the Cabinet will ask the Diet to continue the increased land tax after 1903, applying the proceeds to naval increment. The increase is put by the *Fiji Shimpō* at 120,000 tons, and the construction period at 6 years. It is expected that the principal difficulty will be with the House of Peers, but our Tokyo contemporaries allege that the *Kenku-kai*, which includes the most influential members of the House, approves the Government's plan.

The Bank of Japan has reduced its rate of interest by 0.2 *sen* daily. Its specie reserve now stands at 86 million *yen*, and there has not been any urgent demand for money since last spring. The Bank is the Treasury's creditor to the extent of 30 millions *yen*, and its note-issuing power is still 20 millions to the good. Further the purchase of 50 million *yen* worth of bonds from the Deposit Bureau of the Treasury by a British syndicate will give additional ease to the money market. Japanese papers write of all these things as though they were a source of congratulation. But an absence of demand for money could not be regarded as fortunate, were it a fact. It is not a fact, however, or, at all events, it requires much modification. There is plenty of demand for money, but the supply is hampered by terms such as no sound enterprise could endure.

His Excellency the United States Minister returned to Tokyo on the evening of the 3rd instant. We understand that his trip to Vladivostok and Korea was very successful.

It is stated that the Department of Justice has completed the amended drafts of the various bills relating to penal law, penal procedure, distraint, bankruptcy etc. which were not passed by the Diet last session, and that they will be submitted again early in the approaching session.

The war-ship *Shikishima* was floated off successfully on the 3rd instant. Such speedy success had not been anticipated by those engaged in the operation, as 600 tons of weight had to be reduced in order to lessen the vessel's draught by one inch.

The new yacht built by the Mitsu Bishi Firm for presentation to the Prince Imperial, was successfully launched at Nagasaki on the 4th instant, in the presence of the Governor, Mr. Arakawa, and of Mr. Kondo Rempei, President of the Nippon Yusen Kaisha. She was named the *Hatsukaze*, and it is expected that she will arrive in Yokohama on the 15th instant. She is an 80-ton schooner, and her fittings and finish are said to be very beautiful.

Our days are to be lengthened by about 4 minutes from the 1st of January next. The *Official Gazette* announces that sunrise will thenceforth be regarded as the moment when the highest point of the sun's disc

becomes tangential to the horizon line, and sunset will be when the same point becomes similarly tangential at the time of the orb's descent. Hitherto both sunrise and sunset have been counted from the contact of the centre of the sun's disc with the horizon line—in other words, from the moment when the disc is bisected by the line. The new arrangement lengthens the day by the time which the earth takes to revolve through a space equal to the sun's disc, namely, 4 minutes.

It is the fashion in Japan to decry the work of modern craftsmen and to declare that the art of Japan reached its zenith in the days when the art-worker served for the honour of his particular *daimyo*, or temple, or guild,—and for little else. Times have changed. The worker now demands in Japan a fair day's wage for a fair day's pay. But with this change has come no loss in mental activity, artistic ingenuity, or skill in craftsmanship. To many minds the art work of Japan in some particulars is distinctly in advance of the output of earlier eras and in none is this more marked than in the noble art of wood-carving. Quite recently we had the unique opportunity of seeing some carvings which have been executed in this country for the King of the Belgians. King Leopold is erecting in his magnificent park at Laeken some Japanese pleasure pavilions, together with a pagoda and other structures of a purely Japanese character. Needless to say no expense has been spared and the result is seen in some truly magnificent specimens of Japanese workmanship. The wood-carvings in their infinite variety of design and superb execution can only be described in adequate terms by an artist in words; while the metal work is equally fine. Anyone having the privilege of seeing these specimens of modern Japanese craftsmanship can at once refute the fallacy that the art-work of Japan has fallen on evil days. It but illustrates the fact that where money is no object, the Japanese artist in his own field is still unsurpassed.

Various changes of Local Governors are announced:—

Mr. Fukuno Ichizo is transferred from Fukuoka to Aichi.

Mr. Kawashima Jun is transferred from Shiga to Fukuoka.

Mr. Suzuki Sadanawo is transferred from Gumma to Shiga.

Mr. Yoshimi Terasu, Police Inspector, becomes Governor of Gumma Prefecture.

Mr. Ibara Ko, Secretary of Hiroshima Prefecture, becomes Governor of Shimane Prefecture.

Mr. Kano Ryogen, Governor of Shimane Prefecture, is placed on the retired list.

We are authoritatively informed that the capital invited for subscription in C. Nickel and Company, Limited, has been more than fully subscribed, and the Company is now proceeding to formation.

On the 7th instant there was launched at the Mitsui Bishi Yard in Nagasaki a vessel of 6,300 tons, built to order of the Nippon Yusen Kaisha. Mr. Kondo Rempei, President of the latter Company, was present at the launch, and his daughter named the ship the *Aki Maru*. She is a sister ship of the *Hitachi Maru* and the *Awa Maru*.

Vernacular journals, deriving their information from the Domestic and Foreign News Agency, report that a scheme of naval expansion has been formulated by Admiral Baron Yamamoto, and that it will probably obtain the Cabinet's approval. The aggregate tonnage of the ships to be added is

120,000, and the period will be six years, which would involve an expenditure of some 20 million *yen* annually. The vessels are said to be 4 line-of-battle ships, 6 first class cruisers, and various gun-boats and torpedo-boats. The line-of-battle ships will be built in England; the cruisers in England, France and Germany, and the small craft in Japan. Of course these figures can not be accepted with implicit confidence.

The leading Tokyo papers allege that it has been virtually decided to raise the Japanese Legation in London to the rank of an embassy. A similar course would be adopted in other great Western capitals if the country's finances permitted, but the weight of the *post-bellum* programme compels Japan to go slow. In consideration, however, of her special relations with Great Britain she will make an exception in the case of the London Legation. We do not vouch for the truth of this rumour, but we note that such a step on Japan's part would of course necessitate a similar measure with regard to the British Legation in Tokyo.

The sale of "extras" has become a veritable swindle in Tokyo. They are such excellent devices for obtaining money on false pretenses. No one that can afford a couple of *sen* likes to run the risk of missing an important item of news, and so when a man is seen running along with every semblance of haste and importance, and shouting "gogai, gogai" as though the speedy dissemination of the news he carries were a matter of the utmost moment, he is tolerably certain to find a good demand for the little sheet of printed matter he flaunts in the face of the public. One of the latest of these "extras" contained the following item of intelligence and nothing more:—"It is thought probable that several small banks will be ordered to close." The sale of such a scrap of uninteresting rumour would be an excellent joke on the 1st of April, but people in Tokyo are said to be getting rather tired of these performances.

French talk about Japanese designs in Siam has evoked some sharp rejoinders from Japanese journalists. The *Nippon* is particularly bitter, but we expect a little chauvinism from that cleverly edited but not always temperate newspaper. More interesting, therefore, are some remarks in the *Jiji Shimpō*. They amount to reminding France that people living in glass houses should not throw stones. Certain French newspapers have shown excitement because a Japanese subject has been appointed to fill the post of adviser to the Siamese Government. They forget, apparently, that no less than ten French citizens are employed by Korea in advisory positions, and that a French citizen is director of the Seoul-Songdo railway works. These appointments did not, when they were made, evoke any expressions of suspicion or excitement in Japanese quarters. Why should not the French preserve an equally calm demeanour when a solitary Japanese obtains a post in Siam? That certainly sounds like sound logic.

The *Niroku Shimpō's* latest sensation is a story that serious differences have arisen between Bishop Nicolai and a section of his congregation, and that there is a strong movement aiming at his removal from the headship of the Greek Church in Tokyo. It is necessary to confess that the *Niroku Shimpō's* statements do not command implicit confidence. The foreign public will require a very great deal of

evidence before they can be persuaded to believe that Bishop Nicolai is in fault. His reputation stands at least as high as that of any missionary that ever visited Japan. We have heard it said, indeed, that he refuses to grant any measure of autonomy to his converts, and it is just possible that the Japanese, who are emphatically sensitive in that respect, may resent being kept in leading strings. But if they rebel successfully against Bishop Nicolai's ministrations, they will have lost one of their greatest friends and benefactors.

Japanese journals state that Mr. Robert Hughes of Kobe has instituted proceedings in the Japanese local court against the new Lord Mayor of London and two others, on the plea that a sum of 15,566 *yen* is due to the plaintiff on account of services rendered by him in securing for the defendants the opium monopoly in Formosa. The venue would seem to lie in London, but as Messrs. Samuel Samuel & Company have an office in Kobe, proceedings have been instituted there.

Tokyo newspapers state that the Department of Agriculture and Commerce has sent invitations to over ten thousand persons in Europe and America to attend the Osaka Exhibition next year. A large attendance of foreigners is expected, and arrangements are to be made for organizing a special office in the Exhibition to provide facilities of all kinds. It is stated that Count Hirosawa, a member of the Welcome Society's committee, will kindly undertake to superintend matters relating to interpreters and guides. The great difficulty will be accommodation. Where that can be provided we do not see, though, after all, no special embarrassment was experienced on the occasion of the Kyoto Exhibition in 1895.

There has been keen competition between the *Seiyu-kai* and the Progressists in consequence of Baron Kaneko's resignation of the post of Chairman of the Tokyo City Assembly. Victory is now declared for the *Seiyu-kai* candidate, Mr. Nisugi Yei, who obtained 32 votes against 22 cast for his rival, Mr. Sudo Tokiichiro.

Prince Tokugawa Keiki, the last of the Shoguns, met with a somewhat serious carriage accident when driving near the official residence of the Minister of War on the 7th instant. The horses took fright, and the Prince was thrown from the vehicle, receiving a wound on the head, and various contusions. His Highness, who though now an old man, is remarkably vigorous, did not lose consciousness. He walked stoutly to the residence of Prince Arisugawa, which is in the immediate neighbourhood of the place of the accident, and there received medical treatment. No fever ensued and the Prince was able to return to his own house on the 8th instant.

We learn from the *Jiji Shimpō* that the doctrines of socialism are obtaining some vogue in Japan, but only among unfledged students, especially those educated in the United States. The *Jiji* has often pointed out this danger, and it now notes that its predictions have been fulfilled and that the Government is thinking of adopting measures to control socialist meetings, speeches and literature. Our contemporary, however, condemns anything of the kind. It thinks that opinions like those of the socialists feed on opposition, and that if Germany and Russia followed England's example and allowed the poison of socialism to dissipate

in the atmosphere of freedom, those countries would be much happier. Japan has the good example and the bad before her eyes, and it will be her own fault if she chooses the latter.

The *Yayeyama* reached Yokosuka on the 8th instant, towed by the *Kasagi*. It seemed at one time scarcely possible that the *Yayeyama* should be saved. We are not aware whether the difficulties encountered in floating her off were really as great as rumour asserted, but it certainly seems that the naval authorities deserve credit.

PEST IN YOKOHAMA.

Wednesday, Oct. 8.

The first suspected case of pest appeared in the house of Mr. Sasaki Ishiyemon, coolie contractor, at No. 20, Gochome, Kaigan-dori (near the building of the Toyo Kisen Kaisha), Yokohama, the victim being his eldest daughter Sasaki Shina, aged 16 years old, who succumbed to the malady at the Manji Hospital, in Minami-Yoshida, on the morning of Oct. 6th. It appears that the unfortunate girl was first taken ill on Sept. 26th with a fever and the following day Dr. Nakayama, of Rokuchome, Honcho, Yokohama, was called to examine her. She showed no peculiar symptoms at that time. But on the night of Oct. 5th when the doctor revisited the patient he came to the conclusion that the girl was suffering from a disease closely resembling pest and at once reported the matter to the Police Authorities. The patient was taken during the night to the Manji Hospital above referred to for treatment. The Home Department, upon receipt of this news from Yokohama, sent a physician the same night to examine the patient who, while undergoing his treatment, expired. An extra issued by the *Yokohama Boyeki Shinbun* on Monday afternoon says that pest germs were found in the blood taken from the patient, whose symptoms were enough to show it to be a genuine case. How and where the girl contracted the malady remains a mystery, but it is believed that she may have been affected by some cotton goods dealt in for transportation by coolies employed by her father. She was attending a girl's high school in this port until Sept. 28th. The Police Authorities had not enforced the stoppage of communication between Kaigandori and other parts of the port up to the afternoon of Oct. 6th.

The Police enforced the stoppage of communication between Sasaki Ishiyemon's house, where the case occurred, and adjacent houses on the afternoon of October 6th. The Yokohama City Office announced on the 6th that the authorities will buy rats from the general public at the rate of five *sen* per animal. As to the origin of the case it still remains unknown, but two carcasses of rats were found in the store-house belonging to the Matsushita shipping agency, next door to Sasaki's house on the afternoon of the 6th. The official examination made revealed the fact that one of the dead rats contained several pest bacilli.

It is further reported that on September 3rd a quantity of raw cotton was imported into Yokohama from abroad by the Mitsui Co., and the goods were afterwards forwarded, through Sasaki to the Fuji Cotton Spinning Mill in Shizuoka Prefecture on September 21st. The belief is that the unfortunate girl contracted the malady from these goods. On the afternoon of October 6th a police and sanitary official from Shizuoka came to Yokohama in connection with the matter.

We are asked by the Police Authorities to say that, while of course the offer to purchase rats whether dead or alive is not restricted to Japanese, yet it is specially desired that foreigners should co-operate with the view of restricting the dissemination of the pest. To this end it is requested that any foreigner whose servants may catch a live rat or under whose notice may be brought a dead rodent, will kindly transmit the same to the Bluff (Yamatecho) Police Station if in that juris-

diction, or to the Kagacho Station if the matter should arise within the limits of the former Settlement.

Thursday, Oct. 9.

Since the above was written, Yamada Kane-kichi, a coolie living at No. 2, Itchome, Yoshidamachi, Yokohama, was attacked by the plague on the morning of October 8th and taken to the Manji Hospital, Minami-Yoshida, for treatment. This makes a total of four cases in all. Kimura Tokujiro, a coolie of No. 20, Gochome, Kaigandori, Yokohama, who was conveyed to the Manji Hospital on Oct. 7th succumbed to the malady at 6.20 a.m. on the 8th.

By order of the Yokohama Police, a number of physicians are now conducting an examination in Yoshidamachi, Kaigan-dori, and other quarters of the port where coolies and workmen engaged in the shipping business live in large numbers.

The Metropolitan Police Authorities have decided to enforce health examination at Shimbashi Station on passengers arriving from Yokohama.

Friday, Oct. 10.

The fifth suspected case of the plague occurred on Oct. 9th in the house of Azumai Kichimatsu, No. 20, Gochome, Kaigan-dori, Yokohama, where an employe was taken ill on the evening of the 8th and is said to have developed symptoms of the pest the following day. The patient was at once conveyed to the Manji Hospital.

The stoppage of communications was practically enforced by the Police Authorities on the last infected place, namely Kaigan-dori where the plague made its first appearance, shortly before midnight on Oct. 8th, when a high wooden wall was erected, thus shutting off the place from other parts of the port. In the above enclosure are 166 houses, including the building of the Toyo Kisen Kaisha, with 1,240 persons. In consequence of this, the offices of the shipping company were temporarily removed to Mr. Nishimura's house in Honcho, Yokohama, on the 9th. Steps have been taken to catch rats in affected places, but, strange to say, very few were captured up to the afternoon of the 9th. Prior to the above place being officially isolated there were four persons, namely two women and two children, who left the place and concealed themselves in the house of Idei Tsunekichi, at No. 2, Itchome, Hatsunecho, Yokohama. The matter was, however, discovered by the Police on the morning of the 9th and they, with the family of Idei, were at once subjected to health examination and are now under isolation there. On Oct. 9th policemen were posted at various important places to give warning to persons who are found walking barefooted, and this measure will continue for the time being. On the 8th, 69 boats and junks anchored near Kaigan-dori were medically inspected, as also 146 *sendo* belonging to these craft. On the morning of the 9th, some 30 boats moored in the immediate neighbourhood of the Imperial Pavilion, near the Yokohama Chiho Saibansho, were taken to the O-oka river, after having been disinfected. A number of boats near the Yoshidama Bridge were also medically dealt with owing to the fact that the *Fukuyoshi Maru*, a junk to which one of the pest patients formerly belonged, was found anchored amongst them.

It may be added that as a measure of precaution the Police Authorities have resolved to keep vigilant watch about China Town and other portions of the former Settlement where persons engaged in shipping business reside.

THE BASUKE SKETCHING CLUB.

The members of Mr. F. J. Basuke's Sketching Club opened an exhibition of water-colours at No. 76 Main St. on Monday forenoon and their works will remain on view till Saturday the 11th. The Club includes fourteen members, every one of whom, as is shown by his productions, is an able exponent of his art, while some are quite strong men who would attract keen attention anywhere and under any conditions. Mr. Basuke himself is an artist of great gifts, which have been developed by unremitting industry and

application. In one of his works "A quiet afternoon" he discloses a mood which is essentially soft and restful; the picture is quietness itself. A noticeable exhibit of the same class is "Mist in the Early Morning" also by Basuke,—a scene in Abura-dani near Kumamoto. Still another of Basuke's is a capital scene "Searching for the Lost,"—a woman striving by means of a pole to recover something dropped in a well, while the loser, a child of ten, stands on tip-toe gazing into the depths, in rapt observation of the salvage efforts. This picture was "kodaked" by the artist while engaged in other work one day, and the local touches introduced from memory, but the poses of the two figures are strikingly natural. Nos. 5 & 6 "A Sick Baby," and "Ameya, the Street Confectioner" as well as a moonlight sketch are very strong and bold in execution. One of the most successful exhibitors, we should say, is Mr. K. Ishikawa, whose best examples are probably 138 and 144. In these the colour effects are very striking. "Pines at Numazu" is another from the same hand where again the colouring is very successful, and a similar remark may be made about 143, in which Ishikawa introduces peach trees in bloom with a foreground of naked *kuwa* (mulberry) stems. Mr. Kobayashi has a very strongly drawn village scene by moonlight and Mr. Takeuchi, a young and exceedingly promising artist, is represented by a *toro* and some human figures on the road to Shinanoi in Shinano, and a delicate little piece entitled "A Street in Miogi." Kasuke has an everyday view—two women stamping a rice-grinding mill almost under the eaves of an old-fashioned farmhouse. Kobayashi, another art-worker who is making his mark, has No. 114, striking moonlight scene, and his name is also attached to quite an original work which he calls "Haneda," and which shows that locality as it appears at 4 o'clock in the morning. Other noticeable water-colours are "Moonlight" (No. 59) by Omura, a very fine piece, and quite a powerful landscape by Shimoyama which with the assistance of only a house or two and a few shadows shows blazing heat in every patch. Mr. Basuke is again to be congratulated upon the exhibition promoted by him and his pupils, and it is to be hoped the young school will receive the encouragement it deserves.

CHRIST CHURCH, YOKOHAMA.

The festival of the dedication of Christ Church, Yokohama, to public worship was celebrated on Sunday. The congregations which gathered at Morning Prayer and at Evensong were disappointingly meagre, but the services were both bright and hearty. Morning Prayer began with the processional hymn, "The Church's one foundation," while the special psalms were the 48th, 84th, and 122nd. The *Te Deum* and *Benedictus* were sung to Langdon's setting. The hymns reflected the purpose of the day's celebration and were "O, word of God above," "We love the place, O, God," and "Pleasant are Thy courts above." The Incumbent, the Rev. W. P. G. Field, preaching from the words "My Father's House," made an eloquent appeal to his hearers to make a more general use of the church; to let it enter more freely into the plan of their daily lives; to the world-weary, care-laden man or woman, perplexed by the worries and troubles of life, the little Church on the Bluff should be a haven of peace where, as sons and daughters in their Father's house, they could drop in at any moment of the day and commune awhile with God, the all-Father, finding thereby peace and consolation and receiving a fresh stock of courage wherewith to continue the battle of life. Evensong began with the hymn, "Saviour, blessed Saviour." The proper psalms were the 125th, 118th, and 150th; the *Magnificat* and *Nunc Dimittis* were by Dr. Bunnett; the anthem was "Ye that stand in the House" (Spinney); the service concluding with the hymn "Blessed City." As a closing voluntary, the organist, Mr. W. Karl Vincent, played with fine effect "The War March of the Priests" from *Athalie*.

SALE OF FIVE-PER-CENT. BONDS.

WE briefly announced on Friday the conclusion of a financial transaction representing a sum of fifty million *yen*. The *Kogyo Ginko* (Credit Mobilier) is the apparent principal on the Japanese side, and on the English side the Hongkong and Shanghai Banking Corporation. The bonds are taken at £98 per 1,000 *yen* and are to be offered in London at a minimum price of £103, so that Japan gets 97.796 for every 100-*yen* bond, and as the bonds carry 5 per cent. interest, it follows that she pays 5.11 per cent., which is 0.45 per cent. more than the rate on Count MATSUKATA's loan of two millions sterling and 0.11 more than the rate on the previous sale of 40 million *yen* worth of bonds affected through Messrs. Samuel Samuel and Company. A part of the money is to come to this country in December, and the remainder will arrive in February and March.

The purpose of this sale of bonds may be briefly stated to be the prosecution of the *post bellum* programme as originally projected. Owing to the impossibility of floating domestic loans which were intended to be an important source of revenue for carrying out the programme, the Treasury has found itself constantly confronted by the embarrassing alternative of either abandoning works which had been carried within sight of completion, or drawing upon funds which could not be permanently applied to such purposes. Count MATSUKATA, when he held the portfolio of Finance, found that the Indemnity had been thus drawn on, and as the Indemnity was ultimately destined for other ends, a foreign loan of ten million sterling was effected in order to restore the drafts thus made upon that fund. Last year the present cabinet adjusted a similar difficulty by drafting the North-China Indemnity into the Budget, but that, of course, being a measure serviceable for one year only, some other plan had to be adopted for the purposes of the 1903-4 Budget. Hence the present sale of bonds, which, however, can not be properly called a loan, as will be presently explained.

That is the broad fact. As for the particulars, they take the following form, according to Tokyo papers:—

	Yen.
Deficit arising from unsold bonds for the 34th fiscal year (1900-01)	12,094,531
Additional to the above	535,617
Amount to be restored to the Indemnity..	14,739,793
Borrowed from the Bank of Formosa ...	6,400,000
Amount of Formosan Bonds issued in 1902	4,740,000

Total 38,509,941

This transaction may be said to have been upon the *tapis* for a considerable time, though the actual period consumed by the negotiations when once definitely placed *en train* was just six weeks. Great secrecy has been observed, since success alone justifies publicity in such matters. The transaction does not involve the issue of any new bonds by the Treasury, or any consequent increase to the national debt. It means simply that bonds which though

already issued, did not find purchasers among the general public in Japan and had, therefore, to be taken over by the Deposit Bureau (*Yokimbu*) of the Finance Department, now pass into the hands of British investors. The demand in London for Japanese five-per-cent bonds became keener from the early months of the present year, and finally the Hongkong and Shanghai Bank through whom the applications came, proposed to become sellers themselves instead of mere brokers. Therefore they applied for a large consignment of bonds. That was in June last. But as mutually satisfactory terms could not be arranged, the transaction did not immediately mature. Negotiations were resumed in August, and have now been concluded. Thus the situation is that the Hongkong and Shanghai Bank become possessed of a number of bonds hitherto held by the Deposit Bureau of the Finance Department, and will place them on the London market as occasion offers. The Japanese Credit Mobilier, whose able President, Mr. SOYEDA, has been chiefly instrumental in effecting the arrangement, derives no direct profit from it, but will, of course, be indirectly benefited by enhanced reputation. For the rest it may be assumed that if the Hongkong & Shanghai Bank finds its account in this transaction, it will be prepared to undertake similar business hereafter; which signifies that a bridge has now been built between the London market and that of Japan. It was pointed out in *The Times* some months ago that such a bridge is necessary, and that the *Kogyo Ginko* (Credit Mobilier) would probably be the most serviceable key-stone on the Japanese side, a forecast which has now been verified.

It may be added that the bonds are specially endorsed by the Japanese Government, and that the sterling rate of redemption is fixed at two shillings and a half-penny to the *yen*. As usual the Hongkong and Shanghai Bank has shown itself the most enterprising and the most efficient financial agent between Europe and the Far East.

THE BUDGET.

IT is stated on good authority that the Cabinet has agreed to a draft Budget for 1903-4, and that all talk of differences of opinion between the Ministers may now be dismissed as idle. The total of the expenditures included in the Budget is not yet stated, but that it is well within the limits of the income available may be taken for granted.

The Cabinet has not adopted a purely conservative policy as to public works. There are to be substantial appropriations on account of railway and telephone expansions. Postponement of such works is not sound finance. It is simply abstaining from enterprises not only directly profitable to the State but also indirectly beneficial to the nation at large. Since the commencement of what is called the *post-bellum* period, that is to say, during the six fiscal years

ended on March 31st, 1902, the ordinary revenues of the State exceeded the ordinary expenditures by an aggregate sum of 156 million *yen*. But the greater part of this amount having been appropriated to meet the extraordinary outlays mapped out in the *post-bellum* programme, it resulted that the actual surpluses totalled only 24 millions. We have often pointed out that when the extraordinary *post-bellum* undertakings are completed, and when the necessity of making annual provision for carrying them on ceases, the country's finances will be in a flourishing condition. There will, in fact, be a clear surplus of over 20 million *yen* yearly, on the present basis and making due allowance for all normal increases of expenditure. Under such circumstances the Government would certainly not be justified in abstaining from productive enterprises solely because its resources are largely absorbed by non-productive works. Potential sources of future revenue must be created. Therefore the resolve to continue the development of railways and telephones will be welcomed.

As to the land tax, little doubt is now entertained that the Diet will be asked to sanction the continued levy at the present rates, namely, 3.3 per cent. on rural lands and 5 per cent. on urban lands. The increment of revenue accruing from that source is, roughly speaking, 9 million *yen* annually. There would be no difficulty in restoring the tax to its original figure, namely, 2½ per cent. on all kinds of land without distinction, did not the question of naval increment present itself for immediate consideration. Japan must keep step with the times in this matter. There is no choice for her. The civilization she has embraced compels her to follow the example of her new associates who, by squandering large blocks of their revenues upon engines of destruction, render themselves immune against one another's violence. A third programme of naval increment will therefore have to be undertaken, and the general belief is that the income derived from the increased land tax will be appropriated for the purpose. Probably the Diet will show some reluctance to vote for the continuance of the present rates beyond the five-year period originally fixed by law, which period terminates on March 31st, 1903. The Upper House is not expected to prove recalcitrant, but many of the members of the Lower House believe themselves pledged to their constituencies in this instance. However, the matter rests with the *Seiyu-kai*, and the *Seiyu-kai* leaders must be perfectly cognizant that whatever Cabinet is in power, naval increment must be faced. Unless they can indicate some other and sounder method of obtaining funds, they will be bound to direct their followers to vote for continuing the tax on its present basis.

CRITICISM OF THE LATEST FINANCIAL TRANSACTION.

IT does not appear that the comments of the Tokyo journals on the recent sale of five-per-cent. bonds have been uniformly discriminating. The *Asahi Shimbun*, for example, goes into an elaborate calculation with reference to the comparative weights and fineness of Japanese and English gold coins, and arrives at the conclusion that when bonds having a face value of 1,000 *yen*, are sold for £98, Japan gets only 96.767 *yen* for every 100 *yen* of debt that she contracts. We are at a loss to follow this reasoning. The sterling value of the *yen* is definitely fixed for the purposes of the transaction, and consequently the elaborate calculations of the *Asahi* seem to be entirely superfluous, while, on the other hand, the result reached by our contemporary is erroneous. For the sterling value of the *yen* being fixed at 2s. ½d. it follows that £98 is the equivalent of 959.99 *yen*, and thus instead of receiving 96.717 *yen* for every 100-*yen* bond, the Treasury receives only 95.99 *yen*. This fact may seem to strengthen the general argument of the objecting journals, namely, that a high price has been paid by the Treasury; but let us look a little closer before endorsing such a conclusion. In the first place, if comparisons are to be made, the data must be accurately stated. It is quite true, as some journals allege, that Count MATSUKATA's four-per-cent. loan of 1899 was negotiated at 86, and that five-per-cent. bonds, if disposed of at the same rate, should produce 107½. But there is here one difficulty, namely, that the loan of 1899 can not be said to have been a success. A large portion of the bonds had to be taken up by the Japanese Government itself, and none could be sold on the open market for a price justifying the rate fixed by the negotiators of the loan. It is idle to set up an unqualified comparison between the figures of that transaction and those of the recent sale of bonds. The comparison works out in a sense entirely contrary to the view of the critics, for the effect of the 1899 loan must have been to deter European financiers from paying anything like such a price in the future. In short, the failure to find a reasonably profitable market for these four-per-cents militated against the success of subsequent negotiations. A more legitimate standard of comparison is the sale of five-per-cent. war bonds in 1897. The Treasury then disposed of 43 million *yen* worth of war bonds for £4,386,000, being at the rate of £102 per 1,000 *yen* of face value. That works out at 99.92 per 100 *yen*, taking the *yen* at 2s. ½d.; and consequently shows a rate better by 3.93 per cent. than the rate just given by the Hongkong and Shanghai Bank. But our statement is not yet exhaustive. Two important corrections have to be applied. The first is that the 1897 war bonds carried half a year's interest. That condition was made a *sine qua non* by the purchasers.

Hence for purposes of accurate comparison we must deduct 2½ per cent. from the price obtained, and the figure being thus reduced to 97.42, it results that the difference in apparent favour of the 1897 transaction is only 1.43 per cent. The second correction is that whereas five-per-cent bonds were selling for 97 in the home market in 1897, they are now quoted at 89, a difference of 8 per cent. Of course it may be urged in this context that the bonds procurable in Japan are not specially endorsed; that their interest and principal are not payable at a sterling price explicitly fixed, and that they are liable to an income tax of 2 per cent. These objections all carry a certain weight, but their bald statement is misleading. The first two are, in fact, sentimental rather than practical. All Japanese State securities, in common with State securities everywhere, are guaranteed by the Government. The Government pledges its credit that they shall be redeemed, and that the interest on them shall be paid, with gold coins of a certain weight and a certain fineness. To ask the same Government to endorse upon the same bonds a declaration that the interest and principal shall be paid with such coins, is like asking a man to promise that he will keep his promise. It is not thinkable that the Japanese Government should attempt to pay the interest on its bonds or to redeem them with coins—silver or what not—having an intrinsic value inferior to that of the empire's standard coins; and it is quite obvious that the engagements of a Government capable of such flagrant repudiation would not derive additional value from any endorsement it might make on its bonds. English investors appear to entertain some unreasoning predilection for bonds carrying such endorsement, but they may at any moment discover the unpractical character of their fancy, and in that event they will employ agents to buy direct in Japan, instead of paying four or five per cent. more in London just for the privilege of having a worthless sentence printed across the back of the bonds. We must therefore take the selling price in Japan as a basis of comparison, applying to it only one correction, namely, that on account of income tax, which is one per mille of the face value of the bonds, a virtually insignificant quantity. All these things considered, it must be quite plain that to sell a hundred *yen* five-per-cent. bond in London for 95.44 *yen* when the same bond is purchasable in Tokyo for less than 90 *yen*, is an incomparably better transaction than to sell the bond for 97.42 *yen* when its Tokyo value is 97. As a matter of mere arithmetic, it is plain that if the 97 *yen* Tokyo bond sells for 97.42, the 90 *yen* bond should be worth only 90.39 *yen*, whereas it has actually been sold for 95.99 *yen*. The comparison is very largely in favour of the recent transaction; so largely in favour of it that many persons must have found difficulty in credit-

ing the figures at the moment of their announcement. We have often had occasion to comment on the rashness of Japanese journalistic critics in matters of finance. Their solicitude for their country's credit does not seem strong enough to induce careful collation of figures before publishing positive statements. Had they carried their minds back to the time when the KATSURA Cabinet came into power, they would remember that it received from its predecessor a legacy in the shape of a proposal to sell five-per-cent. bonds in America at 90. From what has been shown above, 90 would have been a figure corresponding with substantial accuracy, *mutatis mutandis*, to the price obtained for war bonds in 1897. But the price now obtained is 95.99. The Treasury is to be heartily congratulated on a very admirable *coup*, and the Hongkong and Shanghai Bank on its courage and liberality, while as for the carping critics, nothing can be offered them except advice to take their *sorobans* in hand again.

A METHOD OF PROMOTING HONESTY.

IT has been proposed in Kobe that all foreign and Japanese firms, when dismissing an employee, should advertise their reason for doing so, in order to warn other firms against engaging the man. We gather that the recommendation is intended to apply to cases of dishonesty only, and that its adoption is thought likely to have a wholesome effect in lessening that particular form of immorality. At first sight it may seem doubtful whether any such result would follow. The tendency will be to think that if the fear of losing his employment and being criminally arraigned does not deter a man from cheating or stealing, the dread of public exposure would not restrain him more effectually. But there is a special phase of the situation to be considered; a phase which has often been explained in these columns. If any one thinks carefully of the conditions existing in a foreign settlement, he will see that the force of public opinion is practically inoperative so far as concerns a Japanese subject doing business with foreigners or serving them in any confidential capacity. The career of such a Japanese is almost completely hidden from the eyes of his own nationals. He may have been guilty of the worst kind of offence without any knowledge of the fact reaching his countrymen, and even though they do get to know, it is plain that in ninety-nine cases out of every hundred they have to rely on an *ex-parte* statement, the story told by the man himself. Public opinion as every one recognises, may be regarded as one of the safeguards of integrity. If an average man were assured that his evil deeds would always remain hidden from his own nationals, one of the strongest incentives to honesty would be removed. From that point of view the proposed system of advertisement

might be of some service and might even be justifiable, were it extended to the vernacular newspapers, and were it confined to cases of dishonesty. But there is a difficulty. No employer would be entitled to insert such an advertisement without absolute proof of the dishonesty of the person advertised. How often is such proof forthcoming? On the other hand, the Japanese would then be strictly within their right if they, in turn, inserted charges against any foreign firm supposed to have been guilty of sharp practices. Are there no such firms? The fact is that the introduction of such an extraordinary system must gradually create an almost intolerable state of affairs. Its utility would depend on the absolute universality of its observance, and that is precisely what could not be secured, and its impartial practice would depend on the absence of all passion or prejudice from the advertiser's mind, a condition not possible of realization. After all, the conviction is forced upon us that, in this particular matter, what is best, and that the course indicated by the accumulated experience of many generations is the most beneficial in the long run. No foreigner need employ a Japanese without making the fullest scrutiny into his antecedents, and if the man's record is cloudy, such scrutiny can not fail to discover the clouds. There is no occasion to inaugurate a regimen of public arraignment at private instance, which must inevitably culminate in all kinds of recrimination and ill-feeling.

THE QUESTION AT ISSUE.

ARTICLE II. of the Protocol about the House Tax says:—"The question at issue upon which the Parties to this Arbitration request the Arbitral Tribunal to pronounce a final decision is as follows," and then proceeds to formulate the question thus:—

Whether or not the provisions of the Treaties and other engagements above quoted, exempt only land held under leases in perpetuity granted by or on behalf of the Japanese Government, or land and buildings of whatever description, constructed or which may hereafter be constructed on such land, from any imposts, taxes, charges, contributions or conditions whatsoever, other than those expressly stipulated in the leases in question.

It would be difficult, we think, to propound a question in clearer terms. The point to be determined by the arbitral tribunal is whether the charges provided in the leases cover the land only or whether they cover the buildings also. There is nothing else to be considered. The matter stands wholly between land alone or land plus buildings. Yet, strange to say, some publicists argue that, under the terms of this Protocol, the Arbitrators will be justified in taking into consideration all the issues that have been raised; for example, whether the exemption includes incomes derived from perpetual lease property, whether business and income taxes are taxes on the property and so on. What is stranger still, the advocates of this view claim that when the arbitral tribunal comes to deliberate, it will

read, in conjunction with the question submitted to it, the preamble of the Protocol and the correspondence that has passed between the respective Governments, and will frame its reply in accordance with the information thus obtained. That means that the tribunal will go beyond the question submitted to it, and will undertake to answer a question evolved out of its own perusal of correlated literature. But of course the tribunal will not do anything of the kind; it will answer the question submitted to it and nothing more. It is, in fact, warned not to answer, or to attempt to answer, anything more, for the language used is "the question at issue upon which the Parties to this Arbitration request the Arbitral Tribunal to pronounce a final decision, is as follows." The answer of the tribunal will doubtless be of the briefest description, and will take one of these forms:—

"The Arbitrators consider that the exemption applies to land only";

or

"The Arbitrators consider that the exemption applies equally to land and to buildings."

There may be, and probably will be, a statement of reasons, but so far as the answer itself is concerned, it must be an answer simply to the question propounded, and not at all to any issues not formulated in that question.

THE CHRISTIAN DAIMYO.

CHAPTER IX.

Embassy sent to Europe.—Reception which is given it on its way.—War between Riuzoji and Arima.—Shimazu invades Bungo.—Sorin implores the help of Hideyoshi.—Expedition of Kiushu.—Conversions of Mori Hidekane, of Asonuma and of Otomo Yoshimune.—Division of Kiushiu.

The year 1582 opened with an important event in the history of the relations of Japan with the Occident: the Christian *daimyo* resolved to send an embassy to Pope Gregory XIII and to some of the European sovereigns. These ambassadors were the first Japanese to undertake officially such a long voyage, and to tread European soil, of which they were until lately almost ignorant.

It is beyond doubt that the Jesuits induced them to take this step, but it is not less certain that the Christian *daimyo* lent themselves to the movement with complaisance: on both sides real advantages were hoped for. Of course the Jesuits desired to present to astonished Europe these distinguished neophytes of a new people; but there were more serious considerations leading them to send Japanese to our countries. It was of moment to them to show the Japanese, so inclined to be doubtful, that all that the Religious had told them on the subject of the Christian religion was true, to let them see that the most civilized peoples made a profession of this religion, and that even Kings and Emperors considered themselves happy to be reckoned in the number of its adherents. They also hoped that the riches of Europe and the splendour of its cities would make an impression on these envoys, too prone to think that their poor country, with its primitive habitations and its more than modest food, was the first in the world, and that the Religious had only come thither to find an easier life than in their native land. As to the opinion, often expressed in Japanese books, that by this embassy, the Jesuits wished to deliver Japan to the Pope, it does not deserve the honour of a refutation. Suffice it to say that the fanaticism which the Japanese profess for their native land would have, from the beginning, convinced men less intelligent than the Jesuits that this question must never be touched upon.

Father Valignani had just finished his pro-

vincial visit in Japan, and on his return to Europe he was to conduct the ambassadors thither. As time pressed, they had to be chosen in haste. Sorin was represented by Mancio Ito, the son of his nephew. Willingly would he have intrusted this mission to Jerome Ito, the son of the late *daimyo* of Obi, but Jerome was then in the college of Azuchi, and it would have been impossible to bring him back before the date fixed for the departure of the ship. Arima and Omura deputed also one of their near relatives in the person of Michael Chijiwa Seiyemon, Omura's nephew and cousin-germane of Arima. They added two other of their relations: Julian Nakaura and Martin Hara. These four young men were hardly 16 years old, and one would have taken them rather for students making a voyage under the care of their teacher, than for ambassadors sent to the greatest monarchs of the entire world. But thanks to the slow deliberation with which the voyage was made, they had time to complete their education before arriving at the end of their journey.

Embarking on the ship of the Portuguese, Ignace Lima, they left Nagasaki on the 20th of February 1582, and did not arrive in Rome till the 22nd of March 1585. At Macao they had to stay nine months, awaiting the ship which, only once a year, made the voyage from the Indies. At Cochin they remained six months, awaiting the spring and the favourable monsoon. From that place their ship carried them to Goa, and Father Valignani, named in the meantime Provincial of the Indies, placed them in the care of Father Nunez. While thus confiding the ambassadors to another, Father Valignani did not cease to accompany them by his solicitude, even to Europe. He warned the Courts, to which they were to be presented, to show them much kindness but to render them few honours, for fear, that in their native vanity, they would imagine that these regards were due to them. Naturally neither at Rome nor at Madrid was any attention paid to these recommendations, which were condemned as narrow views.

The enthusiasm which was to welcome the ambassadors all along their route commenced even in Goa itself. The Viceroy received them with all possible magnificence, put chains of gold around their necks, and gave them three thousand dollars. Of all the ships on the point of sailing, he had the largest prepared for them, and spent two thousand ducats in rendering it more comfortable. The archbishop and all the city did not know how to manifest their joy at seeing these sons of Kings, as they pompously called the young ambassadors. On the 20th of February 1584, they left the Indies, doubled the Cape of Good Hope on the 10th of May, and after having sojourned eleven days at St. Helena, they finally reached Lisbon on the 10th of August.

From this moment their progress was nothing but a succession of triumphs, of fêtes, and of receptions such that, in their admiration, the ambassadors might have believed themselves transported to some fairy land. Cardinal Albert, Archduke of Austria and Governor of Portugal, received them with open arms. The Duke of Braganza sent his carriage to fetch them and the Duchess, wishing to prepare an agreeable surprise for them, had clad her son Edward in Japanese costume. On arriving at Madrid, where all the great men of the time were then united at the luxurious court of Philip II, they were treated as princes. The grantees, the ambassadors of foreign Powers, each wished to get hold of them, were it only for an instant. After having spent three days at the Escorial, they returned to Madrid, where Philip II himself went to visit them at the residence of the Jesuits. The celebrated University of Alcala received them with the same ceremonial as it observed on the occasion of visits from the king himself. Everything great or beautiful, in the arts, the sciences, or in riches, that Spain had, was shown and explained to them.

In Italy the enthusiasm which their arrival excited was no less. At Pisa, at Florence, at Sienna they were looked upon as Kings. But Rome surpassed in grandeur and in éclat all that the ambassadors had seen till then. Several squadrons of cavalry went to meet them, all the city went *en masse* to the gate "Del Popolo," by which

they were to enter. Clad in their ceremonial dress and with the traditional two swords at their sides, the ambassadors went on horseback to the Pope. The entire population followed them, the trumpets blew and the bells sang, the artillery of the fort "Sant Angelo" saluted their arrival. The Pope received them, surrounded by his court, in the throne room and as sovereigns. Dazzled by so much magnificence, filled with a religious respect on seeing themselves in presence of the representative of God, the ambassadors fell prostrate at the feet of the Sovereign Pontiff. The latter, his face bathed in tears, raised them to their feet and embraced them with effusion. After the reading of the letters that the *daimyo* of Funai, Arima and Omura addressed to the Pope, Cardinal St. Sixtus invited the ambassadors to his table and made them visit the basilica of St. Peter. All the honours, all the privileges, generally reserved for princes were accorded to them. When the Pope issued from his Palace they accompanied him on horseback in the streets of Rome: they received visits from the ambassadors of the whole world. After their first reception by the Pope, they laid aside their Japanese dress and clad themselves in costumes of black velvet garnished with golden embroidery, costumes of which the Pope had made them a present. Thus dressed they assisted at the funeral of Gregory XIII., who died 18 days after their arrival, and at the coronation of Sixtus the Fifth, his successor. The latter made them knights of the Golden Spur. The cardinals and ambassadors of the different countries assisted at the ceremony of their reception. To the representatives of France and of Venice fell the honour of putting the spurs on them. On receiving the sword from the hands of the Pope, they promised to defend the Catholic faith even at the price of their blood.

But the distinctions of which they were the object did not end there. The Pope delivered to them a Brief authorizing them to take part in the consistories, a privilege which was only accorded to sovereigns. The assembled senate received them in the Capitol and conferred on them the titles of Roman Citizens and Patricians. A diploma furnished with a golden seal was for ever to recall to them this extraordinary favour. When on the 3rd of June 1585, they left the Eternal City the people and the army accompanied them outside the walls. Venice, the Queen of the Seas, gave them a reception no less hearty. The Doge and the Senate overwhelmed them with favours. Tintoretto received 2,000 ecus to make their portraits which, signed by their hands, were to be placed among those of the Doges. Mantua, Milan, Genoa rivalled each other in their attentions to them, and succeeded in convincing them that Italy was the richest and most hospitable country in the entire world.

Arriving at Barcelona, the ambassadors went to take leave of Philip II. The latter presented them with garments of silk trimmed with gold and gave each of them an Arab horse with harness. He equipped a ship for them at his own expense, gave orders that the ambassadors should be received with distinction everywhere they passed, and offered them 4,000 gold pieces towards their travelling expenses. On the 30th of April 1586, they embarked at Lisbon and arrived at Goa on the 29th of May 1587. There circumstances detained them for nearly a year: it was not until the 1st of April, 1588, that they left this port, accompanied by Father Valignani, and overwhelmed with favours by the Viceroy of the Indies.

While the ambassadors were thus the object of the highest honours in Europe, their relatives in Japan were struggling with numberless tribulations. Omura Sumitada, after having been dragged into an alliance with Riuzoji, had finished by submitting to the authority of the latter. He had even been obliged to give him his three sons as pledges of his fidelity. It is thus that he was constrained to make war on Arima, his own nephew. Riuzoji and Omura had invaded the domain of Arima and already possessed themselves of Shimabara, the most important place in this *daimyate*, when Arima called Shimazu to his help. The latter, always ready for the combat,

helped Arima all the more willingly as for a certain time back Riuzoji had made no secret of his pretensions on the subject of the province of Higo, (74) which the ambitious *daimyo* of Kagoshima desired for himself. Before such an adversary the army of Omura held together no longer: it passed to the side of Shimazu. Sumitada himself, in order not to break the oath made to Riuzoji, did not take part in this campaign. The allies marched immediately on Shimabara and laid siege to that fortress. Riuzoji was not long in coming at the head of 25,000 men. From the description of this army one can discover how wide-spread had the use of fire-arms already become in Japan. More than 1,000 arquebusiers formed the advance guard of Riuzoji and the army was provided with several large cannons (75).

On the 24th of April 1583, the fight began under the walls of Shimabara. Riuzoji after a desperate struggle, was defeated and fell himself along with his eldest son, Masatane, in the battle. His head was sent to Kagoshima: for Shimazu claimed it as a trophy. The five thousand men shut up in the castle of Shimabara then surrendered, and were exchanged for the three sons of Omura, whom Riuzoji had detained as hostages. Shimazu swore eternal friendship to Arima, but meanwhile he kept Shimabara and Mie in exchange for his services.

While the three sons of Omura were detained at Gotoyama by Riuzoji, they were exposed to a thousand dangers. The defection of Omura's army very nearly cost them their lives. Then they were attacked on the subject of their religion: sometime they were even threatened, their persecutors hoping to make them apostatize. Thanks to the exhortations of Sanchez, the eldest of the three, all efforts to make them yield, either in the matter of their faith or in that of their morals, were useless. Their fervour was such that the third son of Riuzoji, who was 22 years of age, let himself be converted to their faith, and he would probably have demanded baptism, if the death of his father had not caused him such grief that he went mad and had from that time onward to be watched (76).

Shimazu, after having defeated Riuzoji, turned his arms anew against Otomo Yoshimune. The latter had, thanks to his father Sorin, regained some fragments of the provinces of Buzen and Chikugo, but Shimazu, having induced the *daimyo* Akizuki to join his party, destroyed all from top to bottom. Chikugo and Buzen revolted and Bungo was invaded by the troops of the enemy. Yoshimune, unable to resist the flood of invasion, lost battle after battle, and wishing to lay the blame on another, he accused his brother Sebastian of treating with the enemy and of conspiring against him. He even went so far, in his blindness, as to despoil him of all his possessions and to have him killed by poison. When his father, Sorin, reproached him with this crime all his hatred turned against the latter. All that malice could suggest to an unnatural son, Yoshimune thenceforth employed to vex his father. The latter, however, seeing that the catastrophe was more and more imminent, wished to make a last attempt to stave it off. In spite of a serious illness, he undertook the long voyage to Osaka where Hideyoshi then resided, and begged him to send succour to his son. Hideyoshi, whose compassion was aroused by this great figure, acquiesced in the demand of the unfortunate father and promised to intervene without delay.

This step on the part of Sorin hastened an expedition which Hideyoshi had been thinking of for a long time back,—the conquest of Kiushu. Willingly would he have set out immediately, but political affairs detained him at this moment in Osaka. However he immediately gave orders to his brother Hidenaga to make a start (March 1587). The army proceeded to Shimonoseki where troops of Mori Terumoto, commanded by the two uncles of the *daimyo*, Kobayakawa Takakage and Mori Hidekane, were to rejoin him.

(74) Riuzoji had already taken possession of the Amakusa isles and had also taken John Amakusa as hostage.

(75) Avvisi del Giappone, 1582-1583.

(76) Avvisi del Giappone, 1582-1583.

Among the *daimyo* who set out with Hidenaga were Kuroda Yoshitaka and his son Nagamasa.

Fervent Christian that he was, the presence of Yoshitaka was to have the happiest consequences for the Christian religion. Scarcely had he arrived at the house of Mori, over whom he exercised great influence, when he persuaded him to put a limit to the rancour with which he had persecuted the Christians since he became *daimyo* of Yamaguchi. Mori complied with all these demands, and from that day he received favourably the Religious who were refugees from Bungo, and allowed them to establish themselves at Yamaguchi and Shimonoseki. Kuroda even preached so well the excellence of the Christian religion that Mori Hidekane, one of the uncles of Terumoto became converted and baptized under the name of Simon (77). This example was immediately followed by the conversion of one of the first *Kerai* of Terumoto, Asonuma Buzen-no-Kami, whom the annals of the Religious often call Kumagai. This name comes from the fact that Asonuma was a descendant of Kumagai Naozane, a very celebrated warrior of the 12th century. Asonuma took the name of Melchior. Finally the two brothers of Kuroda and his son Nagamasa were also baptized at this period (78).

While the army of Hidenaga invaded Buzen and Chikugo, in order to cause Akizuki, Shimazu's ally, to direct his efforts to that side, Hideyoshi commanded Sengoku Hidehisa, *daimyo* of Sanuki and Chosokabe Motochika to pass into Bungo, where, in concert with Otomo Yoshimune, they were to repulse the attacks of Shimazu. This combination was most unfortunate. Sengoku, who was as debauched as Yoshimune, thought rather about amusing himself in company with the latter than in making war. Paul Shiga, a vassal of Yoshimune's, was the only one to make any show against Shimazu, till, overpowered by numbers, he was defeated. The enemy penetrated as far as Funai, and then only did the two libertines decide to give battle. They were literally crushed and had to flee to Nakatsu (Buzen). Funai fell into the hands of Shimazu, who delivered it to the flames, after having pillaged it. To complete the misfortune, the plague made its appearance and carried off thousands of the people. Among the victims of this scourge was the unfortunate wife of Sorin, the mother of Yoshimune (January 1587).

When Kuroda learned that Yoshimune had arrived at Nakatsu, he had nothing more urgent to do than to go and find him. He commenced at first by tearing him from the company of Sengoku, who was sent back into his domains and deposed a few months after. Then, after having reproached Yoshimune with his ingratitude towards his father and with his ill-conduct, Kuroda exhorted him to embrace the Christian religion, the practice of which would certainly make a better man of him. Yoshimune, convinced by his misfortunes as much as by Kuroda's reasoning, asked to be permitted to receive baptism with all his family. The ceremony took place at Nakatsu on the 27th of April, 1587 (79). Yoshimune took the name of Constantine, probably to give himself a little constancy in the good resolutions he had taken at his baptism.

Sorin's joy on learning this news may be imagined. Shut up in the castle of Usuki he did nothing but grieve over the ill-conduct of his son. On learning, then, of his conversion, he felt as if waking from a dream. His joy was still further increased by the arrival at Funai of Hidenaga's army. For, from that time, Shimazu had to retreat. The bonzes who had followed him, while he was victorious, now turned against him, and acted as guides for the enemy. It appears that this treason provoked among the *samurai* of Satsuma such hatred against the bonzes, that even in our days it is hardly extinct. Thus it was that Shimazu, suffering defeat upon defeat, had to fall back on the right bank of the Mimigawa in Hiuga. John Amakusa, a vassal of Shimazu's was even made prisoner and owed his life to Paul Shiga. Akizuki, defeated

(77) Solier 577.

(79) Solier, p. 581.

in several encounters, finished by submitting completely.

Hideyoshi, however, on learning of the military successes of Hidenaga, wished to go himself into Kiushu in order to win there the last victories. On the 7th of April, he left Kyoto with his army, and in 25 days reached Shimonoseki.

Takayama Ukon served in the vanguard and Konishi commanded the fleet, which was destined to transport a part of the army and to enable the rest to pass the straits of Shimonoseki. On the 5th of May, Hideyoshi arrived in Buzen, and took command of all the united troops. These amounted to 300,000 men (80), a figure which the annals of the Jesuits reduce to 70,000. Besides, there was no need to employ such an instrument of war: what Hidenaga had not been able to do, the name alone of Hideyoshi, the prestige of his past victories, had sufficed to disarm the most audacious. It was rather a triumphal march that Hideyoshi made across the different provinces of Kiushu, even to Kagoshima where Shimazu, the last rebel humbly submitted.

Niuro Ise-no-Kami (81), formerly visited by Francis Xavier, and, at the time of the Kiushu expedition, one of Shimazu's most celebrated warriors, manifested his rancour towards Hideyoshi, by declaring to him that, if his master had not commanded him to lay down his arms, he would never have submitted. This frankness pleased Hideyoshi so much that he bestowed on Niuro a fan and military cloak, a distinction of which the descendants of his family are proud to this day. Several Japanese historians are pleased to compare Hideyoshi to Napoleon and Cæsar. Although it would be difficult to establish the parallel, it must be confessed that, at least during the expedition into Kiushu, Hideyoshi could repeat with Cæsar "I came, I saw, I conquered."

The conquest of Kiushu being thus finished, nothing remained but to divide it and distribute the provinces among the *daimyo*, who had most distinguished themselves during the campaign. Hideyoshi, fond of doing things on a grand scale, called all the *daimyo* together at Dazaifu (Chikuzen), the oldest town in Kiushu (82). After having required hostages from all those interested, in case of discontent, he proceeded to the distribution of the rewards. Kuroda Yoshitaka, who during this campaign had particularly distinguished himself, received more than half of Buzen, with a residence at Nakatsu. Mori Hidekane, the new convert, obtained half of Chikugo with a residence at Kurume. Before going there, Mori married his second wife Maxence, the daughter of Otomo Sorin.

Otomo Yoshimune was reduced to the sole province of Bungo. His cousin, Ito Suketake, brother of the late Yoshimasu, for having bravely fought against Shimazu and acted as guide to Hideyoshi's army, received half of Hiuga, which he shared however with his nephew Bartholemew Yoshikata, the eldest son of Yoshimasu. They all lived at Obi, the principal castle of their ancestors. John Amakusa was not disturbed on his isles, nor the Omura in their domains. The Arima re-entered into possession of Shimabara and of Mie, which Shimazu had to restore to them. Riuzoji Masaie retained only a part of Hizen, and even this he had to cede later on to his *herai*, Nabeshima Naoshige, whom Hideyoshi appointed *daimyo* of Sâga (Hizen). Shimazu had to content himself with the provinces of Satsuma and Osumi and with the principality of Satowara (Hiuga). From that time Kiushu and all the central provinces of Japan recognized the authority of Hideyoshi.

(80) Koku-shi-riyaku.

(81) This Niuro Ise-no-Kami is the same as the Hexandono of the first chapter, about whose identity we entertained some doubt. He resided in the castle of Ichiku and his full name was Niuro Tadamoto. Hexandono must be a corruption of Isedono.

(82) It was founded towards 670 A.D.

Mr. and Mrs. Montague Kirkwood, who recently returned from Tokyo, where Mr. Kirkwood has for many years past held the position of Legal Adviser to the Imperial Japanese Government, have gone, says a London paper, to reside at Highfields-park, Withyham, Sussex.

YOKOHAMA LITERARY SOCIETY.

With the setting in of autumn the various social organizations which tend so effectually to brighten existence for the foreign residents of Yokohama during the colder portion of the year are springing into activity again and holding business meetings for the election of office-bearers and sketching out possible programmes for the coming season. The A.D.C. have held their meeting we understand and though nothing definite has yet been arranged, the prospects are said to be bright, despite the greatly regretted departure from Yokohama of Mr. and Mrs. E. W. Maitland, who have done so much for the community on the concert platform and in amateur theatricals. On Friday evening the Yokohama Literary Society held its annual general meeting in Van Schaick Hall for the purpose of receiving the Secretary's report and the Treasurer's accounts, election of officers and committee. The Rev. J. L. Dearing presided over a fair attendance. The following report and accounts were presented and after perusal adopted:—

SECRETARY'S REPORT.—SEASON 1901-1902.

Once more as we come to the end of another year in the history of the Yokohama Literary Society we can congratulate ourselves upon a most pleasant and interesting season brought to a successful close.

As will be seen from the Treasurer's Report, although we lost several of our members through departure and other causes, yet by the addition of 42 new members, who were elected during the past season the number at the end of April of actual members, *i.e.* those who had paid their dues for the period, remains at about the same as last year, the receipts showing a slight decrease owing principally to the fact that several family subscriptions have been divided up into individual subscriptions. With a credit balance of ¥386.52, however, we enter upon the new season in a sound financial position.

The expenditure shows a slight increase due to part cost of the extra lighting of the Hall, fire insurance on the Society's property, which appears as a new item, and the cost of fittings and chemicals for the Society's stereopticon. All these items, however, represent an advantage to the Society, and our thanks are due to Messrs. H. A. and O. M. Poole for the trouble they have taken in fitting up and exhibiting the new lantern.

The programmes arranged by the hardworking Literary and Music Committees throughout the season were quite up to the usual standard of excellence. Especial mention might be made of Prof. Clarke's scholarly paper on "Tennyson's View of Immortality"; Miss E. P. Hughes' bright and interesting address on "Some Modern Educational Problems in England, America, and Japan"; the enjoyable evening devoted to reminiscences of American College Life, followed by an excellent musical programme; and the two evenings devoted to the lives and works of Schubert and Wagner, arranged respectively by Mr. N. G. Maitland and Mr. W. Karl Vincent.

The following is a summary of Papers and Lectures given before the Society during the Season. 1901.

- Oct. 4.—Annual Business Meeting.
- Oct. 18.—"Incidents of Travel in Many Lands," Miss Jessie Ackerman, F.G.S.
- Nov. 1.—"A Physician of the XIVth Century," Mr. A. Bellamy Brown.
- Nov. 15.—"Carbon Photography," Prof. T. I. Chapman.
- Nov. 22.—"American College Life," "Wellesley College," Mrs. O'Leary. "De Pauw University," Mr. V. W. Helm. "Boston University," Mrs. Dearing. "University of California," Mr. E. C. Swan.
- "Brown University," Mr. Parshley.
- Dec. 13.—"Tennyson's View of Immortality," Prof. E. B. Clarke, M.A., F.R.S.L.
- Dec. 27.—"Recitations, etc.," Miss Ross, Mr. G. G. Brady.

1902.

- Jan. 10.—"Representative Men of the XIXth Century," Various Speakers.
- Jan. 24.—"The Last of the Shoguns," Prof. E. W. Clement.
- Feb. 7.—"Some Modern Educational Problems, and their attempted solution in England, America and Japan," Miss E. P. Hughes.
- Feb. 21.—"Notes on Schubert, the Composer," Mr. N. G. Maitland.
- Mar. 7.—"College Settlements," Mrs. T. S. O'Leary.
- Mar. 21.—"The Treasures of Age," Prof. W. D. Cox.
- Apr. 4.—"The Discovery of the Future," Mr. H. G. Wells.

Apr. 18.—"The Life and Works of Richard Wagner," Mr. W. Karl Vincent.

The hearty thanks of the Society are due to the numerous ladies and gentlemen who have so kindly assisted in both musical and literary capacities throughout the season, especially to those gentlemen who came down from Tokyo.

A. W. S. AUSTEN,
Hon. Secretary.

E. & O.E.

Yokohama, September 30th 1902.

N. G. MAITLAND,

Hon. Treasurer.

Examined with vouchers and found correct.

H. A. POOLE.

The Rev. J. L. Dearing being desirous of retiring from the post of President, which he has filled so ably for the past two years, Mr. A. Bellamy Brown was elected President, with Mrs. E. C. Bellows as Vice-President; Mr. N. G. Maitland as Treasurer, and Mr. A. W. S. Austen as Secretary.

The Literary Committee was next elected and will now consist of Mrs. E. C. Bellows, the Rev. J. L. Dearing, Miss Abenheim and Mr. A. W. S. Austen; while the Music Committee will be Mrs. Jas. Walter, Miss Mendelson, Mr. W. Karl Vincent and Mr. A. Henry Atkinson.

A hearty vote of thanks was accorded to the retiring President, who in reply assured the Society that he would continue to work in its interests as a member of the Literary Committee to the utmost of his power and ability.

THE INTERPORT FESTIVAL.

The teams for the Interport Cricket and Baseball Festival at Kobe have now been arranged as follows:—

CRICKET.

YOKOHAMA:—G. C. Allcock, C. M. Duff, E. G. Fradgley, A. R. Firth, E. W. Kilby, H. W. Kilby, A. Kingdon, F. E. White, S. Wheeler, K. F. Crawford (Captain), F. Lammert and F. O. Stuart (probable).

KOBE:—W. Braess, A. J. Buckley, W. D. S. Edwards, A. H. Gillingham, H. E. Green, H. C. R. Hancock, H. S. Thompson, A. W. Allen, C. J. Lucas, G. C. Murray, T. Ross Reid.

The Umpires will be—Mr. J. H. Bathgate and Mr. A. H. Groom.

BASEBALL.

YOKOHAMA:—E. W. Kilby, C.; C. H. Thorn and D. H. Blake, P.; N. W. Vancleve, 1st B.; W. L. Merriman, 2nd B.; H. W. Kilby, S.S.; D. H. Blake and C. H. Thorn, 3rd B.; C. Parker, L.F.; E. J. Cowan, C.F.; H. Goddard, R.F.

KOBE:—C. W. Atkinson, S.S.; W. Braess, C.F.; A. J. Chalfant, 3rd B.; H. Hancock, R.F.; A. T. Hellyer, 2nd B.; H. M. Nock, 1st B.; C. Stephens, P. and L.F.; D. Weed, C.; H. S. Wheeler, L.F. and P.

CRICKET.

INTERPORT PROBABLES V. THE REST.

The cricket match on Saturday afternoon between the Interport Probables *versus* The Rest was deadly dull from a spectator's point of view, and disappointing, we should imagine, from that of the players. Perhaps the weather had something to do with it. For an October afternoon the atmosphere was most oppressively stuffy and the glare which prevailed until the evening shadows began to gather was another source of irritation and consequent headache and depression. The Rest went to the wickets first and sent out O. Strome and F. O. Stuart to face the bowling of P. B. Clarke and E. G. Fradgley. The first wicket fell at the tenth run. Strome being run out; Stuart and Abbott succumbed at 18 and 21 respectively. Then Kingdon settled down to run-getting and though at first he was rather slow—the century was not reached till 3.30 p.m.—he carried out his bat for 77. Kingdon's performance was the best of the whole afternoon. His score included thirteen 4's, one 3, and three 2's, which does not look as if the Yokohama interport bowlers are very deadly this year. The Rest closed their innings at a quarter past 4, by which time the light was already growing bad. In the time at their disposal The Probables knocked up 103, for the loss of seven wickets, S. Wheeler, the first to go in, making 25, and E. W. Kilby, the last to bat, 26. Scores:—

THE GENERAL HOSPITAL.

In consequence of the publication of the letters written by Dr. Mècre regarding the employment of a nurse at the General Hospital, it has been thought proper to give everyone an opportunity of judging the contract embodying the terms proposed to him in the matter by the ladies of Yokohama. This contract was approved by Mr. F. S. James, Chairman of the Hospital Committee, to whom it was sent for submission, but was not shown to Dr. Mècre, as he had in the meantime refused to sign any contract for the employment of a foreign nurse except on such terms as were prohibitive of the proposition.

The provisions of the contract were, however, explained to him, though, as stated, he did not read it. The contract follows:—

KNOW ALL MEN BY THESE PRESENTS

That we, the Committee of the General Hospital of Yokohama, Japan, party of the first part, A. Mècre, M.D., Manager of the said General Hospital, party of the second part, and..... of..... party of the third part, have covenanted and agreed, and by these presents do covenant, promise, and agree, to and with each other, as follows:—

The party of the first part, in consideration of the services which the party of the third part agrees to perform, hereby promises to pay and secures to the said party of the third part..... monthly, payable on the last day of each month, so long as she continues in the service of the said General Hospital.

The party of the second part, in consideration of the said services of the party of the third part, agrees to furnish said party of the third part with suitable board and lodging, throughout the term of her employment at said General Hospital, to instruct the other nurses at the Hospital that they shall in all cases observe and obey the directions of the party of the third part, unless in opposition to the previously expressed commands of the party of the second part, and to advise and consult with the party of the third part concerning the management and direction of the Hospital affairs, to the end that there may be no clash of authority or misunderstanding.

In consideration of the engagement of a nurse and payment of her salary by the party of the first part, which is a substantial benefit to said party of the second part, inasmuch as it will relieve him in part of the supervision of the Hospital Attendants and will attract possible patrons by increasing the efficiency of the service, the party of the second part further covenants and agrees that he will continue to maintain at his own expense the same number of equally efficient nurses, attendants and servants as heretofore; viz., a steward, two Japanese trained nurses, three attendants, and a Hospital cook, so that the employment of said party of the third part may not fail of its intended purposes, to wit, to increase the efficiency of the Hospital service.

And said party of the second part further covenants and agrees that, if the party of the first part at any time wishes to employ one or more additional attendants, the said party of the second part shall make no objections, provided always that such additional attendant or additional attendants shall entail no expense on said party of the second part, either for board, lodging, or salary, and that said additional attendant or attendants shall not be personally objectionable to said party of the second part.

And the said parties of the first and second parts jointly and severally covenant and agree that the said party of the third part shall be entitled to a vacation of two weeks during each year of her service at the said Hospital, without loss of compensation; said vacation to be taken at one time or at different times of a few days each, as the party of the third part may agree.

The party of the third part in consideration of the above named salary, with board and lodging, covenants and agrees to perform the duties of a head nurse at the said General Hospital, to show due respect for the wishes and authority of the said party of the second part, as manager of the Hospital, to direct the other nurses, admonish them for failure to perform their duties properly, to report any insubordination or persistent neglect of duty to the manager, to exercise careful supervision over the bedding, and other supplies of the Hospital, being regardful that neither the manager should suffer loss through failure to exercise proper care nor the patients suffer needless discomfort, and to give all her time and energy to the concerns of the Hospital, only reserving such time for rest and outdoor exercise as is necessary for the preservation of her own health. And said party of the third part further promises that she will use her skill, time, and strength impartially for the benefit of all the patients in the Hospital, as the needs of each may require.

In witness whereof the party of the first part has caused these presents to be signed by the Acting President and Acting Secretary of the Committee of the General Hospital of Yokohama, and the parties of the second part and third part have signed each for himself. Signed at Yokohama, Japan.

THE ODAWARA DISASTER FUND.

Madame Sufu wishes to thank the following donors for their gifts towards the relief fund she is raising for the sufferers from the Odawara tidal waves:—

LADIES' INTERNATIONAL READING ROOM.

ANNUAL MEETING.

The Seventh Annual General Meeting of the Ladies' International Reading Room was held in the Vestibule of the Public Hall on Wednesday, October 8th at 2.30 p.m. All the members of the committee and a small number of members were present.

The following reports were read and adopted.

The Chairman of the book committee reported:— The work of the Book Committee during the year has consisted chiefly in cataloguing the additions to the library and in revising and preparing a complete list for a new catalogue.

There have been generous donations of books—about three hundred in all—among which are many of what may be termed the new, popular novels and some standards.

Duplicates have been sold to the amount of about twenty yen.

There have been no supplementary lists printed for circulation as it was deemed advisable to devote any available funds to the printing of a new catalogue.

The Committee regret, however, that the balance in the Treasury has not warranted the expense of a new catalogue, and gratefully acknowledge Mrs. Lowder's generosity in coming to the rescue.

We are also indebted to Mrs. Swain for a recent donation of ten yen to be invested in books, which

the incoming committee will have the pleasure of selecting.

There are 1769 books at present in the library.

The Secretary's Report read:—The 6th annual meeting of the subscribers to the Ladies Reading Room was held in the Public Hall on Tuesday, October 8th, 1901. Reports were read and the new committee elected, monthly meetings of the committee have been held during the year. In spite of the many changes in the community and the loss of a great many former subscribers the number of members is about the same as last year, namely 105 compared with 106; and in addition there are a number of monthly subscribers, which of course vary each month in number. Thirty-seven monthly and 11 weekly magazines have been provided, six of which were duplicated. They included 21 English and 27 American.

There were 2,789 visitors to the Reading Room during the year, 1,680 books and 2,345 magazines were circulated.

The thanks of the committee are due to several friends for generous gifts, principally of books, which have enabled them to maintain the reading room with the funds at their disposal.

After the reading of the reports a vote of thanks was passed to the retiring Committee and the meeting proceeded to the election of new officers. The following were elected:—

President, Mrs. Sale; Vice-President, Mrs. McIvor; Hon. Treasurer, Mrs. Stedman; Hon. Secretary, Mrs. Read.

Committee—Miss Abenheim, Mrs. Baker, Mrs. Bellows, Mrs. Bonar, Mrs. Dearing, Mrs. Frazar, Mrs. Hayward, Mrs. Hobart-Hampden, Mrs. Weston.

E. & O. E.

JULIA M. LOWDER,
Hon. Treas.

Yokohama, 30th, September, 1902.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In Mr. Ebina Danjō's organ, the *Shinjin*, appears an article entitled "The Essence of Religion," in which Mr. Ebina states his views on religion in general and on a number of disputed theological questions. The following is a brief abstract of his remarks:—In religion the finite and the infinite are joined to each other, and it is undesirable to attempt to separate them. Regarded from some points of view the tendency to keep them apart is very strong. In the finite consciousness the infinite can have no place, and

when man's intellect attempts to form conceptions of the infinite it is at once realised how utterly inadequate is the help afforded by human consciousness. It will be found that religion has done best when and where there has been no attempt to draw a line between the domain of the finite and the domain of the infinite. The Chinese as a people may be said from a religious point of view to have erred in confining their thoughts too exclusively to the finite. What human consciousness has taught they know well, but the world beyond they have left unexplored. The Hindoos have erred in the other direction. They have allowed themselves to be so absorbed in the contemplation of the infinite as to become mystics and dreamers. True religion is the result of a distinct consciousness of responsive interaction between the finite and the infinite. The finite consciousness though unable to comprehend the infinite, recognises its existence and realises a certain affinity between some parts of man's nature and the infinite. All real religious feeling is based on this consciousness. It was because Christ possessed this consciousness in an eminent degree that he was able to make such a strong impression upon his fellow-men. In all outward things he was an ordinary man. He worked at his trade, ate and drank and attended social gatherings like other men, but at the same time he lived in another world, where his soul held converse with the infinite. But it is a mistake to think that all his knowledge of Divine things was obtained by intuition. He studied like other men (*Kare wa manabazu shite shiritaru hito ni arazu; nanigoto mo soranjite oritari*). He exalted reason and at the same time held in high esteem that inner light which every man possesses. He never taught the doctrines of original sin, the atonement, or the Trinity. He understood man's nature and thought it capable of thorough purification and elevation. . . . Let no one say that Christianity alone is a supernatural religion. If the term supernatural be used for all that cannot be comprehended by ordinary intelligence, for all that is beyond man's ordinary nature, then Christianity is supernatural, but so are other forms of belief. What are called miracles are by no means confined to Christianity. What we claim for ourselves we must not deny to believers in other religions. To represent the supernatural as opposed to reason or as above reason is most objectionable. Though religion often leads one into a land of mystery, where reason cannot follow, and though it often teaches us things which reason cannot test, it is unsafe to discount the function of the rational faculties on this account. Directly man gives himself up unreservedly to mystical thought and to mere intuition, he is in danger of becoming the victim of superstition. It is reason alone that keeps real faith from developing into superstition. Religion is too apt to become a combination of the 正信, *seishin*, and the 迷信, *meishin*, the true faith and the false. This has to a large extent already taken place. The supernatural has grown to be supra-rational and is frequently represented as the irrational. This accounts for the existing antagonism between religion and science. To the scientific man I would say, "Visit the religious world and explore it for yourself." The religious world is no other than the psychical world, the world where reason rules supreme as she does with you. Don't go away with the notion that religion is all mystery and unintelligibility. The religion which I know is not one that makes it its chief object to hide truth, but one which seeks above all things to reveal it. The fact is that many doctrines like that of the Trinity and the Divinity of Christ were originally only ways of expounding the methods by which the infinite had been revealed to the finite, but subsequently they were exalted into mysteries, belief in which was declared to be necessary to salvation. And so they actually became hindrances to those who desired to study religion. It is the misconception of what religion is and of its relation to reason that is responsible for a very large part of the learned opposition which it encounters

* * *

In the magazine from which we have been quoting Mr. Ukita Kazutami discusses at great

length the character of Christ under the title of "Views on the Christ of History." It seems to us that considerable importance is to be attached to the opinions held by prominent Japanese Christians on cardinal doctrines of Christianity. There are many evidences that the form of Christianity adopted by the leading self-supporting churches throughout the country differs in some very essential particulars from what is known as orthodox teaching in the West. Men like Mr. Ebina Danjō and Mr. Ukita Kazutami undoubtedly have many admirers among their fellow-countrymen, and the conclusions which they have reached and which they boldly make known to their fellow-Christians cannot but influence many weaker minds. The following in an abbreviated form is what Mr. Ukita has to say on the nature and work of Christ. (1) The Christ we know was the creation of Christianity and not a mere historical personage in the ordinary sense of that term. (2) Christ shines in the light in which the veneration of his followers all the world over have placed him. His personality has been created by his disciples. (3) But the foundation of the character attributed to Christ by his followers is to be found in the New Testament. No one can read what is recorded of his life and sayings but must acknowledge that he was no ordinary Jewish teacher. He was beyond his age and enunciated principles which were destined to form the basis of a new civilisation and thus established a claim to world-wide fame. Though I neither bow to the authority of the Bible as a book nor to the authority of the Church, I realise that by studying the Bible I can form a correct estimate of the greatness of Christ's personality. (4) As for the miracles that are recorded I can not say that they all actually took place nor can I say that none of them could have taken place. There are things that have occurred in all times which have been inexplicable. History has recorded many cures that were said to be miraculous. For a long time the Kings of England and France were believed to be able to cure persons suffering from scrofula.* How far the cures attributed to Christ were performed by ordinary means, though subsequently represented to be supernatural acts, is a question which we have no means of settling. It seems to me that we have no grounds for inferring that Christ performed all the acts attributed to him (5) Christ was a real man. But what kind of man? Historically there is no reason why he should be called the Son of God. But nobody doubts that he was a great genius and in order to show their sense of his superiority to all other men the world has named him "the Son of God." (6) Christ was no ordinary genius, but a man who realised that he occupied a moral level so far above that reached by ordinary men that he could say to his fellow-men "follow me." (7) Christ, though of humble birth, by pure force of character gave a new ideal to the world and raised mankind from a state of sin to a state of holiness. (8) As a great moral genius Christ has no equal, but I cannot go so far as to say that in him alone all truth was embodied. In Buddhism, in Confucianism, in Shintō too, there shines the light of absolute truth. Though like the sun the light of truth may seem to shine in a different way in the spring, summer, autumn and winter, yet the orb is one and the same, however it may appear to us. (9) The essence of the teaching of Christ was stated by him in words which were quoted from two passages in the Old Testament, which he skilfully combined, "Thou shalt love the Lord thy God with all thy soul, with all thy mind, and with all thy strength. . . . Thou shalt love thy neighbour as thyself." Herein lies the true significance and essence of the teaching of Christ. (10) In things ethical there is a limit to progress. There is no discovering new truths age after age indefinitely. Perhaps it may be said that Christ and Confucius pretty nearly discovered all there is to be known. (*Shimpō wa kanarazu owari ari; shinri no hutsume mo mukyū [without end] naru koto*

*This is very poor reasoning. In order to show that some of the Bible miracles might have been actual occurrences Mr. Ukita cites instances that are almost universally pronounced to be mere delusions.—(WRITER OF SUMMARY.)

atawazu. *Shūkyō, dōtoku no shinri no gotoki wa Kirisuto, Kōshi wo motte kwanzen ni nashi toge rancharu ni chikashi*). Just as the evolutionists assert that animals culminate in man, and just as monogamy represents the highest point which family life can reach, so in religion in Shaka's 慈悲, *jihi*, (compassion), Confucius' 仁, *jīn*, (benevolence), and Christ's 愛, *ai*, (love), the limits of all absolute religious and ethical truth are reached. Beyond this it is not possible to go. Though for more than a hundred years after his death Christ was unknown to history, yet as a result of his teaching a spiritual kingdom was set up which helped to mould European civilisation and which has lasted until to-day. Though from an historical standpoint Christ can only be regarded as a wonderful genius, judged by the religious consciousness it is not too much to call him the "Son of God." "Ye worshippers of the world's great heroes, the Napoleons and the Cromwells, bow the knee to this unique figure on the page of history!"

* * *

Taking the views of the Rev. Arthur Smith as expressed in his recent work on village life in China, as a text for its remarks, the *Tōkyō Maishū Shinshi* asks and attempts to answer the question, "How long will it take to convert Japan to Christianity?" Mr. Smith expresses the opinion that seeing it took 800 years to Christianize the Anglo-Saxons, with the modern facilities for propagating knowledge China can be converted in the same space of time. Judging by the rate at which we have adopted the material civilisation of the west, creating for ourselves in a few decades an army and a navy that compares favourably with those of any Occidental country, one might suppose, says the *Maishū Shinshi*, that a few more decades would suffice to Christianize Japan. Twenty years ago there were many that predicted that it would only take 10 years to convert Japan. Nobody holds such a view now. If things were to go as they have been doing Japan might be Christianized in 100 years, but will they do so? That is the question. In order to effect rapid progress more of the churches must become self-supporting and our Christians must show more steadfastness of faith. In the apostles' days there was a strong tendency among certain Christians to prefer knowledge and intellectual acumen to faith. It is the same with us to-day. All things considered, we ought to advance more rapidly than the Chinese, but we should beware of being over confident. All depends on our own efforts.

* * *

In the September number of the *Taiyō* appears another letter from Dr. Anezaki Masaharu, who went to Germany to study religion and philosophy some time ago and who now writes from England. His letters are very well written and represent the workings of an earnest mind in search of the finer elements of that complex thing we are in the habit of calling Western Civilisation. On July 4th, soon after the postponement of the Coronation and all the festivities that were to have commemorated it, he attended a lecture of Mrs. Besant's given in Queen's Hall. Mrs. Besant's immense popularity as a speaker was a great surprise to Dr. Anezaki. The charges for seats on the occasion referred to ranged from 5s. to 1s. But not a seat was left unoccupied, and though the lecture lasted for an hour and a half, there was no sign of weariness anywhere. The power wielded by the eminent Head of the Theosophical Society who has done so much for its cause was a revelation to Dr. Anezaki, as was the equanimity with which an English audience listens to reproof of the kind administered by Mrs. Besant. On the occasion referred to she discussed British imperialism, compared it with that of Rome and Spain, pointed out its weaknesses, discharged arrows of scorn at the silly pomp and show and clap-trap for the display of which the Coronation was to have been utilized. Going into particulars, Mrs. Besant attacked England's method of ruling India, maintaining that there is little sympathy between the governors and the governed and that the pride of race, the display of which by Englishmen excites so much hatred in Europe, is more manifest in India than anywhere. She then went on to comment on the hollowness, vanity and child-

ishness of many of the preparations that had been made for the Coronation and hinted that a postponement of the great event was to be welcomed as affording an opportunity for the nation to set about the celebration in a different spirit. The earnest, serious, and intensely moral tone of the discourse naturally captivated Dr. Anezaki, and he thinks that England is to be congratulated not so much on possessing such lecturers as Mrs. Besant as on the sobriety, self-control and openness of mind of her people. Dr. Anezaki hints that in Japan such an address would have been interpreted as disrespect to the Emperor and would have set the whole country in a ferment of excitement, which is no doubt true. Mrs. Besant asserted that England's weakness lies in the pride and carelessness of her people, and that she has nothing to fear from the navies of France and Russia, nor from the German army. If she falls the corruption will come from within. She must aim at governing for the good of her subjects rather than to gratify her ambition for empire. Dr. Anezaki rejoices in the freedom of thought and the amount of adverse criticism of all kinds allowed in England as compared with Germany and Japan. He says that there is no Buddhist priest in existence that would have the courage to speak of ceremonies and festivities devised by the Government in honour of the Emperor as Mrs. Besant spoke of England's gaieties. He concludes his lengthy epistle by discussing the real nature and the ultimate ideal objects of the imperialism which has taken such a strong hold of the British mind. He seems to think that it is not mere dominion that England seeks, but that she believes she has a mission to the world, which is in the words of Rudyard Kipling's poem, the "White man's Burden":—

"To seek another's profit and work another's gain."

Dr. Anezaki writes regretfully of the way in which Japan has followed in the wake of Germany instead of trying to set before itself the English ideal. The following strongly worded passage represents his inmost convictions in reference to the merits of the two systems of thought and government (the German and the English). He writes as an ardent, serious-minded, Japanese patriot. *Ah! Wasawai naru kana! Nihon ya Doitsu no gotoku; me zenshi, mimi rō seru tami! Ah! saiwai naru kana! kokumin ni nawo kuchi ari, mimi aru Eikoku! Mukashi yori saru mane no bummei wo motte tateru Nihon wa, tsui ni Doitsu no gotoku na nomi arite, Eikoku no gotoku jitsu naki tekoku shugi no uzumaki no uchi ni ochiiri-saran.* "Woe to you, Japan. Like the Germans you are a people whose eyes are blind and whose ears are deaf. Blessed are you, England, for your people have mouths (that speak) and ears (that hear). Japan, a country that was founded on a civilisation that was derived from the imitation of monkeys, is about to end her days by entering an Imperialistic whirlpool, where like Germany she has only names, and none of England's reality." The language will be pronounced exaggerated and unphilosophical, but compositions of this kind have immense influence in Japan, specially when read by the friends and admirers of the writer. It must be remembered that Dr. Anezaki is not only one of the ablest, but he is also one of the most earnest and sincere of University graduates and that he has made a special study of religion. In England he seems to have attended a large number of religious services and to have carefully noted all that he saw and heard.

* * *

Mr. Tokutomi Ichirō, the editor of the *Kokumin Shinbun*, in the columns of that journal, discusses in the following terms the future of Buddhism:—The unseemly disturbances that have been going on for so long in one of the most influential Buddhist sects has brought the creed into bad odour with the public generally and there are many who maintain that the religion is doomed as far as Japan is concerned. We ourselves do not hold that opinion. We approach the discussion of this subject from the point of view of one who recognises that Buddhism has wielded enormous power in this country and who holds that if adequate steps be taken to reform abuses there is nothing to prevent its play-

ing an important rôle in the future. Almost any form of religion is preferable to a country's being left without any religion whatever. Our Japanese Buddhism has become a national institution that we should be sorry to see overthrown. The way in which we stamp our nationality on the creeds that are brought to us from foreign lands is very remarkable. Buddhism is undoubtedly pessimistic in India, but it is not so in Japan. However much originally it may have preached asceticism and general separation from the world, in this country it has served as a guide in any number of purely temporal and secular affairs. Japanese Confucianism differs essentially from that found in China, and Christianity too will most certainly be Japonicised sooner or later. . . . It seems to me that there is nothing in the creed as known and practised by our forefathers that need cause us to take a despondent view of its future. It has numerous elements of vitality and power still left in it. What is wanted is not new Buddhism as much as a new set of teachers and preachers. There are many who seem to think that the influence of Buddhism can be best maintained by controversy. But it seems to me that this is a fatal mistake to make, for logically Buddhism is weak. Though the doctrines preached by the various sects are all said to be Buddhist, in not a few instances they are mutually destructive. The way of salvation is by no means one and the same in the various sects. There are sects like the Shingon that preach salvation by works, that believe in winning the divine favour by practising severe austerities and there are sects like the Jōtō Shinshū that preach salvation by faith, by reliance on help derived from another (他力). The lovers of Buddhism will do well to keep away from dialectics altogether. The sects in attempting to defend the creed as a whole will certainly find that they have not sufficient ground in common to make a good show. Religion is not philosophy, neither does its power depend on logic. Religion is rightly held to be sacred and followed, implicitly by the devout. They do not question its authority. Faith needs no rhetoric to support it. When people cease to believe in a religion as a rule they are not to be argued back to a state of faith. The religion that has to rely on dialectics for its position in the world and claims to be followed is in a very poor way. If the articles of a creed no longer represent the steadfast and sincere belief of those who subscribe to that creed, no controversial defence of those articles is likely to prove of any avail in reviving lost faith. As Mr. Balfour says in his "Foundations of Belief," "Our faith does not originate in reason, but in authority." A religion establishes its authority in a country at first by the character of its teachers. Buddhism in Japan owed its early prosperity to the force of personal influence. It was not owing to the nature of its doctrines, but on account of the exemplary lives of the founders of the great sects that Buddhism succeeded in winning the homage of the nation. If men of the type of Hōnen and Shinran are forthcoming in this twentieth century, there is nothing to prevent the creed's receiving the homage that it enjoyed for so many hundreds of years.

* * *

Under the title *Tondemonaki Tsūben*, the *Fukuin Shimpō* records an instance of outrageous liberty taken by a Christian pastor in Sapporo in interpreting the address of a foreigner, whose name we take to be Landis. The time has gone by for this kind of thing to pass unnoticed, there being in almost every audience persons who know English, if not other languages, sufficiently well to detect errors of interpretation. On the occasion referred to by the *Fukuin Shimpō* the speaker's sentiments as expressed in his address were on orthodox lines, but the interpreter managed to impart to them a Unitarian ring. When the reverend gentleman quoted the words, "But whom say ye that I am?" they were translated, *Dare ga Kirisuto wo tsukutta ka?* The misrepresentation that went on for over an hour was so unscrupulous that Mr. Tanaka, one of the Sapporo pastors, felt it to be his duty on the following day, to retranslate the whole address, giving the speaker's actual opinions. The erring

pastor is somewhat amusingly referred to by the *Fukuin Shimpō* as one of the "High Collar" party, which is the modern Japanese way of condemning a man outright. The connection between high collars and mistranslation—an interesting psychological question—is left undiscussed by the *Fukuin Shimpō*.

* * *

From a Christian point of view the results of the General Election are, on the whole, satisfactory, says the *Shinjin*. Among those known to us who have been elected, it continues, there are Messrs. Kataoka Kenkichi,* Shimada Saburō and some 8 or 9 others. Messrs. Yokoi Tokio, Ebara Soroku and some 5 or 6 other Christian candidates for election were unsuccessful. Among those elected there are a few whom one cannot altogether respect as Christians. They are men who have made a practice of concealing their belief. Do they not think that a religion which gives life to mankind is something to be proud of? But there is some excuse to be made for them. They are conscious of having occasionally trimmed to the times and to have followed St. Peter in denying that they know Christ, and so they are somewhat reluctant to make a public confession of their faith.

The *Seikyō Shimpō*, the Greek Church organ, in commenting on the same subject goes further into particulars in the following manner. There were some 20 or 30 Christian candidates for election in August last, but how many were there among them who in a bold manner were prepared to confess themselves to be Christians? Various tales have reached us in reference to the doings of these so-called Christians. Here is one of them. A Tōkyō candidate for election who had been known as the President of a Temperance Society, on finding that his cause was not making satisfactory progress, applied to the keeper of a *sake* tavern and succeeded in obtaining a large number of votes through him. Another candidate is said to have tried to get votes by applying to the brothel keepers of the Yoshiwara, but they refused to help him on the ground that he had been one of the agitators in favour of the abolition of licensed prostitution. But still worse than this, a Mr. Takenokoshi—(It is quite evident that Mr. Takenokoshi Yosaburō, the author of the *Nisengohyaku-nen-shi* (史) is referred to)—a writer for the *Seisho-no Tomo*, and the *Kiristo-kyō Shimbun* and the author of a "Life of Christ," finding that in a district where the Buddhist Shin sect is very powerful the cross of Christ was a hindrance, allowed it to be stated in a newspaper that he was a Buddhist. In a local paper the following notice appeared:—"Takekoshi—is a Buddhist believer attached to this temple. Since of late certain newspapers have caused us no little inconvenience by asserting that Mr. Takekoshi is a Christian, we have published the fact of his connection with us."†

* * *

The following comments are taken from the *Koye*, the Roman Catholic organ. There are a class of Christians who do nothing but think of their own comfort in religion. They pray, listen to sermons, and perform charitable acts because these things add solace to their lives. There is little real devotion and self-sacrifice in their lives. They may be called *riko* (利己) *shinja*, self-seeking believers; they neither love God nor their fellow-men.

The watchword of the present age is not "higher!" but "quicker"! Everything must be done in a hurry. Hence there is lack of thoroughness everywhere. How beautiful was

* This gentleman is the President of the Dōshisha. It will be remembered by some of our readers that a few months ago the President of the Kyōto University predicted that before very long Mr. Kataoka would again be involved in the whirl of politics and hinted that he had better give his undivided attention to Christian education. Dr. Kinoshita's forecast has now been verified.—(WRITER OF SUMMARY.)

†We are inclined to doubt the truth of this story as given by the *Seikyō Shimpō*. Mr. Takenokoshi is, we believe, a pantheist and as such may have some sympathy with the Buddhists, but he has never declared his leanings in this direction in any public manner and we do not think he is the kind of man to do so.—(WRITER OF SUMMARY.)

the quiet life of Abraham camping in the open with his flocks and herds! How he would loathe our modern hurry-scurry could he but rise from the dead and witness it! And what are men striving to get by all this haste? They think that happiness is their object, but they give themselves no time to be happy. We are all more or less slaves of the spirit of the age, which is intensely materialistic and worldly. We are not objecting to progress nor do we desire to return to the state in which Abraham lived, but we object to the breathless haste with which men rush from pursuit to pursuit without giving themselves time to think of the great spiritual truths of religion and of the bliss that knows no end.

Who is it that produces the newspapers? The writers of these papers, say some. No; rather their readers. The demand rules the supply. This accounts for the existence of those disgraceful sheets known as the *Akutoku* (惡德) *Shimbun*—papers of corrupt morals, who trade on vice unscrupulously. Some of our Christians, we observe, actually allow these papers to be brought to their houses and they themselves read them.

* * *

The 有神疑義, *Yūshin Gigi*, written by the late Rev. Heinrich Ritter and translated by the Rev. R. Minami, is a work covering some 300 pages, for sale at the Seikōsha, Kamitomi-zaka, Koishikawa and elsewhere at 55 *sen* a copy. Its German title is *Ob Gott ist?* In the preface to the work Mr. Minami thus refers to the line adopted by Mr. Ritter. The object of this work is to examine in an impartial manner existing arguments for and against the existence of God, specially those arguments on which much stress has been laid by writers on natural science. The work neither assumes the existence nor the non-existence of God, and so its title is not *Das Gott ist*, but *Ob Gott ist*. It treats the existence of God as an open question. Mr. Minami goes on to refer to the keen interest which Mr. Ritter has always taken in Japanese affairs and tells us that Mr. Ritter began to study Japanese at Potsdam when acting as a pastor there. Mr. Ritter's German work entitled "Thirty years of Protestant Missions" has been translated into English by the Rev. G. E. Albrecht and revised and brought up to date by Dr. Greene. It seems that the writing of the work, *Ob Gott ist*, which has now been reproduced in Japanese by Mr. Minami, was one of the last acts of Mr. Ritter's life. Mr. Minami furnishes a short biographical sketch of the author's career and dwells on his influence on Japanese thought. The work breathes a philosophic tone throughout and deserves to be very well received in this country.

The *Kiseki Shinron* (Recent Discussion on Miracles) is a small book issued by the press of the General Evangelical Protestant Missionary Society. It contains a preface by the Rev. Hans Haas, in which Mr. Haas, says that there is certainly a great dearth of high class Christian literature in this country.—Learned books dealing with the evidences of Christianity and with the philosophic and scientific objections to it, which are so numerous in the West, have only recently been beginning to issue from Japanese Mission presses. The *Kiseki Shinron* is a translation made by Messrs. Minami and Awaki from a German work on the subject.

Another book from the same source entitled *Shinshiron Igi*, "The meaning of the term Son of God," is a translation from the German made by Mr. Yamamoto Chūbi. It deals in a liberal spirit with the question of the sense in which Christ may be said to be divine and condemns those who insist on the acceptance of the ultra-orthodox view on this disputed point. The work sells at 25 *sen* a copy.

* * *

On the subject of the questionable tactics followed by Christian candidates for election to the Diet we observe that the *Tōkyō Maishū Shinshi* publishes the following under the title of "The Bold Decision of the Kobe Church." Mr. Itō Shunsuke, a member of the Kōbe Kyōkai, having for the purpose of obtaining votes given out that he was a Buddhist, the members of the church struck his name from the roll, though it

is alleged that Mr. Itō did not really mean to abandon Christianity. Nevertheless the action of the church is highly to be commended. Mr. Itō is a barrister of considerable standing and is connected with the Agricultural and Industrial Bank, besides being a personal friend of the pastor of the Kōbe Church, Mr. Harada, so that had the members been made of the pliable material of which so many Japanese Christians are composed they would have let Mr. Itō off. There is too much bowing to rank and wealth in our churches and too great a tendency to keep the names of well-known men on church rolls for the sake of the prestige they bring, despite the fact that they are living unchristian lives. Pastors should look into these cases, and if they find that men who are enrolled as Christians are quite unworthy of Christian membership, they should take steps to have their names removed from the register forthwith.

LAW CASES.

SARDA v. BORSEDON.

In the Yokohama Chiho Saibansho on Tuesday morning, before Judge Kato, was heard an action brought by M. P. Sarda, No. 84, Yokohama; against M. A. Borsedon, legal representative of Messrs. R. Chauvin & Co., No. 250, Yokohama, claiming *yen* 368.465 with five per cent. interest from March 28th, 1901, until the execution of judgment, costs of the case to be borne by defendant. Mr. Ishiura appeared for plaintiff and Mr. Akiyama for defendant.

Mr. Ishiura stated that his client, who is the owner of the building on Lot. No. 179 in the former Settlement, rented the premises to defendant several years ago and the latter occupied the building until July, 1901, when he left it. The defendant, while occupying the building, asked plaintiff to remove a partition, that is to say, the wall inside the building, to make it convenient for his business. The plaintiff, in accordance with this request, undertook the work under the direction of a Mr. Beckel, whom the plaintiff appointed for the purpose. During the course of the work it was found that a *keyaki* board in the bed room of the building had been burned and consequently it became necessary to replace it with a new one. Moreover damages were found in several places in the interior of the building. The total expense of the work amounted to *yen* 368.465 as above stated, including *yen* 104.160 required in removing the wall, *yen* 7.450 in replacing the burned board, *yen* 108.265 for for new glass, new doors, and other articles, *yen* 137.500 for house rent per month, etc. the latter figures being about one-half of the house-rent, which was *yen* 275.50 per month. The work occupied about 60 days.

Mr. Okiyama said that the work did not occupy 60 days as stated by plaintiffs, and the bill sent in was too great. As a matter of course, the work could have done more cheaply. The defendant therefore could not accede to the plaintiff's demand.

Mr. Ishiura said that whatever the defendant's contention might be, the costs of the work ought to be paid by defendant, and he asked the Court to appoint an expert and dispatch him to the building to see whether or not the amount claimed was unreasonable.

The proceedings were adjourned until October 30th.

MIZUTANI v. SINGER MANUFACTURING CO.

In the Yokohama Chiho Saibansho on Tuesday morning, before Judge Kato, was resumed the suit brought by Mr. Mizutani, of Yoshidamachi, Yokohama, against The Singer Manufacturing Company, No. 80, Yokohama.

The plaintiff was represented by Mr. Ideura and the defendants by Mr. Akiyama.

Mr. Ideura asked the Court that the defendant be ordered to pay to plaintiff one thousand *yen* with six per cent interest from April 1st this year until the execution of judgment.

Mr. Akiyama made a counter-claim upon the plaintiff. He applied to the Court that plaintiff be ordered to pay to the defendants *yen* 2,800 and

interest at the rate of six per cent per annum from March 17th this year until the execution of judgment, the above sum being the balance still remaining unpaid by plaintiff who agreed to purchase from the defendants twenty silk-handkerchief sewing machines for three thousand yen. He further claimed from the plaintiff yen 19.44 for storage and insurance of the machinery.

Mr. Ideura contended that on November 29th last year a contract was made between the parties at the offices of the defendants for the purchase of the 20 machines for yen 3,000, and the plaintiff paid to the defendants one thousand yen as bargain money, it being understood that the machines would develop the maximum speed of 1,200 stitches per minute. The contract also provided that the machines should be delivered to plaintiff not later than March 31st this year. The articles arrived in Yokohama on March 17th this year. Trials of the machines were then made at the defendant's offices two or three times in the presence of both parties, but, contrary to expectation they did not develop a speed of more than 600 or 700 stitches per minute. One of the trials was made on either the 25th or 26th of March this year. Under the circumstances, plaintiff refused to take delivery of the machines and broke the contract on June 20th this year.

Mr. Akiyama said that plaintiff could not claim recovery of the bargain money as the defendants had fulfilled the contract.

Mr. Ideura said that owing to the fact that the machines failed to attain a speed of 1,200 stitches, plaintiff subsequently demanded of the defendants delivery of other machines which could develop the desired speed. Thus a dispute arose between the parties and three months passed in this manner. The plaintiff was justified in claiming recovery of the bargain money so far as this contract was concerned.

Mr. Akiyama contended that he could not recognize the fact that the trials of the machinery were made at the defendants' offices. Continuing, he said that in the contract the matter of maximum speed was not mentioned. That the machinery could develop a maximum speed of 1,200 stitches per minute was verbally communicated to plaintiff, in other words the defendants made an explanation to the effect that the machinery could develop a maximum speed of 1,200 stitches when driven by steam or electricity. While the dispute was dragging on, plaintiff made a proposal that he would like to take delivery of the machinery, should a reduction be offered by the defendants. Apparently something inconvenient must have occurred and it was for this reason that plaintiff refused to take delivery of the machines.

Mr. Ideura admitted that the working capacity of the machinery was not mentioned in the contract, but urged that as this was the most important point in the present case plaintiff obtained from defendants on the day the contract was signed a supplementary note, in which the maximum speed of the machinery was described, as evidence for the future. That a contract was made was simply because of the statement that the machinery could develop the maximum speed of 1,200 stitches when driven by foot; otherwise the plaintiff would not have made it.

Mr. Akiyama said that the maximum speed described in the supplementary note was only entered as an explanation on the part of the defendants.

Mr. Ideura asked the Court to re-examine Mr. Sugimoto Shoshichi as a witness in order to ascertain whether or not the trial working of the machinery was made at the offices of the Singer Manufacturing Company.

This application was granted, despite a protest raised by Mr. Akiyama, who urged that such a process need not be resorted to.

The case was adjourned until Oct. 23rd.

DOERING v. KANHAUSEN.

Judgment was delivered in the Yokohama Chiho Saibansho, by Judge Kato, in the case brought by Mr. J. G. Doering, No. 75, Yokohama, against Mr. E. Kanhauser, formerly an employe of the plaintiff, claiming yen 5,550 with five per cent. interest from May 10th this year

until the execution of judgment. The defendant was ordered to pay to the plaintiff, yen 2,000, but other claims by the plaintiff were rejected. Particulars of the case appeared in the *Japan Mail* of Oct. 3rd.

SUMI v. VANTINE & CO.

The above case, which was expected to be resumed in the Yokohama Chiho Saibansho on Wednesday, was postponed until Oct. 29th. The plaintiff, who is a resident of Osaka, claims yen 8,550 damages, alleged to be due on account of breach of the contract on the part of the defendants.

NEWS OF THE WEEK.

The master of the steamer *Iwenzhou* (Capt. C. F. Arnold, it would appear) was killed during the Amoy fire by a wall coming down.

We learn that Bluff lot No. 144, with the buildings thereon, belonging to the estate of the late Mr. J. Witkowski, was sold by Messrs. Eyton and Pratt at public auction on Tuesday, the purchaser being Mr. F. M. Tegner and the price yen 30,100. The sale of furniture continues to-day and to-morrow.

The Rev. M. N. Trollope, of New College, Oxford, who has been appointed to succeed the late Rev. R. R. Dolling in the vicarage of St. Saviour's, Poplar, came to Korea in 1890 as Bishop's chaplain and senior S.P.G. missionary. He recently obtained Bishop Corfe's consent to his spending a period of some years in England.

There is a scheme afloat for establishing the Habutaye Seiri Kaisha (company for developing the *habutaye* business) under the joint efforts of Frenchmen and Japanese interested in the business. The promoters have sought the advice of the Yokohama Silk Merchants' Guild in connection therewith. It is not yet known where the proposed concern will be established.

Ishikawa Ken, an ex-official of the Yokohama Tax Collectors' Office, was arrested on October 2nd on charges of incendiarism and theft. After undergoing the usual trial at the Yokohama Chiho Saibansho the accused was conveyed to the Negishi prison. The facts seem to be that about 2 p.m. on Oct. 2nd a fire occurred in the house occupied by Mr. Nanri Ryoji, No. 653, Nishitoh, Yokohama, while the family were out. The fire was, however, got under control before much damage was done. The police, after investigating the affair, came to the conclusion that incendiarism was committed by Ishikawa, the accused, who lives next door. He finally confessed his crime and stated that prior to setting fire to Nanri's house he stole a quantity of clothing, valued at about yen 160, from the place. The man was drawing a salary of yen 40 per month from the Tax Office until February this year when he was dismissed, and poverty has apparently driven him to crime.

In view of the late disaster at Odawara, it is interesting to learn from *Engineering* that experiments made by the late Thomas Stevenson with a marine dynamometer which he constructed for the purpose, showed that with waves 10ft. high the main pressure recorded was 1.36 tons per square foot. This is about one-third of that given by the formula ascertained by treating the wave as a solid body moving with a certain velocity, when the kinetic energy, or the power to move material, would be the product of the weight and the height from which it had descended. Mr. Frank Latham found by experiment with a dynamometer, carried out on the sea-wall at Penzance, with the wind blowing with a force of 15lb. to 18lb. per square foot, and with a depth of 10ft. of water, the pressure of the water on the wall due to the waves striking it at right angles was from 18 cwt. to 20cwt. per square foot. From experiments made at Cherbourg it was found that the force of the waves in storms varied from about 600lb. to 800lb. per square foot.

CORRESPONDENCE.

YOKOHAMA GENERAL HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—At a Committee Meeting held on the 30th September, two letters received from Doctor Mècre, were read, and it was decided to ask the newspapers to publish the same in accordance with his wishes. We therefore enclose the letters in question together with copy of letter from Doctor Mècre to Mrs. Bellows, and also English translations of same, and shall feel greatly obliged if you will have them printed in your daily issue.

It may interest the public to know that at a Committee meeting held on the 15th July, it was fully recognized that the nursing staff was deficient, and the Committee was prepared to provide the salary for two extra Japanese nurses, from the funds at its disposal. A few days after the meeting a movement was set on foot by some of the Yokohama Ladies to provide an European nurse, and it was therefore thought advisable to postpone action in the matter till the outcome of the movement was ascertained.

As there appears to be some misunderstanding in various quarters, as to the conditions under which Doctor Mècre holds the Hospital, it was decided at the first mentioned Committee Meeting above referred to, to publish the full text of his lease, and we would therefore ask you to kindly give publicity to same, as per enclosed copy.

Thanking you for allowing us to encroach so much on your valuable space,

We remain, Dear Sir, Yours faithfully,

F. S. JAMES.

J. KERN.

L. MOTTET.

HENRY KESWICK.

} Committee.

Yokohama, 1st October, 1902.

Yokohama, le 19 Septembre, 1902.

A Monsieur JAMES,

Président du Comité de l'Hôpital Général,
Yokohama.

CHER MONSIEUR,—Au nom d'un groupe de Dames de Yokohama, vous m'avez, il y a quelque temps, proposé de recevoir, comme pensionnaires, les trois Nurses Anglaises, actuellement ici. Je ne pas accepter cette proposition.

Il fut, ensuite question, d'en prendre une, qui, appartiendrait en service de l'Hôpital, serait payée par les Dames, mais nourrie par moi, at logée dans l'établissement.

J'accedai à cette demande, en désignant Miss Anoor, que je connaissais un peu, et qui, me paraissait pouvoir l'habiter en services.

Si, cette personne était restée au Japon, avant qu'elle n'entrât chez moi, je vous aurais officiellement prévenu, qu'en cas de mésintelligence entre vous, je me réserverais le droit de me priver de a service. Cette latitude n'avait pas grande importance, pour une personne prise sur place, mais, il n'en est plus de même, si, comme là dit Madame Bellows, une Nurse doit être engagée en Europe; pour cela, un contrat est nécessaire et j'aboligerois toute autorité chez moi, en acceptant une semblable obligation.

Plusieurs essais de Nurses Européennes ont déjà été faire à l'Hôpital; aucun a donné résultats satisfaisants, et, vous comprendrez facilement, que je ne sois pas disposé à renouveler des expériences aussi onéreuses, que désagréables.

En résumé. Je consens, toujours, aux conditions ci-dessus indiquées, à recevoir une nurse prise sur place, mais, je refuse d'entren dans toute combinaison, qui, m'engagerait vis à vis, d'une personne demandée en Europe.

Le service de bonnes Nurses Japonaises ne l'érisse rien à désirer et on peut obtenir d'elles beaucoup plus que des Nurses Européennes. En s'adressant à la Direction de la Croix Rouge, il serait possible d'obtenir des saïoto, ayant tous les diplômes, partant Anglais et habitués à une discipline, qui est indispensable dans un Hôpital. Le serait beaucoup plus pratique, moins onéreux, il le résultat humanitaire poursuivi par ces Dames, c'est à dire, les meilleurs soins et la plus grande attention portés aux malades serait obtenu.

Veillez recevoir, Monsieur le Président, l'assurance mes sentiments bien dévotés.

D. MÈCRE.

[TRANSLATION.]

Yokohama, September 19th, 1902.

To F. S. JAMES Esq., Chairman of Committee of the General Hospital, Yokohama.

DEAR SIR,—On behalf of a number of the Ladies of Yokohama, you proposed, some time ago, that I should board and lodge the three English nurses who are now in this country. I could not accept this proposal.

It was afterwards suggested that I should receive one, who should be on the staff of the Hospital, and boarded by me but paid by the Ladies.

I agreed to this proposition if applied to Miss Amor, with whom I was slightly acquainted, and who appeared to me capable of undertaking the work.

Had this lady remained in Japan I should (before she joined my staff) have officially notified you, that, in case of any misunderstanding, I reserved to myself the right of dispensing with her services. This latitude was not of great importance, in the case of a person engaged locally, but the case is entirely different, if as Mrs. Bellows tells me, a nurse is to be engaged in Europe; for this purpose a contract is necessary and I should lose all authority in my hospital were I to accept such a contract.

Several trials of European nurses have already been made at the Hospital; none have been satisfactory, and, you will easily understand that I am not disposed to renew experiences which have been both costly and disagreeable.

In short I am always ready under the above mentioned conditions to receive a nurse locally engaged but I decline to join any combine which would bind me under contract vis-a-vis a nurse engaged in Europe.

The work of good Japanese nurses leaves nothing to be desired and one can get from them more than from European Nurses. By applying to the Directors of the Red Cross Society it would be possible to obtain nurses having all the diplomas, speaking English, and accustomed to the discipline, which is indispensable in a hospital. This course would be much more practical and less costly, and the charitable result sought by these Ladies, that is to say, the greater care and attention for the patients would be secured.

Believe me, Mr. CHAIRMAN, yours faithfully,
(Signed) D. MECRE.

Yokohama, le 27 Septembre, 1902.

A Monsieur JAMES,
Président du Comité de l'Hôpital Général,
Yokohama.

CHER MONSIEUR,—Ci-contre, je vous donne copie de la lettre, que j'ai écrite à Madame Bellows, le 24 de ce mois; les tones conciliants, dont je m'étais servi m'avaient fait espérer une appréciation autre, que celle contenue dans la réponse, reproduite bien dans l'*Herald*.

Le Manager de l'Hôpital (comme Madame Bellows se permet de m'appeler), s'en rapporte au Comité, pour prendre, au sujet de cet incident, les mesures, qu'il jugera les meilleures, pour sauvegarder les intérêts de l'hôpital, qui, sont aussi les siens.

Aurez, je vous prie, Cher Monsieur, l'assurance de mes sentiments bien dévoués.

D. MECRE.

P.S.—Comme Madame Bellows, a donné à la presse communication de sa réponse, je vous serais très obligé, pour éviter que l'opinion publique ne s'égare, de vouloir bien faire insérer le soir, si possible—ces deux lettres, dont l'une prouvera, que, si, j'ai refusé de me présenter au meeting, je n'en ai pas moins accepté de recevoir une Nurse Européenne à laquelle je m'engageais de fournir logement et nourriture.

[Copie de ma lettre à Madame Bellows]

Yokohama, le 24 Septembre, 1902.

CHÈRE MADAME,—Malgré mon vif désir de vous être agréable, je ne puis me rendre à l'imitation, que vous m'avez envoyée pour le meeting du 20 Octobre. Dans ma lettre au Président du Comité de l'Hôpital, lettre, qui, vous a été transmise par Monsieur James, j'ai donné les raisons pour lesquelles je ne puis accepter de contrat; dans l'entretien, que nous avons eu chez moi, je vous ai fourni toutes les applications que vous avez jugé bon de me demander.

Je ne puis n'en ajouter à ce que j'ai dit ou écrit, et je ne veux pas m'exposer à des contradictions, qui, dans un meeting pourraient être le résultat d'une phrase mal comprise ou mal interprétée.

Comme je vous l'ai dit, je m'engage à nourrir et à loger une Nurse Européenne, mais, sentiment, pendant le temps où je serai satisfait de ses services, et sur ce point, je désire conserver une liberté absolue.

Je vous prie d'agréer, Chère Madame, l'assurance de mes sentiments respectueux.

D. MECRE.

[TRANSLATION.]

Yokohama, 27th September, 1902.

F. S. JAMES, Esq., Chairman of Committee of the General Hospital, Yokohama.

DEAR SIR,—Herewith I beg to hand you copy of the letter which I wrote to Mrs. Bellows on the 24th inst. The conciliatory tone which I adopted led me to hope that it would be accepted in a different spirit from that shown by the letter published yesterday by the *Herald*.

The Manager of the Hospital (as Madame Bellows allows me to be called) joins with the Committee to take, in these matters, such steps as it shall judge

best to safeguard the interests of the Hospital, which are also his own.

Believe me, Dear Sir, yours faithfully,
(Signed) D. MECRE.

P. S.—As Madame Bellows has communicated to the Press the contents of her letter, I shall be much obliged to you (so as to avoid any misunderstanding by the public) if you will be good enough to publish these two letters, the one proving that if I have refused to be present at the meeting, I nevertheless agreed to accept a European nurse, for whom I agreed to provide lodging and board.

Yokohama, September 24th, 1902.

DEAR MADAM,—In spite of my earnest desire to meet your wishes I cannot avail of the invitation that you have sent me to be present at the meeting of the 20th October. In my letter to the President of the Committee of the Hospital—which was transmitted to you by Mr. James—I gave the reasons for which I cannot accept any contract; (with regard to a nurse) At our meeting at my house I furnished you with full explanations to all the questions you put to me.

I cannot add anything to what I have already said or written, and I do not wish to expose myself to any misunderstanding which at a public meeting might arise from want of knowledge of the English language or from faulty interpretation.

As I have already said, I engage to board and lodge a European Nurse, but only so long as I am satisfied with her services, and on that point I desire to reserve my complete liberty.

Believe me, Dear Madam, yours faithfully,
(Signed) D. MECRE.

[LEASE.]

This Agreement made at Yokohama, Japan, this Twenty-sixth day of May in the year one thousand eight hundred and ninety six between A. O. Gay, A. Dumelin, J. H. Brooke, E. C. Irwine, A. J. Wilkin and Paul Colomb, acting as the committee of the Yokohama General Hospital, hereinafter called the Committee of the one part, and A. Mécre, Doctor of Medicine, citizen of France, residing at Yokohama, Japan, of the other part witnesseth:—

That the said A. Mécre agrees to assume the charge and care of the land, buildings, fences and appurtenances of the Yokohama General Hospital situate on Lot Number Eighty-two A (82A) and number Eighty-two B (82B) in the Bluff Foreign settlement of Yokohama, Japan, for and during the term of fifteen years from the date whereon the new buildings upon said Lots, to be erected as hereinafter provided, shall be fit for occupancy as a hospital, which date shall not be later than the thirty-first days of October in the year one thousand eight hundred and ninety-six, and the Committee hereby gives Leave and Licence to the said A. Mécre and his heirs and successors to enter upon and occupy the said land, buildings, fences and appurtenances for and during the said term, Subject to the following agreements and conditions which the said A. Mécre for himself and for his heirs and successors, and the Committee for themselves and for their successors in office, hereby respectively covenant and agree to fulfill and perform.

1.—The said A. Mécre and his heirs and successors shall occupy and enjoy the said land, buildings, fences and appurtenances peacefully, and without molestation or hindrance from the Committee, or from anyone claiming under the Committee, subject, however, to the right of visitation by the Committee for the purpose of ascertaining the condition of the premises and the manner of fulfilment of the agreements and conditions herein provided.

2.—The Committee will allow the said A. Mécre to remove the hospital buildings at present on the said Lots and to use or sell the material thereof as he may see fit.

3.—The said A. Mécre agrees, at his own cost, to erect upon the said lots a new building, in accordance with the plan heretofore submitted by him to the Committee, in a thorough and workmanlike manner, with the necessary outbuildings, and planned and fitted for a hospital of the most approved type with a view to the best sanitary conditions and to furnish the same with proper beds, bedding and other furniture—using the furniture now in the said hospital as far as it can be used to advantage—and to afford therein suitable accommodation for patients from the community of Yokohama and those visiting the port who require medical or surgical aid, and, further, to renew the fencing and drains upon the said lots.

4.—The said A. Mécre agrees to pay the annual ground rent charged upon the said lots under the title deeds thereof and to pay any other or further taxes or assessments that may be levied thereon by the Japanese Authorities, and to keep the said buildings, furniture, fencing and drains in good and efficient repair and condition and in such repair and condition, at the end of the said term to deliver over the same, free of all charges, to the Committee, excepting, however, from such furniture the silver plate and surgical instruments, which plate and instruments shall remain the property of the said A. Mécre.

5.—If at the end of the said term, the said A. Mécre shall desire to renew this agreement for a further term, and if such renewal shall suit the Committee, then the said A. Mécre shall have a prior right over others to entry upon and occupancy of the said lots, buildings and appurtenances upon the payment by him to the Committee of the sum of one hundred silver dollars per month during such further term.

6.—The said A. Mécre agrees to keep the said buildings and furniture fully insured against fire, and, in the event of their loss or injury by fire, earthquake, or tempest, will, without delay restore them to their former good order and condition.

7.—The said A. Mécre agrees to receive into the said hospital, for care and medical surgical treatment, such charity patients as the Committee may send thereto, upon a charge of one silver dollar per diem, and to receive therein, for care and medical or surgical treatment, from the Yokohama foreign community generally, first-class patients upon a maximum charge of five silver dollars per diem, and second-class patients upon a maximum charge of three dollars and fifty cents per diem, and third-class patients upon a maximum charge of two silver dollars per diem.

8.—The said A. Mécre agrees to receive into the said hospital, for care and medical or surgical treatment, private patients, when introduced by any of the local resident physicians in good standing, other than the said A. Mécre, to be there attended by such physicians, upon a reasonable charge only per room board and attendance of servants.

9.—The said A. Mécre agrees to associate with him at all times during the said term an English-speaking physician for the care of English-speaking patients in the said hospital, and will, from the outset of the said term, arrange with Doctor Neil Gordon Munro, of Yokohama, Japan, for his services for such purpose, and upon his retirement from such association, will confine the appointment of his successor to such persons as may be approved by the Committee.

10.—The said A. Mécre agrees and promises that during the said term he will not knowingly admit or retain in the said hospital or its grounds appurtenant any patient suffering from an infectious disease.

11.—And it is further agreed that, in the event of the disability, from any cause, of the said A. Mécre to perform his agreements aforesaid, or in the event of the death of the said A. Mécre, then his successor in the charge and care of the said hospital and premises shall be selected without unnecessary delay and subject to the approval of the Committee.

12.—And it is further agreed that, in the event of the non-fulfilment or breach of any of the aforesaid agreements, promises or covenants on the part of the said A. Mécre, it shall be lawful for the Committee or their successors to fully re-enter upon and possess the said land, buildings, fences and appurtenances and all of the buildings, fences, furniture and appurtenances then placed thereon by the said A. Mécre, excepting the silver plate and surgical instruments, shall thereupon become forfeited to and become and remains the property of the Committee in trust for the Foreign Community of Yokohama and all of the rights and privileges hereby conferred or intended to be conferred to the said A. Mécre, his heirs or successors, shall thereupon cease and determine.

Nothing in this agreement shall be construed as in any way an abandonment or alienation of the rights of property of the Foreign Community of Yokohama or of the Committee for the time being in and to the said lots of land, buildings, fences and appurtenances, but the lawful title and control thereof shall continue during the operation of this agreement in the manner and upon the terms provided for in the title deeds for the said lots executed by the Japanese Authorities and as existing before the execution of these presents.

In testimony whereof the said parties have hereunto subscribed their names at the place and time first herein written.

Signed by the COMMITTEE.

A. MECRE.

Since then the Fees have been increased with the approval of the Committee.

THE STUDY OF THE JAPANESE LANGUAGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having just read with very great interest the lecture of Mr. Walter Denning on the Study of Japanese, published in the *Weekly Mail* of Sept. 27th, I wish briefly to express my appreciation of Mr. Denning's helpful advice and at the same to offer a single criticism, lest some young missionary should be discouraged by what he says in regard to the hopelessness of any one learning to speak accurately who has no ear for music.

Now, undoubtedly true as it is that without a good ear for pronunciation good speaking is out of the question, it does not follow that a "musical ear" and

a "linguistic ear" are the same. On the contrary, in an experience of more than a decade in Japan, the fact has repeatedly struck me that several missionaries with especial musical gifts were deficient in correct pronunciation, and *vice versa*, that some of the best speakers had no ear for music. I have one in mind whose accent is more highly praised by the Japanese than that of any other worker of my acquaintance. Yet in this case the musical ear, if not entirely absent, is yet distinctly below the average. The same thing is confirmed by missionaries from China. One would expect that a mastery of all tones of that language would require a musical ear. Yet the invariable testimony is that musical ability confers no especial advantage in the matter of pronunciation. Nor, on the contrary, does the lack of a musical ear prove a handicap, for several cases have been cited to me where men and women who could not distinguish one tune from another became fluent and correct speakers of Chinese.

I remain, very sincerely yours,

ICHABOD QUILL.

Kumamoto, Sept. 29th, 1902.

THE GOVERNMENT IRON AND STEEL WORKS.

A report to the British Foreign Office by Mr. E. A. Griffiths on the Imperial Japanese Government Iron and Steel Works at Wakamatsu, which were formally opened on Oct. 18th, 1901, contains of necessity much information that has already been published, but as a recapitulation of facts and for purposes of reference it will be doubtless be useful to many. It can hardly be called up to date, however, as it takes no notice of Mr. Wada's resignation or of the recent operations of the Foundry. We reprint the following:—

The necessity of rendering Japan independent of foreign countries for her supply of steel and iron manufactures by the establishment of a steel factory has for some years past been recognised in the country. It was not, however, until the year 1890 that anything definite was attempted, and even then although the question was taken up by the naval authorities and an estimate submitted to the Diet, the attempt proved abortive. Various reasons were at the time given for the failure of the Government scheme—one to the effect that sufficiently explicit information had not been given to the Diet by the Government as to the amount of iron ore and other raw material which Japan herself could supply to meet the needs of the foundry, another that there had been a difference of opinion on the question of control between the War and Navy Departments. Whatever the reason may have been the proposal was rejected by the House of Representatives. The Upper House, however, was not satisfied to let the matter rest there. It urged upon the Government the necessity for further action, and suggested as a preliminary step that a Committee of Enquiry and Investigation should be appointed. It further gave its opinion that it would be well if the business of establishing a steel foundry and its subsequent control were entrusted to the Department of Agriculture and Commerce instead of to the naval and military authorities. This view was adopted by the Government, and a committee was appointed by them to make investigations and report upon the whole question, more particularly as to the "amount of iron ore obtainable in Japan, the trial manufacture of pig iron and steel, and the organisation of the works."

The committee appears to have been a thoroughly representative one comprising experienced officials from the War, Finance and Navy Departments, as well as experts from the Mining Bureau of the Departments of Agriculture and Commerce and the Tokio University. The investigation occupied about five years, and as a result, and after a successful trial manufacture of iron had been made at Kamaishi in Rikuchu, the Government decided to establish a steel works in Japan, and with that object submitted a Bill to the Diet at the beginning of 1896, asking for an appropriation of 4,095,793 yen, to be voted as a continuing fund spread over four years. The scope of the works was to be sufficient to turn out 60,000 tons of steel of various kinds, or less than one-half of the total quantity—130,000 tons—required at the time. In the Government estimates 300,000 yen was set apart for the purchase of the necessary ground, 100,000 yen for the preparation of the site, and 560,500 yen for building purposes. The Government proposals were unanimously passed by both Houses of the Diet, and it was decided to entrust the control of the undertaking to the Department of Agriculture and Commerce, as suggested five years previously by the House of Peers.

After the claims of Ujina, Hakata, the Hokkaido and Wakamatsu in Chikuzen, to be selected as the site for the works had been severally considered, the

last-named place was eventually chosen, and on March 30, 1896, the organisation of the steel foundry was officially announced by Imperial Edict, the staff, exclusive of workmen and artisans, to consist of a president with a salary of 4,000 yen a year, one chief expert with a salary of 3,000 yen a year, two managers with a salary of 2,600 yen a year, each, eight experts with salaries averaging 1,200 yen a year, and 30 clerks and 40 assistants at an average monthly wage of 30 yen. Provision was also made for the employment of foreign experts and two German engineers were engaged.

Mr. Teiun Yamanouchi was appointed the president of the foundry, and Mr. Michitaro Oshima, chief expert, while Messrs. Taishin Nagao and Michisaburo Miyashita were appointed managers on the resignation of Mr. Yamanouchi in August, 1897, Mr. Rentaro Hotta, chief engineer of the Mining Bureau, was placed in charge, to be succeeded a few months later by Mr. Tsunashiro Wada, the present president. At the time of the inception of the undertaking Mr. Wada was director of the Mining Bureau in the Department of Agriculture and Commerce, and was one of the original members of the Committee of Enquiry appointed by the Government in 1892. He was consequently thoroughly acquainted with the details of the scheme, with the origin of which he was so closely identified, and it was, I believe, on his initiative that the original idea that the foundry was simply required to manufacture military and naval requisites for the Government was altered and a programme of a more general scope adopted.

In the meantime experts had been despatched to Europe and America to enquire into the condition of the steel works in various foreign countries, and to obtain expert opinion abroad as to the new undertaking. As a result of these inquiries it was found that the original estimates of the cost were far too small, and in 1898 the Government obtained from the Diet an additional sum of 6,474,056 yen towards the expense of the work, while in its thirteenth Session (February, 1899,) the Diet was asked to vote a further sum of 8,632,845 yen, including 4,500,000 yen for working capital, 3,632,845 yen for the acquisition of mines and their improvements, and 500,000 yen as a subsidy to the Wakamatsu Harbour Works Company. The total thus appropriated for the establishment of the works amounted to close upon 20,000,000 yen.

The works are known as the Imperial Japanese Government Iron and Steel Works, and are situated close to the town of Wakamatsu in Chikuzen, in the north-west corner of Kiushu, the exact locality being Yawatachi, Ongagori, in the Prefecture of Fukuoka. The nearest railway station is at Okura, which is 14 cho or about one mile from Wakamatsu. Wakamatsu itself lies nine miles to the west of Moji.

POSITION AND FACILITIES.

THE GROUND AND HARBOUR.—The ground occupied by the steel works, in area close upon 300,000 *tsubo* (or about 248 acres), with an additional lot of over 90,000 *tsubo* (over 74 acres) for enlargement purposes, lies on the eastern side of a large lagoon 10 miles in circumference. This lagoon adjoins and is connected with a pool or basin about a mile in diameter at its greatest width, which again is connected with the sea by a short and narrow channel, on the west side of which is situated the town of Wakamatsu. The lagoon is for the most part very shallow, but is to be dredged and deepened by the Harbour Works Company. The present depth, which is about 8 ft. at ebb tide, is to be increased to 20 ft., and a quay wall over 2,000 ft. long is being built along the front of the works.

The commercial benefit which Wakamatsu might possibly derive from its proximity to the coalfields of Chikuzen and Buzen, on the completion of the Kiushu Railway system, was recognised even before the place was considered as a site for a Government steel works. It suffered, however, from the disability of having a very shallow harbour, and it was consequently necessary that something should be done to render it more easy of access from the sea before it could become the important port which its situation warranted one in believing that it would eventually become. In November, 1888, therefore, the authorities were requested to sanction the organisation of a dredging company to conduct the work of deepening the harbour, which at that time was only about 5½ ft. deep in its shallowest part. An investigation was made, and Mr. Ishiguro Isoji, an engineer of the Home Department, in a report on the proposed dredging, issued by him in November, 1889, stated that a capital of 600,000 yen would be required, that a breakwater 2,245 yards long should be constructed, and that the shallowest parts, both within and outside the harbour, should be dredged. He suggested that the expense of undertaking the work could be met by the levying of dues on ships entering the harbour, and by the disposal, either by sale or lease, of the land which would be reclaimed in the course of the work. In May, 1900, official sanction was obtained, and the Wakamatsu Harbour Works Company was organised. The work of dredging was commenced some

time afterwards, and by June, 1893, a depth of over 8 ft. had been obtained. In April, 1894, official sanction was given to the company to charge dues on ships entering the harbour. In May, 1896, it was resolved to extend the dredging operations in view of the fact that the Government had selected Wakamatsu to be the site of the new steel foundry. As considerable inconvenience was caused, however, by the collection of shipping dues from every ship entering the port with materials for the construction of the Government works, it was, in December, 1899, agreed between the Government and the harbour works company that the fees should be abolished in the case of such ships, and that in lieu thereof a sum of 500,000 yen should be paid by the Government to the company during a period of five years. The company thereupon increased its capital to 1,500,000 yen, and further extended the scope of its work. As a result the whole of the Wakamatsu Harbour will be dredged to a depth of 20 ft., and ships of 3,000 tons displacement will be able to approach the quay wall belonging to the steel works and load and unload cargo alongside. The work already (December, 1901) completed consists of a channel 6,000 ft. long, 240 ft. wide and 14 ft. deep, extending from the main channel outside the harbour to the Kiushu Railway Company's pier. The greater part of the breakwater has also been completed.

RAILWAYS.—The quay is connected by a branch line with the main line of the Kiushu Railway, as well as with all parts of the works, the length of railway lines within the works amounting to about 20 miles. The gauge in use is the same as in other parts of Japan, and trucks can consequently be transferred from the Kiushu Railway lines to the lines in the works and taken to any parts of the latter.

LOADING.—The machinery for loading and unloading ships or railway waggons consists of two 1½-ton electric movable portable cranes, one 25-ton quay crane, fixed, driven by electricity, and one 10-ton shearleg, hand worked.

WATER is brought by conduit from the Itabitsu River, near Okamwa, Ongagori, and distributed by the same means all over the works. The length of the conduit is about 2½ miles, and the average amount of water supplied is 1,200 gallons per minute. For the purpose of storage two reservoirs have been built.

BUILDINGS.—The works are divided into three departments:—(1) the pig iron department; (2) the steel department; and (3) the rolling mill department. In addition to these there are a central pumping station, an electric central building, a repair shop, an iron foundry, a patternshop and foundry, sand storage, a boiler-shop smithy, chemical and mechanical laboratory and inspection bureau and firebrick plant. There are also, of course, offices and dwelling houses, as well as a hospital. The various buildings are all lighted both outside and inside, by electric light, about 120 arc and 1,000 incandescent lamps being used.

POWER.—Steam, electric, and hydraulic power is used in the works, the first, except in the case of locomotives, being produced in steam boilers fired with waste gas from blast furnaces and coke ovens. Altogether 24 steam engines, of 31,200 horse-power, and 52 steam boilers, of about 10,000 horse-power, are used in the works.

MACHINERY.—I am informed that all the machinery used in the works, with the exception of the electric cranes, which were made in America, came from Germany.

HOUSES.—It may be mentioned here with reference to the offices, hospital and houses, that the head office is a two-storied brick building, covering an area of 720 square metres, that the hospital building covers an area of 872 square metres, and that the officers' quarters occupy ground to the extent of about 3¼ acres. The dwellings for the workmen and their families are built of wood and occupy a space of about 5¼ acres.

SOURCES OF SUPPLY.

RAW MATERIAL.—The raw material used in the works—magnetite, hematite and a smaller quantity of zimonite—is all obtained in Japan, with the exception of the portion of the ore which is supplied, under contract, by the Hang-Yang Iron Works from their mines in Dayeh, Hupeh, China. Japanese iron ore comes principally from the Akadani and Kamo iron mines in Echigo, which have been purchased by the works, and in smaller quantities from other mines. It is expected that the Akadani mine when in full working order will turn out about 100,000 tons of ore annually, while the amount to be supplied by the Chinese mine, under contract, is from 50,000 to 70,000 tons per annum.

In addition to the two iron mines mentioned above the works have also purchased for their use three coal mines, the Takao, Igisu and Uruno in Kagogori, Chikuzen, all within 30 miles of the works, and connected with the latter by rail. Coal is also obtained from various private mines in Japan. It is estimated that the amount of iron ore required for consumption

every year, when the works are in full working order, will be 250,000 tons, and that the amount of coke and coal consumed will be 380,000 and 800,000 tons respectively.

As regards the cost of the iron ore, it was recently stated by the *Jiji Shimbun* that in February last the Hang-Yang Iron Works supplied from their mine 60,000 tons of iron ore at a cost of from 2 yen 50 sen to 3 yen per ton at the mine, while the freight thence to the Wakatsu works averaged 4 yen 50 sen. The total cost of the ore per ton at the works amounted, therefore, to from 7 yen to 7 yen 50 sen, and this was the cheapest ore supplied. It is estimated, however, that when arrangements have been completed for bringing ore from the Akadani mine, the cost of the ore laid down at the works—i.e., freight and other charges included—will be about 5 yen per ton.

PRODUCTION.—According to a recent official announcement the works are intended to supply, as far as possible, all the steel materials required by the Government at a price to be arranged annually in advance, irrespective of the current foreign market prices. Certain kinds of steel materials will also be supplied, but only in large quantities to Japanese engaged in industrial business at a price lower than the cost of imported articles. The price at which the Government will be supplied is to be determined in advance, by arrangement with the official department requiring the materials, on the basis of the average price ruling abroad during the immediately preceding five years, the state of the work at the foundry being also taken into consideration.

LITERARY GOSSIP.

The "Pilgrim's Progress," translated into Matabele, will shortly be issued by the African Department of the London Missionary Society. The illustrations of the book are also "translated." Christian as a blackman is shown trudging through a kraal, the squatted natives watching his departure. No copies of the book will be on sale outside Matabeleland.

A volume of personal memories of Tennyson is promised by Messrs. Williams and Norgate. The writer of it is Miss A. G. Weld, whose mother was Lady Tennyson's sister. Miss Weld often visited the Tennysons, and so she is able (says the *Daily Chronicle*) to tell us of the poet at first hand. She has something new to say of his out-look upon the world and its affairs.

From a book called "Plain English, So They Think," we take the following extract from a circular issued by a firm of French wine merchants:—"The Wermouth is a brightly bitter and perfumed wine, with additional good vegetable. This is tonic, stimulant, fabrifuge drinking. Mixed with water, it is refrigerating and also a powerful preservative of fivers; those latter are very usual in warmth countries."

Here are a few reflections, selected at random, from H. Seton Merriman's new novel, *The Vultures* :—

When a strong man quits a room he often bequeaths a sudden silence to those he leaves behind.

People whose lives are anything but a joke are usually content with the smallest jests.

Girls are infinitely wiser than young men. But the wisdom ceases to grow later in life, and old men are wiser than old women.

Wise men cease persuading the moment they have gained consent.

The inevitable is bound to happen, and Mr. Kruger has written, or rather dictated, his memoirs. The competition amongst publishers for the MS. is said to have been great, and Messrs. Lehmann, of Munich, have secured it. Messrs. Lehmann propose to publish the volume in November next simultaneously in several languages. These memoirs cannot fail to provide us with an interesting document, though we imagine that the history of the South African War which De Wet is writing will surpass it in popularity. For this, too, there is much competition amongst publishers.

Miss Goodrich Freer, whose book regarding the customs and folk-lore of the Outer Hebrides recently appeared in London, has spent several weeks in these outer isles each summer for some years past. Miss Freer's favourite resort is the little island of Eriskay, in the Sound of Barra, where the population is wholly Roman Catholic,

and where she has had an excellent opportunity as the guest of the parish priest of getting to close quarters with a people who are singularly shy of Saxon strangers. As recently as last summer the house in Eriskay in which Prince Charles Edward spent his first night in Scotland was demolished.

Sir James Ramsay, of Banff, who is approaching his seventieth birthday, intends to signalise the event by the publication of another historical work. It is ten years since his first important work, "Lancaster and York," was published. It was followed six years later by the "Foundations of England," an elaborate work, tracing the history of England from the Roman invasion till the death of Stephen in 1154. The forthcoming volume will carry on the history through the reigns of the three succeeding monarchs—Henry II., Richard I., and John. Sir James, who was educated at Rugby and Christ Church, Oxford, was formerly public examiner in law and modern history, and was elected a barrister of Lincoln's Inn forty years ago. Sir James Ramsay's daughter, after a distinguished University career, married Dr. Butler, Master of Trinity College, Cambridge.

The article on Mr. Gladstone in one of the new volumes of the "Encyclopædia Britannica" is from the pen of Mr. G. W. E. Russell. A prominent characteristic of Mr. Gladstone, he says, was his love of power. His ambition had nothing in common with the vulgar eagerness for place and pay and social standing. Rather it was a resolute determination to possess that control over the machine of State which should enable him to fulfil without let or hindrance the political mission with which he believed that Providence had charged him. The love of power was supported by a splendid fearlessness. No dangers were too threatening for him to face, no obstacles too formidable, no tasks too laborious, no heights too steep. The love of power and the supporting courage were allied with a marked imperiousness. Of this quality there was no trace in his manner, which was courteous, conciliatory, and even deferential; nor in his speech, which breathed an almost exaggerated humility. But the imperiousness showed itself in the more effectual form of action; in his sudden resolves, his invincible insistence, his recklessness of consequences to himself and his friends, his habitual assumption that the civilised world and all its units must agree with him, his indignant astonishment at the bare thought of dissent or resistance, his incapacity to believe that an overruling Providence would permit him to be frustrated or defeated.

The sale at Sotheby's recently of a complete set of *Fraser's Magazine* (1830-1882) reminds one of a curious chapter in the history of Dr. Maginn. He quarrelled with Blackwood, and proposed to Hugh Fraser, one of his boon companions, that they should have a magazine of their own. Going down Regent street the name Fraser over No. 215 attracted Maginn. "Here's a namesake of yours, Fraser!" he cried. "Let's try him!" The precious pair did try him; he consented to the scheme, and the first number soon afterwards appeared. The first four numbers were nearly all from Maginn's fertile pen. Douglas Jerrold's *Shilling Magazine* was the first serious rival to *Fraser*, and many years later the successful experiment of *Cornhill* gave a further blow to its half-crown rival. Meantime, Coleridge, Thackeray, Father Prout, Ainsworth, Froude, William Allingham, and many more had contributed to its pages, and Carlyle's "Sartor Resartus" threatened it with untimely extinction. Curiously enough, his last-published work, on the "Early Kings of Norway," and his "Portraits of John Knox" also appeared originally in *Fraser*. Thackeray records the fact that he showed a number of *Fraser* with a sketch of Samuel Rogers (probably by Maclise) in it to Goethe at Weimar. Goethe viewed this work of art with extreme disapproval. "They would make me look like that!" he growled. The set of volumes the other day changed hands at £15 10s.—a fairly modest price, "considering."

The mixed metaphor is the subject of an amusing article in the *New York Times Supple-*

ment. "Will you hurl the cornerstone of Irish independence to the English wolves thirsting for its blood?" asked an orator. He was hardly more adventurous than the speakers in the House of Commons. Among metaphors actually heard in the Strangers' Gallery are these: "By taking this course the Government will be opening the door to the thin end of the wedge." "A quarrel is so imminent that it requires only a spark to let loose the dogs of war." "It is of no use for the honorable member to shake his head in the teeth of his own words." "We are drifting into the African desert without rudder or compass." "The Government is becoming a crystallized bureaucracy, running in a groove and deaf to reform." It was not long ago that the late Sir Ellis Ashmead Bartlett, in a letter to the *London Times*, complained that the concert of the Powers in China was "a mere delusive screen, agreeable in sound, very tickling to the ignorant ear, calculated to draw the cheers of the groundings, but which really serves only as a blind to ourselves, as a cover for ministerial inaction, as a means of informing our rivals and foes of all our plans, and as a lever wherewith they are enabled to checkmate British policy." It is more surprising that errors of this kind should be perpetrated in cold print, but a popular living theologian in Scotland is responsible for the two following which may be found in a book that has had a large circulation: "This question occurs often to every careful reader of the gospels, but lands us as often as we ask it in a sea of mysteries!" "Such a course will inevitably land us in the great central current which runs through the whole of Scripture from first to last." This confusion between land and sea may be compared with that of a reporter who, in describing a wreck, asserted that no less than fourteen of the unfortunate passengers and crew bit the dust.

SECRET TRANSMISSION OF NEWS.

The secret and extraordinarily rapid transmission of news in India and among native races generally is one of those mysteries which Europeans have never been able to fathom, try they never so ably. A recent article in the *Spectator* on this subject has evoked a very interesting correspondence, and Mr. Alfred J. Bethell writing from the Naval and Military Club in Piccadilly, gives a personal experience which he offers as "a negative proof that the phenomenon may be in the nature of prophecy, in that it is not always accurate." He says:—

About 1885, when the Bechuanaland Border Police was first raised, I became its Adjutant, with headquarters at Mafeking; and in the course of duty I traversed a good deal of country that was then comparatively unknown. On one occasion I proceeded with an orderly and three horses to investigate the country that lay between Khama's then capital, Shoshong, and the Victoria Falls of the Zambesi. Shoshong is now deserted, but in those days it lay approximately two hundred miles north of Mafeking, and about three hundred and fifty miles south of the Victoria Falls. A few days after leaving the Nata River (a river that lies about a hundred and fifty miles north of Shoshong, and—though this is part of another story—is composed of alternate stretches of quite fresh, and very salt, water), we entered on a tract of country that was believed to be about eighty to a hundred miles broad, and that was said to be waterless. However, we thought that we could get our horses across it by riding both day and night, and ourselves by carrying our waterbottles full. The unforeseen, naturally enough, transpired, and nearly beat us. The sand was extremely heavy, the weather excessively hot, one of our two water-bottles was broken in riding through some bush at night, and our horses gave in. So presently we found ourselves with unknown miles of deep sand in front of us before the next water, sixty miles of it behind, a pint of water between us, and our own legs—that had known no rest for twenty-six hours—to rely upon. We could not go back, for we should have died of thirst; and so we went on. After twelve hours more of continuous walking we came to water, drank, and went to sleep. Now comes the story. As we rested at the water, a party of three Matabele came by, who had come from Bulawayo, far away to the east of our road, on their way to the river. Note,—they were the only living men

we had seen since leaving the Nata, they were travelling in the same direction as we were, and we were alive. They passed by, and we saw them no more; and we ourselves presently walked on the remaining distance to the Falls. Our walk home again from the Falls was slow, for though, by the help of some Bushmen, we found plenty of water where before we had found none, we ran short of food, and had to live on berries. White men, however, cannot work properly on berries, and so our progress was delayed. Eventually, about six weeks after we had seen the Matabele, we got out to Shoshong again. On our arrival we were greeted with amazement; for, we were told, word had come down by Khama's Bushmen that "a Matabele" had seen both of our dead bodies three days' journey beyond the Nata; and the story that we had died of thirst had been so circumstantial as apparently to admit of no doubt. Our exact appearance had been described, it was told us, even, down to the stripes of rank that I bore on my sleeve; and, as a climax, the news of our death had been sent down country whence (as I subsequently found) it had been cabled home. I took some pains to discover when the story of our death had first reached Shoshong, and the evidence showed that Khama had received word of it about twenty-four hours after the time the Matabele had passed us. Now the place where the Matabele passed us—Daka—is quite two hundred and fifty miles from Shoshong; miles, too, of the most inhospitable sort. Any one who has been through thirst will bear me out in saying that no lapse of time will efface any detail of it from the memory. Moreover, I made notes at the time which I still possess. But the news was wrong, though the speed of its transmission was marvellous.

EUROPEAN NEWS.

On Aug. 16th in the presence of a fashionable assembly, the Right Hon. the Earl of Dudley was sworn in as Lord-Lieutenant of Ireland. Before his departure for England in the evening, the Lord-Lieutenant and a distinguished party were entertained at dinner at the Royal St. George's Yacht Club at Kingstown.

Aug. 19 was the last day for sightseers to witness the "trappings of the Coronation," as Bishop Weldon expressed it, in Westminster Abbey, and 18,650 persons paid for admission. During the seven days the Abbey has been open nearly 97,000 persons have entered, and almost £5,000 has been received in fees for charitable objects.

The deep-sea trials of submarine No. 4, which were postponed owing to a slight mishap to her gasoline engine, have been successfully concluded in the Irish Sea. When in deep water she was submerged to a depth of about 10 ft., and in this position travelled for about six miles. Subsequently she went through several evolutions on the surface with the greatest celerity.

The *France Militaire* states that important reinforcements of French Colonial infantry and cavalry are to be despatched from Lorient to Indo-China at the end of this month, as the outbreak of a conflict between France and Siam is considered to be possible at any time. The first regiment of Colonial artillery at Lorient will furnish 335 non-commissioned officers and men.

Newgate is passing away. Already the work of demolition has begun. On Aug. 18th the first stroke of destruction resounded in the women's ward (unused for 25 years), and the next day the walls were scarcely pierced. Rising to a height of 50 ft. the outer walls in thickness are 5 ft. They are composed of solid blocks of stone a yard and a half in length and three feet across. It will take two months, perhaps three, to destroy.

As there is some misunderstanding regarding the extent of the King's gift of Osborne House to the nation, says a London journal we shall not be out of place in stating that the gift includes the whole of the estate held by Queen Victoria in the Isle of Wight, and that all will be handed over to the Office of Works. There will in future be no accommodation for Royal personages at Osborne. The late Queen's private apartments will be sacredly reserved as a memento of her Majesty, but some very interesting portions of the

building will be open to the public. The other parts of the Royal mansion will be at the disposal of convalescent officers of the Army and Navy.

The health of European armies has been engaging the attention of Professor Kende, of Budapest, and the results of his investigation are now given to the world. Of all the armies, the professor is inclined to put the German first, though the general sanitary conditions of the French appear to be almost as satisfactory. The Frenchman, however, is of a feeble constitution. Austria, it is said, suffers from the ravages of disease, and the sanitary condition of the Italian army is most strongly condemned. Out of a thousand men, according to Professor Kende, Italy loses, nine, Austria six, France five, and Germany only four. The system of Germany is certainly a good one: but it must be remembered that it is employed on a stock naturally strong and robust.

When the British Navy estimates for the current year were framed it was impossible to give an approximate estimate of the total cost of the *King Edward*, but now that the details of construction are advanced it looks as if she will cost £1,500,000. This enormous sum will be better understood when it is stated that the largest sum ever provided for the building of a battleship for the navy was £1,129,756, the estimated cost of the *Venerable*, at Chatham, but the *King Edward VII.* will be larger by 1,350 tons than the *Venerable*. The rapid and costly strides which have been made in naval shipbuilding of recent years will better appreciated when the cost of the new ships is compared with that of the armoured ships *Achilles*, *Bellerophon*, *Northumberland*, *Temeraire*, *Hercules* and *Aguincourt*, all regarded as monsters a few years ago, and not one of which cost £500,000.

Some interesting details are given by the Rome correspondent of the *Newcastle Chronicle* of a gem, probably unique as a work of art, which is to be presented to the Pope by the Roman Catholics of the world at the close of this, his papal jubilee year. It is a Brazilian topaz, weighing nearly four pounds avoirdupois, and originally belonged to the Sicilian Bourbons, but Prof. Cariello, the then director of the Neapolitan National Museum, spent ten years in carving upon it a relief of Christ breaking the Eucharistic Bread. In this work he used diamond dust worth £16,000. The Bourbons being gone, the artist was left with the gem, and on his heirs offering it to the Count of Caserta, the latter declined on the ground that the art work exceeded that of the jewel. The present director of the Neapolitan Museum describes the topaz as the finest piece of carving executed on hard stone in modern times.

In January a petition was presented to King England for the incorporation of the British Academy for the Promotion of Historical, Philosophical, and Philological Studies. In the *London Gazette* of Jan. 14, it was announced that the petition had been referred to a committee of the Privy Council. His Majesty has now been pleased, acting upon the advice of this committee, to accede to the petition and to grant to the British Academy a Royal Charter. This states that the Academy aims at the promotion of the study of moral and political sciences, including history, philology, law, politics and economics, archaeology, and philology. Of the original 51 petitioners, who, according to the draft charter, were to be the first Fellows of the Academy and to elect a president and council from among their own number, three have died—Lord Acton, Mr. S. R. Gardiner, and the Rev. A. B. Davidson. On the other hand, the name of Lord Rosebery has been added to the list, so that 49 gentlemen now become the first Fellows of the British Academy. The list includes Lord Reay, President of the Royal Asiatic Society; Mr. Arthur Balfour, M.P.; Mr. John Morley, M.P.; Mr. James Bryce, M.P.; Mr. Lecky, M.P., and many professors at the Universities.

The amended plans for the new cruiser *Devonshire* have been received at Chatham Dockyard, and work was resumed on her in

August. The keel plate of this cruiser was laid by the Prince of Wales on March 25th last, but work on her, as also on her five consorts, *Roxburgh*, *Antrim*, *Hampshire*, *Argyll*, and *Carnarvon*, was stopped, as the British Admiralty decided to strengthen the armour-plating on their sides. Originally their broadside armour was 4in. at the thickest part. This has now been increased to 6in. tapering to 4½in. fore and aft, and it will run from stem to stern 6ft. above the water-line and 4ft. 6in. below. The protective plating will be 2in. on the bows, the bulkheads 4½in., the casemates 6in., and the conning tower 5in. She will be provided with a protective deck running fore and aft. As amended the *Devonshire* will be 450ft. long by 68ft. 6in. beam, she will displace 10,700 tons, and her mean draught will be 24ft. 9in. Her main armament will consist of two of the new 7.5in. quick-firing guns in barbettes, one forward and one aft; and in this she differs from the first batch of "county" cruisers of the *Monmouth* class, which mount two 6in. forward and two aft. The *Devonshire* also carries ten 6in. quick-firers and twenty-eight smaller quick-firing weapons. There will be two submerged torpedo tubes for 18in. Whitehead torpedoes. The speed of the *Devonshire* class is to be twenty-three knots, and each will be a combination of water-tube and cylindrical boilers.

TELEGRAMS.

RUSSO-JAPANESE RELATIONS.

London, Oct. 3.

A Russo-Japanese Society has been established in Moscow with the object of promoting Russo-Japanese Commerce; and has established a mill at Minsk for weaving Japanese raw silk.

THE AMERICAN COAL FAMINE.

Owing to the coal famine in New York resulting from the strike, President Roosevelt has invited the presidents of the coal-carrying railroads, with the president of the Miners Union to meet in a conference on Oct. 3rd regarding the failure of the coal supply, which has become a matter of vital concern to the whole nation.

THE SENTENCES ON IRISH MEMBERS.

Shanghai, Oct. 4.

The sentences on Messrs. Reddy and Haviland Burke, M.P.'s, mentioned on Sept. 26th, have been revised and reduced.

Military posts are being established in the disturbed districts (of Ireland.)

CHOLERA IN EGYPT.

Cholera continues to rage in Egypt. There have been 36,658 cases and 39,088 deaths since the 15th July.

THE EDUCATION BILL.

Messrs. Chamberlain and Balfour have denied that they intend to withdraw the Education Bill.

THE MACEDONIAN TROUBLE.

A great display of Turkish force has taken place and is likely to over-awe the revolutionists.

THE SHIPPING COMBINE.

The Shipping Combine has tated (? made) an agreement with the British Government to the effect that there shall be no discrimination against the combination's ships with regard to the carriage of mails, troops, &c., and no policy antagonistic to the combination or to a continuance of existing contracts.

THE HOUSE TAX.

Later.

The Times, commenting upon the reference of the House Tax question to The Hague tribunal, eulogises the courtesy and good humour displayed by both parties and the

graceful and becoming concessions on the part of the Japanese Government, which has shown a high sense of what befits Japan as a great Power.

THE EDUCATION BILL.

There is a general stir in political circles in view of the approaching parliamentary session. The Non-conformist opposition to the Education Bill is growing and extending even in the section of Unionists. Mr. Chamberlain presides on Thursday at Birmingham over a private conference of Unionists to discuss the subject of present arrangements.

THE "SHIKISHIMA."

London, October 5.

The Japanese battleship *Shikishima*, recently ashore near Yokosuka, has been floated. Her damages are slight.

THE BIG COAL STRIKE.

President Roosevelt's efforts to settle the coal strike have proved abortive, both sides maintaining an uncompromising attitude.

TRANSVAAL FINANCE.

The *Financial News* states that Mr. Chamberlain will introduce a bill in parliament authorising a Transvaal loan of 30,000,000 sterling, to redeem Boer obligations and promote public works. The Transvaal's contribution to the cost of the war will remain in abeyance for three or four years and will probably not exceed fifty millions.

FUNERAL OF ZOLA.

Later.

Yielding to the entreaties of Madame Zola, Captain Dreyfus abstains from attending the funeral on Sunday, to avert Nationalist disturbances.

NEW JAPANESE LOAN.

A Japanese loan will be issued on Tuesday at £102 1s. 8d., being equivalent to par.

ZOLA'S FUNERAL.

London, October 6.

Enormous but orderly crowds attended Zola's funeral. The Minister of Education represented the Government and delivered an oration. Captain Dreyfus was present but passed unnoticed.

SOUTH AFRICA.

The Martial Law Commissioners have sailed homewards.

THE U.S. COAL STRIKE.

London, October 7.

The Morgan Trust have arranged for the purchase in England of 50,000 tons of coal for shipment to the United States in their own ships, so as to relieve the suffering resulting from the strike.

The Dominion Company of Canada is sending 100,000 tons.

President Roosevelt and the members of the Cabinet had a conference yesterday on the subject of the coal strike. The proceedings were not divulged.

The Governor of Pennsylvania has determined to maintain order even if compelled to call out the entire State Militia.

BOERS AND CHARGES OF TREASON.

Forty-one Boers, chiefly Cape Colonists, returning from Ceylon, were charged at Durban with high treason.

DEWET DECLARES HIS POSITION.

London, October 8.

General Dewet, speaking at Brussels, denied that he came to Europe to seek vain support for efforts to regain independence. He wanted help in repairing the ravages caused by the war and he himself would remain faithful to his new country if the conditions of peace were loyally observed.

THE AMERICAN COAL STRIKE.

Later.

All the National Guards of Pennsylvania have been called out in consequence of the coal strike.

FRANCE AND SIAM.

The Treaty between France and Siam has been signed in Paris.

THE NEW SIAMESE TREATY.

London, October 9.

Europe anticipates that the new treaty between France and Siam will remove all sources of the Franco-Siamese irritation.

THE AMERICAN COAL STRIKE.

The American demands for coal are causing a serious rise in the price of the mineral in England. Scotch coal has risen four shillings per ton. 36,000 miners are now on strike at Pas-de-Calais. President Roosevelt has offered to provide a commission to investigate the dispute provided that the President of the Union secures immediate resumption of work.

(RECEIVED AT THE LEGATION OF FRANCE.)

NEWS FROM PARIS.

Saigon, October 1.

The opening of Parliament has been fixed for the 14th October.

General Rau has been named Commandant of the 8th Army Corps; General Servièr of the 3rd; General Mathieu of the 5th; General Passerieu of the 10th; and General Michal of the 20th.

Saigon, October 4.

It is telegraphed from London that the negotiations with the Vice-Minister of Siam concerning the questions of Siam, Kelantan and Trigaun are virtually terminated and that an agreement will soon be signed. England does not at all desire that Kelantan and Trigaun should be separated from Siam, provided that they are properly governed and that facilities are given to British commerce assuring to it hereafter conditions as favourable as those which exist by the Bangkok route.

FRANCE AND SIAM.

Saigon, October 8.

In a speech delivered at the Banquet of Commerce, M. Combes declared that he would apply the ministerial programme and he affirmed his pacific sentiments.

M. Delcassé has signed, with the Minister of Siam, a convention regulating pending questions.

France obtains the provinces of Melouprey and Bassac, and a territory on the Great Lake between the rivers Prollos and Prekompougiam. The French troops will evacuate Chantaboon.

Siam may send troops to the various points which remain in her possession on the right bank of the Mekong, but only Siamese troops commanded by Siamese officers.

Siam may construct in the Siamese portion of the basin of the Mekong ports, canals and railways, but with Siamese personnel and capital and conditional on accord with the French Government.

No differential duties shall be established for the use of ports, canals and railways in the basin of the Mekong and in all Siam.

Asiatics of French territories or placed under French protection, and their children, may be entered as French dependants at the French Legations and Consulates in Siam.

As to other Asiatics, France will enjoy the same rights as those accorded by Siam to other Powers.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

LIU KUN-YI.

Shanghai, October 6.

Viceroy Liu Kun-yi died on the 6th inst of disease.

THE U.S. COTTON CROP.

New York, October 5.

The cotton crop in the United States this year promises to be the worst on record, but no effect has been produced upon the market.

LAUNCH FATALITY AT KOBE.

(FROM OUR CORRESPONDENT.)

Kobe, October 8.

Messrs. Nickels & Co's launch *Cruiser* was cut down last night, near the hatoba, by the Kyodo Unyu Kaisha's tug-boat, and sank. Two Japanese and one Chinaman on the *Cruiser* were drowned, but the rest of the crew were rescued by the Nippon Yusen Kaisha's launch *Kitano* and sampans who put off to render assistance.

(FROM THE "JIJI SHIMPO.")

FUNERAL OF M. EMILE ZOLA.

London, October 1.

The remains of the late M. Emile Zola will be buried in Montmartre, Paris, on Friday, October 3rd. The Paris press has generally expressed the deepest regret over his death. Captain Dreyfus was among those who paid a visit to the death chamber.

ATLANTIC SHIPPING BUSINESS.

Mr. Gerald Balfour, speaking with regard to the Atlantic shipping combine at the Cutlers' Feast in Sheffield, announced that the Cunard line will remain in all respects a British Company, that the State subsidy to the Company will be increased, and that they will construct two large steamers to run 25 knots, the cost of construction to be defrayed by the Government.

Mr. Choate, the United States Minister to Great Britain, said (? on the same occasion) that the profits accruing from the operations will be divided among the American and British companies.

SOUTH AMERICAN TROUBLES.

The U.S. cruiser *Montgomery* has started for La Guayra in compliance with the urgent request of the United States Minister in Caraccas.

THE CANADIAN PACIFIC.

London, Oct. 2.

The Canadian Pacific Railway Company contemplates opening business on the Atlantic whether a Government subsidy is granted or not.

THE SHIPPING COMBINE.

The amalgamation of shipping firms, under the auspices of Mr. Morgan, has been accomplished. An office has been established in New Jersey, with a capital of \$120,000,000. Mr. Griscom, who has been the president of the International Navigation Company since 1888, has been appointed president of the new corporation.

GRAND DUKE NICHOLAS.

London, Oct. 4.

Grand Duke Nicholas visited the Sultan in Constantinople yesterday.

TURKEY AND BULGARIA.

A demonstration in favour of Russia has been started in Bulgaria with a view to stir up discontent with reference to Macedonia. The Turkish Government has therefore considered it necessary to dispatch a strong force of troops to Bulgaria. The state of things is critical.

MILITARY MANOEUVRES.

Grand military manoeuvres took place to-day in Copenhagen. Various royalties were present.

FUNERAL OF M. EMILE ZOLA.

The funeral of the late M. Emile Zola will be performed to-morrow. The project of making a political demonstration in connection therewith has been abandoned.

TROUBLE IN MACEDONIA.

London, Oct. 6.

The disturbances in Macedonia are assuming

serious dimensions. The Turkish troops are about to bombard Petria (?Petrinia). The Bulgarians are busy building fortifications.

THE U.S. COAL STRIKE.

In consequence of the coal strike in the United States coal for the use of steamers in England has risen in price.

Four thousand coal strikers have resumed work through the efforts of President Roosevelt.

ZOLA'S FUNERAL.

Captain Dreyfus attended the funeral of Emile Zola. There was no disturbance.

JAPANESE NEW BONDS.

London, Oct. 7.

£5,000,000 worth of the Japanese new bonds will be issued for subscription to-morrow morning. Applications already sent in exceed the figures.

FOUR PER CENT. JAPANESE BONDS.

Four per cent. Japanese bonds rose by 10 shillings on the London market.

FRANCO-SIAMESE TREATY.

A treaty between France and Siam was signed at Paris to-day. By this agreement, Melu Prey and Bassac became French territories, while Chantabun was returned to Siam.

EARTHQUAKE IN GUAM.

A shock of earthquake has taken place in Guam. The building of the United States naval depot was destroyed.

RUSSIAN MINISTER OF FINANCE.

A report emanating from Russia says that M. de Witte, Russian Minister of Finance, will proceed to Korea with a view to adjusting the finances of the peninsula.

(FROM THE "JAPAN HERALD.")

BRITISH FINANCE.

London, Oct. 3.

The Bank rate has been advanced to four per cent.

The papers state that the movement is a natural one and suggests nothing exceptional in the financial situation.

RUSSIA AND THE AMUR.

London, Oct. 3.

The St. Petersburg journals, discussing the reports as to the agricultural and industrial depression on the Russian side of the Amur, advocate that the whole of the Amur basin should belong to Russia.

RUSSIA AND TURKEY.

London, October 5.

Several Russian torpedo boats have been sent through the Dardanelles contrary to the Treaty of Paris.

The Grand Duke Nicholas recently arrived at Constantinople on an ironclad.

All this is regarded as indicating a definite Russian object, having relation to the Bosphorus.

It has also transpired that the Russian Government has asked the Sultan to grant coaling-stations on the Aegean Sea and others on the Black Sea.

AMERICAN COTTON CROP.

Mr. Theodore Price, examining the United States Government report on the cotton crop, concludes that the figures indicate an exceedingly small crop and that prices must go much higher.

THE DEATH OF LIU KUNG-YI.

London, October 7.

The London papers regard the death of Viceroy Liu Kung-yi as a misfortune, and praise his tact and energy. It is trusted the Foreign Representatives will use their influence to prevent the nomination of a partisan sharing Prince Tuan's ideas.

EARTHQUAKE AT GUAM.

It is reported that an earthquake has destroyed the American Naval works at Guam.

THE NEW JAPANESE LOAN.

A Japanese loan of £5,000,000 sterling is offered for subscription at par.

The *Globe* says that nothing is more desirable from the point of view of England than that Japan should be strengthened and supported in finance, her one weak point.

M. DE WITTE'S TOUR.

London, October 8.

It is rumoured at St. Petersburg that M. de Witte, the Russian Minister of Finance, intends visiting Korea with a view to strengthening the position of M. Alexieff, the Russian Minister to Korea, and reorganising Korean finances.

(FROM THE "DEUTSCHE JAPANPOST.")

THE BOER GENERALS AND THE KAISER.

Berlin, Oct. 2.

The excitement shown by some English papers on account of the Boer Generals' reception by Emperor Wilhelm is unfounded, as the audience has been arranged officially by England and has by no means a political character.

OPENING OF THE REICHSTAG.

The Reichstag will be opened on the 14th inst. The order of the day does not show any matters of political interest.

RUSSIAN AFFAIRS.

The activity shown recently by the Tsar in receptions of countrymen and workmen deputations and in speeches delivered to these people is very much remarked and commented upon by the German press. It is still unconfirmed that M. Witte's journey to Manchuria is to be pushed as far as to Japan or even to the United States.

THE GERMAN TARIFF.

Count Posadowsky, the German Minister of the Home Department, has declared in the last meeting of the tariff committee that the inquiries made by his functionaries bearing on tariff matters are showing in many points other results than those to which the trusts and syndicates as yet have come.

THE KING OF SPAIN.

King Alphonso XIII. has refused to sign several decrees submitted to him by the Minister of War, General Martinez, for signature.

CHOLERA IN MEDINA.

Asiatic cholera has made its appearance in Medina, the famous Arabian place of pilgrimage.

EXCITEMENT ON NEW YORK STOCK EXCHANGE.

Berlin, Oct. 3.

The New York Exchange is in a state of great excitement, the money-market being very tight. The German exchanges are not influenced by the New York crisis. The great coal miners' strike causing a large want of coal is spreading and enlarging from day to day and doing much damage to industries of all sorts. President Roosevelt has interfered, trying to settle the controversies existing between the owners of the mines and the miners.

THE FRENCH CHAMBER.

In France the Chambers have been convoked for the 14th of October.

THE FUNERAL OF EMILE ZOLA.

The funeral of Emile Zola will take place next Sunday with military honours. The partisans of Zola, the Dreyfusists, are planning a vast political manifestation on this occasion. The anti-Dreyfusist press being very much excited by this intention, it is said that the interment will give occasion to counter-demonstrations.

THE TARIFF.

Berlin, Oct. 4.

The duty tariff committee has finished the second reading of the new tariff law.

THE LORD LIEUTENANT OF HANOVER.

The Lord Lieutenant of Hanover, Konstantin Count zu Stolberg-Wernigerode, has resigned. Count Stolberg was born in 1843 and is a son of the late Count Wilhelm zu Stolberg-Wernigerode. He is the owner of the large Silesian seigniories Jannowitz and Kupferberg.

STORM IN NAPLES.

In Naples a strong gale and thunderstorm has caused much damage.

EAST INDIA PETROLEUM TRUST.

A union of East Indian petroleum producers has been formed to which belong five Dutch companies. The new company will join the association of Russian petroleum producers and form with them a selling company. The company's name is "Asiatic Petroleum Company, London." Their capital amounts to two millions pounds; shares of 600,000 pounds have already been issued. The Koninklijke Maatschappij in the province of Langat, Sumatra, have increased their funds by adding one million guilders.

THE FUNERAL OF EMILE ZOLA.

Berlin, October 7.

The funeral of Emile Zola took place on Sunday in a most dignified manner. Large numbers of people took part, including Captain Dreyfus, who was not recognized. There were no disturbances or political manifestations.

THE MINING STRIKE IN AMERICA.

The conference between President Roosevelt and the mine owners and miners over the trouble existing between the latter has proved unsuccessful.

THE CROWN PRINCE OF GREECE.

The Crown Prince of Greece has had an accident while on an automobile trip, and was hurt on the head. The Prince is Chief Commander of the Greek Army and has been married to the sister of Emperor Wilhelm for 13 years. His birthday will occur on the 15th inst.

THE GERMAN MINISTER TO AUSTRIA.

The German Minister to the Austrian Court, Fürst Ph. zu Eulenburg and Hertefeld Graf von Sanders is to resign because of ill-health.

THE BOER GENERALS IN GERMANY.

The Boer Generals De Wet, Delarey and Botha, will arrive at Berlin in a few days. The reception to them by the Emperor is fixed for the 17th inst.

THE GERMAN TARIFF.

Berlin, October 8.

The *Norddeutsche Allgemeine Zeitung* denies the reports, according to which the competent Ministers of the German federal states will meet in Berlin for the purpose of deciding the position to be taken up by the Empire's Government in consideration of the results obtained from the conferences of the duty tariff committee.

THE COAL STRIKE IN AMERICA.

In Pennsylvania the National Guard has been called out to maintain order in the mining districts where the miners begin to show signs of disorder after the President's endeavours at settling the controversies had proved unsuccessful.

THE FRANCO-SIAMESE TREATY.

France has come to an agreement with Siam with regard to the boundaries. Both countries have concluded a treaty the principal points of which are the follows:—France abandons her claims on Chantaboon and annexes the State of Cambodia, which is being governed under French control, the Mekong districts of Melouprey and Bassak. Siam obliges herself not to undertake anything along the Mekong river without France's consent. Siam promises to engage in her Army only Siamese native soldiers under Siamese native officers.

DR. LEYDS.

It is most likely that Dr. Leyds will get a position in the administration of Java.

THE BOER GENERALS AND THE KAISER.

It is reported that it has become uncertain if the three Boer Generals will be received by the Kaiser. According to the Berlin papers the Generals have not made any move at all towards being received by Kaiser Wilhelm and consequently the Emperor does not feel inclined to see them.

THE SHIPPING SUBSIDIES.

The Bremen and Hamburg shipping companies, notwithstanding the fact that the Cunard line is financially supported by the English Government, are resolved not to make any demand for a subsidy upon the Empire.

TRUSTS IN GERMANY.

It is not true that a conference is to be held at Berlin concerning the trusts.

(FROM THE "N.-C. DAILY NEWS.")

THE MACEDONIAN REVOLT.

London via Bombay, Oct. 3.

The great display of Turkish force that is being made is likely to overawe the revolutionaries. The Governor of Monastir reports the dispersal of three of the bands. [Monastir is in Rumelia, about 90 miles N. W. of Salonika.]

THE BOER GENERAL AND THE KAISER.

Regarding the proposed interview between the German Emperor and the Boer Generals, it is stated that the initiative was taken not by the Generals, but by powerful friends of the Boers in Berlin, who intimated that the Generals' request for an audience would probably receive a favourable reply.

FRENCHMAN HANGED FOR MURDER.

Singapore, September 29.

The Frenchman Goin, who was sentenced to death at the last Assizes for murdering a ricksha puller, was hanged this morning. This is the first European executed in the Colony.

THE STRANDED TRANSPORT.

The French transport *Cachar*, which was stranded at Batu Berhent, has been refloated without sustaining serious damage.

JAPANESE PEARL-FISHERS IN NORTH AUSTRALIA.

A Australian correspondent writes to the Times :— In the old days, when pearling first commenced, Europeans did the diving, and were quite able to do the work; but soon the Japanese came, who do not appear to set so much value on their lives, and they dived deeper and cheaper than the European would do, so that, of the European divers, some went away, while others stayed on in various capacities connected with the fleets. The method of diving is as follows :—

Each company engaged in pearling has its "floating station"—i.e., a schooner used as a store house, and a fleet of 10, 12, or 14 luggers. The captain of the schooner decides which waters shall be fished, and he goes there accompanied by his fleet. The luggers are manned exclusively by coloured men. Usually the diver is a Japanese or Manila man, and his "tender," the man who attends to his signals and holds the life line, is usually a friend and countryman of the diver. The crew are four in number and may be South Sea Islanders, Manila men, Japanese, Straits Islanders, or New Guinea natives. On arrival at the fishing ground each diver is left to his own judgment as to where he will go down, and before long the luggers are all scattered about on the horizon, some drifting with sails down, others, with a little sail on, working across the tide, while at the bottom of the sea, under each lugger, walks a little brown diver, ploughing through mud or tramping gaily over coral bottom, with keen eyes peering through the glass of the helmet for the shells of the big pearl oyster. As he sees each one he puts it in a rope-basket that hangs by his side, and if he gets a basket full he signals up the tender to lower down a lot of slack of the life line, and he sends up his basket without coming up himself. If shell is plentiful he may get a couple of hundred in a day, but nowadays 40 or 50 shells are quite a good day's work. Some very rich patches of shell have been found at great depths—35 or 40 fathoms—depths to which no diver but the Japanese would dream of going for the small return of the pearl-shell. But the Japanese go down, one after the other, even though man after man comes up paralysed by the pressure of the water. At Darnley Island, in the great depths, it takes four men hard at work at the pump to force down the air to the diver, and when he is brought up he has to be raised a few fathoms at a time, lest the sudden change of pressure should kill him. They seem to have absolutely no fear of death. If they know they can get shell they will go down; they smile when warned of the danger, and say, "Plenty more Japanese!" Against such men as these no white diver can hope to compete.

White Refined	8.20 to 10.20

EXPORTS.

RAW SILK.

Business has fallen away to very small proportions, and all quotations are nominal. In fact isolated purchases of Kakedas have been made at *yen* 20 below the list prices. The general tone is shaky, although for the moment holders in general will not meet buyers. We look for lower quotations by this time next week.

QUOTATIONS.

Filatures—Extra Best, Coarse	Y. 1,080 to 1,100
Filatures—Extra, Fine

BOVRIL AT THE FRONT.

Bovril has played such a conspicuous part in South Africa that it forms no inconsiderable feature of the story. The *Lancet* has had frequent references to Bovril in the reports of the officers of the Royal Army Medical Corps. Nearly every newspaper correspondent has had to refer to Bovril to make his story complete. Rudyard Kipling and Baden-Powell have written their Bovril stories. Over 500 British hospitals and similar public institutions use and prescribe Bovril, not beef tea, but Bovril.

The reason is not far to seek. Bovril is a nourisher as well as a stimulant. It contains the albumen and fibrine, the sustaining properties of the beef. It is this fact, together with its absolute purity, that commends Bovril to physicians and scientists, and proves in practice what it demonstrates in analysis.

GOLF HANDS
Red
Rough
Hands

ONE NIGHT CURE.

Soak the hands on retiring in a strong hot creamy lather of

Cuticura
SOAP

For sore hands, red, rough hands, itching, burning palms, and painful finger ends with shapeless nails, the CUTICURA treatment is simply wonderful.

Dry, and anoint freely with CUTICURA, the great skin cure and purest of emollients. Wear during the night old, loose kid gloves, with finger ends cut off and holes in the palms.

Complete External and Internal Treatment for Every Humour. Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure torturing, disfiguring humours, with loss of hair, when all else fails. Aust. depot: R. Towns & Co., Sydney, N. S. W. So. African depot: LENNON LTD., Cape Town. "All about the Skin, Hands, and Hair," free. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

PEACH'S LACE CURTAINS

SEND YOUR ADDRESS for our New Illustrated Catalogue; Foreign Edition Post Free. The most complete List of Lace Goods issued.

Import your own Goods DIRECT FROM the LOOMS, and save three Profits, LACE CURTAINS, MADRAS MUSLINS, CAPES, LADIES & GENTS, REAL SWISS, ROLLER BLINDS, BLOUSES, LOOM HOSIERY, GUIPURE D'ART, LACES ALL MAKES, COLLARETTES, HOUSEHOLD LINENS

POPULAR PARCEL Y. 10.25

Lot No. 338 CONTAINS:—1 pair Rich Artistic Drawing-Room Curtains, 4 yds. long, 2 yds. wide. 2 pairs alike, Handsome Dining-Room Curtains, choice old lace design, 3 1/2 yds. long, 60 in. wide, 1 pair neat Floral Pattern Bed-Room Curtains, 3 yds. long, 50 in. wide, 1 pair new fashionable Sash Curtains, 1 table centre, renaissance design, 1 Set of Duchess Toilet Covers, one 45 in. long, and five smaller. Ecu if desired. On receipt of Post Office Order for Y. 12.75 or 26/-, the lot sent per Parcel Post, direct to your address in Japan well packed in oilcloth.

Customers throughout the Empire testify to the reliable work, Marvellous Value, and Durability. First Prize Medals, Toronto 1892; Chicago, 1893.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 18TH, 1902.

MARRIAGE.

On the 14th October, at Christ Church, Yokohama by the Rev. W. P. G. Field, M.A., SAMUEL HENRY MOORE, of London, England, to AMY FENTON, eldest daughter of D. J. Scott, Esq., of Yokohama.

SUMMARY OF NEWS.

THREE Chinese passengers on the *Sachsen* on her last homeward voyage, threw themselves into the sea near Suez and were drowned.

MR. W. MCCLURE, the popular chief engineer of the P. M. steamer *City of Peking*, celebrated the seventieth anniversary of his birthday in Kobe on Oct. 8th.

THE Japanese cruiser *Idzumi*, now in Shanghai, has been ordered to proceed to Nanking to be present on the occasion of the funeral of Viceroy Liu. Captain Kaburagi is in command.

A COMMERCIAL school to be called the Chuo Shogyo Gakko will be established in Tokyo in the near future under the auspices of Mr. Y. Umebara, graduate of the University course of the Keio Gijiku. The promoter has secured the support of many influential persons and institutions including the West Hongan Temple, which has

promised to subscribe yen 5,000 and the Osaka Life Assurance Company, which offers yen 6,000.

THE Japanese warship *Musashi* having finished her repairs at Yokosuka left the dock a few days ago and will undergo a trial run shortly. The vessel was blown on the rocks off Nemuro, Hokkaido, and badly damaged her bottom during the storm in May this year.

A SPECIAL general meeting of shareholders of the Yokohama Stock and Rice Exchange will take place on Oct. 28th when matters relating to the adjustment of the finances are to be discussed. The Exchange's debts are said to amount to about yen 50,000.

THE Hunan S.S. Company has placed an order with the Osaka Iron Works for the construction of two steamers, each aggregating 900 tons with a speed of 12 knots. The cost of each vessel is put at yen 120,000. They are to be finished by September next.

CAPTAIN W. D. WORCESTER, R.N.R., formerly Commander of the P. and O. steamer *India*, was a passenger from London for Malta by the P. and O. *Formosa*. Capt. Worcester has been appointed P. and O. Agent at Malta, and went out by the *Formosa* to assume his new duties.

THE Japanese Consul in Newchwang wires home that Lieut.-General Alexieff, Governor-General of the Liaoting, who has been in St. Petersburg for several months, is expected to return to Port Arthur about the middle of this month. He left the Russian capital on Oct. 1st.

THE Bantan Railway Company, at a special general meeting convened on Oct. 10th, passed a resolution to dispose of its property to the Sanyo Railway Company for a little over yen 1,400,000. A conference between the two companies will take place shortly to make final arrangements.

DURING three days commencing from Oct. 22nd, the Yokosuka Admiralty have consented to have the war-ships *Chinyen* and *Iwate* thrown open to the members of the Japan Red Cross Society, which institution will celebrate its 25th anniversary in Ueno Park shortly. The number of the visitors is limited to 300,000 in all.

PRINCE KOMATSU lately received a handsome album containing pictures of the scenery of Port Arthur and neighbourhood from the Chief of the Russian Administrative Office in that port, who forwarded the same through the Russian Minister in Tokyo. Count Matsukata and Admiral Viscount Ito, Chief of the Naval Board of Command, also received similar presents.

A CHARITY concert for the benefit of the Ainu in Hokkaido, will take place in the hall of the Tokyo School of Music, Ueno Park to-day and to-morrow under the auspices of Prince Konoye, Prince Shimazu, Baron Senge, and many other ladies and gentlemen. Prof. Koeber, of the Tokyo University, is said to have agreed to be one of the players.

THE local branch of the Hongkong and Shanghai Banking Corporation has received a telegram from its London Office dated 9th October stating that the issue of the resale of yen 50,000,000 5 per cent. Imperial Japanese Government Bonds has been largely over-subscribed by the public and is already quoted 5/8th. per cent. premium.

A TORPEDO-BOAT belonging to the Saseho

Admiralty, while on her way from Misumi to Amakusa, ran aground off the coast of Amakusa district, Kyushu, on Oct. 4th. Fortunately the steamer *Tamayoshi Maru*, of the Higo Steamship Company, happened to be near the spot and by her assistance the torpedo craft was pulled off successfully the same afternoon. No one was injured.

INTELLIGENCE from the Russian Authorities, received by the Japanese Government, says that bills of lading to be presented to the Russian Customs in connection with the landing of parcels must contain full particulars of the articles, namely, their quality, name and quantity, etc., in the future; otherwise they will be rejected from landing.

THE Emperor and the Empress, on Oct. 9, made the following donations toward the relief of sufferers by the disastrous storm of Sept. 28th:—yen 1,200 to Kanagawa, yen 17,000 to Ibaraki, yen 14,000 to Tochigi, yen 6,800 to Chiba, yen 6,000 to Tochigi, yen 4,200 to Yamagata, yen 800 to Saitama, yen 500 to Miyagi and yen 300 to Gumma Prefectures. Baron Kataoka, Chamberlain to His Majesty, has been ordered to visit the above devastated places.

ON Oct. 12th the letter-carriers, 27 in number, belonging to the Yokosuka Post and Telegraph Office went on strike. As a result, the delivery of mail in that place was greatly delayed. Owing, however, to the prompt measures taken by the post-master of Yokosuka, who applied to the Yokohama Post Office for the dispatch of a number of carriers, postal business in Yokosuka was conducted as satisfactorily as before since the morning of the 13th, about 40 men having been sent from Yokohama. The strikers are reported to be gradually resuming work.

CONCERNING the reported resignation of Mr. Tsai, Chinese Minister in Tokyo, a Tokyo paper says that there was no truth in the report, only rumours. There was, however, no denying the fact that the Chinese Minister has been placed in an awkward position since the occurrence of the recent Chinese students affair, and it appears that there are persons connected with the Peking Government who are desirous of securing the post of Chinese Representative to Japan. No wonder, therefore, says the paper, that various rumours emanate from Peking.

By the N. Y. K. steamer *Matsuyama Maru* from Hakodate, three German seamen, two firemen and one cook, were brought to Yokohama on Oct. 10th and handed over to the German Consulate though the Yokohama Water Police. It appears that some time ago these men landed at Muroran from a German steamer which touched at that port and in the meantime the steamer weighed anchor for another place. They were therefore obliged to go to Hakodate whence they, through the assistance of the Japanese there, were taken to Yokohama as above stated.

THE N.Y.K. steamer *Kaga Maru* which arrived in Yokohama from Seattle on Saturday morning had very heavy weather during the latter part of her voyage. All went well until Oct. 6th when a heavy gale started during which a two year-old girl, the child of Mr. and Mrs. Smythe, who were booked for Hongkong, narrowly escaped being washed overboard, the cabin being broken open by the seas and the girl swept out on deck. A sailor caught hold of her in time to save her life. On the 8th another gale was encountered, which, however, did not cause much damage. It will take yen 10,000 to repair the ravages wrought by the first storm.

THE SALE OF BONDS.

Apparently the subscriptions for the recently sold Japanese bonds aggregated twelve millions sterling, and the average rate was £1.085 above the price paid by the Hongkong and Shanghai Bank for the bonds. These facts furnish a complete answer to some of the objections made to the sale of the bonds. The main criticism is that better terms might have been procured by the Japanese Treasury. But it is now seen that the premium obtained by the purchasing Bank would not have justified better terms. The Bank appears to have gauged the state of the market with remarkable perspicacity. It obtains a fair profit, but only a fair profit, and considering the risk it took, the average price subscribed in London will probably be regarded as offering a distinctly small margin. Certainly it dared not have paid another shilling for the bonds, and when the situation is accurately considered, most people must agree that had not the affair been well managed and had not the securities received some gilding from the character of the intermediary Bank, a very different result might now have to be recorded.

Onlookers are always wiser than the persons actually engaged playing a game. It is not surprising, therefore, to find some onlookers who, on this occasion, glibly declare that better terms might easily have been obtained had better methods of procedure been adopted. What are these better methods of procedure? They remain always hidden, and no persons seem more interested in keeping them concealed than those who most loudly proclaim their existence.

One of the objections raised is that a new plethora of imports will be witnessed since five millions sterling of hard money is to flow into the country. We did not imagine that Japan was such a very small place! But how is that formidable result to be brought about? The comparatively small sum coming into the Treasury's vaults during the next few months will presumably be spent upon productive enterprises. The Cabinet is understood to have resolved that the extension of railways and telephones shall not be suspended, but that these works shall proceed steadily, though unfortunately the progress can not be rapid. Will the expenditure of a few millions of *yen* upon labour and railway material produce an additional growth of imports? It may have that effect so far as concerns rails, locomotives and such things, all of which are money-earning instruments. But it can not cause any appreciable change in the demand for ordinary staples of import. Fears of that nature seem quite chimerical.

Does it not appear that the incident has produced another display of the conservative timidity which still lingers in certain sections of Japanese society? Liberal and courageous as the bulk of the Japanese nation have shown themselves, a few publicists continue to be influenced by a shrinking dread of all association with foreigners in financial matters. They apprehend that somehow or other the crafty and masterful *tojin* will get the better of them. Accompanying that remnant of pre-Meiji prejudice there is an idea that all transactions with foreigners should be conducted on the fine old basis "heads I win, tails you lose." The alien's profit in a transaction is to be reduced to a minimum, a vanishing quantity if possible, and the gains of the Japanese are to swallow up the whole margin. Are

not these two sentiments—the sentiment of aloofness and of cupidity—are they not at the root of the small outcry now raised by certain folks? They regard the foreigner as a kind of Dr. Fell and they can not easily reconcile themselves to the possibility of his deriving any gain whatever from a transaction by which they themselves profit largely. It is dangerous to dogmatise on such topics, but we can not avoid a conviction that some mood of the kind exists, and assuredly so long as it exists the foreigner can never bring his capital to Japan to assist in developing the country's resources. No transaction can be sound or successful unless both parties gain by it. Equality of gain is the basic principle of permanent business. A preponderance of profit on either side may be agreeable for the moment, but will inevitably kill the business in the long run.

"FOREIGN DEVIL."

It can not be denied that the habit of calling a man bad names ends in making him odious. If the little children in Japan could be persuaded to give up crying "ijin baka" and "neko papa" when a foreigner passes, international friendship would be materially advanced. Of course the child is not to blame. Those that prompt it, or fail to restrain it, are alone deserving of censure. However, there is very little to complain of in that respect in Japan to-day. Even at Kobe the times of coolie truculence seem to have passed away, and one may travel for days in town and country without encountering a crooked look or a cross word. In China, on the contrary, we read that things are going from bad to worse. The *North-China Daily News* says that cries of *yankueitai* and *yangleupan* are louder and more frequent in Shanghai now than they ever were previously. That is a wretched state of affairs, and we have no manner of doubt as to the justice of our contemporary's comment that if the people did not believe themselves to be echoing the sentiments of their officials and their literati, they would soon cease to apply such epithets to foreigners. But we do not for an instant endorse the following:—"It might have been supposed that in any other country but China such lessons as the last two years have brought would have been taken seriously to heart, and a greater respect of speech born of wholesome fears or growing wisdom would be evident." Why should anything of the kind be supposed? Our own conviction is that in any country in the world a nation having suffered such things as China suffered during the past two years, would cordially hate the persons at whose hands it suffered. We do not mean to deny that China deserved some suffering. That is another question; a question not under discussion here. What we say is that no people love their invaders. No people feel friendly towards aliens who have carried fire and sword through the land, and whose victories have imposed upon the whole nation a burden of taxation under which it is groaning. The natural thing, the thing to be expected and looked for, is that the Chinese should invoke curses on the head of every European and American. And so they are doing, apparently. They do not turn the other cheek to be smitten, as is apparently expected.

"UNCONVINCED"

Saturday, Oct. 11.

This is "Unconvinced's" latest:—

The Editor of the *Japan Mail* is irrepressible—*vide* his further remarks on "Property" in yesterday's issue. But his pretty three-figure example lacks point, inasmuch as it is not conceivable that any of the level-headed auctioneers in Yokohama would "announce the sale of a certain *property* adjacent to this Settlement held under a *land* lease of 999 years." It would be an insult to their common sense to imagine such a thing possible, and, besides, they have too much self-respect to make themselves ridiculous in the eyes of the community by inserting any such manifestly incorrect advertisement.

This is enigmatical. So far as we can discover, the point upon which "Unconvinced" relies is that "land" can not possibly be described as "property," and that it would consequently be "an insult to one's self-respect," "ridiculous in the eyes of the community" and so on, to advertise a "property held under a land lease for 999 years." Of course if that were so, if it could be proved that "land" can not properly be described as "property," the victory would rest completely with "Unconvinced" and with the opponents of the house tax. "Unconvinced" must see that. In spite of the very low estimate he forms of our intelligence compared with the intelligence of any auctioneer in this settlement, we have too much respect for his perspicacity to imagine that when he wrote the above letter he was not perfectly conscious of begging the whole question. As to the meaning of the word property, however, perhaps we may be allowed to quote from the advertising columns of *The Times*. There we find the following:—

"A picturesque freehold property of 8 acres,"

"The property extends over an area of 100 acres."

"Giddy and Giddy's List of Estates, Sporting Properties, etc."

"To be sold, a very attractive property of over 10 acres with handsome residence, &c."

The columns of London journals abound with such examples. They show that in every-day phraseology the word "property" is used with reference either to land, or houses or both together. It is absolutely correct to speak of "property held under a land lease of 999 years." All the leases under which foreign residents hold their lots in the Settlements are "land leases." "Unconvinced's" letter may contain some occult significance not apparent to ordinary eyes, but if he intends to say that "land" is not "property" or that "land" could not be advertised as "property" by any "level-headed auctioneer," we must continue to differ from him even at the risk of being considered "irrepressible."

Tuesday, Oct. 14.

"Unconvinced" writes:—

Where buildings are non-existent, or, indeed, in any case, I differ entirely from the Editor's statement that the expression "property held under a land lease of 999 years" is absolutely correct. If property means land in the context, the use of both is manifestly superfluous and incongruous, and I submit that the correct expression, would be land held under a 999 years' lease."

To that we reply that "property" does not necessarily "mean land in the context" of the example we have given if the word "land" be omitted. When a man advertises for sale a property held under lease for 999 years," the announcement might indicate something other than land. What we maintain is that "property" is a perfectly correct expression to apply to land, *qua* expression, and that it ceases to have generic significance when specialized by its context, as is the case in the 18th article of the Treaty where the description is added "held under

perpetual lease." Nothing can be properly said to be held under a lease except the object leased, namely, in this case, land, and consequently the words "the property held under leases in perpetuity" present no ambiguity whatever and admit of no construction except "land."

"Unconvinced" further says:—

I would conclude this controversy by asking the Editor of the *Japan Mail* one simple question: Would it be absolutely correct to advertise in England, "For Sale a Thousand Acres," or, in Japan, "For Sale a Thousand Tsubos of Property?"

It must be confessed that to end a controversy by asking a question is a peculiar device. However, we willingly answer, and our answer is, "no," but "no" with a qualification. The expression "so many acres of property" is unusual in the English language and can not therefore be called "absolutely correct." But the expression "a property of so many acres" is a commonly employed and well understood formula. When Mrs. Gamp, having asked, "Who deniges of it Betsy Prig?" proceeded to impart an awful significance to her proposition by inverting the order of the terms and inquiring "Betsy Prig, who deniges of it?" she was well within her controversial rights. But every proposition does not lend itself to similar freedom of inversion. One does not, for example, in describing the condiments of a repast, speak of "fish of a kettle," but rather of "a kettle of fish." Yet because the terms can not be thus inverted, does it follow that we can not say "a kettle of greens" or of some other kind of edible?

THE FOREIGN NURSE QUESTION.

It appears to us, on reading all the correspondence which has passed with reference to a provision of foreign nurses for the General Hospital in Yokohama, that this is a rare case of both sides being in the right. Dr. Mècre has good reasons, we think, for the objection he advances to having such nurses placed on the Hospital Staff under the system proposed by the projectors of the scheme. He certainly would not have absolute control of the nurses, and it is within his strict right to judge whether absolute control is essential to the efficient working of the institution. On the other hand, the ladies of Yokohama are convinced that some arrangements must be made for rendering the services of foreign nurses available in special cases. Well trained, attentive and helpful as Japanese nurses are, they do not always show the necessary degree of resolution in dealing with a foreign patient, and it would, perhaps, be scarcely reasonable to expect that they should fully satisfy that requirement. The situation now is that nurses imported from Europe or America at the cost of the community can not be placed on the staff of the Hospital, and must therefore belong to some independent institution if they are to be available at all. The small foreign community of Tokyo faced this question some five years ago, and, largely owing to the energy shown by the Honourable Mrs. Whitehead and the generosity of Mr. Whitehead, a satisfactory system was elaborated and put into practice. Is it not possible for Yokohama and Tokyo to combine, the community of the former continuing to extend its support—though possibly on a modified scale—and Yokohama being made the head-quarters of a staff of nurses increased sufficiently to serve the requirements of both places?

BUDGET GOSSIP.

All the Tokyo journals allege that the Government has decided to ask the Diet to sanction an important change in the method of compiling the Budget. Hitherto it has been customary to fix a period within which each of the State's enterprises had to be carried to completion. It resulted that whether the portion of work allotted to any one year of the period had or had not been finished, the Department to which the enterprise was entrusted saw itself compelled to demand a fixed appropriation for the ensuing year, and thus the funds set aside were often in excess of the work actually done. Such a manner of compiling the Budget is plainly misleading. The Cabinet proposes, therefore, that there shall not be any fixing of periods in future, but that the rate of progress shall be determined by the facilities offering, whether financial or otherwise. It may be conjectured that the purpose of abandoning the principle of fixity is to enable the Government to postpone or delay works for whose rapid prosecution funds are not immediately available. We do not see that such a result would be at all calamitous, but, at any rate, the Government is understood to deny any intention of the kind. It claims, on the contrary, that greater expedition may be secured in some cases.

The House of Peers is said to be discussing the question of continuing the increased rate of land tax after next year. A meeting of the parties was held on the 12th instant in the *Kazoku Kai-kwan*. No definite decision was reached, the idea being that fuller investigation must be made of available resources as well as of the possibility of effecting administrative retrenchments and financial reforms. It is understood that the general attitude of the House is favourable to the Cabinet, but the members naturally hesitate to commit themselves to a hard-and-fast resolution.

The problem of naval increment also came upon the tapis. It is said that no determined opposition declared itself, but that, on the other hand, a majority considered it advisable to associate the question with financial potentialities. In short, they favoured increment provided that ways and means should be forthcoming. Of course the Government will not introduce any programme of naval expansion without indicating a source from which funds may be obtained. One source will be the proceeds of the continued land tax. That may be taken for granted.

The first note of distinct opposition comes from Tosa, namely, from the political coterie which supports Mr. Hayashi Yuzo, one of the prominent figures in the *Seiyu-kai*. This coterie, the *Chuo-ha* (central section), is said to have pronounced itself definitely hostile to continuing the increased rate of land tax after next year. It pleads that Government and Diet have pledged themselves to lighten the people's burdens after the year 1903, and that the promise is sacred. The statement rests on the authority of the *Nippon* only—not a perfectly trustworthy source of information in such matters.

The *Jiji Shimpō* lends its great influence to support the cause of naval increment and to advocate the continuance of the present rate of land tax. There is no other solid source of revenue available for the purposes of increment, and every thinking Japanese must admit that increment is unavoidable.

The *Jiji* admits that administrative reconstruction and financial reform are very desirable, but it urges that these things must not be confounded with the vital question of keeping the country's defences in a proper state of efficiency.

As on-lookers—foreign on-lookers—we may be permitted to say that the cry for administrative reconstruction and financial reform has become quite farcical in Japan. Are any such measures possible on an important scale? If they are, it is a most extraordinary fact that Cabinet after Cabinet fails to elaborate any satisfactory scheme or, indeed, any scheme at all. The present Ministry has been in power since May 1901. Does any one pretend to believe sincerely that it could not submit to the Diet next session a tangible programme of reconstruction and reform if the present systems were disfigured by any flagrant abuses? Or are we to suppose that every Ministry since 1891 has been playing with this question?

A JAPANESE EXHIBITION IN LONDON.

There is in London, as most people know, an association called the London Exhibition Company, Limited. It possesses a large lot of land, measuring some 14 acres, whereon are erected various buildings designed for purposes of exhibition with all necessary accompaniments of shows and amusements. This Company—a very flourishing concern which pays a dividend of from 10 to 12 per cent. yearly—has conceived the idea of organizing a Japanese exhibition in 1904, the nucleus to consist of articles remaining over from the Osaka Exhibition of next year. It is stated that the project has received the earnest support of the Japan Society of London, whose active Vice-president, Mr. Arthur Diosy, is lending much assistance. The Company, we read in the *Kokumin Shimbun*, has approached Mr. Arakawa, Japanese Consul-General in London, with a proposition which takes three forms. The first is that the Japanese Government should rent the whole of the Company's premises for a year at a cost of £80,000. The second is that the Government should rent the main section only, at an outlay of £50,000, leaving the company to make what it can out of the annexes; and the third is that the Company should undertake the whole business on its own account, under the declared approval and patronage of the Japanese Government. This third proposal seems to involve a payment of £16,000, but that point is somewhat obscure. Mr. Arakawa is said to have accompanied his report with a favourable recommendation. He says that the Company is a thoroughly trustworthy concern, and that, considering the interest taken in Japan's affairs since the Anglo-Japanese alliance, such an exhibition would doubtless be welcomed and would produce a good effect.

While heartily endorsing Mr. Arakawa's recommendation, we may be permitted to add that the idea is not at all new. It was put forward about 8 years ago by Mr. L. Fagan, formerly of the British Museum, who was then on a visit to Japan, and it had the support of several enterprising and far-seeing men in London. But the time was not then seasonable. To-day no objection of that kind can be urged. We do not doubt that the project would prove a success.

CHINESE NEWS.

Saturday, Oct. 11.

Baron Komura, Minister of State for Foreign Affairs, has sent a telegram of condolence to the family of the late Viceroy Liu Kun-yi, and a similar step has been taken by the Japanese residents of Shanghai. It is further stated that British and Japanese ships of war will proceed to Nanking to take part in the funeral ceremony.

It still remains uncertain, so far as intelligence received in Japan is concerned, whether Chang Chih-tung has been appointed to succeed Viceroy Liu permanently or whether he goes to Nanking temporarily. We ourselves have very little doubt on the subject. Viceroy Chang is much too great a man to be sent anywhere as a mere stop-gap. If he leaves Wuchang for Nanking—and he is said to be about to do so about the 15th instant,—he will go as permanent Viceroy of the two Kiang. We presume that His Excellency will be accompanied by Mr. Kung Hung-ming, whose writings are now so familiar to Anglo-Saxons in the Far East.

Monday, Oct. 13.

The death is announced of His Excellency Tou Mu, Viceroy of Liang-Kwang, who succeeded the late Li Hung-chang in the Viceroyalty of the Kwangtung and Kwangsi provinces. He died on the morning of the 10th instant in Canton.

The *Jiji* has a telegram from Shanghai saying that, according to the general belief there, the withdrawal of the foreign forces from Shanghai will be postponed in consequence of the death of Viceroy Liu Kun-yi.

Tuesday, Oct. 14.

A telegram to the *Jiji Shimpō* says that the Viceroy of Szchuan reports much discontent among the people owing to the weight of taxation. He declares that there is no possibility of collecting the required sum, and he therefore prays that the Indemnity, or rather Szchuan's share of it, should be cut down by one-half. It is very difficult to understand that a nation so lightly taxed as the Chinese should find any difficulty in paying the small amount due annually on account of the Indemnity. One has to fall back upon the hypothesis that the amounts actually collected in the guise of taxes are a very large multiple of the amounts openly accounted for. China badly wants some form of representative government. How immeasurably her difficulties would be relieved if she had a parliament to discuss her fiscal and political affairs!

It is stated that Viceroy Chang Chih-tung resolutely refuses to accept the Viceroyalty of the two Kiang, in succession to Liu Kun-yi. He declares that if the Government presses him to accept, he will have no resource but to resign altogether. Under these circumstances the Peking authorities are said to be much perplexed how to act. Chang is probably obeying the old Chinese maxim important to maidens, "Enter a house where the wife has been divorced, but do not become the wife of a widower." To stand in the place of a deceased Liu Kun-yi without loss of prestige, would be a difficult task even for a Chang Chih-tung.

Apparently Viceroy Yuan Shih-kai has obtained permission to lay aside his official duties and return to his native province in consequence of his mother's death. The telegraph says that the Empress Dowager

wishes Wang Wen-shao to discharge the functions of Viceroy of Chili during Yuan's absence from his post.

Wednesday, Oct. 15.

No exit has been found from the dilemma about the compulsory worship of Confucius in the new Chinese schools. Special attention was drawn to the matter in the Shantung College, established by Yuan Shih-kai. Dr. Hayes, principal of the teaching staff, and the other Christian teachers, resigned some time ago because students were obliged to prostrate themselves before the tablet of Confucius, which meant, of course, that the Christian students had to withdraw from the College. The Chinese officials express a desire to retain Dr. Hayes' services, but avow themselves unable to modify the rule as to Confucian worship since it is founded on a decree from the Throne. It is much to be regretted that the Chinese can not persuade themselves to secularize public education completely. Education at private schools and colleges is another matter. There the introduction of the religious element should be perfectly free. But funds obtained from general taxation ought not to be devoted to promoting a particular kind of creed. The wrong of such a course is probably smaller in China than in any other country, for the whole nation, with the exception of the very petty fraction that have embraced Christianity, are disciples of Confucius, and entertain no manner of objection to worshipping before the Sage's tablet. Wrong is wrong, however, be its dimensions what they may. The trouble is accentuated in the present case by the alleged fact that the worship of Confucius was not a necessary element of the curriculum in the old provincial colleges. It has been introduced, according to the critics, in the new colleges only, and they infer, not unnaturally, that its direct purpose is to check the spread of Christianity and to harass the Christian converts.

The new Police School in Tientsin is to be opened on the 19th instant. Its object is to train police officials for service throughout the Metropolitan province. The School is under the direction of Mr. Miura, formerly a public procurator in Japan; Mr. Izami holds the post of police inspector and Mr. Ogawa that of sectional chief, while the interpreters are Messrs. Nakajima and Kawasaki. The fact that the system of police education pursued at the school is to be purely Japanese may be inferred from these names.

Thursday, Oct. 16.

It is alleged that Prince Ching has made various recommendations to the Throne in the sequel of his foreign tour. The first is that education should be made compulsory for all children of a school-going age; the second that Confucianism should be encouraged and schools organized to teach it; the third, that the police system should be reformed; the fourth that schools of law should be established, thus sowing the seeds for the abolition of extraterritorial jurisdiction; the fifth that provision for technical education should be made in the localities; the sixth that the system of conscription should be adopted; the seventh, that the sons and younger brothers of nobles and Ministers of State should be made officers in the army; and the eighth that the high officials should be sent abroad to enlighten them. These sweeping changes are said to have been briefly approved by the Empress Dowager, but whether they will be carried out seems very doubtful.

Mr. Kano Jingoro did not meet Viceroy

Liu Kun-yi when he visited Nanking on the occasion of his recent journey to China. He says that the Viceroy's condition did not permit the reception of visitors. In attempting to check the dysentery under which the old man was gradually sinking, remedies had been employed which, in turn, became responsible for new complications. Mr. Kano adds that zealous as the Viceroy showed himself in matters of reform, he was much thwarted by the conservatives in his district, and that his death will naturally inspire the latter with fresh courage. Viceroy Chang Chih-tung thus remains the only bulwark of reform in the central regions.

It is stated that efforts are being made to push forward the work on the detached palace at Paoting. Orders for the construction of this palace were issued when the Court was on the eve of returning to Peking, but the building was then described as a resting place, and people wondered that at a time when the Government's finances were necessarily in a very straitened condition, so much expense should be incurred on account of a merely temporary structure. But the story now is that the Empress Dowager intends to move to Paoting as soon as the new palace is ready to receive her. It is impossible to divine the dimensions of the grain of truth embodied in this rumour. The Empress Dowager's doings will continue to be a mine of treasure to the newsmongers so long as Her Majesty herself continues.

The latest statement about the Chinese students in Tokyo comes from a Mr. Matsuoka, who telegraphs to the *Hochi Shimbun* from Peking under date of the 8th instant. He says that Prince Ching, junior, when received in audience by the Empress-Dowager after his return from Europe, was asked by Her Majesty whether the present Chinese Representative in Tokyo had acted wisely in the matter of the students. The Prince replied in the negative, but, on being further questioned, deprecated any change of Minister, and expressed the opinion that the situation would be fully met by appointing a superintendent of education, for which post he recommended one of his own suite, Mr. Wan. The *Hochi's* informant goes on to say that Mr. Tsai, being protected by Yung Lu, can not be easily moved; and, further, that to remove him on account of the students would encourage the latter to become unreasonable.

We suspect this story to be a clumsy *réchauffé*. The conversations that pass between Chinese sovereigns and princes are not public property and, besides, nothing is less probable than that Prince Ching, if questioned at all about the matter, would have confined himself to such perfunctory replies. Perhaps it may be well in this context to deny again the often-repeated statement that the two students, Wu and Sung, were deported by the Japanese Government at the instance of the Chinese Representative. Our information goes to show that the Chinese Representative had nothing to do with the matter. The students amply merited their punishment.

Friday, Oct. 17.

The *N.-C. Daily News* asserts positively that the foreign garrisons are to be withdrawn from Shanghai on the 1st of November and that the news was conveyed to Viceroy Liu on his death-bed. Our contemporary pays a high tribute to the good conduct of the men of the four nationalities during the whole time they have been stationed in Shanghai. It adds that

the French propose to increase their force of gendarmerie after the regulars have left, but that otherwise things will revert to their normal state.

THE NIPPON YUSEN KAISHA AND TRAVELLERS' FACILITIES.

The management of the Nippon Yusen Kaisha have effected arrangements which will greatly add to the convenience of travellers. They have made an agreement with the Sanyo Railway Companies, so that henceforth it will be possible for travellers by the N. Y. Kaisha's steamers to debark at Moji and take the train thence to Kobe, thus performing a considerable portion of the journey overland without any additional expense. The same facility will be given in the other direction also. No other Steamship Company is in a position to offer this convenience. The Nippon Yusen Kaisha will be actually out of pocket by the arrangement, but it should be compensated by an access of popularity for its boats.

Another great improvement effected by the same Company is that it has combined with the Nippon Railway Company, the Tanko Railway Company and the Hokkaido Railway Company to effect a joint arrangement so that persons travelling from Tokyo to any of the principal points in Hokkaido, can obtain through tickets and can book their baggage from start to destination without any expense whatever—within the prescribed limits of weight, of course. At present several purchases of tickets have to be made and several transfers of baggage. Here, again, the Nippon Yusen Kaisha will be out of pocket, since it will have to provide for the carriage of passengers' baggage between the steamers and the railways, but such considerations are not suffered to weigh against an addition to the convenience of the travelling public.

EDUCATION AS A NATIONAL ASSET.

In his opening address before the British Association last September, Professor Dewar, the new President, laid strong stress upon the importance of education as a national asset, and lamented the backwardness of the United Kingdom in developing a class of trained men fitted to cope with the exigencies of the times. He referred to the value of the German chemical industries, which, developed within a period of seventy years, were largely founded on basic discoveries made by English chemists, but which were never properly appreciated or scientifically developed in England. The root of the mischief was, he said, the want of education among the workmen. What has given Germany its commanding advantage in this field, he argued, has been an abundance of men of ordinary plodding ability, thoroughly trained and methodically directed, and it is the failure of English schools to turn out, and of its manufacturers to demand men, of this kind, which explains the country's loss of some valuable industries and its precarious hold upon others. Professor Dewar insists upon the absolute necessity of general training as a basis for technical education. Mental habits, he says, are formed for good or evil long before men go to the technical schools, and without a good general training no amount of technical training will remedy the deficiency of which he complains.

POSTAL SAVINGS BANKS.

There has been talk for some time, as our readers are aware, of instituting a system of premia in connexion with postal savings banks, in order to encourage the spirit of effective economy. Tokyo journals allege that a draft of a bill in that sense was prepared by the Department of Communications, and that it contained a provision fixing the maximum premium at five thousand *yen*. The Finance Department, however, cut down the premium to a thousand *yen*, on the ground that it would not do to make it higher than the premium now paid by the Industries Bank. In consideration of giving premia, the interest on deposits is to be reduced from 4.8 per cent., its present rate, to 3.6 or 3.5 per cent.

There is room to doubt how far this policy will be successful. The deposits in postal savings banks reached their highest point in 1896, when they aggregated 28 million *yen* in round numbers. Two years later they fell to 22½ millions, and in 1900 they rose again to 24 millions. These figures do not suggest that the postal banks have many attractions for the people. If the Government now reduces the rate of interest from 4.8 per cent. to 3.6, the immediate result will be a total loss of 288,000 *yen* annually to depositors, in the matter of interest. How much of that sum will be allotted in the form of premia? Hardly enough, we imagine, to reconcile people to the new and very small rate of interest. Six-and-a-half per cent., compounded every half year, can easily be obtained from banks of first-rate standing. Will people be content with 3.6 per cent. and the infinitesimally small chance of a premium? It suggests itself to ordinary observers that if the Government really wants to encourage depositors, it should not deprive them of a large fixed income for the sake of a small chance in a lottery. But these are very obvious considerations. We must assume that full weight has been given to them and that the Government knows the mood of its own nationals.

KOREA.

Fourteen Japanese subjects have been deported from Korea for secretly introducing nickel coins from Osaka. Other culprits of the same character are expected to be discovered. The amount of the importation was fifty thousand *yen*.

The Italian Consul and *Chargé d'Affaires* in Seoul died on the night of the 11th instant of dysentery, from which he had been suffering for some time.

There are some confused rumours from Seoul about the circulation of notes issued by the First Bank of Japan in that city. One story is that the Korean Foreign Office has interdicted the circulation. Another says that the Russian *Chargé d'Affaires* has instructed his nationals, serving under the Korean Government, to refuse to receive their salary in the above notes. According to the former account this incident is a prelude to the coming of Mr. Waerber and to the renewal of a struggle for political power. According to the latter, it is simply a device to create trouble. The fact is that in Korea Russia occupies the place of the *femme* of the fable who is always to be sought when tales of commotion begin to emanate from Japanese sources.

GERMAN INFANTRY.

An interesting question has been raised in connexion with the recent German manœuvres. The Emperor, a feature of whose genius is to seek information wherever it can be procured by any possibility, invited some distinguished American and English officers to pass judgment on his army after its recent parades and movements. Adjutant-General Corbin, of the U.S. Army, is reported to have replied:—

"In drill and compact organisation there is nothing like the German infantry the world over. It would have been invincible in former days with a calibre and range of guns which permitted a hostile army to approach within a few hundred yards. But in modern warfare, with artillery that reaches several miles, and rifles with a range of 4,000 yards, the German infantry would be annihilated. It would be a shining target if some soldiers should lie behind embankments a great distance away. The German infantryman so far as I am able to judge from parades, is made of stern fighting timber, but with the system of solid ranks and automaton-like discipline his fighting force is reduced to a minimum. Against long range artillery and rifles, in my opinion, he would be useless in action."

We do not believe that General Corbin said just that. But he may have said something like it, for something very like it has been said in our own hearing by British officers who, fresh from the experiences of South Africa, declared that if German troops, using tactics such as are now practised on the mimic battle-fields of the Fatherland, had been engaged in the Boer campaign, they could not have won a fight. General Botha, recently describing what took place on the Tugela when Buller made his disastrous Colenso advance, adopting stereotyped methods of formation and concluding that because the enemy did not answer his artillery fire they were either absent or silenced—General Botha has shown that the British owed their disaster solely to conservative tactics. However, the curious point is that Mr. Poulteney Bigelow, in a recent essay—we can not recall where it was published—declared that all the show parades, the serried charges, the big-battalion rushes, and the impressively grand movements made by massed columns for the benefit of foreign military observers in Germany, are pure show, having no relation whatever to the real campaigning in which the troops have previously engaged. Mr. Bigelow's assertion is that the foreign expert, when by invitation or request he attends German manœuvres, is carefully excluded from witnessing the army at work and is only allowed to see it at play. If that be true either the expert must be a very simple person or the German staff possess extraordinary facilities for deceiving him.

THE RICE CROP.

Talk about the rice crop is beginning to be heard again. On the 24th of last month, that is to say, 4 days before the storm, the Department of Agriculture and Commerce announced, as the result of its second investigation, that the crop would be 39½ million *koku* in round numbers. But the Mitsui Bussan Kaisha now estimates the yield at only 36 million *koku*, in other words, a figure corresponding to that for 1895. Possibly—some folks say "probably"—the total will not exceed 33 millions. In any case the prophets are foretelling a large import of rice from abroad and a corresponding exodus of specie. Forty million *yen* is spoken of. But prices in the rice market can not be said to reflect these sinister forecasts.

DEPARTURE OF MR. WU JU-LUNG.

Mr. Wu Ju-lung left Tokyo on the 14th instant, after a visit which had lasted several months. During the whole time he devoted himself with untiring energy to inspecting schools and investigating educational affairs. Before leaving the city he had a long interview with Marquis Ito, and as a matter of course, there were other official meetings and farewell entertainments. The impression produced by him during his sojourn in Tokyo was the impression produced by contact with numerous individual Chinese, namely, that he is a man of the highest capacity and thorough earnestness of purpose. China has many such subjects, and their influence on her career can not fail to produce fine fruit.

The eminent educator's parting interview with Marquis Ito took place at the latter's villa, the Soro-kaku, on the 12th instant. Mr. Wu was accompanied by one of the most celebrated Chinese scholars in Japan, Mr. Mori Kainan. The visitor asked Marquis Ito's opinion about administrative reform in China, and received a reply characteristic of the Japanese statesman. During his visit to China in 1898, the Marquis explained, he had made known his views very clearly in answer to inquiries, and he did not doubt that what he then said was still remembered by some of his hearers. Administrative reform must be radical. Nothing of a really useful character could be effected by merely awaiting suggestions from Viceroy and Governors, even though such suggestions were utilized when received. That method of procedure meant treating the leaves and branches and neglecting the malady in the trunk. Able rulers and simple-minded people represented a situation lending itself easily to reform, just as water flowing from high places naturally seeks the lower levels. But competent subjects and incompetent rulers constituted a situation hopeless from the reforming point of view. That was the teaching of all experience, whether Occidental or Oriental, and the lesson of all history. As for education, its object was to equip men of ability for all the functions of the age. In China, however, the ideal of scholarship was intimate knowledge of Confucianism. Beyond that the Chinese student's vision did not range. But was it reasonably conceivable that from the mind of one man, living thousands of years ago, materials to equip all men for all time could possibly emanate, be that man a sage however exceptionally gifted? The narrow notions collateral to such a theory were fatal to true progress. If was not to be denied that a nation should have an accurate knowledge of its own past. But it must also have a clear perception of its present needs, which conception could be obtained only by grafting modern learning upon the ancient. What China needed most was acquaintance with Occidental science. Japan had commenced by establishing an engineering college and China might advantageously follow that example—equip herself, in the first place, with practically useful experts.

Marquis Saionji was present on this occasion, and it is related that Mr. Wu asked him what impressions he gathered from reading Occidental and Chinese books. The Marquis answered that a perusal of Occidental books showed him a philosophy having for objective the rejection of selfish isolation and the promotion of universal brotherhood; whereas the perusal of Chinese books revealed a system of self-segregation and alien repulsion.

THE NAMURA AFFAIR.

In the absence of any more exciting topic the Tokyo newspapers devote a large space to discussing the question of Public Prosecutor Namura Shin and the school readers. One is often obliged to doubt the evidence of one's own senses when one has to examine these periodical journalistic excitements in Japan. The veriest grain of dust is magnified into a mountain. Mr. Namura Shin is the son-in-law of the former President of the Court of Cassation, Mr. Namura Taizo. In 1899, while Mr. Namura Shin was known as Mr. Ogo Shin, not having yet been adopted into the Namura family, and while he was serving as assistant public prosecutor, not having yet received substantive appointment, there came before him a complaint from the Department of Education which charged the well known book store Kinkodo with having supplied readers not up to sample. Of course there was no question about the contents of the readers: the manuscript had been duly examined and approved by the Department. The question related solely to the quality of the paper used in printing them. To Mr. Ogo Shin, in his capacity of acting public prosecutor, fell the duty of considering the suit instituted by the Department of Education. He rejected it, and the point made is that his rejection was the result of a bribe of 1,000 yen given to him by the Kinkodo. The matter is now under official examination, and its quality may be gathered from the fact that the prosecutor is Mr. Kudo Tetsuo, who was recently in jail on a charge of obtaining money by intimidation and is now out on bail awaiting trial. Moreover, he was then connected with the *Niroku Shimpō*, which newspaper is a bitter foe of Mr. Namura Shin. During its trouble with the police the *Niroku* accused Mr. Namura of instigating the prosecutions to which its people were subjected, and it now exults over the attack made upon him. Is not that a pretty story? To cap it all we have the fact that even if Mr. Namura be convicted of taking a bribe, the statute of limitations will save him from criminal punishment. So long as there are yellow journals, active police officials, and corrupt traders, such incidents are inevitable. But is it inevitable that a majority of the Tokyo journals should busy themselves with these bagatelles? The longer we live in Japan the more respect do we entertain for the maxims by which every-day folks are governed. It often seems very strange that men and women show so much reluctance to meddle with matters appearing in the newspapers, and that they allow themselves to be slandered without protest. But is it not wiser to endure a great deal rather than to take the lid off this stormy tea-pot of Tokyo journalism?

AN UNDER-CURRENT IN AMERICAN LIFE.

A writer in the *Academy* in the course of a criticism of Mr. F. W. Halsey's new book "Our Literary Deluge," which deals exclusively with the American book-market, makes some pertinent observations which we print below:—

If the surfeiting of the national collection were the only outcome of the excess of the New Book, America might bear or burn her burden with equanimity. Her real danger is from the effect of the chronic boom, and the too frequent arrival of the epoch-making American author, accompanied by a first edition of fifty thousand copies or so of the masterpiece for which the age stands still. But the critic does not, as we think, take sufficient account of the large community of systematic and orderly readers which exists in the United States and Canada. There

is no part of the world, with the possible exception of Germany, where culture is being so much sought among the people by the medium of methodical and well-planned reading, as in America. One hears comparatively little of it, because the real student is everywhere a reticent creature; but no one can go much into American society without being struck by its results, especially in the smaller cities of the West and South. New York, Boston, Philadelphia even, and assuredly Chicago (in which improbable locality American publishers find one of their richest markets for *belles lettres* and the best class of new books and reprints) are vocal, where what we should call the provinces only read steadily and well, and buy enormous quantities of books, without making a fuss about it.

Especially among American women of all ages is methodical and well-ordered reading—reading really well done and well assimilated—an increasingly prevalent habit. Book-clubs, reading circles, and literary societies of different kinds certainly exceed in numbers and enthusiasm similar bodies in this country. It is easy to be funny about them; but they are themselves very much in earnest, and their influence is an educative and useful one. Their members "set" each other different spheres of study which are patiently pursued; and guide each other's choice of related books, which they meet periodically (generally in the members' houses) to discuss. There is no doubt a good deal of self-consciousness in the process; but the advantages derived from it are evident.

"Booms" and the largely circulated cheap magazines of America make it easy to underrate the literary progress of the country. In a community of seventy millions there is abundant room for desultory and idle readers, the "reading public" of the dry-goods store and the monthly magazines. But the number of true book-lovers and good book-users exists largely and is rapidly growing.

THE LAST WORDS OF LIU KUN-YI.

Some of our Tokyo contemporaries print a translation of the last words dictated—or actually written—by the late Viceroy Liu Kun-yi. He committed them to paper five days before his death, and they must be read as a message inspired by the sincerity that possesses all hearts on the verge of dissolution. Liu refers to his own essay, in conjunction with Chang Chih-tung, to introduce reforms into the Government. Obviously the reference is to that celebrated memorial which went up to the Throne over the signatures of the two great satraps in the spring of the present year. He declares that it affords him profound satisfaction in his last moments to know that the elective system has begun to be adopted in China; that his country has broken away from the worship of obsolete models and will now take what is good from the outer world. Fortunately, he goes on to say, the Throne possesses the services of men like Prince Chin and Prince Sü, and of an official like Yuan Shih-kai. This last the old Viceroy eulogizes warmly. The courage and liberality of the man are remarkable, he says, and though he may be inferior to the late Li Hung-chang in fertility of mental resource and in political craft, he is superior to him in sincerity and directness. The Throne should not allow itself to be influenced by the charges preferred by petty detractors against such a public servant. China is a vast country with an enormous population. Among its numerous inhabitants there are many without sufficient education. The employment of such men must be avoided, but when once an official is appointed, he ought to be trusted, and his capacities should not be hampered by undue interference from above. As for himself, the Viceroy confesses that his disposition is rough and his ability inferior, and that his want of talent in dealing with affairs has caused him many regrets. But he thinks that he understood something of the purpose of the Throne in his choice of enlightened men to serve in

the posts that were at his disposal. There are critics who allege that students sent to study abroad become infected with the false doctrines of other lands, lose their love for their country, and acquire a turbulent insurrectionary spirit; while some of them enter the path of vice and end their educational career in the slough of dissipation. Among thousands of students there may be two or three against whom such charges are justly preferable. But it is extravagant to denounce the whole body and condemn the whole system because of a very few failures. Dangers and abuses of that kind can be easily averted or corrected by a system of proper supervision. The urgent need of the country at present is to enlist the services of able men. The Throne has good advisers, and it is to be earnestly hoped that His Majesty will bring to the selection of his officers a broad and liberal mind. "I am now an old man, worn out by illness and of little talent. There are hundreds of things that I would fain say. But I must leave them unsaid, praying my Sovereign to divine them."

We were mistaken, it seems, in conjecturing that an official of Chang Chih-tung's importance would not go to Nanking to fill the post of Viceroy temporarily. The *North-China Daily News* says that the Viceroy of Liangkang must be a man of Hunan extraction. Were the office given to a native of any other province, he could scarcely hold it for more than a year without exterminating the Kolao Hui Society, which would involve incidentally the destruction of some 200,000 braves of the Siang army. It is therefore considered certain that Chang Chih-tung will not remain many months in Nanking, and that the real Viceroy will be Wei Kuang-tao, now of the Yun-kuei provinces. The late Liu Kun-yi, shortly before his death, recommended four officials from among whom his successor should be chosen. One was Chang Chih-tung, whom, as his old friend and coadjutor in reform work, he was bound to mention. Another was a Manchu—it is *de rigueur* to include the name of a Manchu in such a list—; the third was Governor Nieh of Anhui, and the fourth, whom Liu really desired to designate, was Wei, Viceroy of the Yan-Kuei provinces.

It is a startling commentary on the state of affairs in the Yangtse Valley that the Kolao Hui and the Siang Army are practically masters of the situation at Nanking—startling if true.

The *N.-C. Daily News* has the following interesting note about the late Viceroy Liu:—

H.E. Liu-yi was a native of Hunan, the mother of statesmen in China, and was born in the year 1828. He never attained high literary rank, having only reached the grade of Hsiutsai, licentiate. Men of action were wanted in the stirring times of the Taiping Rebellion, not students, and action comes naturally to the Hunanese. Accordingly in 1854 the young Liu joined the staff of his great fellow-provincial, the Marquis Tseng Kuo-fan, who was then Generalissimo of the armies of seven provinces engaged in the work of suppressing the rebellion. For his faithful service, the Marquis recommended him for the post of Provincial Judge of Kuangtung, to which he was appointed by the Throne in 1861. In 1862 he rose to be Provincial Treasurer of Kuangsi, and became Governor of the same province in 1865, and Viceroy of the two Kuang provinces seven years later. In 1879 he was transferred to Nanking as Viceroy of the Liang Kiang provinces. In October 1881 he was ordered to resign his post and go up to Peking for audience, and the presents he made to the metropolitan mandarinates were regarded as so unsatisfactory considering the positions he had held, that in January 1882 he was denounced to the Throne as "being too much under the influence of his protégés," and was put into retirement for about eight years, which he spent at his native town of Siangyin.

In 1890 a Hunan man was required as Viceroy at

Nanking, and Liu was reappointed. The selection was not very well received, it being objected that Liu was old, a confirmed opium-smoker, and thoroughly apathetic and indifferent. The sequel has shown the power there was still in the old Hunanese, when the occasion demanded it, notwithstanding his age, his long absence from official work and his devotion to opium. In the war between China and Japan, when Li Hung-chang's vaunted "Huai" armies were suffering a series of defeats at the hands of the hitherto despised Japanese, Liu was ordered up to Peking with his Hunanese "Siang" troops, to take over the direction of the war in Manchuria. In December of the same year he was made Generalissimo of the forces within and without the Great Wall, with his headquarters at Shanhaikuan. Here he remained, unable to make any impression on the tide of misfortune which followed Li's rash entry into a war for which he was utterly unprepared, until the close of Li's successful mission to Japan to arrange a peace. In 1895 Liu returned to Nanking and resumed the viceroyalty, which had been held in the interim by Chang Chih-tung. We have alluded to the great services he rendered to his country and to all of us in 1900, for which he was rewarded with the grant of the title of Junior Guardian of the Heir Apparent, being raised in 1901 to the Senior Guardianship, with the grant of the two-eyed peacock's feather.

Liu's illness dated from the time of the Boxer troubles, and not long ago he had a serious attack of diarrhoea, which grew into dysentery, which carried him off yesterday morning. His death cannot make for peace in the Yangtze Valley, for it is well known that the maintenance of order there was entirely due to his strong personality and the fact that he was a Hunanese. The strongest secret society in China is the Kolao Hui, a large and important section of the members of which are Hunanese and soldiers in the "Siang" army. This formidable society, of which so much is heard and so little seen, has been spreading widely of late and has extended its scope from the Liang Kiang into the Yun-kuei, the Two Kuang, and Szechuan provinces. As its headquarters are in or near Nanking, it demands that the Viceroy there shall be a Hunanese, and this is the only consideration that is against Chang Chih-tung's succession. For all this, it is probable that the Viceroy of the two Hu provinces will be Liu's successor, for there is no strong Hunanese available at the moment. The only two that seem eligible are Wei Kuang-tao, the Viceroy of Yun-Kuei provinces, who cannot easily be spared from that post at this time of unrest in southern China, and Nieh Chih-kuei, our former Taotai, now, Governor of Anhui. Nieh has an excellent record, but it remains to be seen whether he is strong enough to succeed Liu. The name of Yuan Shih-kai has been mentioned, but it is doubtful if the Empress Dowager will allow him to leave Chihli, and he is not a Hunan man.

The loss of so good a man as Liu must be always a severe shock, but it is particularly inopportune at such a critical time as this. Nearly the whole of China is in a state of ferment, and he was a great repressive force. His enlightenment and his appreciation of the necessity for a change in China were genuine; he was a straight-forward gentleman, not a times-server or opportunist, and he had much influence for good with his Imperial mistress. His adi too was wanted to make the Treaty of Shanghai a success, and no one can say what view Chang Chih-tung's new colleague, whether he is appointed to Nanking or Wuchang, will take of it.

The lamentation in China over the death of Liu Kun-yi will be deep and wide-spread and foreigners may well join in it, for we have also suffered a serious loss in his death.

THE EDUCATIONAL QUESTION.

Saturday, Oct. 11.

It is stated that the Diet will be invited during its next session to consider an important reconstruction of the educational system. No change will be made, speaking generally, in the primary schools, but whereas at present third and fourth year students of these schools have access to technical classes should such classes be formed, it will hereafter be necessary to form them. In short, the faculty of a primary school will be deprived of discretionary power as to organizing a practical section: they must organise it. Middle Schools also will remain unchanged, but there will be added to them a *Hoshu-ka*, or "supplementary section," where a graduate must study for a year if he desires to carry his educa-

tion to a higher stage. The time required for graduation in a Middle School is 5 years. Consequently, under the new system, a lad must add another year if he contemplates an university career. But the radical change is in the matter of High Schools. At present a Middle School graduate enters a High School and from thence gains access to an University. The High Schools are now to be abolished, and in their place *Yobi-mon*—preparatory colleges—will be formed, where a graduate of a Middle School who has put in his year in the Supplementary Section, will study for two years before entering an University. The net result of this is that 9 years' study in a Middle School and a Preparatory college will take a youth to an university, instead of the present minimum of 10 years. The most important reform, however, seems to be in the matter of technical education. All the present technical schools—and there are several actually in existence as well as a number about to be organized—will be changed into High Practical Schools, where a lad may matriculate after graduation at a Middle School, without studying for a year in a Supplementary Section. The great object is to promote practical education.

Friday, Oct. 17.

It appears that the public has been mistaken in its conception of the changes contemplated in the educational system of Japan. There is no idea of allowing youths to pass from Middle Schools to the Universities with only the intervention of supplementary sections. In fact, the object of the reform is, not to facilitate admission to the Universities, but rather to enable a youth to attain a sufficiently high standard of education for all practical purposes without graduating from a university. It is with that aim that the establishment of high technical schools is contemplated. A student passing from a middle school to a high technical school will receive an education fitting him for any position, and will not be at any serious disadvantage as compared with a graduate of a university. Such is the plan, apparently. The idea of supplementary sections in the Middle Schools seems to have been evolved from the imagination of newspaper reporters, though that is very difficult to conceive.

Baron Kikuchi, interviewed on this subject by a representative of the *Chiuo Shimbun*, is reported as saying that the question of middle education is perplexing European nations as well as the Japanese at present. His Excellency spoke of the controversy about abolishing the study of Latin and Greek in English Schools, and compared it with the problem of the study of modern languages in Japanese Schools. He appeared to think that too much time is given to the study of European languages in some of the educational institutions of this country—7 or 8 hours a week, for instance, to English alone, whereas in Germany or France one or two hours are considered sufficient. Baron Kikuchi sees no valid reason for such a difference. He does not think that Japanese students labour under any moral disability for acquiring foreign languages. But he does think that the method they pursue is very faulty. No sooner does a student acquire even a rudimentary knowledge of English than he sets himself to read Carlyle or Spencer, which results, of course, in failure to acquire any facility in the colloquial.

No doubt that is very true. But with

whom does the fault lie? We can not suppose that Japanese students refuse to be guided by their teachers in their choice of studies. It is the teacher that must bear the blame. One can easily conceive why he prefers to immerse his pupils in the perusal of volumes which he himself has already mastered, and which serve to conveniently circumscribe the course of instruction. Baron Kikuchi is well aware, no one better, that two hours a week with a good teacher conduce more to progress than six or seven hours with a bad teacher. In France and Germany students of the English language have Englishmen for teachers, just as in England students of French or German have natives of France or Germany. In Japan the teachers of European languages—or, at least, 99 out of every hundred of them—are Japanese, and only a very small percentage of them have any claim whatever to be considered competent for the work they undertake. We do not speak in a carping spirit. Most fully do we appreciate Japan's difficulties in this matter, and most profoundly do we sympathise with the hard-worked, poorly paid Japanese teacher, whose livelihood depends on doling out to his pupils such small pittance of erudition as he has himself acquired with infinite pains. It is all very hard and much of it is very sad. Let us, however, get the bases of our comparisons correctly, especially if the process leads us incidentally to appreciate the heavy handicap under which Japan labours owing to her impecuniosity.

WAGES IN ENGLAND.

Official returns show that there was a marked decline in wages in the United Kingdom during 1901. The previous five years had been years of steady appreciation, but in 1901 the change was so sharp that, according to the statistics, the number of work-people who experienced reductions was greater than in any previous year, and the amount of the reductions exceeded the total recorded in the eight years immediately preceding. To state the latter result in figures, the decrease of the weekly wages bill was more than one and a half millions sterling. Of course all trades did not experience a similar fate. Specially notable is the fact that whereas workmen in private employment had to be content with smaller pay, those in the service of the Government, the local authorities, the railways and the police received better rates than ever. On the other hand, if the workman's reward diminished, the returns show that there is a growing tendency to settle wages' questions by compromise and conciliation, instead of having recourse to strikes and lock-outs. The official report says:—"Out of every hundred persons whose wages were changed, only two were concerned in strikes and lock-outs." Commenting on the report, *The Times* says:—"Even more important than the fact that in every coal-mining district, with the exception of South Wales, a conciliation board for the general regulation of wages and kindred matters is now established, is the general growth of a better spirit; the discrediting of hot headed mischief-makers; the spread of a disbelief in the efficacy of strikes; the presence of a vivid sense that the real gains to the victor in this form of civil war are rarely worth the cost; the belief that a strike is generally due to temper or want of tact in one or more persons."

THE WAIST OF JAPAN.

Some years ago a foreign engineer, whose name we do not now remember, though it deserves to be remembered, suggested that the waist of Japan should be severed by a canal. One of Japan's appellations is "Akitsushima," so called on account of its resemblance to a dragon fly. It certainly resembles a wasp, inasmuch as it has a waist of exceeding narrowness, where the Bay of Wakasa on the Western coast and the Bay of Owari on the Eastern, are separated by a narrow strip of dry land. Moreover, between the two bays lies the great lake of Omi. A canal running westward from Owari Bay through a length of 37 miles would reach the eastern shore of Lake Biwa, and a canal running eastward from Wakasa Bay through a distance of 13 miles would reach the western shore of the same lake. In other words, 50 miles of cutting would create a water-way right across the waist of Japan, thus increasing enormously the efficiency of the navy and the facilities for water transport between the eastern and western coasts of the island. It is further computed that the excavation would supply material for reclaiming two million acres of rice land from Lake Biwa. This is a great project, and that it will be carried out sooner or later we entertain no doubt. It has been revived by the people of Kyoto, who have sent Mr. Yoshida Genosuke to Tokyo to promote the scheme. Some representation on the subject will probably be submitted to the House of Peers. The completion of such a work would greatly improve Japan's strategical position.

TOKYO WATER WORKS PIPES.

There is fresh trouble about pipes for the Tokyo Water Works. Vernacular journals say that a contract to supply 2,475 pipes was made by a well known Yokohama firm. They arrived in three batches and each batch was condemned after expert inspection. Efforts were nevertheless made to induce the Water Works Authorities to take delivery at reduced rates, but the proposal did not meet with approval, Baron Kaneko, President of the City Assembly, being unreservedly opposed to the use of defective material. After Baron Kaneko's resignation, however, the question was again brought forward, and it has now been decided that the pipes shall be used at the reduced rates proposed by the importer, the chief reason for this change of front being that, in default of these pipes, the construction of the Water Works must be suspended. We observe a disposition in some quarters to discover a mare's nest in this transaction, but ordinary observers will be disposed to regard it as natural and sensible. The whole problem turns upon the nature of the defects detected by the experts. If they are defects such as must shorten the life of the pipes, or seriously reduce their coefficient of resistance, then, of course, the material should be rejected whatever rebate be offered by the importers. Already, however, there have been several cases of pipes rejected on account of wholly insignificant defects, and it is quite possible that the present incident may be another illustration of the meticulous disposition shown by some junior experts in Japan. At any rate the question is one for experts alone to decide. There is no occasion to search for subterranean processes on the part of those interested in selling the material.

NOTES ON CURRENT EVENTS.

We are glad to see that the *Fiji Shimpō* hints at the unwisdom of such outlays as must be caused by the approaching celebration of the Red Cross Society. The celebration will be the eleventh in the Society's career, and it will also serve to commemorate the 25th anniversary of the Society's organization. Upwards of ten thousand persons are said to have already sent in their names as intending to be present. These are not residents of Tokyo but visitors from the provincial branches of the Society. Our contemporary calculates that each person will spend 50 yen on the average, including the cost of travelling and that of staying in Tokyo. Hence the total outlay will be five hundred thousand yen. Is such an outlay necessary, asks the *Fiji*. Could not the money be more usefully spent? There can be no second opinion on that subject we think. Probably it will be urged, however, that meetings of this kind are necessary for rendering the Society popular. Perhaps they are. Perhaps public charity requires such props.

The *Nippon* publishes a statement alleged to have been made by the Chinese Legation to the effect that the rumour of Mr. Tsai's resignation is unfounded. The *Nippon's* informant adds that Mr. Tsai has been much kinder to the students than the former Minister, Mr. Li Shing-tok; that the nine lads for whom His Excellency refused to go security had been expelled from their own country and were adventurers; that there are in Peking many political parties, some of whom speak ill of Mr. Tsai, and that the latter is not at all likely to resign on account of such a paltry affair.

Lieut.-General Oku, who goes to India to represent Japan at the Great Durbar which the Governor-General holds next year in celebration of the Coronation, will leave on the 18th instant by the German steamer *Hamburg*, reaching Colombo on the 16th of November. Thence he will proceed by a small steamer to Tuticorin, and there take train for Calcutta. At the close of December he will proceed to Delhi, remaining there from the 27th of December to the 9th January.

The *Fiji Shimpō* urges that steps should be taken to nourish the spirit of foreign enterprise (*taigai shiso*), among the youth of Japan. Much of Great Britain's success is due, our contemporary thinks, to the education of such a spirit. It is largely assisted in her case by judiciously compiled readers which make English children acquainted with the world outside the United Kingdom, above all with that large section of it over which the British flag floats. Japanese readers are not prepared with a view to any such purpose. That defect should be remedied, and a still more effective step, though necessarily of limited character, might be taken by sending students to China and Korea during their holidays. We are a little surprised that our contemporary does not allude specially to Manchuria in this context, but doubtless it includes that region in "North China." It may be noted that the suggestion as to sending students abroad during their holidays has already received practical attention. This year, a school, of which we can not at the moment recall the name, sent some 50 or 60 pupils to Seattle where they were very hospitably received, though, as reported by a news agency, some urchins threw stones

at them on one occasion calling them "more Japs." Moreover, on the 4th of the present month, the Kyoto Commercial School sent 35 students to Shanghai under the care of two teachers. Of course steamship companies like the Nippon Yusen Kaisha, the Toyo Kisen Kaisha and the Osaka Shosen Kaisha would be ready to grant special facilities to such students.

Northern Nigeria, where the British Resident, Captain Moloney, has just been murdered, did not come into existence as a separate entity till Sir Claude MacDonald, the present Minister to Japan, went out in 1891 as Imperial Commissioner to the Oil Rivers Protectorate. Sir Claude then devised the present form of government for the vast territories which accrued to Great Britain in the sequel of the Anglo-German and the Anglo-French agreements, which practically divided up the dark continent into spheres of influence for the European Powers. Northern Nigeria contains the greater portion of the old kingdom of Bornu, a large part of the pagan confederation of Borga, and a great number of pagan tribes to the north of the Benue River and also north of the east and west stretch of the Niger. It is rich in agricultural resources, though portions of the territory are said to be highly mineralised. It is from this district that the Hausas troops, which have proved so useful to Great Britain in recent West African wars, are principally recruited.

The Bank of Japan celebrated the twentieth anniversary of its establishment on the 10th instant. Nothing could have been quieter or less pretentious. After the day's work was over at 4 o'clock, the principal employees assembled and listened to a brief address by the President, Mr. Matsu-moto, to which Mr. Ichikawa, one of the Auditors replied. There were then a few words from Mr. Mita, a director, after which a present was made to 9 employees who had served for 20 years, and the remainder received a small sum to buy materials for a feast. The whole affair occupied an hour and a half.

The Indian employee of the Circus which recently visited Nagoya where the man was arrested for striking a comrade so as to cause his death, has been sentenced to imprisonment with hard labour for a year and a half. The public procurator had urged that the penalty ordinarily imposable for the offence, namely, 6 years' imprisonment, should be reduced by three degrees, and the Court took that view. Tokyo journals report that the man burst into tears on hearing the sentence, and that when informed of his right to appeal, he declared himself without means to do so. His counsel announced, however, that he himself would bear the costs of appeal, and notice in that sense was duly lodged. The managers of the circus are understood to claim that the affair was wholly accidental, and that the two men were merely indulging in rough play when one of them chanced to give a fatal blow to the other.

The public are warned by the *Shogyo Shimpo* that some counterfeit 10-yen notes are circulating in Tokyo. They may easily be detected, as on the face at each of the upper corners, are the letters I. H. V. P. H.

On the 11th instant the Honorable Miss Yuki, second daughter of Count Okuma, was married to the Honorable Mr. Matsuura, son and heir of Count Matsuura, the former

feudal chief of Hirado. Tokyo newspapers say that the young Count is to be Count Okuma's heir, and that an entertainment to celebrate the marriage will be given at Waseda on the 16th instant.

His Excellency M. Dubail will leave Tokyo on the 30th instant to assume charge of the French Legation in Peking. His Excellency M. Harmand, who returns to Japan to resume the functions of French Representative, is now in Annam and is expected to reach Tokyo on the 28th inst.

"Yen," writing in the *Anglo-Japanese Gazette*, adopts a congratulatory tone about the successful issue of a loan of £91,875 (900,000 yen) in the London market for the uses of the Yokohama waterworks. It is difficult to endorse the comment. Japanese municipalities and other local bodies may consult their temporary convenience by borrowing paltry sums in Europe, but they certainly do not consult the interest of their country's credit. Think what is involved in the notion of the Yokohama municipality going all the way to London to procure a sum of ninety-one thousand pounds sterling at 6 per cent. ! It is like a man asking a friend for a loan of five shillings. Yokohama, Nagasaki, Osaka—all these places have been indulging in similar operations of finnikin finance. They get what they want for the moment, but they convey to the Occidental mind an impression that Japan is living a hand-to-mouth life, and that the smallest mercies are thankfully received by her. It would be far better that the Treasury should become banker for these small enterprises, and that a substantial loan for productive purposes—railways, harbour-works, water-works, telephones and so on—should be contracted *en bloc*.

It is stated that a bill for amending the law relating to the hypothecation of railways has been drafted. This is an outcome of the investigations conducted in connexion with the visit of Sir William Bisset last spring. Inasmuch, however, as the questions treated in the Bill are connected with many provisions of the Civil and Commercial Codes, the draft is said to have been returned to the Legislative Bureau for further consideration, and there are consequently some doubts as to whether it will be submitted to the Diet this session. We can scarcely credit that statement. The Legislative Bureau has had over 6 months to compile the bill, and if it postpones the matter for another twelvemonth, the responsibility of blocking the inflow of foreign capital will rest wholly with the Government.

Mr. Kano Jigoro, Principal of the High Normal School, has returned from his visit to China. He says that China's regeneration is to be effected, not by the use of force, but by friendly intercourse and the amicable communication of progressive doctrines. The greater the number of Japanese that visit the Middle Kingdom and mix freely with the people, the better. Mr. Kano adds that he has made arrangement for the coming of another large contingent of Chinese students, chiefly from the provinces of Anhui and Chekiang.

The Italian Society is to hold a meeting at the Kogetsu in Karasumori-cho on the 17th instant. After the meeting there will be a *r union* to bid farewell to M. Cobiainchi, Secretary of the Italian Legation, who is soon to leave Japan. The presence of the Italian Minister is expected. The Italian

Society has Marquis Nabeshima for chairman and Prince Arisugawa for President. It is said to be in a flourishing condition, its capital fund having amounted to 4,000 yen, so that no further subscriptions are to be taken from the members *pro tem*.

It is stated that the Department of Finance has advised the Home Department to refuse its consent to the project of the Nagasaki Municipality for obtaining a loan from the Hongkong and Shanghai Bank on account of the Water works. The reasons of the former Department's objections are not publicly stated, but presumably it is a matter of terms.

Tokyo journals state that the Government has completed its investigations into the question of private claims arising out of the Boxer troubles, and that steps will speedily be taken to satisfy them. There are over 170 claimants and the total of their demands is about 1½ million yen. The Treasury is in receipt of one million nine hundred thousand yen, including interest, to meet these claims.

It is stated by Tokyo journals that the Osaka Harbour Works Authorities have at length completed their negotiations with Messrs. Samuel Samuel and Company for a loan of 3½ million yen. The Third Bank has represented the Osaka folk in their matter, as the Bank has hitherto been financing for the Harbour Works. The rate of issue of the 6-per-cent. bonds is said to be 96½, and the contracting parties are to share equally in any subscriptions over and above that figure. Considering that the Yokohama Water Work's loan of 900,000 yen was negotiated at a nominal 90 yen per bond and a real 87.75 yen, the rate of interest being 6 per cent. it must be admitted that the Osaka people have done much better. Some critics, we observe, are disposed to attribute to Mr. Yasuda Zenshiro of the Third Bank the credit of having made a good bargain for Osaka. No doubt Mr. Yasuda managed matters cleverly, but there could be no greater error than to imagine that these affairs are materially influenced by the dexterity or clumsiness of negotiators. English financiers know very accurately what they are prepared to give, and though they found themselves confronted on the Japanese side by the most skilled negotiators conceivable, they could not greatly alter their terms.

The Educational Society has prepared a Representation for submission to the Diet next session, urging that a bureau of translation be organized, having for its object the translation of foreign books such as shall be useful to teachers in Japanese schools. Private enterprise has done much in that direction already, but it is plain that private translators can not hope to be repaid for the labour of translating works which, in many cases, can not appeal to more than a very limited section of the general public, however useful they may be to instructors in special subjects. We should imagine that the Diet will readily endorse this proposal, the credit of which belongs, apparently, to that indefatigable worker in the cause of education, Mr. Tsuji Shinji.

As an illustration of the attitude assumed by the labouring classes in Australia, where a system of State socialism has been introduced almost completely, it is notable that sheep shearers are demanding more than a pound sterling per 100 fleeces, on the

ground that the value of the fleece as well as that of the animal has appreciated. But the appreciation is due, not to a brisker demand, but to the fact that some forty millions of sheep and lambs having perished during this year from drought, those that remain are necessarily more valuable. A skilled hand can shear a hundred sheep daily, so that his earnings are at the rate of £6 a week. One would suppose that the figure should suffice.

The main count of the suit brought by Mr. Sato Rennosuke against the British subject through whom the services of Professor Davis were engaged, is that whereas he engaged to exhibit ten varieties of illusions, only six were shown. Moreover, he gave only one night's entertainment, thereafter packing up his paraphernalia and taking his leave. It is certainly true that the performance at the Kinkikan underwent sudden interruption, for we know people who, repairing thither on the second day, had to come away disappointed. But the general impression is that the interruption must have been due to a mere misunderstanding, for the display was subsequently resumed and continued for 10 days.

Shirane mountain at Nikko is reported to have become active. There have been rumours of this kind for some time, and they now appear to be confirmed. There would be nothing very strange in such an event, for this particular Shirane-san—there are two other mountains of the same name—was active as recently as 1889. It is in one of the valleys of Nikko Shirane that there exists a tarn celebrated for its brilliant green colour.

THE COMET.

Mr. Inouye Shiro, of Yokohama, reported to the Tokyo Observatory on the 10th inst. that he had detected a new comet with a right ascension of $35^{\circ} 40'$ and a declination of $19^{\circ} 20'$. This was verified by the astronomers of Tokyo, who are of opinion that the comet is approaching the sun and that it will steadily increase in size.

The Comet is rapidly increasing in size, having developed a distinct tail, and, at the present rate, it is expected to be very plainly visible to the naked eye by the middle of next month. It has now attained the 4th magnitude, and is almost overhead to a gazer in Yokohama.

LAUNCH AND INAUGURATION CEREMONY AT URAGA.

Invitations were issued by Mr. S. Fushihara, President of the Uruga Dock Co., Limited, to attend on Wednesday the ceremony of the official inauguration of the now completed works of the united Uruga and Ishikawa Dock companies, and also the launch of the first of the five gunboats ordered by the United States Government for service in the Philippines. The guests numbering about 250 embarked from Yokohama Pier on board the N.Y.K. steamer *Kobe Maru* between 9.30 and 10 a.m. on Wednesday and arrived at Uruga at 11.30, the steamer being piloted into Uruga harbour by the veteran dockmaster of the Company, Mr. Furukawa. Amongst the guests were Baron Komura, Minister for Foreign Affairs, Colonel Buck, U.S. Minister, and Mrs. Buck, Count Arco Valley, German Minister, Viscount Enomoto, Admiral Ito, Admiral Inouye, Count Hirosawa, Baron Mayeshima, Captain Guhler, Naval Attaché, German Legation, Admiral Rogers, Admiral Evans and Mrs. and Miss Evans, General Chaffee, Mr. Bure, Belgian Consul-General, Mr. G. H. Scidmore, U.S. Deputy

Consul-General, Mr. Ishiguro, Director of the Docks Bureau in the Naval Department, etc. On arriving at Uruga the guests were landed in a steam launch and proceeded to inspect the docks, which now number three. One of these, the longest, 500 feet long, with a draught on the sill of 26 feet, is now occupied by the U.S. battleship *New York*, which made a fine showing with her bunting displayed and band playing. The whole premises of the Docks were gaily decorated and day fireworks were fired from time to time. At 1 o'clock a splendid cold collation with liquid refreshments *ad lib* was served in a large marquee beside the dock containing the *New York*. After the guests had done justice to the repast, Mr. Tsukuhara, the President of the Company, rose and proposed the toast of welcome to the guests of the United Companies, which was followed by the Band striking up "The Star Spangled Banner." Colonel Buck, U.S. Minister next proposed the health of H. I. M. the Emperor, after which the Japanese National Anthem followed. Admiral Ito then proposed the toast of "Prosperity to the Uruga Dock" in the course of which he said:—Allow me one word on this occasion of the launching of one of the gunboats ordered by the Insular Government of the Philippines and the inauguration of the Uruga Dock Co. The latter started in the year 1900 and it is not full three years since, but they now have got in a position to build naval vessels for a foreign government. This is not only to their honour but our nation is proud of the rapid progress made in this industry. In the harbour we notice the flagship of the U.S. squadron lying under repair and on shore we see five gunboats in the course of construction, one of which is now to be launched. Let us go back to 50 years ago when Commodore Perry came here and anchored off the harbour and opened our door so as to bring us before the world. Now 50 years later one of the U.S. squadron comes here and opens the Dock's door. How much we owe to the United States for our civilization I cannot express in words and now in building these five gunboats for the U.S. Government we feel nothing is too good for their construction. The company should do their best in every way to respond to the favours of their patron, and finally I wish them increased prosperity.

After President Tsukuhara had proposed the health of his guests, Mr. Rose, Inspecting Engineer of the Philippine Government, spoke as follows:—

LADIES AND GENTLEMEN.—My being called upon after such distinguished speakers as those to whom we have just listened with the greatest interest I can assure you is an unexpected honour. My views and sympathies have been fully expressed and so much has already been said and the grounds so well covered that I feel there is little or nothing left for me to say, only a few of my observations as an Inspector. Six months ago I came here as Inspector for the Insular Government of the Philippine Islands to superintend the construction of these five vessels. I saw all the detail shop workings made for all the various details of hulls and machinery, saw the first blow dealt toward their construction, the first chop of the adze into the heavy teak wood to shape the sterns, keels and sternposts; heavy castings and forgings made; frames bent to shape and various small details of hulls and machinery forged, sheared drilled, punched, fitted rivetted and bolted together, parts of machinery accurately fitted together, the assembling of these many parts until to-day we see the five vessels under the various stages of completion, one of which we see before us finished and resting upon her ways, awaiting the gentle touch of the delicate finger of one of America's most charming and attractive daughters upon the electric button, and this vessel will glide gracefully down the ways, receiving her name and making her first plunge into the briny sea. I have observed very carefully the work of construction of its many details and feel proud that I am the Inspector over this work and take pleasure in stating to the credit of the Builders that all materials used and workmanship are of the highest standard. I also wish to say a word of praise for the able and efficient management of the Uruga Dock Co., of their many courtesies extended and unceasing efforts to make life as pleasant and agreeable as possible to the officers and crews of vessels that are docked and repaired in Uruga. During the past 6 months I have seen 29 steamers of the

merchant marine, averaging over 2,000 tons each, docked and some quite extensively repaired; 8 warships have also been repaired and 5 quite extensively. I have made it a point to inquire into the class of work done of the officers in charge of the vessels and have always heard praises of the management of this company's completion of work on stipulated time and fairness of charges. The Uruga Dock Co. while yet in their infancy have so thoroughly and well laid their foundation stone of success, and if the present management hold together I can safely predict for Uruga, while being the most historic port in Japan, in the near future the sound of heavy forges, steam and rivetting hammers and the buzz of industry will echo through these hills and valleys and Uruga will become the little Clyde or Delaware River of Japan. I wish the Uruga Dock Co. every success; they deserve it. I propose the health of the Dock management.

The last toast was that of success to the gunboat and shortly afterwards the guests proceeded to the slips from which the gunboat was to be launched. The boat was prettily decorated with garlands of evergreens and flowers, with the usual paper basket containing pigeons at the bows. The ceremony of christening the boat was performed by Miss Evans, daughter of the Admiral. The launch was perfectly successful and the boat guided gracefully into the water without a hitch. The boat was christened the *Romblon*, the name of an island in the Philippines. Her dimensions are, length 140 ft., breadth 20 ft., depth 12 ft.; tonnage 350 tons, and 450 horse-power. She has twin screw engines which are expected to give her a speed of 10 knots. The cost is to be *yen* 120,000 without armament.

About 4 p.m. the *Kobe Maru* started back with her passengers for Yokohama, arriving at 5.45.

We cannot speak too highly of the care and attention of the hosts to the comfort and enjoyment of their guests, who had a very pleasant day's outing.

TELEGRAPHIC DELAYS.

Tuesday, Oct. 14.

On the 2nd of August a batch of cablegrams were dispatched from Yokohama, on behalf of many foreign firms, by the local post office. To the astonishment of all concerned it took 25 days for them to reach their destination and naturally complaints and enquiries have poured into the Yokohama Telegraph Office. The Director of the Office has made every enquiry and assures us that the delay did not happen in Japan. In his opinion the cablegrams were hung up in the office of the Eastern Extension Telegraph Company at Shanghai through misadventure or carelessness. He is still prosecuting enquiries, however, and promises to publish the result as soon as it comes to hand. Meanwhile the Imperial Post and Telegraph Office in Yokohama asks us to print for general information the following abstract of The International Telegraph Service Regulations, Art. XLII, Par. 3:—

When the sender has prescribed the route to be followed, the respective officers are bound to conform to his instructions, unless the route indicated be interrupted, or is known to be overcrowded, in which case the sender cannot make any claim on account of the employment of another route.

Wednesday, Oct. 15.

The Director of Telegraphs in Yokohama informs us that he is in receipt of information from Tokyo that the telegrams of August 2nd which took 25 days to reach their destination, were delayed in Shanghai through the carelessness of a clerk—presumably Chinese—in the employ of the Great Northern Company. He exonerates the Eastern Extension Telegraph Company of all blame.

In future should it be found that a telegram marked "Eastern" cannot be sent from Japan *via* that route owing to interruption or blockage of the line, it will sent *via* Northern instead, without reference to the sender and the difference in cost will be refunded; while *vice versa* the extra charges incurred will be collected. This is in accordance with the regulation printed above.

THE SHANGHAI GARRISON.

THE question of the Shanghai garrison is again spoken of in connexion with the death of Viceroy LIU. He is said to have reopened the subject just before his decease. On the other hand, rumour also alleges that the Foreign Representatives in Peking have brought forward the matter, and that arrangements will probably be effected for withdrawing the garrison on the 1st of November. The whole business is a striking example of the jealousy with which foreign Powers regard each other. A few hundred men would have been an ample garrison for Shanghai even at the most strenuous moment of the Boxer outbreak. The place is within easy reach of naval assistance, and there is even reason to doubt whether any occasion ever existed for landing a military force, especially in the face of the efficient and successful measures taken by the Viceroys CHANG and LIU to preserve peace and protect foreign life and property in the Yangtze Valley. But no sooner had one State landed troops than three others considered it necessary to do the same; necessary not in the interests of Shanghai's safety, but merely in the interests of the "balance of power." Then having once taken the step, none of the four is willing to withdraw lest the other three should obtain an advantage by declining to follow suit. It can not be pretended for a moment that the presence of troops in Shanghai is now essential as a measure of precaution. They are kept there solely because the Powers distrust each other. Which of the four is chiefly responsible for this state of affairs we may be permitted to refrain from discussing, but that it is a wretched state of affairs can scarcely be denied. It illustrates what would happen in the event of anything like a partition of China. The empire would become a battle-ground of rival Powers. And to whom would the settlements fall? Who would acquire the right of eminent domain in Shanghai, for example? There is just this to be added that Chinese satraps receive but little encouragement to be loyal to their country's treaty engagements and to protect foreign life and property. At Tientsin, which was the very centre of the Boxer disturbance, Tientsin where the foreign settlement was in a state of siege for weeks and where a general massacre of foreign residents was averted only by the courage and promptitude of a Russian battalion—at Tientsin the foreign garrison has been withdrawn. But at Shanghai, which remained throughout entirely beyond the range of disturbance owing to the vigorous and far-reaching measures of Viceroys CHANG and LIU, four Powers still retain their forces, so that the high Chinese officials who showed themselves conspicuously friendly to foreigners have now the reward of being conspicuously humiliated by those very foreigners. There is no such thing as sentiment in international politics, say European statesmen. Certainly their practice illustrates the fact.

MEETING OF THE "SEIYU-KAI."

A MEETING of the *Seiyu-kai*, which had been looked forward to with much interest as likely to afford a clear indication of the Party's attitude towards the Cabinet in the approaching session of the Diet, took place in the Kinki-kan Tokyo, on the 11th instant. Nearly four hundred members were present. The *Seiyu-kai*, as our readers are aware, occupies a position unique in the history of Japanese political parties. It has a plurality in the House of Representatives—not a mere majority as compared with any other party, but a plurality of the whole House. Hitherto the most powerful political association in the country could only claim to be stronger than any rival, and the consequence was that combinations and consultations were necessary in order to carry any measure whether for or against the Government. Not infrequently the extreme of parliamentary illogicality was witnessed—a small coterie of politicians holding the casting vote and being thus enabled to control the whole situation. But the *Seiyu-kai* can now muster force superior to the combined strength of all its rivals. If it decides to oppose the Ministry next session, one of two things must ensue—either a change of Cabinet or a dissolution of the Lower House. To Englishmen it will doubtless appear strange that a Ministry should attempt to remain in office without the support of a majority in the Lower House. But parliamentary affairs in Japan are not yet in accord with British models. The present Cabinet assumed office with open disavowal of parliamentary support. It represents the familiar *chosen shugi*, or independent policy, which is one of the transition stages from a bureaucracy to constitutional institutions. It takes its mandate from the Throne alone, and does not acknowledge direct responsibility to any political party. If, then, the *Seiyu-kai* should marshal its forces against the Ministry next session, the Cabinet would be logically following the rule of its existence did it send the members back to their constituencies, a sentence which the members, having just incurred the expense and trouble of a general election, will naturally be most anxious to avoid. Neither is it likely that things will ever be pushed to such a flagrant issue. The *Seiyu-kai* is under the leadership of Marquis ITO, who, more than any statesman in the country, enjoys the SOVEREIGN'S confidence. Marquis ITO's attitude towards the present Cabinet is avowedly directed by the principle of ministerial stability. Strongly opposed to ephemeral tenure of office, he desires to educate among politicians a conviction that the interests of party must always be sacrificed to those of State, at least to the extent of not disturbing the occupants of the seats of power merely because of their occupation. So long as that process of education can be continued without over-straining the cohesion of the *Seiyu-kai*,

Marquis ITO is likely to continue it, and when it becomes difficult to continue, we may be sure that the necessary readjustments will be effected without anything like a crisis. To those, therefore, that consider the situation closely, the interest of a meeting like that of Saturday last lies in the indications it affords as to the temper of the leading members of the *Seiyu-kai* rather than as to any general policy adopted by the Party towards the Cabinet; for when a general policy of that nature is adopted, what the public will hear is its results not the fact of its adoption. We may say at once, then, that the meeting did not supply materials for any very definite analysis. Mr. OZAKI YUKIO, indeed, pronounced a very militant speech. He regretted that the Cabinet had not been decapitated a year earlier, as he himself recommended, but he expressed some doubts about the necessity for performing the operation now inasmuch as the patient was already *in articulo*. Still, on the whole, he was in favour of instant beheading. Mr. OZAKI, however, has come to be regarded as a kind of free lance; very skilled in debate and refreshingly vigorous, but generally marching so far ahead of his party that they see only the dust he creates. Mr. MATSUDA and Baron SUYEMATSU, the other two speakers, must be regarded as more genuinely representative of *Seiyu-kai* opinion. Mr. MATSUDA's speech was very guarded. He congratulated his Party on the strong position in which it finds itself, and he reminded it that the greater its strength the larger its responsibilities. Then he passed on to insist that administrative reconstruction and financial reform are the great desiderata of the time. The present Cabinet had these things in view, but its success in achievement was questionable. What the *Seiyu-kai* members had to do was to fix their eyes on these points during the next session of the Diet, and to refrain from diverting attention to local or parochial issues. His speech can not, therefore, he said to have pointed to any definite line of policy. He supplied only an outline of the course to be followed, and left his hearers to infer that if the Cabinet's programme of reforms, administrative and financial, proved sufficiently comprehensive, the Party should support it. Baron SUYEMATSU also refrained from any explicit proclamation of either hostility or tolerance. The gist of his speech was that the country's armaments had been already developed to the limit of its legitimate resources and that diplomacy might now be trusted to maintain and improve the national status. In short, his utterances were a veiled, though sufficiently distinct, declaration of opposition to the scheme of naval increment which the present Cabinet is said to have elaborated. At for the resolutions passed by the meeting, they were of a somewhat nebulous character. The first declared that administrative reconstruction and financial reform must be made the prime objects of the time; the second amounted to a broad denunciation of government abuses.

Within the four corners of such resolutions there is room for large latitude of movement, and it was doubtless the intention of the *Seiyu-kai* leaders to leave themselves plenty of room.

PREDICTIONS AND THEIR FULFILMENT.

"PENDING the conflict," said *Questions Diplomatiques et Coloniales*, "Japan will have the support of English capital and will thus avoid the domestic bankruptcy which menaces her at this moment." These words were written last March. Strange as they sounded then, they were not without justification so far as concerned the "bankruptcy" statement, for Viscount WATANABE had made the same declaration from his position at the Treasury. It was in fact believed in Europe at that time that something very like bankruptcy menaced Japan, and the same belief holds today among ignorant people. More discernment might have been expected from a magazine of such standing as *Questions Diplomatiques et Coloniales*, but experience shows that, on the whole, French publicists are not eminently well-informed about Japanese affairs. Nor can we reasonably expect that they should be, for France's interests in Japan are distinctly small.

The extract we have quoted betrays similar ignorance about England. Evidently the writer's conception was either that Great Britain would come officially to Japan's financial aid, or that British capitalists would be carried away by the curious vertigo which induces Frenchmen to lend milliards to the country *amie et allié*. The people of *la belle France* undoubtedly make staunch friends, and it is not unnatural that they should judge others by themselves. They are wrong, however, when they imagine that the English Government, still less the English people, would lend money to Japan simply because she had become Great Britain's ally. If the two countries were actually fighting shoulder to shoulder, and if Japan found herself crippled for want of funds, England would certainly come to her assistance; but the mere fact of an alliance for the purpose of maintaining the peace of the East was not likely to direct a solitary English guinea towards Japan.

Yet we may be quite certain that the sale of bonds just effected in London will absolutely convince Frenchmen of the correctness of forecasts like the above. And not Frenchmen only, but other Europeans also. The purchase made by the Hongkong and Shanghai Bank will be pointed to as a direct outcome of the alliance. It will be vain to insist that sentiment is not suffered to invade the sphere of business in England. The two events assume so easily a relation of cause and effect in the eyes of average onlookers that the tendency of public opinion can be anticipated with tolerable assurance. It is not to be denied that the alliance, in so far as it improved Japan's international status, made her a more eligi-

ble borrower. Thousands of Englishmen regard her with much greater respect and correspondingly increased confidence since she became their country's ally. But that is not the sense in which the above extract from *Questions Diplomatiques et Coloniales* was penned. The writer imagined that the alliance would open English pockets to Japan as a matter of policy and sentiment alike, thereby showing that he knew as little about the disposition of the normal Englishman as he did about Japan's economical condition.

In another direction the same writer may point with greater justice to the verification of his predictions. Analyzing the probable effects of the alliance, he said, among other things:—

Every prejudice caused by Russia to the interests of Japan in China and in Korea will be considered as a *casus belli*. What is to be understood by aggressive action on Russia's part or prejudice caused by her? Is it an armed attack upon Chinese or Korean territory? Is it a prolonged Russian occupation of Manchuria, and more particularly of Newchwang and Shanhaikwan? Is it further grants of exclusive economic privileges in Manchuria to the Russo-Chinese Bank? The first question may be put aside at once. The Russians will prudently observe the *status quo*, consecrated by treaties in good and due form, and will confine themselves to counterbalancing, by secret intrigues, Japanese influence in Korea. They will employ, in order to arrive at their aim of annexing Manchuria, means possessing efficacy different from the use of brute force. They have only to allow the military and colonizing strength of the Cossack element to work quietly. * * * If Russia preserves her prudent *sang-froid*, the annexation of Manchuria will take place peaceably at the end of two, five, ten, twenty years, by the force of events, by the simple effect of the *endosmose cosaque*. Does not the Russian *masse* exercise everywhere a formidable natural pressure upon China? Is not her progress towards the south and the East as irresistible as the march of a glacier?

As to the second question propounded above, the moral menace exercised by the alliance of England and Japan will evidently diminish the range of the Russo-Chinese Convention about Manchuria. * * * Russia, led astray for a moment by the fever of rapid acquisition, will return to the slow but irresistible action which has hitherto succeeded so well for her in her Asiatic colonization. Not possessing immediately the financial resources necessary for regenerating and reserving exclusively to her economic activity the immense country in which her arms alone have opened a path of civilization, she will wisely restore to China Newchwang and the disputed points, after she has had the glory of restoring order there. She will gradually hand back the occupied and pacified territories to the Mandarins whom she will not delay to convert to her influence. But her concessions will stop there. She will maintain the most legitimate of her pretensions, consecrated by the treaty of 1896, the effective protection of her railway from Harbin to Port Arthur, so long as Chinese troops are not able to ensure absolute security of life and property in Manchuria. On its side the Russo-Chinese Bank will contract the field of its exigencies and will therefore be less tempted to start enterprises out of proportion with its resources.

A French publicist, discussing Russia's probable policy in given contingencies, might be expected to pass an accurate judgment. Events have shown that the above judgment was accurate in the main. It is true that the same writer, when he came to forecast Japan's attitude, erred as egregiously as he did when he spoke of her financial condition. For he expressed a fear that, "completely intoxicated by the alliance of a Power which offered itself absolutely to her, she would allow herself to be carried away by her extreme jealousy towards Russia, sharpened still more by the secret promptings of England, and, losing all moderation, would require the Russian Government to absolutely

withdraw its troops; that is to say, to make a concession incompatible with the dignity of a great nation." War, he went on to say, would ensue, and Russia, massing 460,000 troops south of Harbin within six months, would confront a quarter of a million of Japanese, the results being some small injury to Russia's Pacific squadron, supplemented by a prolonged bombardment of Port Arthur and Vladivostock; while, on the other side, would stand disaster to the arms of Japan, an irremediably fatal blow to her influence in China, her economic ruin, the definite occupation of Manchuria and Korea by Russia, and enormous war expenses borne indirectly by England. All that talk has been shown to be mere moonshine. The writer was lamentably ignorant of England; lamentably ignorant of Japan. He imagined that Great Britain, engaging merely in a game of bluff to recover her prestige, had "descended from her pedestal of splendid isolation to seek the military support of a Power short of money;" that she had "offered to Japan the aid of her millions to bring to a successful conclusion the grandiose but onerous work of economic and military renaissance undertaken by the latter since 1896, and to create a scare-crow capable of driving off for a time from China's entrails the Russian or German eagles;" that she "would thenceforth possess her mercenaries in the Far East, and that she would ultimately have her pains for her money." One can imagine how irate the French would be were they told that the Russians are their mercenaries in Europe. Such amenities need not be exchanged. Apart, however, from his shallow fancies about England and Japan, the French writer certainly did show prescience in Russia's case. She has proved herself even more complaisant and more time-trusting than he foresaw; but, for the rest, she will soon be seen, as he indicated, "marking time in Manchuria; strengthening the defences of Port-Arthur and Vladivostock; improving the Trans-Asian road; doubling her effective forces in Siberia; multiplying her skilful manœuvres in Persia and Afghanistan, until the day when she will be strong enough to do what she pleases." It is not a pleasant picture, because it suggests deliberate preparations for a vast movement of armed aggression, and because it explicitly represents Japan as entering into an agreement with the great Northern Power "to divide Korea amicably and to exercise her rights of expansion in Fuhkien and the Yangtse Valley." Since, however, it is a picture from a French pencil, we must assume that it is not intended to be uncomplimentary to Russia.

Scottish shipbuilders launched during August twenty-two vessels of 46,882 tons, as compared with nineteen vessels of 32,022 tons last month and twenty-three vessels of 55,080 tons in August last year. To the total the Clyde contributed nineteen vessels of 45,543 tons, the Forth two of 1,213 tons and the Tay one of 126 tons. The new work reported, aggregating 16,000 tons, is lower than that of any previous month this year.

THE BOOKSHELF.

The Queen of Quelparte, by ARCHER BUTLER HULBERT. Illustrated by Wilfred S. Lukens. Boston: Little, Brown & Co.

THE publishers of this novel print upon the decorated wrapper, which nowadays covers most books coming from the United States, the following glowing foreword:—

A vivid and exciting romance, with its scene laid near Japan shortly after the war between China and that country. Its novel plot, striking incidents, and stirring action make it a really remarkable story. The chief motive is a Russian intrigue to throw Quelparte, an island province of Korea, into the hands of Japan as a sop for the possession of Port Arthur by the Czar, and the efforts of the Chinese, directed by Prince Tuen, to prevent it. The author, when at Korea in 1897 to 1898, was a correspondent of several important American newspapers, and a great deal of the romance is founded upon fact. "The Queen of Quelparte" is a story of our own times, with as much of the romantic and seemingly impossible as if it dealt with adventures of more than a century ago.

Upon a separate "folder" the above lines are again printed with the addition of some further facts. To wit:—

The Queen of Korea was murdered by Japanese renegades because she was playing Korea into Russia's hands. Her body was burned, all save her little finger, when she was murdered, after the Japan-China war. Her ashes and little finger were buried in November, 1897, as the writer describes. There is a charming love story running through this striking novel, the hero being Robert Martyn, an American in the employ of a Russian diplomat, and the heroine is the latter's daughter.

A somewhat lengthy acquaintance with publishers' announcements has rendered us skeptical as to the amount of truth they can contain, still we must make confession that the foregoing "puffs" rather whetted a jaded appetite and induced us to open the book with pleasureable anticipations. For has not "the" novel with China, Japan, or Korea as its back-ground yet to be written? Perhaps here it was; who could say? Alas, a brief excursion within the well-printed pages of *The Queen of Quelparte* dashed the hopes so fondly raised, and ere two chapters were completed it became a veritable weariness to the flesh as well as to the spirit to continue the perusal of the story. If the writer was really in Korea for over a year he has made surprisingly poor use of his opportunities in applying "local colour" to the bare outlines of his crudely told tale. And yet where he has taken the trouble to infuse a sense of atmosphere his blunders are fearful to behold. Of course an American West Point graduate who enters the military service of the Czar and becomes at once a leading spirit in a political intrigue within the short space of a voyage from San Francisco to Yokohama, can rise superior to the limitations against which ordinary mortals have to contend; still it rather takes away one's breath to find our hero conversing familiarly with the King of Korea in the tongue of the Anglo-Saxons without going through any of the formalities which usually hedge a king even in the Land of Morning Calm. The hero tells his own tale, but he fails entirely to convince, while the melodrama of Russian intrigue supplemented by Chinese duplicity which runs through every chapter is also most unreal in developments as well as in narration.

We do not know whether this is Mr. Hulbert's first excursion into the realm of fiction, but we should imagine so, for his style is decidedly amateurish, and clumsy even at that. Need we say more?

Great Britain, her Finance and Commerce, being the Souvenir of *The Morning Post*.

WE have received this book through the courtesy of Mr. W. N. Wright of Yokohama, who distributes it with the compliments of the Proprietors of the California Wines "Big Tree" Brand. Primarily an advertising venture, this quarto volume contains some capital articles on the many trades and industries which go to make Great Britain famous the world over. Many hundred illustrations are found within its covers, while statistics go hand in hand with the most useful information.

Japan and America is the title of a magazine published in New York of which the September number has reached us. There are several articles of considerable interest in the copy to which we refer.

The September issue of *Sunset* is very readable. Though this magazine is published by the Passenger Department of the Southern Pacific Company and so avowedly has advertising aims, a mass of interesting reading matter is contained within its covers. There are short stories, accounts of sporting trips, sketches of country, etc., which render the publication quite up to the level of the high-class popular magazine.

THE PLAGUE.

There was no report on Saturday of any fresh case of plague. Rats are again at a premium in Tokyo. Any one that carries a carcase to the police will receive three *sen*, for which purpose the Municipality has set aside a sum of twenty thousand *yen*. The prohibition against walking with bare feet is to be strictly enforced everywhere, in city and suburb alike, and various other sanitary measures are being taken.

No more cases of pest were reported in Yokohama on Oct. 10th. The fifth patient, Iwakichi Jinkichi, employe of Azumai Yoshimatsu in Kaigan-dori, succumbed to the malady early on the morning of Oct. 10th in the Manji Hospital, whether he was taken the previous day.

In the course of Oct. 9th, as many as 222 persons, including nine women, were found to be walking barefooted in the former Settlement and the neighbouring streets by the officers of the Police Station, who were posted at various important places the same day to give warning to such persons. They were all warned not to repeat the practice for the time being.

No case of plague was reported on Friday but a doubtful case was discovered within the isolated region which is at present under investigation.

A doubtful case of plague which occurred in Kaigan-dori, within the isolated area, on the afternoon of Saturday was ascertained not to be genuine. In connection with the outbreak, two persons, one named Koike Tamiji, an employe of the Sanitary Office and the other Toku-uye Toyofusa, a coolie, were taken to the Yokohama Chiho Saibansho by the Isezakicho Police on the night of Oct. 10th on a charge of having violated the Infectious Diseases Prevention Regulations. The following day the Court passed judgment: Koike Tamiji being ordered to pay a fine of eight *yen* and Toku-uye Toyofusa a fine of ten *yen*. It appears that Toyofusa, the coolie, borrowed the uniform of Tamiji and entered the isolated area to collect bills, but was discovered by the police on duty there. Since the outbreak up to Oct. 12th, 320 rats have been purchased by the Yokohama City Office and 1,309 by various police stations in this port.

No fresh case of pest has been reported in Yokohama since Oct. 11th, but suspicion is attached to the death of Terada Kishichi of No

20, Itchome, Bandaicho, Yokohama, who succumbed to fever on the evening of the 12th at his house. Microscopic examination of his blood is now being conducted. By way of precaution, the house of the deceased and seven adjacent houses were at once disinfected and are now isolated. Among the various preventive measures adopted or proposed by the Authorities is one for removing the people in the isolated area, Kaigan-dori, to Kanagawa fort, and it is very likely that the project will be carried into effect, should any further cases be reported in that quarter. Another proposal is to burn the houses in Kaigan-dori or else carry out a thorough cleansing there. Up to the present no pest germs have been found on any of the rats captured in other parts of the port.

With regard to the case of Tarada Kishichi, of No. 20, Itchome, Bandaicho, Yokohama, who succumbed to fever on Oct. 12th, it has been ascertained, as the result of microscopic examination of his blood, that the deceased apparently died from the effects of fever and not from pest. In consequence, the isolation of deceased's house and the neighbouring buildings has been rescinded. Meanwhile the work of building houses is incessantly going on day and night on Kanagawa fort with a view to removing thither the people in Kaigan-dori, which place is now isolated. It is expected that the removal of the people will be carried out in a few days. There has been no fresh case since Oct. 11th.

LAW CASES.

LIU v. NORWICH UNION FIRE INSURANCE CO.

In the Yokohama Chiho Saibansho on Tuesday afternoon, before Judge Kato, was resumed the case, adjourned from Sept. 20th, brought by Liu Hok-sen, a Chinese now in Colombo, against the Norwich Union Fire Insurance Company, No. 50, Yokohama, claiming *yen* 5,120 insurance money from defendants. Mr. Koide appeared for plaintiff and Mr. Sawada for defendants.

As arranged at the previous sitting, Mr. Cho, Chinese Consul-General for Yokohama, was examined as an expert to give his opinion as to Chinese law relative to the present case. Replying to the Judge's questions, the Consul-General said through an interpreter that he was 44 years old, resided at the Chinese Consulate-General, was once a Judge of the Chinese Court in Shanghai, and had dealt with various law cases, both foreign and Chinese.

The Judge asked whether there is in China any law which provides for the necessity of depositing security on the part of a plaintiff's Counsel, provided that the plaintiff is a foreigner and defendant a Chinese.

The Consul-General replied that there was no such law in China up to the present. This finished the examination.

The Judge announced that in accordance with the evidence just given by the Consul-General the objection raised previously by defendants' Counsel, who demanded the deposit of security by plaintiff's Counsel, would be quashed.

Mr. Koide asked the Court for a postponement of the case, saying that the official document certifying the genuineness of the power-of-attorney given him by his client had not yet been received from Colombo. This was granted and the proceedings were adjourned *sine die*.

TEGNER v. ALLISON.

In the Yokohama Chiho Saibansho on Wednesday morning, before Judge Kano, was heard an action brought by Mr. F. M. Tegner, of Vivanti Brothers, No. 168, against Mr. J. H. Allison, No. 28, Yokohama, claiming *yen* 105 as house rent for three months. Mr. Ideura appeared for plaintiff and Mr. Akiyama for defendant.

Mr. Ideura said that Mr. F. Vivanti, of Vivanti Brothers, who is now in New York, had authorized Mr. F. M. Tegner, the plaintiff, to conduct the present case. He then stated that a contract was signed between the parties towards the end of last year, whereby plaintiff agreed to rent to defendant rooms on lot No. 87 for two months,

namely from December 1st, 1901, to January 31st this year, at the monthly rental of yen 35. The defendant, however, continued to occupy the house after the expiration of the term of the contract and left the rooms at the end of March this year; in other words, the defendant occupied the place for another two months without giving any notice to the plaintiff to that effect. From a legal point of view, say by referring to Arts. 619 of the Civil Law, the defendant ought to have given plaintiff three months' notice before leaving the house, but he did not do so. In consequence plaintiff claims the above sum as rent for three months.

Mr. Akiyama admitted that his client had used a part of the house for residential purposes and continued occupying the rooms until March 31st this year, as stated by plaintiff's Counsel. Plaintiff, however, raised no objection whatever while defendant was occupying the rooms for four months altogether and it may therefore be taken for granted that the plaintiff admitted that the defendant might legally occupy the rooms even after the expiration of the contract term. Under the circumstances it was quite unreasonable for plaintiff to bring the claim against defendant. On March 31st when the defendant left the rooms he communicated with plaintiff to that effect. Defendant had acted in quite a proper manner so far as the plaintiff was concerned.

Judgment was reserved until Oct. 20th.

VAN DER HEYDEN v. STORNEBRINK.

In the Yokohama Chiho Saibansho on Wednesday morning, an action brought by Dr. Van der Heyden, No. 270, on the Bluff, against Mr. H. S. Stornebrink, a Danish resident of No. 270, Bluff, Yokohama, came up for hearing before Judge Kano. Plaintiff was represented by Mr. Matsuda, but neither defendant nor his Counsel were present.

The plaintiff asked that the defendant be ordered to consent to equally divide the property held by the parties jointly.

Judgment by default was given in favour of plaintiff, while a counter-claim brought by defendant was rejected.

Mr. Matsuda said the facts of the case were that in April, 1895, plaintiff constructed, after obtaining the consent of defendant, three houses covering 331 *tsubo* on lot No. 270, for the purpose of deriving profit therefrom. In later years, plaintiff asked defendant to divide the property equally, but defendant refused to do so. Accordingly plaintiff carried the matter before the Court for decision, the result being as stated above.

In the counter-claim brought by Mr. Stornebrink against Dr. Van der Heyden, the former claimed from the latter payment of yen 12,948, including yen 8,220 as balance of profits due to plaintiff, Mr. Stornebrink, from January, 1891, to May this year, and also yen 4,728 as his salary during that period.

CLAUSEN v. KOMOR.

In the same Court on Wednesday afternoon, before Judge Kano, was heard an action brought by Mr. Carl Briand Clausen, No. 66, Yamashita-cho, Yokohama, against Mr. Seigfried Komor No. 213, Bluff, Yokohama, claiming yen 1,231.71, the cost of repairing the house occupied by defendant. Mr. Ohashi appeared for plaintiff and Mr. Sato for defendant.

At the outset of the proceedings, Mr. Sato brought a counter-claim, asking that plaintiff be ordered to pay to his client yen 750. He said that the plaintiff agreed to undertake the repairing work for yen 2,250 but as the work proceeded plaintiff sent in bills for extras and in the end defendant paid plaintiff yen 3,000. A balance of yen 750 therefore remained in the hands of plaintiff over the contract price and his client claimed this sum. Owing to the application of Mr. Ohashi, who asked for the postponement of the case so as to enable him to prepare his brief more fully, the proceedings were adjourned until Oct. 31st.

JOVANSSEN v. HOPKINS.

In the criminal section of the Yokohama Chiho Saibansho on Thursday morning at 10.20, before Chief Judge Danno and associate Judges Mabuchi

and Kobayashi, Reginald George Hopkins, ex-Secretary of the Club Hotel, and Mrs. Jovanssen were again brought up for trial on charge of adultery instituted by Mr. Jovanssen, formerly manager of the Club Hotel, Yokohama. Public Procurator Ohira conducted the prosecution.

Mr. Otsuka appeared for the accused, who were both allowed to take seats at Counsels' table. Mr. Matsuda, Court interpreter, officiated.

The Chief Judge asked the accused—Have you the documentary evidence and books which you were ordered to present to the Court at the previous sitting?—Yes, we have.

Hopkins then said—There was one point which I should like to make: it is that the evidence given by various witnesses at the preliminary examinations is utterly false.

Mrs. Jovanssen—I must also say that the evidence given by the witnesses is all false.

Mr. Otsuka said that in connection with the present case he had received from both accused information to the effect that all the evidence given by witnesses at the preliminary examination was false in every respect. The information contained explanations relative to important points and in view of this fact he asked the Court to allow him to present the information, which was written in English. This application was at once granted and the information was presented to the Court.

Asked by the Chief Judge whether the accused had anything further to say or to produce as evidence, Mrs. Jovanssen said:—I wish to call as my witnesses, Dr. N. G. Munro, No. 91, Bluff; Ishida, a boy in the employment of the Club Hotel; and my amah; three in all. I also should like to have Mr. H. Victor Gielen, Danish Vice-Consul for Yokohama, summoned as a witness.

Chief Judge to Mrs. Jovanssen—Why do you wish to call Dr. Munro?—He can certify that I was ill when the alleged act of misconduct occurred. Continuing, she said—I was laid up in the Club Hotel from the end of March this year until about the middle of April. I was in bed all the time. I remained in my bed for fully ten days and so I could not go out of the Hotel. By examining Dr. Munro, he can certify as to the dates on which I was under his treatment.

Chief Judge—What was the nature of your illness?—Peritonitis.

Chief Judge—For what purpose do you intend to call Ishida?—He can tell the Court that I never left my room during my illness. As to the summoning of Mr. Gielen, I wish to certify that my marriage certificate was genuine.

Chief Judge—Was your marriage certificate written by Mr. Gielen himself?—Well, Mr. Gielen can certify to my marriage certificate.

Chief Judge to Hopkins—You have nothing to say?—I remind the Court that what I said in the preliminary examinations was quite truthful.

Mr. Otsuka said he should like to add that Mrs. Jovanssen was in bed all the time of her illness, and this could be proved by Dr. Munro.

The Public Procurator said there was no necessity to examine Ishida, the boy of the Club Hotel, or the amah attached to Mrs. Jovanssen, but Dr. Munro and Mr. Gielen might be summoned as witnesses.

The proceedings were adjourned till 1 p.m. in the afternoon owing to the non-appearance of Prof. Loenholm who was expected to attend the Court in the forenoon.

The hearing was resumed at 2 o'clock in the afternoon. In addition to Mr. Otsuka, Counsel for the accused, Mr. Ohashi was also present on his behalf. Mr. Hattori, Court interpreter, acted this time as interpreter for the accused. The Court-room was densely packed with spectators, including several foreigners, while the President of the Saibansho and other officials of the Court watched the proceedings from the Bench.

Professor Loenholm, of the Tokyo University, was examined as an expert and was asked to give his opinion on points of law relating to the case. In reply to the Chief Judge's questions, the Professor said, through Mr. Nagashima, a lawyer, who acted as interpreter in German, that he was 48 years old, resided at Sendagaya-mura, Tokyo, and that he had no relation whatever to the parties concerned. He then said in the Japanese language that the question before him

was rather difficult to deal with and remarked that "*narutake kantan-ni negai-masu.*"

Chief Judge—Will you kindly tell me the true condition of the law relating to marriage that was in force in Denmark about 1890?—To this, the Professor gave various explanations, stating that in Denmark a man and a woman could marry when their ages reached 20 and 16 respectively, that any one who adulterously violated the relation between a husband and his wife could not marry, and so forth.

Chief Judge—In case a Dane married in a foreign country, is it necessary for him to communicate the matter to his own Government through the Danish Consul?—I don't know exactly, but I think there is such a law in Holland, but not in Denmark. I'm not sure, however.

Chief Judge—Supposing that a Dane, 32 years old, who is a Catholic, married a French lady, aged 21 years old, with the consent of their parents, what condition must they accomplish from a legal point of view?—In central Europe, the couple generally went to a Church and performed the marriage ceremony in the presence of clergymen and others. This system was also observed in Sweden. The Lutheran sect was the national religion of Sweden. If a marriage ceremony was not conducted at a Church, the marriage was not legal. The marriage between a man of the Catholic faith and a woman of the Lutheran faith or *vice versa*, was conducted either at a Church or other place, as they pleased.

Chief Judge—Suppose that a marriage between a Catholic and Lutheran took place at a Church; could the clergyman present a marriage certificate to the couple, after fully examining into the question of their domicile, etc.?—Yes, he could, but the marriage certificate could not be given unless strict examination had been made.

Chief Judge—Could the marriage certificate given by the clergyman be legally recognized as full evidence, if it was genuine?—Yes, certainly.

The Chief Judge then produced the marriage certificate between Mr. and Mrs. Jovanssen and, handing it over to the Professor, asked him to say whether the certificate was genuine or not. The Professor, after examining it, said he could not distinguish whether it was genuine or not. If it was genuine, the marriage between Mr. and Mrs. Jovanssen was all right from a legal point of view.

Mr. Otsuka asked the Professor whether the law relating to marriage, which was enforced in Sweden about 1890, had not been changed since. Dr. Loenholm replied that no change had taken place.

Mr. Otsuka—Suppose that a Japanese married in Sweden and communicated with the Japanese Government to that effect?—In this case the marriage of the Japanese was not legal, according to the Japanese law.

The Professor then stated that in case a Dane married abroad and returned home afterwards he ought to take necessary steps to certify that his marriage was legal.

This finished the examination.

Chief Judge—So far as the examination of the Professor went, the marriage between Mr. and Mrs. Jovanssen may be regarded as legal, should their marriage certificate be ascertained to be genuine.

Mr. Ohashi asked the Court to summon as witnesses Hattori Kichigoro, Nakamura Gen, Ishida Sei, Ishida Kiyoshi, Tsuruzawa Ko and Nakamura Kinoshige. He then made explanations as to the relations between Mrs. Jovanssen and Hopkins.

The Court, after a brief consultation, announced that the summoning of Hattori Kichigoro, Nakamura Kinoshige and Ishiyama Tokumatsu as witnesses would be granted. The case was adjourned *sine die*.

FRAZAR & Co. v. "MIYAKO SHIMBUN."

A suit has been filed in the Tokyo Chiho Saibansho by Messrs. Frazar & Co., No. 200, Yokohama, claiming yen 10,000 damages from the *Miyako Shimbun*, a paper published in Tokyo. Plaintiffs allege that defendants, in their paper printed on the 14th inst., published a paragraph damaging to the reputation of the plaintiff firm

in connection with the domiciliary visit made by the Court officials to the premises of Messrs. Fraser, Farley & Co., No. 259, on the 12th inst. Plaintiffs in addition to yen 10,000 damages claim that an advertisement of apology should be inserted in all the newspapers published in Tokyo.

WARD v. GOEFFERT.

In the Yokohama Chiho Saibansho on Thursday before Judge Kato, Mr. R. J. Ward sued Mr. B. E. Goepfert claiming from him payment of yen 614.165. Mr. Akao appeared for plaintiff while defendant did not appear. Plaintiff stated in his petition that he made a loan of yen 614.165 to defendant on Dec. 17th, 1900, on the understanding that it would be refunded on July 1st, 1901, but defendant failed to repay the loan. Judgment in default was given for plaintiff.

On Oct. 11th the premises of Messrs. Fraser Farley & Co., No. 258, Yokohama, were subjected to a domiciliary search by Judge Tezuka and Public Procurator Mizutani of the Yokohama Chiho Saibansho and several policemen of the Kagacho Police Station, who proceeded thither to collect documentary evidence in connection with the alleged charges of fraud brought against Mr. A. Le Prevost, formerly in charge of the Silk Department of Messrs. Cornes & Co. Mr. Le Prevost is now detained in Negishi prison.

Judgment was delivered on Oct. 9th in the Kobe Chiho Saibansho in the action brought by Mr. V. Dussaud, proprietor of the late Central Hotel, Shimoyamate-dori, Kobe, against Mr. H. Delmas, for the recovery of yen 635, alleged to be due as the rent of the Hotel. Judgment was given in favour of the plaintiff for the amount claimed.

MAGIC LANTERN EXHIBITION.

Over two hundred and fifty of Yokohama's youngest residents, with a score or two of those who have already attained to "riper years," assembled in Van Schaick Hall, at 5.30 on Saturday evening to witness the magic lantern exhibition, arranged for the entertainment of "children of all ages":—which comprehensive term was understood to apply to every stage of life up to and including "second childhood."

The excellent assortment of views and pictures which had been thoughtfully arranged, elicited roars of delighted applause from the youngest, whose appreciation was eloquently expressed as each new feature developed:—while even the old stagers felt their youth renewed, and could almost imagine that they were back in the old country:—re-living those years of childhood when they participated in such juvenile entertainment.

The varied programme commenced with a few brief glances at some notable buildings in the World's Metropolis, the Mansion House, Bank, St. Paul's, &c., being portrayed by exceptionally fine views:—while a peep into the Houses of Parliament and a beautiful scene of Westminster and the Thames by moonlight, certainly merited the hearty applause they evoked. Occasional comical "moving" slides, interspersed with less humorous subjects, served to maintain the interest at a high tension, while a "band" in the form of a phonograph furnished selections at various intervals, the rendering of "Private Tommy Atkins" during the scenes of camp life, being especially appropriate. And so passed one of those happy evenings with which most of us were made familiar while in the home-lands, but which are all too rare to the little folk of this community. We are pleased to learn that the experiment is to be repeated at an early date, and wish all good success to that little coterie of entertainers whose efforts are extended in so excellent a manner.

It is satisfactory to find that the moderate charge for the admission of the older children sufficed to cover actual expenses and that a couple of yen remain in hand to be given to the Yokohama Blind School, which praiseworthy institution still continues its excellent work, although since the death of its principal promoter it is not brought to the public notice as much as it might be.

BASEBALL.

YOKOHAMA COMMERCIAL SCHOOL VERSUS Y. C. AND A. C.

The baseball game on Saturday should have been between a team from the Peers School in Tokyo and the Y. C. and A. C., but owing to the outbreak of plague in this port the Director of the Peers' School thought it inadvisable to allow his lads to come down from the capital. A match was consequently arranged with the Yokohama Commercial School instead. The afternoon was perfect, one of those lovely autumnal days which make life worth the living and compensate for the vagaries of the Japanese climate at other seasons of the year. Naturally a very large crowd gathered, which included many ladies, and the game, full of surprises by-the-way, was watched at times with breathless interest.

Yokohama went first to bat and soon lost E. W. Kilby, but Merriman and Blake got home, and the visitors responded by making three runs in the final half of the first innings. Luck then deserted the home team and for three innings in succession they were sent back without scoring a point. The Y. C. S. meanwhile were piling up runs steadily and at the close of the fourth innings they were 9 runs to the Y. C. and A. C.'s 2. Matters looked black indeed, for errors in the field helped the visitors as much as did their own smart team play. But the unexpected, which sometimes comes to the aid of the good sportsman, now happened and the fifth innings saw six of the Club players get home one after the other to the utter demoralization of their opponents. From now on, as the score will show, the home team pulled up, passed the Y. C. S., and took the lead, which they maintained to the end. The only home-run made during the afternoon was struck by a Japanese player—a lucky drive to the farther fence when all three bases were full, so that four runs resulted. Thorn made a three-bagger and brought two men home. On the whole the form of the Y. C. and A. C. players was disappointing, their fielding being spoiled by missed-catches and fumbled stops. The Japanese team fielded smartly, and on the whole batted in stronger fashion than usual. Both teams changed pitchers during the game, Blake relieving Thorn and Ito taking over the ball from Furihashi. Mr. W. S. Stone was umpire and Mr. J. Nield scorer.

The Interport Cricket Team left Yokohama on Saturday evening for Kobe. An Interport Tennis Match will also take place during the week if time permits, Yokohama being represented by Messrs. H. W. Kilby and H. R. Barnard.

ST. ANDREW'S SOCIETY.

The annual meeting of members of this Society was held on Thursday evening at the Club Hotel, Mr. R. M. Stirling presiding. There was not a large attendance. The report and accounts were duly passed.

Mr. Stirling was elected President, Mr. H. Keswick, Vice-President, Mr. Peters, Hon. Treasurer, and Mr. McClure Hon. Secretary, the remainder of the Committee being: Messrs. R. B. McKinnell, P. Scott, G. Philip, N. G. Maitland, C. M. Duff, and J. H. Bathgate. It was decided that St. Andrew's Day should be celebrated by a ball.

INTERPORT CRICKET.

Much to everyone's disappointment, says the *Kobe Herald*, it was found necessary on Monday morning to postpone the match between the Y. C. and A. C. and the K. C. C. owing to rain. The day broke gloomily but did not declare itself properly until nine o'clock when a slight drizzle began to fall. In spite of this however both teams turned up in flannels and practice at the nets was engaged in while the umpires tried to make up their minds as to whether play would be possible or not. Yokohama won the toss and decided to go in first, whenever that should be. It was not until after eleven o'clock that Mr. Bathgate and Mr. Groom—who had arrived on the ground to umpire for Yokohama and Kobe respectively—came to the decision to postpone play until the afternoon, and two o'clock was the hour agreed upon for the match to start providing there should be any improvement in the weather. Unfortunately at two o'clock the weather was still unfavourable, and play was called-off for the day.

The attractions of the week include a cricket dinner at the Oriental Hotel on Tuesday evening at 7.45, a smoker at 9 o'clock the following night, Interport tennis on Thursday afternoon at 3 o'clock; Baseball on Friday and Saturday, and a baseball dinner at the Oriental Hotel on Saturday evening.

THE FIRST DAY'S BATTING.

The *Kobe Herald* says the match began on Tuesday shortly after 10 o'clock, H. W. Kilby and S. Wheeler going to the wicket to open the innings for the Visitors, Capt. Crawford having won the toss. Buckley and Murray went on to bowl, the former starting at the Pavilion end. In the first over Wheeler scored two off Buckley. Murray's first over was a maiden. Wheeler then put up a boundary hit and followed it up by a two, which ought to have been saved by Green. Kilby then scored another boundary and "ten up" was called. Careful play and careful fielding were the order of the day from this on, but Wheeler soon knocked up a skyer in one of Buckley's over and Braess at mid-wicket just managed to catch the ball when it was about six inches off the ground. The score then stood Wheeler 11, Kilby 8. E. W. Kilby joined his brother. The brothers batted very carefully. In spite of the rain the light could not be called bad. H. W. Kilby proved especially good at strokes behind the wicket and helped the score considerably by several boundaries got in this way. Considering the state of the ground the fielding was fairly good. The Kilbys certainly gave the field plenty of work to do. At five minutes to twelve H. Kilby nearly played on to his wicket but with that exception the batting was of a particularly careful order. Immediately afterward Braess took Edwards's place and started with some slow balls but in the first over E. Kilby put one to the boundary. At five past twelve Gillingham was put on to bowl with Braess still at the other end. H. Kilby was nearly run out shortly afterwards and only just saved himself. Edwards and Green both did some rather smart fielding about this time. At ten minutes past twelve H. Kilby was cleverly caught out by Gillingham from a ball bowled by him, thus separating a couple which had appeared to be invincible. The score then stood 159 for two wickets, H. Kilby contributing 69 towards it. F. E. White then went to the wicket but played in rather a nervous manner as if he were not quite sure of himself. E. Kilby continued to slog away in great form. At half past twelve 180 up was called. At twenty to one Kilby sent a beauty to the boundary and raised his score to 102, amid wild applause. Buckley and Murray took on the bowling about this time and 200 up was called at a quarter to one. By this time White had settled down and though he only scored singles, yet his aggregate was mounting up nicely. Tiffin was called when the score stood at 217, with Kilby and White still batting.

The match was resumed at twenty past two. Edwards took the ball at the north end and Hancock went on at the other end. Edward's third ball bowled Kilby clean, and the third wicket was thus down for 220 runs, Kilby's share being 116. Crawford took Kilby's place. Very cautious play followed and not until a quarter to three was there any striking feature. Then White put the ball to the boundary, but immediately afterwards he was bowled by Edwards with a pretty ball. Four wickets for 230. White had made 28. Kingdon was the next man in. Crawford was all this time putting up high balls and only by good luck more than good management was not caught out; 224 was called just before three o'clock. Just afterward Edwards sent Crawford's middle stump flying and five wickets were down for 241 runs. Crawford's score was seven, made up of three singles and a four. Duff filled the breach. Kingdon knocked up a skyer that went to the boundary, just escaping T. Ross Reid, who made a good attempt to catch an impossible ball. This raised the score to 250; Duff following with a boundary hit

and 270 was called very shortly afterwards. At a quarter past three Gillingham at long off made a splendid catch—holding a ball that Duff had knocked up from Edwards, Duff retiring with 5 runs. The score then stood at 263 for six wickets. Allcock joined Kingdon at the wicket, but he was only in a few minutes when he knocked up one of Edward's balls, Edwards easily holding it. The score now stood at 267 for 7 wickets. Fradgley was the next man in. Kingdon, who had been knocking up a number of skyers, was caught at last by Braess off Edwards. The score was then 280 for 8 wickets. Kingdon had contributed a very useful 32. Firth now joined Fradgley and Murray relieved Hancock of the bowling. 300 was called at twenty minutes to four. Gillingham got the opportunities at fielding and made the most of them, showing himself the best field on the ground. At a quarter to four Firth knocked up one of Hancock's balls which Allen caught in the slips. The score was then 304 for nine wickets, Firth having contributed 14. Immediately afterwards, Fradgley was declared out leg before wicket, bowled by Edwards; his total score being three. Lammert who had only just come in never had a chance at the ball. It was almost four o'clock when the innings closed. E. W. Kilby's score included no less than thirteen fours.

SECOND DAY'S PLAY.

The *Kobe Herald* writing with reference to the second day's play in the interport Cricket Match says:—

By three o'clock the rain had stopped and it was decided to make a start. T. Ross Reid and Gillingham, who had carried their bats from the night before, went to the wicket and Lammert and E. Kilby took up the bowling at the north and south end respectively, the former bowling left handed. The first over was dismissed with only one run for T. Ross Reid. In the next over Gillingham scored a boundary which was placed with great skill. Gillingham followed this with two more boundaries in two consecutive hits and 60 up was called. Seventy followed at twenty-five past three. White then took Lammert's place at the northern end and started with some slow balls. Gillingham knocked up a catch at mid off but the fielder was not quite close enough to secure it. Considering the rain in the morning the ground was in very fair condition although rather slow.

The fielding was very good and both Allcock and Fradgley saved balls from going to the boundary. At twenty to four Gillingham was bowled by White after compiling half a century, 3 wickets for 81. Hancock went to the wicket and Kingdon joined White at the bowling, Kingdon taking the southern end and White remaining at the northern. At a quarter to four White bowled the first maiden over of the afternoon; 90 up was called almost immediately afterwards and Hancock hit his first four. White got another maiden over and two other maiden overs followed, the three being in succession. Both Batsmen continued to score slowly, and 100 up was declared just before four o'clock. Hancock knocked up what appeared to be a sure catch at long leg, which H. Kilby missed, and immediately afterwards sent a beauty to the boundary. Reid all

this time was playing a careful game, slowly adding to his score. Kingdon made his first maiden over just after four. A pretty cut for two by Reid brought the score up to 110. A high ball sent to the boundary by Hancock was followed by some quiet play with very little scoring. Firth, who has the reputation of being the best length bowler in the team, relieved Kingdon at the southern end at a quarter-past four, and Hancock put Firth's first ball away for two, and the second to the boundary. 130 up was declared five minutes afterwards.

140 went up just after half-past four. Quiet play continued, but Hancock was hitting out more than Reid, whose score mounted up to 27. 150 was called at twenty to five. White was still bowling and by this time had delivered 17 overs. At a quarter to five the light was getting very bad. The wind had gone round to the south west and in spite of the heavy clouds hopes were entertained for a fine day to-morrow. Reid then drove a ball from Firth right down to the pavilion on the south side of the ground and the light having become so bad it was decided by the Umpires that it would be better to draw stumps although it still wanted ten minutes to five. Kobe's score then stood as follows:—

KOBE.

THE KOBE CRICKET DINNER.

The Kobe Interport Cricket Dinner took place at the Oriental Hotel on Tuesday evening. The toast of the Y.C. and A. C. was given by the Chairman, Mr. G. C. Pakenham, who paid a warm tribute to the excellent batting performance of the Kilby Brothers. Mr. Crawford returned thanks on behalf of his team and proposed in return the health of the K.C.C. Mr. Murray in responding, says the *Kobe Herald*, said he hoped the Yokohama men would not judge Kobe's welcome by the welcome of the clerk of the weather. The sun got up in the morning, but, said Mr. Murray facetiously, when old Sol saw Mr. Bathgate's face he evidently thought his presence to be unnecessary so consequently retired. With toast and song a very pleasant evening was spent, the singers including Mr. McKay, Mr. E. T. Bethell, Mr. Evans, and Mr. F. E. White.

WEDNESDAY'S PLAY.

Kobe, October 16, 7.50 p.m.

The full score now stands:—

YACHTING.

The race for the cruising class, postponed from the 4th because of lack of wind, came off on Saturday the 11th. The first prize, it may be remembered, was the *Daimyo* Cup. *Asagao* soon assumed a strong lead in this race and finished easily first, but had to yield the premier position to *Virginia*. The corrected times were:—

	Club.	Arbitrary.
	h.m.s.	h.m.s.
<i>Daimyo</i>	5.07.38	5.07.38
<i>Molly</i>	5.21.51	5.16.50
<i>Mosquito</i>	5.17.23	5.07.22
<i>Surprise</i>	5.05.21	4.52.20
<i>Asagao</i>	4.45.29	4.51.54
<i>Virginia</i>	4.55.04	4.35.43

As the prizes were given on arbitrary handicap it will be seen that while *Asagao* gains two record points she only takes second prize, the first prize and one point going to *Virginia*.

The 21 raters had a good race in what was to them in the early part of the contest a fresh-to-strong breeze, for Club prizes. *Pele* got home first and took first prize with two points, *Winsome* gaining the second prize and one point. The corrected times were:—

	Club.
	h.m.s.
<i>Winsome</i>	4.28.00
<i>Pele</i>	4.25.30
<i>Edna</i>	4.29.40
<i>Stella</i>	4.55.55
<i>Vixen</i>	4.41.43

LITERARY GOSSIP.

Madame Sarah Grand, in conjunction with Miss Harriet Jay, is engaged in preparing a dramatic version of her novel "The Heavenly Twins."

Sir Gilbert Parker, M.P., who has written his final word in Canadian romance, and from whom we are not likely to have any work in fiction for a long time, has gone to Carlsbad, where he will remain till the end of September.

Mr. Heinemann is to publish a translation of the records of the evidence given at the solemn revision of the trial of Jeanne d'Arc in 1455. So long ago as the forties, the Latin text was translated into French for one of the French learned societies; but it has never before been done into English. The translator is Mr. T. Douglas Murray.

The Bookman says:—One of the most interesting of the autumn books will be a reprint of Sir Walter Scott's "Minstrelsy of the Scottish Border," no revised or critical edition of which has appeared since Lockhart's, twenty years ago. The new issue, which by means of variorum notes added to Lockhart's, traces the different versions of the ballads, and shows Sir Walter's alterations, is edited by Mr. T. F. Henderson. Messrs. Blackwood are the publishers.

Trégnier, in Brittany, is at last to have a statue of its foremost citizen, Ernest Renan. This is an interesting fact, when we remember that, twelve years ago, the fixing of a memorial tablet on the house at which Renan was born nearly caused a revolution at Trégnier. The proposal to erect a statue and call a street after Renan has now passed the municipal council by a majority of eleven votes to six, which may be regarded as a striking concession for orthodox Brittany.

Messrs. Chatto and Windus have already in the press a large part of Mr. Ernest A. Vizetelly's English translation of M. Zola's last novel, "Truth," which they hope to publish about the end of January next. The story running through the book is that of a great judicial crime, suggested, undoubtedly by the Dreyfus case, though in M. Zola's pages the victim is a Jew schoolmaster. Indeed, many scenes of narrative are laid in the French school-world, and throw a vivid light on the struggle which is now going on between the Republican Government and the religious Orders.

Mrs. Campbell Praed's "My Australian Girlhood" is a forthcoming work which should

interest many readers. It is to the earlier days of the later youth of the Colonies that Mrs. Praed's memory returns. The book is promised by Mr. T. Fisher Unwin and is profusely illustrated. Speaking of her earliest recollections, Mrs. Praed says "that was nearly 50 years ago, when Moreton Bay was still a penal settlement, and the Colony of Queensland not in existence; when Brisbane was only a river village called Brisbane Water, and its Houses of Parliament undreamed of."

What would have been Gilbert White's emotions (says the *Daily Telegraph*) if he had been told that one day his "Natural History of Selborne" would appear with illustrations from instantaneous pictures of the birds and beasts as they lived? For this excellent idea the brothers Kearton are responsible, and during two years they have been procuring the necessary photographs. Peculiar and not unexciting have been the circumstances under which some of them have been obtained; as, for instance, one occasion on which the photographer waited with the pneumatic bulb of his shutter in one hand and a revolver in the other, as a mad bull was expected to put in an appearance before the subject of the picture arrived. Gilbert White's text has been annotated by Mr. Richard Kearton in the light of his own observations. Messrs. Cassell will publish the work.

Sir Edgar Collins Boehm, Bart., F.R.G.S., has printed in book form his notes set down in the course of a prolonged tour which led him into South Africa, New Zealand, Australia, Java, Siam, China, Japan, the Sandwich Islands, the United States and Canada, and Mr. Horace Cox has published it under the title of "Over the World." Sir Edgar does not pretend to write formally or exhaustively of these regions, he merely records, very briefly, his experiences and impressions, telling everything plainly and directly, not so much for the benefit of the geographical or social student as for the guidance of others who may make the grand tour. He writes as a tourist to tourists, and anyone desirous of following his tracks will find much that is of practical value to him in this volume. The book is well illustrated, and contains a list of hotels and clubs in the various places visited.

Mr. Jerome K. Jerome, whose appearance at Henley as prospective Liberal candidate for the Southern division of Oxfordshire has aroused so much interest, is not the only novelist who has aspired to represent the riverside constituency. Thackeray early in his career appeared as Liberal candidate at Oxford, and, like Mr. Jerome, caused much comment by the originality of his views and his speeches. He was a demon for reform, and went so far as to advocate triennial Parliaments—"if the constituents desire them." He was also "for having the people amused after they had done their worship on a Sunday." Thackeray's oratory, however, did not altogether please his committee, and when they candidly told him that he could not speak he coolly reported that he knew that, but he could write! The novelist was badly beaten, but he took his defeat in good humour. He attributed it to his advanced views, which, he said, "he could not blink to be made a duke or a marquis to-morrow."

CANADA AND JAPANESE TEA.

The *Jiji* says, on the strength of certain statistics, that whereas Ceylon tea is gradually growing in popularity in Canada, Japanese tea is steadily losing ground there and fears are entertained by those concerned in the business that Japanese tea will finally be driven out of the Canadian market. The *Jiji* publishes the following comparative table showing the amount of imports into Canada during the past few years:—

	Japanese Tea. lb.	Ceylon Tea. lb.
1897	9,207,477	5,461,822
1898	11,667,763	8,851,832
1899	11,530,876	11,500,876
1900	7,450,603	10,664,900
1901	6,459,953	11,074,629

LOCOMOTIVES FOR JAPAN.

On Thursday morning tenders were opened at Shimbashi Station for the supply of 5 lots of six tank locomotive engines—that is to say, 30 engines and spare parts. Messrs. Okura & Co., who have already supplied 120 locomotive engines to the Imperial Japanese Government Railway within the past few years, were the successful bidders, as the following figures show:—

IS JOHN THE EARLIEST GOSPEL?

Practically all New-Testament scholars have agreed, says the *Literary Digest*, that the fourth gospel is chronologically the latest, and it is in the nature of a surprise that an attempt is being made to place it at the head of the list. Still more surprising is it that the new conclusion is sustained by conservative scholars in the interests of Christian apologetics. Lic. O. Wultich, a German savant, several years ago undertook to uphold this new theory, and now the attempt has been made on a large scale by Dr. Küppers, in a volume entitled "Neue Untersuchungen über den Quellenwert der Evangelien," which has just appeared in Berlin and is attracting attention. His view of the origins of the four gospels may be summarized as follows:—

(1) At an early date, scarcely two decades after the departure of Jesus, or as soon as 50 A.D., the Apostle John, at the urgent request of the other disciples, voiced by Andrew, wrote an account of the teachings of Christ. This fact is attested by a statement in the famous Muratorian Canon, the oldest account we have of the history of our gospels. What John wrote was anything but an exhaustive account; it was rather a group of sayings and doings of the Lord that clustered around his annual visits to the city of Jerusalem at the Easter season. The purpose was not to describe everything in the career of Jesus, but only to furnish the evidence and an abundant proof that, although rejected by the official representatives of the Jewish hierarchy, he nevertheless was the Messiah and the Christ. In the nature of the case this Johannine account stood in need of important supplementing. This is what is meant by the statement in the beginning of Luke, where it is said that many had attempted to narrate "the things which have been fulfilled among us." The other gospels are all such attempts, supplementing the account of John. For many the appeal of John was undoubtedly too high. Then again, the Galileans must have wished to have a written record of what Jesus had done in their territory, since John's gospel was confined almost entirely to the ministry in Judea.

(2) The first to attempt such a supplementary account was Luke; at any rate his is the first which has been preserved. This gospel is not, as is currently claimed, "Pauline"; it is rather "Johannine," having drawn largely upon John, especially for the reports it contains of the passion, death, and resurrection of Christ. It was written soon after our present fourth gospel, and its contents are drawn largely from those who heard and spoke with Christ himself.

(3) Next after Luke came Matthew, written at a time when Paul and Peter were labouring together in the City of Rome, in the beginning of the sixth Christian decade and shortly before the death of Peter. Matthew's purpose was largely to supplement the work of Luke, especially in supplying from the

sayings and doings of the Lord those things which would be apt to convince the Jews that Jesus of Nazareth was the true Messiah, as promised by the prophets and seers of old.

(4) The latest of the Gospel writers is Mark, written soon after the death of Peter in Rome. In contrast to the other gospels its origin was more of an accidental character, the author indeed adding to what had been written by the others, but chiefly aiming to furnish a compendious abridgment of the life of the Lord. It is the most independent of the synoptic gospels.

In this way the order of the first four books of the New Testament as generally given by critics is to be inverted. It is to be John, Luke, Matthew, and finally Mark.

Among the various discussions of this remarkable theory of the origin of the gospels, one of the most thorough is that of Professor Zöckler, of the University of Greifswald, in the *Beweis des Glaubens*, No. 8. He writes:—

"It must be acknowledged that there would be some gains made for Christian apologetics if the new theory of the priority of John's gospel could be demonstrated. It would in fact solve the greatest of New-Testament problems, that of the fourth gospel. But this reconstruction is in conflict with serious facts which make its acceptance impossible. The principal reasons against it are these:

"It is the unanimous tradition of the oldest church fathers that John is the latest of the gospel writings. No tradition has a firmer foundation than this, and even the Muratorian Canon at another place plainly states that this is 'the fourth of the gospel books.'

"Then it would be impossible to understand the character of the fourth gospel if it were the earliest of these books. A full christology of the Lord would be unthinkable before an account of the external career of the Messiah had been issued. In the nature of the case John is supplementary to the other books and not these to John.

"Then, too, there are no indications in the first three gospels that these were intended to supplement the fourth, but internal evidences all show that this is not the case."

All things considered, it would appear that Dr. Küppers's theory will have to be backed by stronger arguments if it is to supersede the older view of the origin of the Fourth Gospel.

RESCUED BY THE "PRINCETON."

Late on Thursday evening there reached Nagasaki the U.S. gunboat *Princeton*, with an interesting tale of her experiences between Cavite and Japan. On October 6th she sighted a schooner flying signals of distress, and promptly made in her direction. She proved to be the *Otelia Pedersen*, and it was found necessary to take off the Captain, J. C. Hansen, and crew of nine, and bring them to Nagasaki, leaving the schooner a derelict.

The story of the *Otelia Pedersen* is not a long nor a very exciting one. She is a vessel of 678 tons only, and was bound from Port Townsend to Hongkong with 900,000 feet of lumber consigned to the British naval authorities. She was caught by a typhoon about September 25th, and for ten days was beaten hither and thither over the sea. It was in Lat. 23° 27' N., Long. 125° 42' E. that the *Princeton* came upon her, and her condition was, as may be imagined, quite helpless at that time. For that reason she was abandoned.

The crew of the vessel have been handed over to the American Consul, Mr. C. B. Harris, and unless any of them sign on in other ships, will be sent back to the United States.—*Nagasaki Press*.

THE ODAWARA DISASTER FUND.

Madame Sufu wishes to thank the following donors for their gifts towards the relief fund she is raising for the sufferers from the Odawara tidal waves:—

	Yen.

Messrs. Averill & Co.	50
" Nemo "	60
Messrs. Andrews & George	100

INDUSTRIES LOCALIZED.

The United States Census Bureau has issued a bulletin on the subject of the localization of industries. The statistics have been prepared by Mr. Frederick S. Hall, under the direction of Mr. S. N. D. North, Chief Statistician for Manufactures. Measured by the value of products, more than 85 per cent. of the collar and cuff manufacture of the United States is carried on in Troy, N. Y.; more than 64 per cent. of the oystercanning industry in Baltimore, Md.; more than 54 per cent. of the manufacture of gloves in the adjoining cities of Gloversville and Johnstown, N. Y.; more than 48 per cent. of the coke manufacture in the Connellsville district, Pennsylvania; more than 47 per cent. of the manufacture of brassware in Waterbury, Ct.; more than 45 per cent. of the manufacture of carpets in Philadelphia, Pa.; more than 45 per cent. of the manufacture of jewelry in Providence, R. I., and the adjoining towns of Attleboro and North Attleboro, Mass.; more than 36 per cent. of the silverware manufacture in Providence, R. I.; more than 35 per cent. of the slaughtering and meat-packing industry in Chicago, Ill.; more than 32 per cent. of the manufacture of plated and britannia ware in Meriden, Ct.; more than 24 per cent. of the agricultural-implement industry in Chicago, Ill., and more than 24 per cent. of the silk industry in Paterson N. J. The number of wage-earners engaged in slaughtering and meat packing in South Omaha, Neb., constituted 89.9 per cent. of the total number employed in all industries in that city.

NEWS OF THE WEEK.

The nonagenarian Sir Henry Keppel intends to winter at Singapore again this year as he did last year.

The U.S. troops in the Philippines are preparing a powerful punitive expedition against the Moros of Mindanao.

One sentence of Dewet's recent speech was not telegraphed to Japan. "The British are no longer enemies," he said, "I have signed and will keep my word."

The inauguration of the Kei-Hin (Tokyo-Yokohama) Electric Car Company will take place within the precincts of the Kawasaki Daishi on Oct. 17th, a national holiday.

"Say, ma!" "Yes, Reginald." "Kin any little boy be president when he grows up?" "Yes, Reginald." "But, say, ma." "Yes, Reginald." "He don't have to if he he'd rather be a first baseman, does he!"

Two kinds of birds, one called *Tengu* and the other *Osa-ori*, have been added to the Zoological Garden, Ueno Park. They were recently brought from Minami-torishima (Marcus Island) by Mr. Kamitaki Shichigoro on the war-ship *Takachiko*. Mr. Kamitaki is the lessee of the island.

The Pennsylvania Railroad Company has placed with the Baldwin Locomotive Works the largest order ever given by any railroad company to a single concern. It calls for 250 high-class freight locomotives, aggregating in cost \$3,250,000, all to be delivered within the first six months of 1903.

Mr. Mori Seiyemon, who recently purchased the property of the proposed Yokohama Electric Car Company, obtained permission from the Authorities to postpone the work of construction until the summer of next year, the term for starting the work having expired in June this year. A meeting of the promoters will take place in the Minatoya, Minato-cho, Yokohama, on Oct. 18th to elect officials and to consider various matters.

About 10.40 p.m. on Oct. 13th fire broke out in the house occupied by Morita Seikichi, a shampooer living at No. 136 in the former Settlement, Yokohama. The Satsumacho and Kagacho fire brigades promptly turned out to the scene, but before the engines were practically

set to work heavy rain came pouring down and put out the flames before much damage was done. The fire was thus confined to the house in which it originated. The fire was accidental.

The cause of the death of the famous anti-ritualist, John Kensit, is briefly told in a telegram from London dated Sept. 25th:—John Kensit, the noted head of the anti-ritualistic crusade in the Church of England, was seriously injured to-day and his eyesight endangered by being struck with a chisel, which was thrown at him after he had addressed a meeting at Birkenhead.

A gentleman residing in London posted on April 12, 1873, a letter to a resident in Church-street, Camberwell. On August 27, 1902, this letter was returned to him marked "Not Known," from the Dead Letter Office, after slumbering in the Post Office for upwards of 29 years—a notable example of the care which the Post Office, authorities bestow on the correspondence committed to their charge.

Letters dated July 21 have been received from Capt. Powell-Cotton, Northumberland Fusiliers, who left England some months ago on an expedition to Central Africa. Writing from the Ravine Station, East Africa Protectorate, the explorer says that he had had capital sport, and has secured two specimens of the five-horned giraffe. He has had an encounter with a pack of wild dogs near Lake Baringo.

By the *Hokô Maru*, a sealing-vessel belonging to the Hôkô Gikai, of which Captain Gunji is President, the Captain of the sealing-vessel *Genever* (?) of British Colombia, and 23 of her crew were brought to Shimagawa Bay on Oct. 13th from Hokkaido and handed over to the Police Authorities. It appears that the Captain, whose name is said to be Seabols (?), and 23 men, including six Japanese, while pursuing seals in Hokkaido waters in August missed their ship, which they had left in boats. Fortunately the *Hoko Maru* happened to be near the scene and rescued the sealers.

President Roosevelt has chosen Mr. Charles-magne Tower, Ambassador to Russia, to succeed White as American Ambassador to Germany. The appointment of Mr. Tower had been expected for several weeks. Mr. White will probably not have his farewell audience of the Emperor, on November 7th, his birthday, as had been provisionally arranged, because his majesty leaves on November 5th for England. The retiring Ambassador therefore is not likely to present his letters of recall until about the middle of November.

German manufacturers of machinery have recently received orders for 100 locomotives representing a value of 60,000,000 marks (nearly \$1,500,000), which will go to Siam, Italy, India and Denmark. The export of locomotives and traction engines is shown by the following figures:—

	Marks.	\$
1899	13,300,000	2,639,400
1900	15,700,000	3,736,600
1901	22,100,000	5,259,000

In the figures for 1899 and 1900 traction and passenger cars and motor wagons to the value of \$700,000 to \$800,000 are included.

A cable to the New York *Sun* from London says:—The British first-class armoured cruiser *Drake*, 14,100 tons, returned to Portsmouth on Sept. 25th after undergoing her engine trials, which proved that she is the fastest war vessel in the world outside of torpedo boat destroyers. She made 24.10 knots, which high speed was partly due to an improved type of propeller. The contract provided she should attain a speed of 23 knots. The *Drake* is 500 feet in length, with 71 feet beam and draws 26 feet. She can store coal to carry her 12,500 miles at the rate of 14 knots. Her thickest armour is six inches and largest guns 9.2 inch.

Hitherto Okayama Prefecture has generally been regarded as the centre of the straw-braid industry. In a few years, however, straw-braid

will be abundantly produced in the Yuki district, Ibaraki Prefecture, where a trial plantation was made in 1901 under the direction of a priest in charge of the Anraku temple in the place, who obtained seed from Okayama for the purpose. The experiment having been attended with success the priest engaged experts in the manufacture of the braid in 1901 and at present a number of training stations are working in various parts the prefecture.

It has been ascertained, on the authority of a Member of the House of Keys, that the Queen, before bidding good-bye to the Bishop of Sodor and Man, graciously expressed herself as follows:—"I had no idea, my lord, that your island was such a charmingly pretty place, and I hope soon to be able to see more of its charms."

In Prince Dhuleep Singh's bankruptcy the claims amount to £3,000. The Prince attributes his position to losses on the Stock Exchange and in gambling; also to the insufficiency of his allowance; and alleges a claim of £600,000 against the Indian Government, derived from his father. He is married to Lady Anne Coventry.

Chess-players in Japan will be glad to hear that the Sendai Chess Club has been revived, the first Fall meeting being held on Oct. 6th at the house of the founder. Further meetings are to be held (*Deo volente*) on Mondays at 7 p.m. at the place appointed at the previous meeting. Person wishing to join should consult any of the old members.

Reports from Spa state that Princess Stephanie was kneeling in prayer in the death chamber of her mother when informed of the King's order to depart. She immediately returned to her hotel, whence she drove in a hired carriage to the station. In response to sympathetic cheers, she said:—"Thank you, dear citizens." She returned to England.

Herr Tomicich, of Munich, has recently made an interesting effort to obtain some standard judgment as to the varying degrees of estimation in which different operas by Wagner are held by professed admirers of the composer. The *Muenchener Zeitung* gives the following as the results of his inquiry, among the hundred correspondents who sent in their opinions: 29 think the "Meistersingers" his masterpiece; 6 hold by "Tannhauser," 12 for "Lohengrin," 5 for "Valkyrie," 1 for "Rienzi," 3 for the "Phantom Ship," 4 for "Siegfried," 1 for "Twilight of the Gods," 15 for "Tristan," and 10 for "Parsifal."

One or two brave ladies in Melbourne have adopted sandals for out-door wear—with stockings—brown stockings with toes. The effect, though it may be comfortable, is by no means becoming. Sandals do not suit twentieth century dress; they require a toga, or some loose flowing garment. With a tailor-made gown they look quite absurd. Modes that make for health are frequently very ugly. Modes that are indifferent to it are usually becoming; the new skirt which grips its wearer firmly at the knees, and then froths out into a cascade of frills, is unhealthy because it gathers up much dust, but unfortunately it is becoming.

Local shipping firms and banks, said the *China Mail* on Oct. 3rd, are warned against the operations of a gang of Europeans now in the Colony whose movements are being watched closely by the police. Although they have not yet committed any punishable crime, their conduct has been such as to arouse the suspicions of the authorities. Their *modus operandi* is to ship China cargo to distant ports—that is to say, what purports to be valuable cargo; and then to endeavour to obtain advances upon the shipping documents. So far, they have not succeeded in obtaining the advances they desired, and luckily for themselves have avoided arrest; and now that they know they are being watched they may seek fresh fields. This paragraph may therefore act as a warning to the Coast Ports, and we would especially advise Singapore, Manila, Shanghai and Japan to be on the outlook.

THE CHRISTIAN DAIMYO.

CHAPTER X.

The death of Omura Sumitada and Otomo Sorin. —The Jesuits are banished from Japan. The causes of this proscription.—Disgrace of Takayama Ukon.—The Jesuits unite at Hirado.—The town of Nagasaki becomes Government property.—Deliberations at Arima.—Conversion of Kinoshita Katsutoshi and Ota Nobuo. Matura and Otomo persecute the Christians.—Conversion of Gratia Hosokawa.

After so many vicissitudes, the Christians (83) were promising themselves at last a happy future, when the death of Omura Sumitada, quickly followed by that of Otomo Sorin, came to plunge them into profound sadness. Sick for several months and wishing for nothing but eternal repose, Sumitada absolutely refused to let a celebrated physician, who had promised to cure him, be brought.

When on the point of death, he sent for his eldest son and conjured him to watch over his brothers and sisters that they might never abandon the faith, which their father had defended for 25 years. He also made him undertake not to give his sisters in marriage to pagans, declaring that such alliance were prejudicial to the Christian party. Then Sumitada sent a special messenger to his daughter Mencia whom, some time before, he had given in marriage to Matura Hisanobu, son of the *daimyo* of Hirado. He made the messenger ask her pardon for having been obliged, for political reasons, to give her to this family hostile to her faith. Sumitada died on the 24th of May 1587, at the age of 55 years. His remains were interred in the church of the Jesuits, situated at some distance from the town of Omura.

Eighteen days later, on the 11th of June, died also Otomo Sorin, the most illustrious *daimyo* of this family. Feeling that he was dying, he had himself carried to Tsukumi, at three leagues from Usuki, in order to spend there in peace his last days. He thanked God that all his children had become Christians, but he begged Him also to withdraw him from the world without delay. Could he have foreseen the misfortunes which were to fall upon his family and upon the Church of Japan? Sorin died at the age of 58 years. His funeral took place at Tsukumi, where his tomb is still to be found. At the time of his death, Bungo contained 70,000 Christians. (84)

However great may have been these calamities for the Christians, they were only heralds of other misfortunes, graver still. The sojourn of Hideyoshi in Kiushu was destined to be fatal to the Christian religion. The expedition once finished, the people expected to see him immediately take the road to Osaka, but on the contrary, he seemed to designedly delay in Kiushu. From Dazaifu he went to Hakata, then the most prosperous town of Chikuzen, and did his best to rebuild the port, damaged during the late wars. It may even be that, already, he sought to make this the port whence would depart the expedition, which he wished to send against Korea and China. However that may be, as soon as Father Coelho, Provincial of the Jesuits in Japan, heard that Hideyoshi sojourned at Hakata, he hastened thither to congratulate him on his recent victories. Hideyoshi, very much flattered by this step, received the Jesuit with much regard and immediately assigned him a plot of ground, exhorting him to build a church and a house for the Religious. He even returned in person the visit of Father Coelho, and promised that he would always protect the Christian religion. (85) Judge, then, of the stupefaction of Father Coelho when, on the night of the 24th July, he learned that Hideyoshi had just issued an edict banishing all the Jesuits from Japan. What had happened, and what were the reasons of so sudden a change? Nearly all the Japanese documents, which give an account of this occurrence, accuse the Jesuits of having provoked this edict by their arrogant conduct towards Hideyoshi, during his stay in Kiushu. (86) The accu-

sations are almost unanimous on this point, though none of them specifies wherein the Jesuits failed in respect towards Hideyoshi who, on the eve of his edict, still accorded them signal marks of favour. In vain are the annals which treat of this question scrutinized; nowhere does one meet with the least vestige of disrespect on the part of the Jesuits, at least according to our European ideas. Here a distinction must be drawn in view of the entirely different manner in which the Japanese see and feel things. If the matter is considered from this point of view, it may be that the Jesuits ruffled the extreme susceptibilities of Hideyoshi, and by that very fact provoked his indignation. Here are the circumstances.

There was then, in the port of Hirado, a Portuguese vessel of extraordinary size. Hideyoshi, who had long desired to procure several ships built in the European style, expressed the desire to see this new vessel, and asked Father Coelho to use all his influence with the captain to induce him to come to Hakata. Father Coelho executed his commission at once, but, as he had foreseen, the captain absolutely refused to anchor at Hakata, declaring that this port was not deep enough to receive a ship of such tonnage. To soften his refusal, however, he came himself to seek Hideyoshi and explained to him the reasons which prevented him from acceding to his wish. Hideyoshi seemed to accept the excuses of the Portuguese, but from this moment his extreme distrust was awake; he remained convinced that this refusal concealed a motive that could not be avowed, and he enveloped merchants and Religious in the same suspicion.

Another circumstance came to completely embitter Hideyoshi's temper. Yakuin, an ex-bonze of Hieizan, and for some years entrusted with the task of providing licentious pleasures for Hideyoshi, found himself rejected with contempt by some Christian maidens of Arima, whom he had solicited in the course of his business. Yakuin, who was well known for his hostility to the Christian religion, promised himself revenge for this check. Returning to Hakata, he found his master and a numerous company indulging in copious libations of Portuguese wines. Without any other preamble, Yakuin told him of his failure with the maidens of Arima, and declared that the foreign religion had alone driven them to this fanaticism. Then, seeing that his words produced the wished-for effect, Yakuin accused the Christians of being more foreigners at heart than Japanese, and declared that, in case the necessity arose, they would make common cause with the Portuguese against Hideyoshi. He added that already several *daimyo* had made offers in this connection, and that he knew from sure sources that Takayama Ukon, the irreconcilable enemy of the gods of the country, was the chief of the conspiracy.

Hideyoshi, a prey to drunkenness, got into a veritable fury, and consented to all what Yakuin suggested to him. On that very evening, the evening of the 24th of July 1587, he signed an edict ordering the Jesuits to quit Japan within twenty days. Needless to add that the accusations formulated in this connection, were designedly manufactured by Yakuin. The Jesuits were accused of despising the gods of the country, of overthrowing their temples, of persecuting the bonzes, and of forcing the Japanese to embrace the Christian religion; then again of eating beef, a practice which was contrary to the laws and customs of the country, finally of authorising the Portuguese merchants to buy Japanese in order to transport them as slaves to the Indies.

As Hideyoshi's resolution would suffer no delay, a special envoy brought the same night this edict to Father Coelho.

On receiving these fatal tidings, the latter was at first seized with the greatest consternation. On recovering himself, he had a long answer written to Hideyoshi, refuting without difficulty the accusations made against the Religious. He admitted that the neophytes had on several occasions indulged in regrettable excesses with regard to the temples and the bonzes, he protested, however, against this accusation, in so far as it concerned the Religious, because they had

not always been able to repress the impetuosity of the neophytes. He also asserted that the Religious had never forced anyone to embrace their religion. As to eating beef, he confessed that the Religious ate it, when they were invited to the houses of the Portuguese. Finally he expressed his regret on the subject of the slave traffic, in which the Portuguese engaged, despite the repeated prohibitions of the Religious. But he showed that the fault was as much on the side of the Japanese as of the Portuguese: Hideyoshi had only to forbid the *daimyo* to sell their subjects, and by that very fact the Portuguese would be obliged to renounce this commerce. As a matter of fact the *daimyo* of Kiushu, and even those of the other provinces of Japan, offered at first in exchange for the fire-arms, and above all for the gold, which the Portuguese imported from the Indies, their prisoners of war. Then, they came to sell even those of such of their subjects as had been guilty of any crime. This commerce was carried on through agents that the *daimyo* had at Nagasaki. Several times did the Jesuits oppose this shameful traffic, but the Portuguese would not listen to them. With some exceptions, these latter differed entirely from the first merchants who had come to Japan. In proportion as their commerce grew, they became more and more dissolute, so that even the pagans were scandalized by their conduct.

Such are the reasons which the writings of the Jesuits give for the changed attitude of Hideyoshi in reference to them, and consequently for the persecution. On the other hand some Japanese authors lead us to suppose that Hideyoshi, in spite of the favours that he accorded them, never liked either the Religious or the Christians, and that he only waited for a favourable chance to banish the one and force the others to apostatize. These same authors add that in this Hideyoshi only carried out the wishes of Nobunaga, who had perceived, too late, that the foreign preachers, as well as their doctrine, were a danger to the country. Without speaking of this pretended repentance of Nobunaga, one finds it difficult to believe that Hideyoshi, the absolute master of Japan, should, for five years, have lowered himself so much as to show politeness to some sixty-six foreigners who were considered as dangerous enemies of Japan. Commonsense refuses to accept this hypothesis. In spite of his defects, Hideyoshi was neither a fool nor a coward; he was rather a Japanese excessively susceptible and entirely under the influence of the moment, be it good or evil.

This first blow delivered to the Jesuits, Hideyoshi turned against Takayama Ukon, the chief of the alleged conspiracy. On the same night also he sent to tell him that he was dispossessed of his daimyate of Akashi, and to order him to go into exile.

Takayama, then encamped in the neighbourhood of Hakata, believed at first that there was some mistake and wished to go to see Hideyoshi. But several of his friends, who had assisted at Hideyoshi's fits of rage, dissuaded him from taking a step which might have cost him his life. They advised him rather to renounce the Christian religion, hoping that this act would make Hideyoshi go back on his decision. Takayama thanked his friends for the interest they took in him, but told them that he preferred death to even a pretended apostasy. Next day he bade adieu to his *samurai*, and asked their pardon for having involuntarily involved them in his own ruin: the same evening he embarked for Akashi.

When his old father saw him arrive unexpectedly in the garb of a proscribed person, he feared at first that his son had brought this misfortune on himself by some defeat, during the war in Kiushu. But when Ukon explained to him the true reason of his disgrace, Dario accepted his misfortune with resignation.

While the proscriptions made their preparations to go into exile, Konishi sent a special message to Ukon, inviting him to retire to the island of Yunoshima, which then formed part of the domains of this *daimyo*. Ukon accepted Konishi's offer and repaired to Yunoshima with all his family. In order to conceal the retreat of

(83) In 1587, they were about 200,000 in Japan.

Takayama, Konishi confided Yunoshima to a Christian *samurai* with orders to let no unknown person enter it. Thus were the gods avenged and the bonzes also: the fall of Takayama, their declared enemy, was a veritable triumph for them.

It was not until the month of August 1587, that Hideyoshi left Hakata to return to Osaka. Before leaving he had shown his discontent with the *daimyo* of Arima and Omura, by destroying several churches, casting down the crosses and razing some of the fortresses of their domains. He even declared to Omura that he would take from him the town of Nagasaki. Finally he gave the Portuguese merchants to understand, that they must henceforth cease bringing preachers to Japan. Returning to Osaka he seized all the residences and churches that the Jesuits possessed in that town, as well as at Kyoto and at Sakai, and confided them to the care of several *samurai*.

The edict of banishment had been posted up in all the towns in Japan. Father Coelho, having pointed out to Hideyoshi that there was no ship leaving for the Indies, obtained a respite of six months. In spite of this favour, Father Coelho understood that it was of the last importance to conform as promptly as possible to Hideyoshi's wishes. He hoped that by exhibiting entire submission he would succeed in dispelling his mistrust. With that object in view, he called all the Religious together at Hirado, a place specially selected in order to avoid bringing any trouble on the Christian *daimyo*.

There were then in Japan 40 priests and 73 lay-brothers, of whom 47 were Japanese (87). With the exception of Father Organtino, whom Konishi had sent secretly to Yunoshima in order to console Takayama, all the European Jesuits met in the month of August at Hirado, and held counsel as to what measures they should take. Among other things, they decided to cease exercising in public the duties of their ministry, and to avoid all that might increase the suspicions of Hideyoshi. However, as all these Religious could not remain in Hirado during six months, Father Coelho consulted the Christian *daimyo* of Kiushu as to what he ought to do in the meantime. Far from being troubled by the arbitrary measures of Hideyoshi, those *daimyo* hastened to offer an asylum in their states to the Religious. Omura Yoshisaki, son and successor of the late Sumitada, took 12 of them, Kotoda of Hirado 4, Otomo 5, Mori Hidekane 2, Amakusa 9, Goto 2, and Arima the remainder.

Father Coelho moved heaven and earth, however, to make Hideyoshi change his decision. He had petitions addressed to several influential personages, even to the wife of Hideyoshi, that they might intercede in favour of the Religious. All was in vain. The respite of six months expired, the Portuguese Emmanuel Lopez went expressly to Osaka, to point out to Hideyoshi the impossibility of taking all the Religious on board his ship, but the latter refused any compromise. This step even irritated him to such an extent, that he destroyed the houses of the Jesuits at Kyoto, Osaka and Sakai and pulled down the 22 churches, which had been erected in the neighbouring provinces. Fearing more and more the existence of a plot between the foreigners and the Japanese Christians, he gave orders to Asano Nagamasa to proceed to Nagasaki and declare this town Government property. This was striking a terrible blow both to the Portuguese who had till then enjoyed extraordinary privileges, and to Omura who thus lost his most flourishing town. Asano nominated Nabeshima and Mori Katsunobu, *daimyo* of Kokura, governors of Nagasaki (June 1588).

This last act is celebrated in Japanese history as a victory over the foreigners. According to the "Shogyoshi" (88) the latter had already possessed themselves of Nagasaki and meditated the conquest of all Japan, to make it a possession of the Pope, when happily Hideyoshi saved the menaced country by taking over Nagasaki from the Portuguese and banishing the Jesuits from Japan.

On seeing these last violent acts of Hideyoshi, Father Coelho understood clearly that it would be difficult to bring him back to a better disposition.
